Survey of DWI Courts and Hybrid DWI/Drug Courts

NHTSA will be designing a program to evaluate DWI Courts, including Hybrid DWI/Drug Courts, to answer questions about their effectiveness: for whom do DWI Courts work best, what DWI Court components are effective, and how effective are they? This survey is a critical first step in that process as it will identify the program structures, operational characteristics, and populations currently served by DWI Court programs.

Your participation in this survey is extremely important. First, the results will provide the most detailed description of DWI programs to date. From this, NHTSA will furnish you with a comprehensive report on what the DWI Courts, as a whole, are doing. Second, the collected information will be used by NHTSA to determine the most germane program features to include in a comprehensive evaluation of DWI Courts. The evaluation findings will help DWI Courts determine how they can best apply their limited resources to achieve the most effective outcomes and maximize the returns on their efforts.

Thank you for participating in this survey. Dissemination of the results will only involve summary statistics that could not be used to identify individual Court responses. Should questions arise as you read through the form, please use the Help link that is provided on each page of the survey.
