Appendix C: Past Period Change Record Layout

Introduction

This appendix describes how to populate the fields in the Past Period Change (PPC) Detail Record layout by each event. It explains the requirements for populating each field to effect a change in historical data. In addition, the edits performed on the data are listed along with the error messages. These specifications must be adhered to when creating a PPC record.

There are three purposes of PPC records:

1. To delete previously reported events that are reported in error (e.g., an event was reported for the wrong borrower)

2. To correct historical data that cannot be adjusted by correcting current data fields (e.g., a previously reported loan status that should have been reported with another value at the time it was originally reported)

3. To delete a previously reported loan when that loan never existed

Refer to Section 6.6 for a detailed explanation of when to use a PPC record and how to populate these records. And see Figure 6–8, PPC Events Keys, and Values, for a complete list of changes that can be made using PPC records.

The Database Extract file accommodates both Detail records extracted from your loan database(s) and PPC records. PPC records can be added at any location in the Database Extract file, which means they can be appended to the file after you extract records from your database(s).

Header Record

PPC records are combined with Detail Records in the data provider's Database Extract file so there is no separate header record for PPC records. See Appendix A for a detailed description of the Header record.

Detail Record Identifiers

Positions 1–3 identify the guaranty agency (GA) and positions 4–60 identify the specific loan to be updated. You should populate these fields in accordance with the data dictionary contained in Appendix A.

Record Type Indicator

You must populate the Record Type Indicator field (position 61 of the Detail Record) with a Z to indicate it is a PPC record. All PPC records bypass Delta processing so that all PPC records are added to the Submittal file. Edits on PPC records differ from Detail records.

PPC Detail Records

Each data element of the Detail record is defined as character, numeric, or date field:

- Character fields may contain letters, numbers, or blanks.
- Numeric fields must only contain numbers.
- Date fields must contain eight digits, be valid dates, and appear in the format CCYYMMDD (e.g., 19970131), where:

  - CC = 2 digits for century
  - YY = 2 digits for year
  - MM = 2 digits for month
  - DD = 2 digits for day

The following types of fields include the following default values:

- Character fields—must be filled with spaces.
- Numeric fields—must be filled with zeroes.
- Date fields—must be filled with zeroes.
