The Responsible Entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- For Measure 1, the Nuclear Plant Generator Operator shall keep its latest transmittals and receipts.
- For Measure 2, the Nuclear Plant Generator Operator and each Transmission Entity shall have its current, in-force agreement.
- For Measure 3, the Transmission Entity shall have the latest planning analysis results.
- For Measures 4.3, 6 and 8, the Transmission Entity shall keep evidence for two years plus current.
- For Measures 5, 6 and 7, the Nuclear Plant Generator Operator shall keep evidence for two years plus current.

If a Responsible Entity is found non-compliant it shall keep information related to the noncompliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None.

2. Violation Severity Levels

2.1. Lower: Agreement(s) exist per this standard and NPIRs were identified and implemented, but documentation described in M1-M8 was not provided.

2.2. Moderate: Agreement(s) exist per R2 and NPIRs were identified and implemented, but one or more elements of the Agreement in R9 were not met.

2.3. High: One or more requirements of R3 through R8 were not met.

2.4. Severe: No proposed NPIRs were submitted per R1, no Agreement exists per this standard, or the Agreements were not implemented.

E. Regional Differences

The design basis for Canadian (CANDU) NPPs does not result in the same licensing requirements as U.S. NPPs. NRC design criteria specifies that in addition to emergency on-site electrical power, electrical power from the electric network also be provided to permit safe shutdown. This requirement is specified in such NRC Regulations as 10 CFR 50 Appendix A — General Design Criterion 17 and 10 CFR 50.63 Loss of all alternating current power. There are no equivalent Canadian Regulatory requirements for Station Blackout (SBO) or coping times as they do not form part of the licensing basis for CANDU NPPs.
Therefore the definition of NPLR for Canadian CANDU units will be as follows:

Nuclear Plant Licensing Requirements (NPLR) are requirements included in the design basis of the nuclear plant and are statutorily mandated for the operation of the plant; when used in this standard, NPLR shall mean nuclear power plant licensing requirements for avoiding preventable challenges to nuclear safety as a result of an electric system disturbance, transient, or condition.

2	January 22, 2010	Approved by FERC on January 21, 2010 Added Effective Date	Update
2	TBD	R9.1, R9.1.1, R9.1.2, R9.1.3, and R9.1.4 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. Title: **Technical Assessment of the Design and Effectiveness of Undervoltage Load Shedding Program.**

2. Number: PRC-010-0

3. Purpose: Provide System preservation measures in an attempt to prevent system voltage collapse or voltage instability by implementing an Undervoltage Load Shedding (UVLS) program.

4. Applicability:

4.1. Load-Serving Entity that operates a UVLS program

4.2. Transmission Owner that owns a UVLS program

4.3. Transmission Operator that operates a UVLS program

4.4. Distribution Provider that owns or operates a UVLS program

5. Effective Date: April 1, 2005

B. Requirements

R1. The Load-Serving Entity, Transmission Owner, Transmission Operator, and Distribution Provider that owns or operates a UVLS program shall periodically (at least every five years or as required by changes in system conditions) conduct and document an assessment of the effectiveness of the UVLS program. This assessment shall be conducted with the associated Transmission Planner(s) and Planning Authority(ies).

R1.1. This assessment shall include, but is not limited to:

R1.1.1. Coordination of the UVLS programs with other protection and control systems in the Region and with other Regional Reliability Organizations, as appropriate.

R1.1.2. Simulations that demonstrate that the UVLS programs performance is consistent with Reliability Standards TPL-001-0, TPL-002-0, TPL-003-0 and TPL-004-0.

R1.1.3. A review of the voltage set points and timing.

R2. The Load-Serving Entity, Transmission Owner, Transmission Operator, and Distribution Provider that owns or operates a UVLS program shall provide documentation of its current UVLS program assessment to its Regional Reliability Organization and NERC on request (30 calendar days). (Retired)

C. Measures

M1. Each Transmission Owner's and Distribution Provider's UVLS program shall include the elements identified in Reliability Standard PRC-010-0_R1.

