August, 2013

Supporting Statement to the OMB 83-I for Paperwork Reduction Act Submissions

OMB Control Number: 1219 – 0025

Information Collection Title: Application for a Permit to Fire More than 20 Boreholes and/or for the use of Nonpermissible Blasting Units, Explosives, and Shot-firing Units; Posting Notices of Misfires

Form Number(s): None

Authority: 30 CFR §§ 75.1321, 75.1327 and 30 CFR § 77.1909-1

General Instructions

A Supporting Statement, including the text of the notice to the public required by 5 CFR 1320.5(a)(i)(iv) and its actual or estimated date of publication in the Federal Register, must accompany each request for approval of a collection of information. The Supporting Statement must be prepared in the format described below, and must contain the information specified in Section A below. If an item is not applicable, provide a brief explanation. When Item 17 or the OMB Form 83-I is checked "Yes", Section B of the Supporting Statement must be completed. OMB reserves the right to require the submission of additional information with respect to any request for approval.

Specific Instructions

JUSTIFICATION

1. Explain the circumstances that make the collection of information necessary. Identify any legal or administrative requirements that necessitate the collection. Attach a copy of the appropriate section of each statute and regulation mandating or authorizing the collection of information.

Under Section 313 of the Federal Mine Safety and Health Act of 1977 (Mine Act), 30 U.S.C. § 873, any explosives used in underground coal mines must be permissible. The Mine Act also provides that, under safeguards prescribed by the Secretary of Labor, a mine operator may permit the firing of more than 20 shots and the use of nonpermissible explosives in sinking shafts and slopes from the surface in rock. Title 30 CFR § 75.1321 outlines the procedures by which a permit may be issued for the

firing of more than 20 boreholes and/or the use of nonpermissible shot-firing units in underground coal mines. In those instances in which there is a misfire of explosives, § 75.1327 requires that a qualified person post each accessible entrance to the affected area with a warning to prohibit entry. Section 77.1909-1 outlines the procedures by which a coal mine operator may apply for a permit to use nonpermissible explosives and/or shot-firing units in the blasting of rock while sinking shafts or slopes for underground coal mines.

2. Indicate how, by whom, and for what purpose the information is to be used. Except for a new collection, indicate the actual use the agency has made of the information received from the current collection.

MSHA uses the information requested to issue a permit to the mine operator for the use of nonpermissible explosives and/or shot-firing units. The permit informs mine management and the miners of the steps to protect the safety of any person exposed to such blasting while using nonpermissible items.

To obtain a permit, the mine operator files an application with the MSHA district manager in the district in which the mine is located. Applications contain the name and address of the mine, the designated active workings in which the units will be used and the approximate number of shots to be fired, the period of time during which such units are to be used, the nature of the development or construction for which they will be used, a plan to protect miners, a statement of the specific hazards anticipated, and the method to be employed to avoid the dangers anticipated.

The district manager may permit the firing of more than 20 boreholes of permissible explosives in a round where he has determined that it is necessary to reduce the overall hazard to which miners are exposed during underground blasting. The district manager issues a permit to use nonpermissible items when he finds that a permissible shot-firing unit does not have adequate blasting capacity and the use of such permissible units will create development or construction hazards. As a condition of use, the district manager may include safeguards, in addition to those proposed by the operator, that he determines are necessary to protect the safety of the miners at the time the district manager permits blasting.

3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses, and the basis for the decision for adopting this means of collection. Also describe any consideration of using information technology to reduce burden.

Applications may be mailed, emailed or faxed, using company letterhead stationery. No improved information technology has been identified that would reduce the burden. The applications to fire more than 20 boreholes, or to use nonpermissible explosives and/or non-permissible blasting units in shaft or slope construction are narrative descriptions of the equipment and explosives to be used, the number and pattern of the boreholes to be fired, and the safety precautions to be employed. The applications may include schematics, tables, and drawings. Such narrative plans and simple graphics can be prepared using personal computers and submitted via email, where the mine operator has the capability of affixing transmittable authorization signatures, or where the respondent follows with an email or facsimile by a signed hard copy.

4. Describe efforts to identify duplication. Show specifically why any similar information already available cannot be used or modified for use for the purposes described in Item 2 above.

There is no similar or duplicate information that MSHA could use. MSHA issues permits on a mine-by-mine basis for the period specified by the district manager. As far as could be determined, no state agency or other party requires such permit approval.

5. If the collection of information impacts small businesses or other small entities (Item 5 of OMB Form 83-I), describe any methods used to minimize burden.

This information collection does not have a significant impact on small businesses or other small entities.

6. Describe the consequence to Federal program or policy activities if the collection is not conducted or is conducted less frequently, as well as any technical or legal obstacles to reducing burden.

In the absence of this collection, or permits for blasting units, explosives and shot-firing units, the mine operator or shaft and slope contractors would be putting the miners at risk. There would be no guarantee that the mine operator would have a plan designed to ensure the protection of life and the prevention of injuries to the miners exposed to underground blasting. In addition, MSHA would be unable to enforce the requirements of the Federal Mine Safety and Health Act of 1977 as effectively without this collection.

