The information requested in this survey is needed to prepare the 2012 end of year report on yields and prices received for tree fruits, berries and selected fresh market vegetables. Information requested in this survey is used to prepare estimates of selected agricultural commodities. Under Title 7 of the U.S. Code and CIPSEA (Public Law 107-347), facts about your operation are kept **confidential** and used only for statistical purposes in combination with similar reports from other producers. Response is **voluntary**.

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0535-0037. The time required to complete this information collection is estimated to average 20 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

How is this information used?

- Fruit and vegetable growers who had fresh market sales can compare their prices and yields with their State averages.
- Farm organizations use the information to help form their policy positions.
- USDA agencies use the information to determine crop insurance and disaster aid payments along with other program benefits.

According to Farm Service Agency (FSA),

“New England farmers receive payments for losses on fruit and vegetable crops through our Noninsured Crop Assistance Program (NAP). Without the data collected from this survey, FSA would have to use yields and prices from outside the New England region. Such prices are typically lower than prices received by New England growers because they don’t accurately account for the volume of direct market sales that we have in New England.”