M2. Each Load-Serving Entity, Transmission Owner, Transmission Operator, and Distribution Provider that owns or operates a UVLS program shall have evidence it provided documentation of its current UVLS program assessment to its Regional Reliability Organization and NERC as specified in Reliability Standard PRC-010-0_R2. (Retired)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Compliance Monitor: Regional Reliability Organizations. Each Regional Reliability Organization shall report compliance and violations to NERC via the NERC Compliance Reporting process.

1.2. Compliance Monitoring Period and Reset Timeframe

Assessments every five years or as required by System changes.

Current assessment on request (30 calendar days.)

1.3. Data Retention

None specified.

1.4. Additional Compliance Information

None.

2. Levels of Non-Compliance

2.1. Level 1: Not applicable.

2.2. Level 2: Not applicable.

2.3. Level 3: Not applicable.

2.4. Level 4: An assessment of the UVLS program did not address one of the three requirements listed in Reliability Standard PRC-010-0_R1.1 or an assessment of the UVLS program was not provided.

E. Regional Differences

1. None identified.

Version History

Standard PRC-022-1 — Under-Voltage Load Shedding Program Performance

A. Introduction

1. **Title:** **Under-Voltage Load Shedding Program Performance**

2. **Number:** **PRC-022-1**

3. **Purpose:** Ensure that Under Voltage Load Shedding (UVLS) programs perform as intended to mitigate the risk of voltage collapse or voltage instability in the Bulk Electric System (BES).

4. **Applicability**

   4.1. Transmission Operator that operates a UVLS program.

   4.2. Distribution Provider that operates a UVLS program.

   4.3. Load-Serving Entity that operates a UVLS program.

5. **Effective Date:** May 1, 2006

B. Requirements

R1. Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program to mitigate the risk of voltage collapse or voltage instability in the BES shall analyze and document all UVLS operations and Misoperations. The analysis shall include:

R1.1. A description of the event including initiating conditions.

R1.2. A review of the UVLS set points and tripping times.

R1.3. A simulation of the event, if deemed appropriate by the Regional Reliability Organization. For most events, analysis of sequence of events may be sufficient and dynamic simulations may not be needed.

R1.4. A summary of the findings.

R1.5. For any Misoperation, a Corrective Action Plan to avoid future Misoperations of a similar nature.

R2. Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program shall provide documentation of its analysis of UVLS program performance to its Regional Reliability Organization within 90 calendar days of a request. (Retired)

C. Measures

M1. Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program shall have documentation of its analysis of UVLS operations and Misoperations in accordance with Requirement 1.1 through 1.5.

M2. Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program shall have evidence that it provided documentation of its analysis of UVLS program performance within 90 calendar days of a request by the Regional Reliability Organization. (Retired)

D. Compliance

1. Compliance Monitoring Process

   1.1. Compliance Monitoring Responsibility

   Regional Reliability Organization.

   1.2. Compliance Monitoring Period and Reset Time Frame

One calendar year.

1.3. Data Retention

Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program shall retain documentation of its analyses of UVLS operations and Misoperations for two years. The Compliance Monitor shall retain any audit data for three years.

1.4. Additional Compliance Information

Transmission Operator, Load-Serving Entity, and Distribution Provider shall demonstrate compliance through self-certification or audit (periodic, as part of targeted monitoring or initiated by complaint or event), as determined by the Compliance Monitor.

2. Levels of Non-Compliance

2.1. Level 1: Not applicable.

2.2. Level 2: Documentation of the analysis of UVLS performance was provided but did not include one of the five requirements in R1.

2.3. Level 3: Documentation of the analysis of UVLS performance was provided but did not include two or more of the five requirements in R1.

2.4. Level 4: Documentation of the analysis of UVLS performance was not provided.

E. Regional Differences

None identified.

January 20, 2006
1	TBD	R2 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. **Title:** **Voltage and Reactive Control**

2. **Number:** VAR-001-2

3. **Purpose:** To ensure that voltage levels, reactive flows, and reactive resources are monitored, controlled, and maintained within limits in real time to protect equipment and the reliable operation of the Interconnection.

