

## Justification of Non-material Changes

0938-0992

There was an overall decrease in respondents and burden estimates associated with this reporting. There was an overall decrease of 35,759 responses, and an overall decrease of 51,724 burden hours associated with this revised data collection. However, the annualized burden per respondent increased to 23 hours. The decrease in responses and burden hours associated with this data collection is attributed to: (1) a change in the level of reporting for four reporting sections, and (2) a change in the most common reporting frequency from quarterly to annually. The increase in annualized burden per respondent is attributed to the increase in overall contracts required to report data.
