

### **Antimicrobial Use and Resistance (AUR) Option**

#### Antimicrobial Use and Resistance (AUR) Option

#### Introduction

Rates of resistance to antimicrobial agents continue to increase at hospitals in the United States.<sup>1</sup> The two main reasons for this increase are patient-to-patient transmission of resistant organisms and selection of resistant organisms because of antimicrobial exposure.<sup>2</sup> Previous studies have shown that feedback of reliable reports of rates of antimicrobial use and resistance to clinicians can improve the appropriateness of antimicrobial usage.<sup>3-5</sup>

The goal of this National Healthcare Safety Network (NHSN) AUR Option is to provide a mechanism for facilities to report and analyze antimicrobial use and/or resistance as part of antimicrobial stewardship efforts at their facility. This module contains two options, one focused on antimicrobial usage and the second on antimicrobial resistance. To participate in either option, the facility must coordinate with their software provider to configure their system to enable the generation of standard formatted file(s) to be imported into NHSN. The format provided for data submission follows the HL7 Clinical Document Architecture (CDA). Manual data entry is not available for the AUR Module.

#### 1. Antimicrobial Use (AU) Option

**Objectives:** The primary objective of the Antimicrobial Use option is to facilitate risk-adjusted inter- and intra-facility benchmarking of antimicrobial usage. A secondary objective is to evaluate trends of antimicrobial usage over time at the facility and national levels.

**Methodology:** The primary antimicrobial usage metric reported to this module is antimicrobial days per 1000 days present. An antimicrobial day (also known as day of therapy) is defined by any amount of a <u>specific</u> antimicrobial agent administered in a calendar day to a particular patient as documented in the electronic medication administration record (eMAR) and/or bar coding medication record (BCMA) (refer to Numerator Data Section); all antimicrobial days for a specific agent administered across a population are summed in aggregate. <sup>8-11</sup> Days present are defined as the aggregate number of patients housed to a patient-care location or facility anytime throughout a day during a calendar month (refer to Denominator Data Section). For each facility, the numerator (i.e., antimicrobial days) is aggregated by month for each patient-care location and overall for inpatient areas facility-wide (i.e., facility-wide-inpatient). Similarly, the denominator (i.e., days present) is calculated for the corresponding patient-care-locationmonth or facility-wide-inpatient-month. A secondary antimicrobial usage metric for facility-wide-inpatient also reported to this module is antimicrobial days per 1000 admissions. The numerator and denominators are further defined below and must adhere

to the data format prescribed by the HL7 CDA Implementation Guide developed by the CDC and HL7.

**Settings:** NHSN encourages submission of all NHSN-defined inpatient locations, facility-wide-inpatient, and select outpatient acute-care settings (i.e., outpatient emergency department, pediatric emergency department, 24-hour observation area) at each facility (Table 1). The patient-care areas may include adult, pediatric, or neonatal units as defined by NHSN Codes (Chapter 15 CDC Locations and Descriptions). A comprehensive submission will enable a facility to optimize inter- and/or intra-facility comparisons among specific wards, combined wards, and hospital-wide data. The optional and minimal requirements for participation in the Antimicrobial Use option are listed in Table 1.

The minimal requirement for participation is submission of data for all four of the following locations (if applicable to facility): 1) all medical critical care units(s) and surgical critical care units(s) [if combined units, then report as medical/surgical critical care unit(s)]; 2) all medical ward(s) and surgical ward(s) [if combined wards, then report as medical/surgical ward(s)]; 3) at least one specialty care area; and 4) facility-wide-inpatient (both days present and admissions must be reported for this location).

