

SUPPORTING STATEMENT

A. Justification:

1. The Commission is requesting an extension (no change in the reporting and/or recordkeeping requirements) in order to obtain the full three year clearance from the Office of Management and Budget (OMB). There is no change in the burden estimates.

Under section 1.929(c)(1) of the Commission's rules, any increase in the composite interference contour (CIC)¹ of a site-based licensee in the Paging and Radiotelephone Service, Rural Radiotelephone Service, or 800 MHz Specialized Mobile Radio Service is a major modification of a license that requires prior Commission approval. However, on February 22, 2005, the Commission released a Report and Order in WT Docket No. 03-103 (70 FR 19293), in which it amended § 1.929(c)(1) to specify that expansion of a composite interference contour (CIC) of a site-based licensee in the Paging and Radiotelephone Service—as well as the Rural Radiotelephone Service and 800 MHz Specialized Mobile Radio Service—over water on a secondary, non-interference basis should be classified as a minor (rather than major) modification of a license. Such reclassification has eliminated the filing requirements associated with these license modifications, but requires site-based licensees to provide the geographic area licensee (on the same frequency) with the technical and engineering information necessary to evaluate the site-based licensee's operations over water.

Statutory authority for this collection of information is contained in 47 U.S.C. 309(j).

2. The purpose for this collection is to enable the geographic licensee to have technical and engineering information regarding a site-based licensee's operations over water in order to guard against unacceptable interference to its own operation(s).
3. Prior to finalizing rulemakings, the Wireless Telecommunications Bureau conducts an analysis to ensure that improved information technology cannot be used to reduce the burden on the public. This analysis considers the possibility of obtaining and/or computer-generating the required data from existing databases in the Commission or other federal agencies.
4. No similar information is available.
5. In conformance with the Paperwork Reduction Act of 1995, the Commission is making an effort to minimize the burden on all respondents, regardless of size. The Commission has limited the proposed information requirements to those absolutely necessary for geographic licensees to have technical and engineering information regarding site-based

¹ A CIC connects the outermost points of the intersecting interference contours for the base stations in a radio system. However, an incumbent's valid CIC does not include areas surrounded by the composite interior contour that are not part of the interference contours of the incumbent's individual sites. See Revision of Part 22 and Part 90 of the Commission's Rules to Facilitate Future Development of Paging Systems and Implementation of Section 309(j) of the Communications Act - Competitive Bidding, *Memorandum Opinion and Order on Reconsideration and Third Report and Order*, 14 FCC Rcd 10030, 10055 ¶35 (1999).

licensees' operations over water in order to guard against unacceptable interference to their own operation(s).

6. If the information were not collected, a geographic licensee would not have technical and engineering information regarding a site-based licensee's operations over water in order to guard against unacceptable interference to its own operation(s).
7. The proposed data collection is consistent with 5 CFR § 1320.6.
8. The Commission published a notice of this information collection which appeared in the Federal Register on December 6, 2012 (77 FR 72861), in compliance with 5 CFR Section 1320.8. We received no PRA comments on this matter.
9. Respondents will not receive any payments.
10. There is no need for confidentiality.
11. This collection does not address any private matters of a sensitive nature.
12. We've determined that the number of licensees who are required to provide the geographic area licensee (on the same frequency) with the technical and engineering information necessary to evaluate the site-based licensee's operations over water will remain the same. Therefore, 50 respondents will be subject to this requirement annually. We estimate that it will take 1 engineer approximately 2 hours to meet this requirement. We assume that this requirement can be met by use of in-house personnel.

$$50 \text{ (respondents)} \times 2 \text{ hrs (engineer)} = 100 \text{ hrs.}$$

Total Hour Burden: 100 hours.

13. Assuming that respondents will use in-house engineering personnel, we estimate respondents' cost to be \$32.00 per hour.

$$\$32.00 \text{ (engineer)} \times 100 \text{ hrs} = \$3,200.00$$

Total Cost Burden: \$3,200.00

14. There is no cost to the Federal Government.
15. There are no changes in the Commission's burden estimates.
16. This data will not be published for statistical use.
17. No expiration date will be displayed.
18. There is no exception to Item 19.

B. Collections of Information Employing Statistical Methods:

No statistical methods are employed.
