**g. Summary of DoD information system or electronic collection. Answers to these questions should be consistent with security guidelines for release of information to the public.**

(1) Describe the purpose of this DoD information system or electronic collection and briefly describe the types of personal information about individuals collected in the system.

The Joint Personnel Adjudication System (JPAS) is an enterprise automated system for personnel security management, providing a common, comprehensive medium to record and document personnel security actions within the Department, including granting interim clearances and submitting investigations. Decentralized access is authorized at the nine central adjudication facilities and DoD Component security offices. JPAS also compiles statistical data for use in analyses and studies. Types of personal information being collected include SSN, name, and date of birth along with any records related to security, clearance or adjudication.

(2) Briefly describe the privacy risks associated with the PII collected and how these risks are addressed to safeguard privacy.

Access, transmission, and storage of information protected under the Privacy Act of 1974 are subject to threats including, but not limited to: malware, sniffing, spoofing, leakage and physical assault, as well as various natural disasters and failures which impact either the protected data or the infrastructure upon which the data services depend. All of these imperil, to one extent or another information availability, integrity, and confidentiality. If all mitigations are working, there should be minimal risk to individual's privacy. The amount of PII and sensitive information retained and collected in JPAS can encompass an individual's entire career as a potential holder/user of classified material. This information is being stored in compliance with all applicable regulatory guidance and with the full and complete knowledge of the member. The privacy risks would include identification of persons who have been investigated and adjudicated for potential access to classified material. Further risks of reduced concern might be the potential focus of targeting by information collection, tracking, or most unlikely direct harm of the individual.