4. **Applicability:**

   4.1. Transmission Operators.

   4.2. Purchasing-Selling Entities.

   4.3. Load Serving Entities.

5. **(Proposed) Effective Date:** The first day of the first calendar quarter six months after applicable regulatory approval; or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter six months after Board of Trustees' adoption.

B. Requirements

R1. Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators.

R2. Each Transmission Operator shall acquire sufficient reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching;, and controllable load – within its area to protect the voltage levels under normal and Contingency conditions. This includes the Transmission Operator's share of the reactive requirements of interconnecting transmission circuits.

R3. The Transmission Operator shall specify criteria that exempts generators from compliance with the requirements defined in Requirement 4, and Requirement 6.1.

R3.1. Each Transmission Operator shall maintain a list of generators in its area that are exempt from following a voltage or Reactive Power schedule.

R3.2. For each generator that is on this exemption list, the Transmission Operator shall notify the associated Generator Owner.

R4. Each Transmission Operator shall specify a voltage or Reactive Power schedule [1] at the interconnection between the generator facility and the Transmission Owner's facilities to be maintained by each generator. The Transmission Operator shall provide the voltage or Reactive Power schedule to the associated Generator Operator and direct the Generator Operator to comply with the schedule in automatic voltage control mode (AVR in service and controlling voltage).

R5. Each Purchasing-Selling Entity and Load Serving Entity shall arrange for (self-provide or purchase) reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching;, and controllable load– to satisfy its reactive requirements identified by its Transmission Service Provider. (Retired)

[1] The voltage schedule is a target voltage to be maintained within a tolerance band during a specified period.

R6. The Transmission Operator shall know the status of all transmission Reactive Power resources, including the status of voltage regulators and power system stabilizers.

R6.1. When notified of the loss of an automatic voltage regulator control, the Transmission Operator shall direct the Generator Operator to maintain or change either its voltage schedule or its Reactive Power schedule.

R7. The Transmission Operator shall be able to operate or direct the operation of devices necessary to regulate transmission voltage and reactive flow.

R8. Each Transmission Operator shall operate or direct the operation of capacitive and inductive reactive resources within its area – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching; controllable load; and, if necessary, load shedding – to maintain system and Interconnection voltages within established limits.

R9. Each Transmission Operator shall maintain reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching;, and controllable load– to support its voltage under first Contingency conditions.

R9.1. Each Transmission Operator shall disperse and locate the reactive resources so that the resources can be applied effectively and quickly when Contingencies occur.

R10. Each Transmission Operator shall correct IROL or SOL violations resulting from reactive resource deficiencies (IROL violations must be corrected within 30 minutes) and complete the required IROL or SOL violation reporting.

R11. After consultation with the Generator Owner regarding necessary step-up transformer tap changes, the Transmission Operator shall provide documentation to the Generator Owner specifying the required tap changes, a timeframe for making the changes, and technical justification for these changes.

R12. The Transmission Operator shall direct corrective action, including load reduction, necessary to prevent voltage collapse when reactive resources are insufficient.

C. Measures

M1. The Transmission Operator shall have evidence it provided a voltage or Reactive Power schedule as specified in Requirement 4 to each Generator Operator it requires to follow such a schedule.

M2. The Transmission Operator shall have evidence to show that, for each generating unit in its area that is exempt from following a voltage or Reactive Power schedule, the associated Generator Owner was notified of this exemption in accordance with Requirement 3.2.

M3. The Transmission Operator shall have evidence to show that it issued directives as specified in Requirement 6.1 when notified by a Generator Operator of the loss of an automatic voltage regulator control.

M4. The Transmission Operator shall have evidence that it provided documentation to the Generator Owner when a change was needed to a generating unit's step-up transformer tap in accordance with Requirement 11.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity.

1.2. Compliance Monitoring Period and Reset Time Frame

One calendar year.

1.3. Compliance Monitoring and Enforcement Processes:

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

The Transmission Operator shall retain evidence for Measures 1 through 4 for 12 months.

The Compliance Monitor shall retain any audit data for three years.

1.5. Additional Compliance Information

The Transmission Operator shall demonstrate compliance through self-certification or audit (periodic, as part of targeted monitoring or initiated by complaint or event), as determined by the Compliance Monitor.

