

NIH Biographical Sketch Survey
Web Survey Screenshots
DRAFT
Version 1
April 15, 2014

Introduction: The following short survey will attempt to capture the opinions of reviewers, who have just reviewed applications containing the modified biosketch. For most reviewers, opinions will be based on a historical comparison to the current NIH biosketch.

Background: The [current NIH biosketch](#), which is submitted with all competing NIH grant applications and most progress reports by key personnel, includes the following sections: identification, education and training, personal statement, positions and honors, selected peer-reviewed publications, patent citations and optional short narrative, and research support. The current format emphasizes the value of publications and the prestige of the journals in which those publications appeared. It doesn't, however, provide information on the scientific contributions of specific individuals other than providing a listing of publications or grants awarded. Also, the list of publications and grants provides little information on the long-term impact of specific discoveries.

The modified biosketch has been designed to move evaluation of past performance away from a simple consideration of the prestige of specific journals or the position of a particular name in a list of authors. The primary focus will be on the magnitude and significance of advances that resulted from a scientist's work and the particular role that researcher played in those discoveries. It will allow researchers to provide an account of their own work to allow reviewers and program officials to better assess their contributions and capabilities. Several external organizations like the [Howard Hughes Medical Institute](#) and the [Wellcome Trust](#) include such descriptions.

Note to Respondents: The information you provide in this survey will remain anonymous. No individual respondents will be identified, and all responses will be summarized and reported in aggregate form.

Public reporting burden for this collection of information is estimated to average 15 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: NIH, Project Clearance Branch, 6705 Rockledge Drive, MSC 7974, Bethesda, MD 20892-7974, ATTN: PRA (0925-0046). Do not return the completed form to this address.

Note: Mouseovers will be programmed to define each of the grant activities in the table as follows:

- NIH Research Project Grant Programs are used to support discrete, specified, circumscribed research projects and are NIH's most commonly used programs
- The AREA program supports small-scale research projects in the biomedical and behavioral sciences conducted by faculty and students at educational institutions that have not been major recipients of NIH research grant funds. <http://grants.nih.gov/grants/funding/area.htm>
- Center grants are awarded to institutions to support long-term, multi-disciplinary programs of research and development.
- Small Business program is designed to support small business concerns conducting innovative research/research & development with potential for commercialization.
- A fellowship is a NIH training award for degree seeking candidates where the NIH specifies the individual receiving the award.
- Career Awards are for candidates with a research or health-professional doctoral degree or its equivalent who wish to further develop their careers in biomedical, behavioral and clinical research.

In your opinion, does the modified biographical sketch format help, have no effect, or hinder an applicant's chance for a successful review outcome?

(Select one of the following)

- Helped
- No effect
- Hinder
- Don't know

If you chose "help" or "hinder" please offer a comment limited to 100 characters that describes how the modified biosketch has helped or hindered applications in the NIH review process.

Have you previously submitted a research grant application to NIH as a Principal Investigator (PI) for a single-PI or multiple-PI grant?

(Select yes or no, below)

- Yes
 No

NIH Definition of a Principal Investigator (PI): The individual(s) judged by the applicant organization to have the appropriate level of authority and responsibility to direct the project or program supported by the grant. The applicant organization may designate multiple individuals as PDs/Pis [Program Directors/Principal Investigators] who share the authority and responsibility for leading and directing the project, intellectually and logistically. Each PD/PI is responsible and accountable to the applicant organization, or, as appropriate, to a collaborating organization, for the proper conduct of the project or program including the submission of all required reports. The presence of more than one identified PD/PI on an application or award diminishes neither the responsibility nor the accountability of any individual PD/PI.
