1 Introduction

1.1 Purpose

The Sexual Assault Prevention and Response Office (SAPRO) serves as the Department of Defense (DoD) single point of responsibility for sexual assault prevention and response policy and oversight. Section 577(f) of Public Law (PL) 108-375 requires the DoD to submit an annual report on sexual assault in the Military Services and Military Service Academies (MSAs) to Congress. Section 596 of PL 109-163 and section 583 of PL 109-364 impose additional requirements for the report. Currently, the majority of data captured in the annual report for both the Services and MSAs is aggregated by hand, and has led to enormous analysis, accuracy, consistency and reporting challenges. Section 563 of Public Law 110-417 requires the Secretary of Defense to implement a centralized, case-level database for the collection and maintenance of information regarding sexual assaults involving a member of the Armed Forces. This database will be called the Defense Sexual Assault Incident Database (DSAID) and will increase the accuracy and consistency of data reporting among all Services and MSAs.

The purpose of this document is to describe in detail all reporting items that are currently delivered to Congress or that are captured in the latest Fiscal Year (FY) data call template. It documents the data criteria necessary to create required reporting items based on data attributes and appropriate formatted values. The categories of reporting items include Restricted Reports, Unrestricted Reports, and Victim Support Services for Service Reports and MSA Reports. The same reporting categories and items apply to Combat Areas of Interest Unrestricted and Restricted Reports, Victims Support Services, and Combat Areas of Interest Service Reports. Additionally, this document specifies some proposed ad-hoc query specifications to support SAPRO's ongoing data analysis and trend identification.

1.2 Intended Audience

The intended audience of this document is the developer and implementer (D&I) that will develop and implement the requirements documented within this document. These requirements will lead to a set of queries to generate predetermined aggregated reports and will allow DSAID users the capability to generate ad-hoc reports.

1.3 Assumptions

This document is developed with the assumption that the DoD centralized, case-level database is developed and implemented based upon the documented sexual assault data requirements. The criteria were written based on known data elements, data usage, and data definitions, and was approved by SAPRO.

1.4 References

During FY08, the Department established an integrated Sexual Assault Prevention and Response (SAPR) Data Collection and Reporting Working Group. The group included members from all Services, Joint Chiefs of Staff/J-1, Reserve Affairs, Health Affairs, and SAPRO. The group worked to develop a basic concept design report for a Department-

wide centralized, case-level database for the collection and maintenance of information regarding sexual assaults involving members of the Armed Forces. The DoD SAPR Data Collection & Reporting System Concept Design Report for the Defense Sexual Assault Incident Database (DSAID) was delivered to Congress in January 2009.

This document also references the reporting items in the Calendar Year (CY) 2004, CY2005, CY2006, and FY07, and FY08 DoD Standard Service Reports and MSA Reports on Sexual Assault. The Section Numbers (ex: Section A, Section B, etc.) in the subtitle of the following sections correspond to the section numbers in the FY10 Data Call Templates.
