SUBJECT: Screenshots for **Solar Cell: A Mobile UV Manager for Smart Phones (NCI)**

Screenshots for this submission titled, "Solar Cell: A Mobile UV Manager for Smart Phones (NCI)," are not being submitted because this is proprietary information. These screenshots could be used by another company, while this SBIR contractor is conducting the research, to develop and market a similar mobile application.

Specifically, the screenshots would reveal the unique use of UV Index forecast data from the National Oceanic and Atmospheric Administration that no competitor mobile application is currently using. The screenshots also will identify the types of proprietary algorithms that were developed to provide sun protection advice in Solar Cell.

NCI would be more than agreeable to send the screenshots to OMB via email. As well, after the randomized trial has been completed and the mobile application launched, the public will have access to view them.