2. Violation Severity Levels (no changes)

E. Regional Differences

None identified.

Note that when these Requirements are retired, the version numbers of the standards will NOT be incremented, but the retired Requirements and associated elements will be clearly marked as retired. After evaluating the options and consulting with the Standards Committee and Standards Committee Process Subcommittee, the P81 drafting team determined that this was the most practical approach. Incrementing the version numbers of each standard is impractical because, in some cases, a subsequent version has already been developed. In addition, incrementing the version would require renumbering Requirements where a retired Requirement created a gap in numbering, and this creates an undesirable administrative burden for entities using certain systems to manage their compliance programs.

Prerequisite Approvals

Background

On September 30, 2011, the North American Electric Reliability Corporation (NERC) filed a petition with the Federal Energy Regulatory Commission (FERC) requesting approval of its proposal to make informational filings in a "Find, Fix, Track and Report" (FFT) spreadsheet of lesser-risk, remediated possible violations of Reliability Standards. On March 15, 2012, the FERC issued an order conditionally accepting NERC's FFT proposal. In paragraph 81 (P81) of that order, the FERC stated:

> The Commission notes that NERC's FFT initiative is predicated on the view that many violations of requirements currently included in Reliability Standards pose lesser risk to the Bulk-Power System. If so, some current requirements likely provide little protection for Bulk-Power System reliability or may be redundant. The Commission is interested in obtaining views on whether such requirements could be removed from the Reliability Standards with little effect on reliability and an increase in efficiency of the ERO compliance program. If NERC believes that specific Reliability Standards or specific requirements within certain Standards should be revised or removed, we invite NERC to make specific proposals to the Commission identifying the Standards or requirements and setting forth in detail the technical basis for its belief. In addition, or in the alternative, we invite NERC, the Regional Entities and other interested entities to propose appropriate mechanisms to identify and remove from the Commission-approved Reliability Standards unnecessary or redundant requirements. We will not impose a deadline on when these comments should be submitted, but ask that to the extent such comments are submitted NERC, the Regional Entities, and interested entities coordinate to submit their respective comments concurrently. North American Electric Reliability Corporation, 138 FERC ¶ 61,193 at p 81 (March 15, 2012) ("P81").

Consistent with P81, a draft Standards Authorization Request (SAR) was drafted to set forth criteria and a process to identify Reliability Standard requirements that either: (a) provide little protection to the Bulk Electric System; (b) are unnecessary or (c) are redundant; and, thereafter, to have NERC file the identified Reliability Standard requirements with FERC to have them removed from the FERC-approved list of Reliability Standards.

Standards Process Input Group (SPIG)

In addition to addressing P81, the draft SAR was drafted consistent with what the SPIG developed as Recommendation No. 4, as set forth in NERC's Recommendations to Improve The Standards Development Process on page 12 (April 2012), which states:

> Recommendation 4: Standards Product Issues — The NERC board is encouraged to require that the standards development process address: . . . The retirement of standards no longer needed to meet an adequate level of reliability.

Collaborative Process

The draft SAR and a suggested list of Reliability Standard requirements embedded in the SAR for consideration in the Initial Phase was the product of collaborative discussions among the following entities and their members: Edison Electric Institute, American Public Power Association, National Rural Electric Cooperative Association, Large Public Power Council, Electricity Consumers Resource Council, The Electric Power Supply Association, Transmission Access Policy Study Group, the North American Electric Reliability Corporation, and the Regional Entity Management Group. The draft SAR was posted for comment, which were due September 4, 2012. The P81 Standards Drafting Team reviewed the comments and finalized the SAR and the proposed list of Reliability Standard requirements for retirement.

Applicable Entities

- Balancing Authority
- Distribution Provider
- Generator Operator

- Transmission Operator
- Transmission Owner
- Transmission Planner

Effective Date of Retirements

All of the Requirements will be retired on the day of approval by applicable regulatory authorities, or in those jurisdictions where regulatory approval is not required, the first day of the first calendar quarter approved by the NERC Board of Trustees, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

Note that no complete standard is being proposed for retirement and all of the other Requirements in each of the affected standards will remain in continuous effect until such time that the entire standard may be retired.