7. Explain any special circumstances that would cause an information collection to be conducted in a manner:

• requiring respondents to report information to the agency more often than quarterly;

Permit applications, which contain all pertinent information, are submitted only one time at any given mine. There are no requirements for the respondent to report the ongoing or occasional use of the district manager-approved blasting plan, including the use of nonpermissible blasting units or the firing of more than 20 boreholes. Although a mine operator is not explicitly required to submit information more than once, revised applications do need to be submitted to MSHA any time the conditions outlined in item 6 of this statement occur.

- requiring respondents to prepare a written response to a collection of information in fewer than 30 days after receipt of it;
- requiring respondents to submit more than an original and two copies of any document;
- requiring respondents to retain records, other than health, medical, government contract, grant-in-aid, or tax records for more than three years;
- in connection with a statistical survey, that is not designed to produce valid and reliable results that can be generalized to the universe of study;
- requiring the use of a statistical data classification that has not been reviewed and approved by OMB;
- that includes a pledge of confidentiality that is not supported by authority established in statute or regulation, that is not supported by disclosure and data security policies that are consistent with the pledge, or which unnecessarily impedes sharing of data with other agencies for compatible confidential use; or
- requiring respondents to submit proprietary trade secret, or other confidential information unless the agency can demonstrate that it has instituted procedures to protect the information's confidentiality to the extent permitted by law.

This collection of information is otherwise consistent with the guidelines in 5 CFR § 1320.5.

8. If applicable, provide a copy and identify the data and page number of publication in the Federal Register of the agency's notice, required by 5 CFR 1320.8(d), soliciting comments on the information collection prior to submission to OMB. Summarize public comments received in response to that notice and describe actions taken by the agency in response to these comments. Specifically address comments received on cost and hour burden.

Describe efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported. Consultation with representatives of those from whom information is to be obtained or those who must compile records should occur at least once every 3 years even if the collection of information activity is the same as in prior periods. There may be circumstances that may preclude consultation in a specific situation. These circumstances should be explained. MSHA published a 60-day Federal Register notice on July 3, 2013 (78 FR 40195), notifying the public that the information collection requirements were being reviewed in accordance with the Paperwork Reduction Act of 1995. MSHA received one comment that strongly supported the continued collection of this information.

9. Explain any decision to provide any payment or gift to respondents, other than remuneration of contractors or grantees.

MSHA does not provide payments or gifts to respondents.

10. Describe any assurance of confidentiality provided to respondents and the basis for the assurance in statute, regulation, or agency policy.

There is no assurance of confidentiality provided to the respondents.

11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private. This justification should include the reasons why the agency considers the questions necessary, the specific uses to be made of the information, the explanation to be given to persons form from whom the information is requested, and any steps to be taken to obtain their consent.

There are no questions of a sensitive nature.

12. Provide estimates of the hour burden of the collection of information. The statement should:

- Indicate the number of respondents, frequency of response, annual hour burden, and an explanation of how the burden was estimated. Unless directed to do so, agencies should not conduct special surveys to obtain information on which to base hour burden estimates. Consultation with a sample (fewer than 10) of potential respondents is desirable. If the hour burden on respondents is expected to vary widely because of differences in activity, size, or complexity, show the range of estimated hour burden, and explain the reasons for the variance. Generally, estimates should not include burden hours for customary and usual business practices.
- If this request for approval covers more than one form, provide separate hour burden estimates for each form and aggregate the hour burdens in Item 13 of OMB Form 83-I.
- Provide estimates of annualized cost to respondents for the hour burdens for collections of information, identifying and using appropriate wage rate categories. The cost of contracting out or paying outside parties for

information collection activities should not be included here. Instead, this cost should be included in Item 13.

Wages for underground coal mine engineers and miners are derived from the publication, *US Coal Mine Salaries, Wages and Benefits* (InfoMine USA, Inc., 2011 Survey Results).

30 CFR § 75.1321 and § 77.1909-1

In FY 2012, 67 permit applications were received (49 under § 75.1321 and 18 under § 77.1909-1). MSHA is using the actual FY 2012 numbers as the basis of this collection estimate. MSHA estimates that it would take a mine operator approximately one hour to prepare and submit a permit application:

Reporting Burden Hours: **67 respondents**/ mines sending 1 response/ application each x 1 hour per application = **67 hours**

MSHA's experience indicates that engineers and other technically trained persons prepare the permit applications. MSHA estimates the average cost per hour for preparation by an underground coal engineer to be \$64.98.

67 hours x \$64.98 per hour = \$4,354

30 CFR §75.1327

The use of explosives may occasionally result in a misfire. In such cases, a qualified person is required to post a conspicuous warning notice at the entrance to the affected area. The number of active mining units using explosives to break coal has declined from 24 in October 2009 to 15 in October 2012. MSHA correspondingly estimates that the number of misfired boreholes requiring notices has proportionally decreased. MSHA estimates that not more than 21 misfires occur each year and that it takes approximately 20 minutes (0.33 hours) to post a notice warning that a misfire that has not been disposed of is present. MSHA estimates the 2011 hourly wage rate for an underground coal miner to be \$36.02 per hour.