Table 1. CDC Location<sup>a</sup>: Optional and Minimal Requirements for AU Option

Inpatient Locations	Minimal Submission Requirements (if applicable for facility)			
Adult Critical Care Units	Requirement:			
	For facilities with only adult critical care unit(s): submit all medical			
	critical care unit(s) and surgical critical care units(s) [if combined units,			
	then report as medical/surgical critical care unit(s)].			
	For facilities with adult and pediatric critical care unit(s), the minimum			
	requirement is the submission of data from all adult and pediatric			
	critical care locations.			
Pediatric Critical Care Units	Requirement:			
	For facilities with only pediatric critical care unit(s): submit all medical			
	critical care unit(s) and surgical critical care units(s) [if combined units,			
	then report as medical/surgical critical care unit(s)].			
	For facilities with adult and pediatric critical care unit(s), the minimum			
	requirement is the submission of data from all adult and pediatric			
	critical care locations.			
Neonatal Units	Optional (i.e., no minimal submission requirement)			
Inpatient Specialty Care Areas	Requirement: At least one Specialty Care Area			
Inpatient Adults Wards	Requirement:			
	For facilities with only adult medical and surgical ward(s), submit all			
	medical ward(s) and surgical ward(s) [if combined wards, then report as			
	medical/surgical ward(s)].			
	For facilities with adult and pediatric medical and surgical ward(s), the			

<b>Inpatient Locations</b>	Minimal Submission Requirements (if applicable for facility)			
	minimum requirement is the submission of data from all adult and			
	pediatric medical and surgical ward locations.			
Inpatient Pediatric Wards	Requirement:			
	For facilities with only pediatric medical and surgical ward(s), submit			
	all medical ward(s) and surgical ward(s) [if combined wards, then			
	report as medical/surgical ward(s)].			
	For facilities with adult and pediatric medical and surgical ward(s), the			
	minimum requirement is the submission of data from all adult and			
	pediatric medical and surgical ward locations.			
Step Down Units	Optional (i.e., no minimal submission requirement)			
<b>Operating Rooms</b>	Optional (i.e., no minimal submission requirement)			
Long Term Care	Optional (i.e., no minimal submission requirement)			
Facility-Wide	Minimal Submission Requirements (if applicable for facility)			
Facility-wide-inpatient	Requirement: Facility-wide-inpatient			
<b>Outpatient Locations</b>	Minimal Submission Requirements (if applicable for facility)			
Select Acute Care Settings	Optional (i.e., no minimal submission requirement)			
Outpatient Emergency Department				
Pediatric Emergency Department				
24-Hour Observation Area				

**aCDC Location:** A CDC-defined designation given to a patient-care area housing patients who have similar disease conditions or who are receiving care for similar medical or surgical specialties. Each facility location that is monitored is "mapped" to one CDC Location. The specific CDC Location code is determined by the type of patients cared for in that area according to the **80% Rule**. That is, if 80% of patients are of a certain type (e.g., pediatric patients with orthopedic problems), then that area is designated as that type of location (in this case, an Inpatient Pediatric Orthopedic Ward).

#### **Requirements:**

An acceptable minimal month of data includes:

- a. Data submitted for all four of the following locations (if applicable to facility): 1) all medical critical care unit(s) and surgical critical care unit(s) [if combined units, then report as medical/surgical critical care unit(s)]; 2) all medical ward(s) and surgical ward(s) [if combined wards, then report as medical/surgical ward(s)]; 3) at least one specialty care area; and 4) facility-wide-inpatient (both days present and admissions must be reported for this location).
- b. Each month, the facility must choose to monitor antimicrobial use data on the *Patient Safety Monthly Reporting Plan* (CDC 57.106)
- c. All data fields outlined in the Table of Instructions (Appendix A) for the AU option are completed via CDA for each location.

#### **Numerator Data (Antimicrobial Days):**

Antimicrobial Days (Days of Therapy): Defined as the aggregate sum of days for which any amount of a specific antimicrobial agent was administered to individual patients as documented in the eMAR and/or BCMA. Appendix B provides a list of antimicrobial agents. Aggregate antimicrobial days are reported monthly for inpatient locations, facility-wide-inpatient, and select outpatient acute-care settings (e.g., outpatient

emergency department, pediatric emergency department, 24-hour observation area) for select antimicrobial agents and stratified by route of administration (e.g., intravenous, intramuscular, digestive and respiratory). Refer to Table 2 and 3 for definitions of drugspecific antimicrobial days and stratification based on route of administration. For example, a patient to whom 1 gram vancomycin is administered intravenously twice daily for three days will be attributed three "Vancomycin Days (total)" and three "Vancomycin Days (IV)" when stratified by intravenous route of administration. Appendix C provides additional examples for the calculation of antimicrobial days. Table 4 summarizes the data elements for numerator calculation. Please note that "zero" should be recorded when no aggregate usage occurred during a given reporting period for a specific antimicrobial agent at a facility in which the agent is used, while "not applicable" should be recorded when data are not available for a specific antimicrobial agent at a facility (e.g., the agent can't be electronically captured at that facility). A value (e.g., a specific number, "zero", or "not applicable") should be reported for every antimicrobial agent listed in Appendix B.

