| SECTION XIII - FUNCTIONAL LOSS AND LIMITATION OF MOTION   |  |  |  |  |  |
|---|--|--|--|--|--|
| <b>NOTE:</b> The VA defines functional loss as the inability, due to damage or infection in parts of the system, to perform normal working movements of the body with normal excursion, strength, speed, coordination and/or endurance. As regards the joints, factors of disability reside in reductions of their normal excursion of movements in different planes.<br>Using information from the history and physical exam, select the factors below that contribute to functional loss or impairment (regardless of repetitive use) or to additional limitation of ROM after repetitive use for the joint or extremity being evaluated on this DBQ: |  |  |  |  |  |
| 13A. CONTRIBUTING FACTORS OF DISABILITY (check all that apply and indicate si   | ide affected):   |  |  |  |  |

| <b>NOTE:</b> The intention of this section is to permit the examiner to quantify the level of remaining function; it is not intended to inquire whether the Veteran should undergo an amputation with fitting of a prothesis. For example, if the functions of grasping (hand) or propulsion (foot) are as limited as if the Veteran had an  |  |  |  |  |
| amputation and prosthesis, the examiner should check "yes" and describe the diminished functioning. The question simply asks whether the functional loss is to the same degree as if there were an amputation of the affected limb.  |  |  |  |  |