Third Party Disclosure Burden Hours: **21 respondents**/ mines sending 1 response/notice each x 0.33 hours per notice = **7 hours**

7 hours x \$36.02 per hour =

\$252

<u>Totals</u>: Respondents = 67 Responses = 88 Burden Hours = 74 Hour Burden Cost = \$4,606 13. Provide an estimate of the total annual cost burden to respondents or recordkeepers resulting from the collection of information. (Do not include the cost of any hour burden shown in Items 12 and 14).

- The cost estimate should be split into two components: (a) a total capital and start-up cost component (annualized over its expected useful life); and (b) a total operation and maintenance and purchase of services component. The estimates should take into account costs associated with generating, maintaining, and disclosing or providing the information. Include descriptions of methods used to estimate major cost factors including system and technology acquisition, expected useful life of capital equipment, the discount rate(s), and the time period over which costs will be incurred. Capital and start-up costs include, among other items, preparations for collecting information such as purchasing computers and software; monitoring, sampling, drilling and testing equipment; and record storage facilities.
- If cost estimates are expected to vary widely, agencies should present ranges of cost burdens and explain the reasons for the variance. The cost of purchasing or contracting out information collection services should be a part of this cost burden estimate. In developing cost burden estimates, agencies may consult with a sample of respondents (fewer than 10), utilize the 60-day pre-OMB submission public comment process and use existing economic or regulatory impact analysis associated with the rulemaking containing the information collection, as appropriate.
- Generally, estimates should not include purchases of equipment or services, or portions thereof, made: (1) prior to October 1, 1995, (2) to achieve regulatory compliance with requirements not associated with the information collection, (3) for reasons other than to provide information or keep records for the government, or (4) as part of customary and usual business or private practices.

MSHA estimates that the narrative and any tables, charts, or drawings created for use in the permit application can be developed on normal office equipment used in the customary and usual course of business. Applications submitted by email or fax only would not incur mailing costs. MSHA estimates that the cost to mail an application is approximately \$6.00. MSHA estimates that 50 percent of respondents mail the applications and 50 percent submit them electronically:

Reporting Cost: 67 applications x 50% x \$6.00 per application = \$201

MSHA also estimates that the warning notice/sign of a misfire will be non-reusable, preprinted "danger/misfire" placards. The estimated cost of placards is approximately \$7.00 each. **Third Party Disclosure Cost:** 21 postings x \$7.00 = \$147

Total Burden Cost = \$348

14. Provide estimates of annualized cost to the Federal government. Also, provide a description of the method used to estimate cost, which should include quantification of hours, operational expenses (such as equipment, overhead, printing, and support staff), and any other expense that would not have been incurred without this collection of information. Agencies also may aggregate cost estimates from Items 12, 13, and 14 in a single table.

MSHA estimates that the review and preparation of a written response of a permit application requires approximately four hours. MSHA technical specialists (GS-12) earning approximately \$50.39 per hour including benefits (Source: OPM Fedscope – MSHA Full-Time Federal Salary and Benefit Data, FY 2012) review applications.

67 applications x 4 hours = 268 hours 268 hours x \$50.39 per hour = \$13,505

Cost to the Federal Government = \$13,505

15. Explain the reasons for any program changes or adjustments reporting in Items 13 or 14 of the OMB Form 83-I.

Respondents or applications for permits decreased from 68 to 67. The decrease in misfires from 33 to 21 reduced the number of placards posted. Burden hours have decreased from 79 hours previously recorded on the OMB Inventory to 74 hours. Total responses have decreased from 101 to 88.

The total annual cost burden to respondents or recordkeepers also decreased from \$387 to \$147 due to an update to the number of respondents who submit applications electronically.

16. For collections of information whose results will be published, outline plans for tabulation, and publication. Address any complex analytical techniques that will be used. Provide the time schedule for the entire project, including beginning and ending dates of the collection of information, completion of report, publication dates, and other actions.

MSHA does not intend to publish the results of this information collection.

17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons that display would be inappropriate.

MSHA is not seeking approval to not display the expiration date for OMB approval of this information collection. There are no instruments associated with this information collection on which to display an expiration date.

18. Explain each exception to the certification statement identified in Item 19, "Certification for Paperwork Reduction Act Submission," of OMB 83-I.

MSHA is not requesting an exception to the certification statement.

B. Collection of Information Employment Statistical Methods

The agency should be prepared to justify its decision not to use statistical methods in any case where such methods might reduce burden or improve accuracy of results. When Item 17 on the Form OMB 83-I is checked "Yes", the following documentation should be included in the Supporting Statement to the extent that it applies to the methods proposed:

As statistical analysis is not required by the regulation, questions 1 through 5 do not apply.