Table 2. Classification and Definitions of Route of Administrations for Antimicrobial Days

Classification:	<b>Definition</b> <sup>b,c</sup>
Route of Administration <sup>a</sup>	
Intravenous	An intravascular route that begins with a vein.
Intramuscular	A route that begins within a muscle.
Digestive Tract	A route that begins anywhere in the digestive tract extending from the mouth through rectum.
Respiratory Tract	A route that begins within the respiratory tract, including the oropharynx and nasopharynx.

<sup>&</sup>lt;sup>a</sup>Other routes of administration are excluded in this module (e.g., antibiotic locks, intraperitoneal, intraventricular, irrigation, topical).

Table 3. Example Stratification of Antimicrobial Days by Route of Administration

Month/ Year-	Antimicrobial Agent	Drug-specific Antimicrobial Days				
Location	Agent	Total a IV IM Digestive Respiratory				
Month-	Tobramycin	Tobramycin	Tobramycin	Tobramycin	Tobramycin	Tobramycin
Year/		Days	Days	Days	Days	Days
Location		(Total) (IV) (IM) (Digestive) (Respiratory)				

<sup>&</sup>lt;sup>a</sup>Drug-specific antimicrobial days (total) attributes one antimicrobial day for <u>any</u> of the specified routes of administration. For example, a patient to whom tobramycin was administered intravenously and via a respiratory route on the <u>same day</u> would be attributed "one Tobramycin Day (Total)"; the stratification by route of administration would be "one Tobramycin Day (IV)" and "one Tobramycin Day (Respiratory)".

<sup>&</sup>lt;sup>b</sup>Definitions per SNOMED Reference Terminology

<sup>&</sup>lt;sup>c</sup>Mapping of standardized terminology for route of administration are provided via the hai-voc spreadsheet.

<sup>&</sup>lt;sup>b</sup> For purposes of example of route stratification only (tobramycin is not FDA approved for administration via the digestive route).

**Table 4. Data Elements for Antimicrobial Days** 

	Antimicrobial Days
Antimicrobial	Defined as select antimicrobial agents and stratified by route of administration (i.e.,
Agents	intravenous, intramuscular, digestive and respiratory). Refer to Appendix B for a complete
	list of antimicrobial agents. The list of select antimicrobial agents will evolve with time as
	new agents become commercially available. Topical antimicrobial agents are not included in
	this module option.
Data source	Antimicrobial days are derived from administered data documented in the eMAR and/or
	BCMA only. Usage derived from other data sources (e.g., pharmacy orders, doses dispensed,
	doses billed) cannot be submitted.
Location	Antimicrobial days are aggregated for inpatient locations, facility-wide-inpatient, and select
	outpatient acute-care settings (i.e., outpatient emergency department, pediatric emergency
	department, 24-hour observation area) per NHSN location definitions.
Time Unit	Antimicrobial days for a specific antimicrobial agent and stratification by route of
	administration are aggregated monthly per location.

**Denominator Data (Days Present and Admissions):** The numerator will be analyzed against the denominator of days present and also admissions for facility-wide-inpatient only. The denominators are further defined below.

<u>Days present</u>: Defined as time period during which a given patient is at risk for antimicrobial exposure for a given patient location. The definition of days present differs from conventional definition of patient days used in other NHSN modules and that recommended by the SHEA/HIPAC guidance for surveillance of multidrug-resistant organisms. <sup>12</sup> Days present is further defined below in context of calculation for patient care location specific analyses and facility-wide-inpatient analyses. Please note that a separate calculation for days present is required for patient-care location compared to facility-wide-inpatient.

