

Invitation to Participate in Enhanced Protocol, Included with the Mailed ATSS

1-855-500-1437

Call to see if you are eligible to participate in an in-home visit.

You will be given **\$40 in cash** if you are selected and participate.

Invitation to Participate in Enhanced Protocol, Included with the Mailed ATSS

- Learning about the health of children is especially important for this second part of our study, so if you have any children aged 3-17 living in your household you are very likely to be eligible.
- To take part in the second part of the study, one of our staff members will come to your house to talk with you in person. During in-home visits, adult participants will be asked questions about their personal health. They will also have their physical measurements taken. These measurements include height, weight, waist circumference, blood pressure, pulse and a sample of saliva.
- If a child also participates, we will take his or her physical measurements and ask questions about his or her physical activity and health. Children between the ages of 12 and 17, who will be asked health and activity questions directly, will receive **\$10 in cash** if they complete this second part of the study. Caregivers of children between the ages of 3 and 11, who will be asked to answer questions on behalf of their children, will be given **\$10 in cash** for their child's participation.
- In-home visits are time sensitive and must be completed within 4 weeks of the time that you complete the survey by either the enclosed questionnaire or over the phone. Also, even if you've completed your paper survey recently, appointments can be scheduled for no later than «**end date for Enhanced Protocol**».
