PLEASE ANSWER THE REMAINING QUESTIONS IN PART I ONLY IF YOUR FIRM IS A U.S. ELECTRIC UTILITY THAT USES URANIUM AS A FUEL; OTHERWISE, SKIP TO PART II.

I-8. Please discuss below your electric utility's reload cycle, explaining, as a minimum, (1) whether you change all of the reactor's fuel assemblies at once or some portion (identify the number replaced out of the total number), (2) the frequency (in months) of your reload cycle, (3) the extent to which you can extend or reduce the reload frequency, (4) the extent to which the costs of uranium products/services affect your reload cycle, and (5) any changes that occurred in the frequency of your reload cycle during January 2007 through March 2013 and any you anticipate during the remainder of 2013 and 2014.

I-9. How long does it typically take to complete a reload and is the entire facility that produces electricity shut down during the reload?

I-10. How does the plant meet its customers' electricity demand during this reload-shutdown period?

PART I.--GENERAL QUESTIONS - Continued

I-11. (a) Has the average enrichment level in the core designs of your nuclear fuel changed between January 2007 and March 2013? If yes, please specify the changes and explain the reason(s) for such changes.

- No Yes--Please explain.

(b) Please explain any costs or benefits from higher enrichment levels in the LEU and whether higher levels are necessary and sufficient for longer reload cycles and for higher capacity factors. Also discuss whether your reactors can accept any enrichment level of LEU, a single specific enrichment level of LEU, or some range of enrichment levels of LEU; please explain the reasons why.

I-12. Do fuel assembly design specifications (other than enrichment levels) generally change at each reload such that the quantity of uranium in a reload for each of your plant's reactors vary? If yes, please specify the magnitude of the changes and explain the reason(s) for such changes.

PART I.--GENERAL QUESTIONS - Continued

I-13. (a) Please discuss how the following parameters have changed during 2007-12 and how these parameters are expected to change in the foreseeable future; specify time periods and reasons for any changes.

I-14. Are any of your plant's nuclear reactors able to use mixed oxide (MOX) or convert to use MOX as its fuel? If yes, please estimate the cost and time required to convert your fuel over to MOX and the reasons why you might switch from uranium to MOX. In addition, please indicate any plans your firm may have for the switch to MOX and note the time period and reasons for such a change. Also indicate and describe regulatory requirements that need to be met in switching over to MOX and if your firm has considered other alternatives.

Unless otherwise indicated, please answer all questions in the remainder of this questionnaire based on your firm's actual market experience in purchasing LEU, either via a SWU contract (purchase of enrichment) or as enriched uranium product (EUP), during January 2007 to March 2013. If your response differs by purchase of enrichment or EUP, by category of purchase contract, or by country of enrichment/origin, please explain in your response or attach a separate response. Country of origin should be based on the origin as specified in the shipping documents and not based on the location of the supplier; if the country of origin is unknown, please report the name of the supplier. Please respond fully to the questions and attach additional discussion as needed; identify attached responses with the question number.

NOTE: EUP is LEU that is sold or purchased where the customer does not provide any natural UF₆.

NOTE: Nonsubject countries/suppliers of LEU refer to foreign countries/suppliers other than France.

Unless otherwise specified, U.S. delivery/shipment of LEU to U.S. customers, commonly U.S. electric utilities, is normally triggered by a BOOK TRANSFER to the customer. This book transfer may occur at the same time as the physical transport of the LEU, usually to a U.S. fuel-assembly fabricator, but frequently occurs sometime after this physical transport (e.g., LEU is not physically transported to the U.S. electric utility's location). On the other hand, if your firm imports LEU and is the end user, (the latter commonly an electric utility), such imports constitute delivery and would normally be physically transported directly to the designated fuel-assembly fabricator. Requests for information in this questionnaire regarding U.S. delivery/shipment of LEU to your firm refers to material that has been book-transferred to your account (during the period requested) at a designated facility either inside or outside the United States.

II-1. **Purchases.**—

Indicate below the countries for which you are reporting based on your firm's purchases of LEU since January 1, 2007 from these countries and indicate whether you purchased enrichment and/or EUP from each country