For patient-care location-specific analyses, days present is calculated as the number of patients who were present for any portion of each day of a calendar month for a patient-care location; the aggregate measure is calculated by summing up all of the days present for that location and month. The day of admission, discharge, and transfer to and from locations will be included in days present. For example, a patient admitted to the medical ward on Monday and discharged two days later on Wednesday will be attributed three days present on that medical ward. Another example, on the day a patient is transferred from a medical critical-care unit to a medical ward, the patient will be attributed one day present on the medical critical care unit as well as one day present on the medical ward. Similarly, a patient's exposure to the operating room or emergency department will be included in days present for these types of units. However, one patient can account for only one day present for a specific location per calendar day (e.g., one patient cannot contribute more than 1 day present to any one unique location on the same day, but can contribute a day present to two different locations on the same day). For example, a patient transferred from the

surgical ward to the operating room and back to the surgical ward in a calendar day contributes one day present to the surgical ward and one day present to the operating room.

For facility-wide-inpatient analyses, days present is calculated as the number of patients who were present for any portion of each day of a calendar month at the facility-wide-inpatient location; the aggregate measure is calculated by summing up all of the days present for facility-wide-inpatient for a given month. Thus, a sum of days present from location-specific analyses would be higher than days present for the facility, because transfers between wards can account for multiple location "days present" for a given patient. Therefore, the individual summing of days present for location-specific analyses to achieve facility-wide-inpatient is not permissible. The calculation must be a separate summation for facility-wide-inpatient analyses.

<u>Admissions</u>: Admissions are defined as the aggregate number of patients admitted to the facility (i.e., facility-wide-inpatient) starting on first day of each calendar month through the last day of the calendar month. This is the same definition for admissions utilized in the NHSN MDRO/CDI Module. In the AU option, admissions are reported only for facility-wide-inpatient.

 Table 5. Location-specific and Facility-wide-inpatient Metrics

<b>Metric Collected</b>	<b>Metric Definition</b>	Comments
<b>Patient Care Locati</b>	on-Specific Analyses	
Antimicrobial Days/ Days present	Drug-specific antimicrobial days per patient-care location per month/Days present per patient-care location per month	One patient can contribute only one day present per calendar day for each specific location.  Summed total may be higher when compared to facility-wide measure (reflecting transfers between locations).
Facility-wide-inpati	ent Analyses	,
Antimicrobial Days/ Days present	Drug-specific antimicrobial days for a facility per month/Days present per facility-wide-inpatient per month	One patient can contribute only one day present per calendar day for a facility. Thus, one denominator is obtained for an entire facility. The day present measure for facility-wide-inpatient may be lower when compared to sum total from location-specific comparison.
Antimicrobial Days/ Admissions	Drug-specific antimicrobial days for a facility per month/Admissions per facility-wide-inpatient per month	Only calculated for facility-wide-inpatient for AU Option.

#### **Data Analyses:**

Antimicrobial use data are expressed as incidence density rates of antimicrobial days per days present stratified by patient-care location and facility-wide-inpatient.

Antimicrobials may be grouped during analysis by route of administration, spectrum of activity, therapeutic indication, or drug classification. A secondary metric, antimicrobial days per admissions, will also be analyzed for facility-wide-inpatient.

#### 2. Antimicrobial Resistance Option

Decisions regarding the Antimicrobial Resistance option are still under consideration, and the timeline for launching will be updated in NHSN E-News and on the NHSN AUR website.

## Appendix A. Table of Instructions: Antimicrobial Use

Data Field	Instructions for CDA of Antimicrobial Use Data
Facility identifier	Required. Must be assigned to facility and included in the importation file prior to submission to CDC.
Month	Required. Record the 2-digit month during which the data were collected for this location.
Year	Required. Record the 4-digit year during which the data were collected for this location.
Location	Required. Record location; must be (if applicable to facility): 1) all medical critical care unit(s) and surgical critical care unit(s) [if combined units, then report as medical/surgical critical care unit(s)]; 2) all medical ward(s) and surgical ward(s) [if combined wards, then report as medical/surgical ward(s)]; 3) at least one specialty care area; and 4) facility-wide-inpatient
Numerator:	Required.
Antimicrobial days per month per location	Antimicrobial days are defined as the aggregate sum of the days of exposure for which a <u>specific</u> antimicrobial was administered. These are required to be extracted from electronic medication administration record (eMAR) and/or bar coding medication record (BCMA). Antimicrobials days will be collected for select antimicrobial agents (refer to Appendix B) <u>and</u> stratified by route of administration.
Denominator:	Required.
Days present	Days present is defined as risk for antimicrobial exposure per time unit of analysis stratified by location. For patient-care location-specific analyses, days present is calculated as the number of patients who were present for any portion of each day of a calendar month for a patient-care location. For facility-wide-inpatient analyses, days present is calculated as the number of patients who were present for any portion of each day of a calendar month at the facility-wide-inpatient location.
Admissions	Admissions are defined as the aggregate number of patients admitted to the facility (i.e., facility-wide-inpatient) starting on first day of each calendar month through the last day of the calendar month. In the AU Option, admissions are only reported for facility-wide-inpatient.

Appendix B. List of Antimicrobials<sup>13</sup>
Please note that mapping of standardized terminology (RXNORM) are provided via the hai-voc spreadsheet.

Antimicrobial Agent	Antimicrobial Category	Antimicrobial Class <sup>a</sup>	Antimicrobial subclass <sup>a</sup>
AMANTADINE	Anti-influenza	M2 ion channel inhibitors	
AMIKACIN	Antibacterial	Aminoglycosides	
AMOXICILLIN	Antibacterial	Penicillins	Aminopenicillin
AMOXICILLIN/ CLAVULANATE	Antibacterial	Penicillins	B-lactam/ B-lactamase inhibitor combination
AMPHOTERICIN B	Antifungal	Polyenes	
AMPHOTERICIN B LIPOSOMAL	Antifungal	Polyenes	
AMPICILLIN	Antibacterial	Penicillins	Aminopenicillin
AMPICILLIN/ SULBACTAM	Antibacterial	Penicillins	B-lactam/ B-lactamase inhibitor combination
ANIDULAFUNGIN	Antifungal	Echinocandins	
AZITHROMYCIN	Antibacterial	Macrolides	
AZTREONAM	Antibacterial	Monobactams	
CASPOFUNGIN	Antifungal	Echinocandins	
CEFACLOR	Antibacterial	Cephalosporins	Cephalosporin 2 <sup>rd</sup> generation
CEFADROXIL	Antibacterial	Cephalosporins	Cephalosporin 1 <sup>st</sup> generation

### **Appendix C. Example Calculations of Antimicrobial Days**

#### **Example 1. Example eMAR and Calculation of Antimicrobial Days**

This example illustrates the calculation of antimicrobial days from a patient receiving meropenem 1 gram intravenously every 8 hours and amikacin 1000mg intravenously every 24 hours in the medical ward. Table 1 provides an example of administered doses for this patient documented in eMAR. Table 2 illustrates the calculation of meropenem and amikacin days by drug-specific (total) and stratified by route of administration based upon the administered doses of meropenem and amikacin documented in eMAR. Table 3 illustrates the contribution of this patient's antimicrobial days to the aggregate monthly report per patient-care location.

Table 1. Example eMAR for Patient housed in Medical Ward

Medical Ward	Monday	Tuesday	Wednesday
	December 28	December 29	December 30
Meropenem 1gram		Given: 0700	Given: 0700
intravenously every 8		Given: 1500	
hours	Given: 2300	Given: 2300	
Amikacin 1000mg			
intravenously every 24			
hours	Given: 2300	Given: 2300	

Table 2. Example of calculation of antimicrobial days

Calculation	Monday	Tuesday	Wednesday
	December 28	December 29	December 30
Drug-specific	Meropenem Days = 1	Meropenem Days = 1	Meropenem Days = 1
Antimicrobial Days (total)	Amikacin Days = 1	Amikacin Days = 1	Amikacin Days = $0$
Drug-specific	Meropenem Days	Meropenem Days	Meropenem Days
Antimicrobial Days by	(IV) = 1	(IV) = 1	(IV) = 1
Stratification of Route of	Amikacin Days	Amikacin Days	Amikacin Days
Administration	(IV) = 1	(IV) = 1	(IV) = 0

Table 3. Example of antimicrobial days per month per patient-care location

Month/ Year-	Antimicrobial Agent	Drug-specific Antimicrobial Days				
Location		Total	IV	IM	Digestive	Respiratory
December Medical Ward	Meropenem	3	3	0	0	0
December Medical Ward	Amikacin	2	2	0	0	0

# **Example 2. Differences in Calculation for Patient-Care Location and Facility-Wide-Inpatient for a Patient Transferred Between Patient-Care Locations**

This example illustrates the calculation of antimicrobial days from a patient receiving vancomycin 1gram every 8 hours that was transferred from the MICU to a medical ward on December 1. Table 1 provides an example of doses documented in eMAR administered to this patient in the MICU and medical ward. Table 2 illustrates the calculation of vancomycin days by drug-specific (total) and stratified by route of administration based upon the administered doses of vancomycin documented in eMAR. Table 3 illustrates the contribution of this patient's vancomycin days to the aggregate monthly report per patient-care location and facility-wide-inpatient.

Table 1. Example eMAR for Patient transferred from MICU to Medical Ward on December 1.

	Tuesday December 1 Location: MICU	Tuesday December 1 Location: Medical Ward	
Vancomycin 1gram intravenously every 8 hours	Given: 0700	Given: 1500 Given: 2300	

Table 2. Example of calculation of antimicrobial days for December 1

Calculation	Tuesday	Tuesday	
	December 1	December 1	
	<b>Location: MICU</b>	Location: Medical Ward	
Drug-specific Antimicrobial	Vancomycin Days = 1	Vancomycin Days = 1	
Days (total)			
Drug-specific Antimicrobial	Vancomycin Days	Vancomycin Days	
Days by Stratification of Route	(IV) = 1	(IV) = 1	
of Administration			

Table 3. Example of antimicrobial days per month per patient-care location and facility-wide inpatient contributed from December 1

Month/ Year-	Antimicrobial Agent	Drug-specific Antimicrobial Days				
Location		Total	IV	IM	Digestive	Respiratory
December MICU	Vancomycin	1	1	0	0	0
December Medical Ward	Vancomycin	1	1	0	0	0
December Facility- wide- inpatient	Vancomycin	1	1	0	0	0

# **Example 3.** Calculation of Antimicrobial Days for a Patient-Care Location when a Patient Admission extends over Two Different Months

This example illustrates the calculation of antimicrobial days from a patient receiving ceftriaxone 1gram intravenously every 24 hours for two days in the surgical ward (but spanning different months). Table 1 provides an example of administered doses for this patient documented in eMAR. Table 2 illustrates the calculation of ceftriaxone days by drug-specific (total) and stratification of route of administration based upon the administered doses of ceftriaxone documented in eMAR. Table 3 illustrates the contribution of this patient's ceftriaxone days to the aggregate monthly report per patient-care location.

Table 1. Example eMAR for Patient housed in Surgical Ward

	Thursday December 31 Location: Surgical Ward	Friday January 1 Location: Surgical Ward		
Ceftriaxone gram intravenously every 24 hours	Given: 0800	Given: 0800		

Table 2. Example of calculation of antimicrobial days

Calculation	Thursday	Friday	
	December 31	January 1	
	<b>Location: Surgical Ward</b>	Location: Surgical Ward	
Drug-specific Antimicrobial	Ceftriaxone Day = 1	Ceftriaxone Day = 1	
Days (total)			
Drug-specific Antimicrobial	Ceftriaxone Day	Ceftriaxone Day	
Days by Stratification of	(IV) = 1	(IV) = 1	
Route of Administration			

Table 3. Example of antimicrobial days per month per patient-care location

Month/ Year-	Antimicrobial Agent	Drug-specific Antimicrobial Days				
Location		Total	IV	IM	Digestive	Respiratory
December/ Surgical Ward	Ceftriaxone	1	1	0	0	0
January/ Surgical Ward	Ceftriaxone	1	1	0	0	0