NERC
NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION

Standards Authorization Request Form

NERC welcomes suggestions to improve the reliability of the bulk power system through improved reliability standards. Please use this form to submit your request to propose a new or a revision to a NERC's Reliability Standard.

Request to propose a new or a revision to a Reliability Standard			
Title of Proposed Standard:	Retirement of Reliability Standard Requirements		
Date Submitted:	September 12, 2012		
SAR Requester Information			
Name:	Brian J. Murphy on behalf of the following:		
Organization:	P81 Interim Standards Drafting Team, as originally supported by Edison Electric Institute, American Public Power Association, National Rural Electric Cooperative Association, Large Public Power Council, Electricity Consumers Resource Council, The Electric Power Supply Association, Transmission Access Policy Study Group, the North American Electric Reliability Corporation, and the Regional Entity Management Group		
Telephone:	305-442-5132		
SAR Type (Check as many as applicable)			
☐ New Standard		☒ Withdrawal of existing Standard	
☒ Revision to existing Standard		☐ Urgent Action	

SAR Information
Industry Need (What is the industry problem this request is trying to solve?):
On March 15, 2012, the Federal Energy Regulatory Commission (FERC) issued an order on NERC's Find, Fix and Track process that stated: "The Commission notes that NERC's FFT initiative is predicated on the view that many violations of requirements currently included in Reliability Standards pose lesser

SAR Information

risk to the Bulk-Power System. If so, some current requirements likely provide little protection for Bulk-Power System reliability or may be redundant. The Commission is interested in obtaining views on whether such requirements could be removed from the Reliability Standards with little effect on reliability and an increase in efficiency of the ERO compliance program. If NERC believes that specific Reliability Standards or specific requirements within certain Standards should be revised or removed, we invite NERC to make specific proposals to the Commission identifying the Standards or requirements and setting forth in detail the technical basis for its belief. In addition, or in the alternative, we invite NERC, the Regional Entities and other interested entities to propose appropriate mechanisms to identify and remove from the Commission-approved Reliability Standards unnecessary or redundant requirements. We will not impose a deadline on when these comments should be submitted, but ask that to the extent such comments are submitted NERC, the Regional Entities, and interested entities coordinate to submit their respective comments concurrently."

North American Electric Reliability Corporation, 138 FERC ¶ 61,193 at p 81 (March 15, 2012) ("P81").

Consistent with P81, the problem this SAR is resolving is to identify Reliability Standards requirements that either: (a) provide little protection to the BPS;[1] (b) are unnecessary or (c) are redundant; and, thereafter, to have NERC file the identified Reliability Standard requirements with FERC to have them removed from the FERC-approved list of Reliability Standards.

In addition to addressing P81, this SAR is also consistent with Recommendation #4 set forth in *NERC's Recommendations to Improve The Standards Development Process* at page 12 (April 2012), which states:

> **Recommendation 4: Standards Product Issues** — The NERC board is encouraged to require that the standards development process address: . . . The retirement of standards no longer needed to meet an adequate level of reliability.

[1] Given NERC's Reliability Standards are based on the definition of a Bulk Electric System (BES), the remainder of this SAR will use the term BES rather than Bulk Power System or BPS.

SAR Information
Purpose or Goal (How does this request propose to address the problem described above?):
The SAR addresses the problem identified above by: (1) Setting forth the initial phase-specific criteria (below) to evaluate whether a Reliability Standard requirement provides little protection to BES reliability or is unnecessary or redundant. (2) Establishing a multi-phased process for addressing these Reliability Standard requirements. During the initial phase, the standard drafting team will identify those Reliability Standard requirements that satisfy the criteria, set forth below, without the need for extensive technical justification or a modification to the requirement, and recommend the retirement of the requirement.[2] During subsequent phases, the standard drafting team may build upon the initial phase criteria, as applicable, to that phase that will identify the remaining appropriate Reliability Standard requirements that could not be included in the initial phase due to the need for additional analysis or a modification of language. This multi-phased approach is also proposed to address FERC's interest in increasing the efficiency of the ERO compliance program, so that the first set of identified Reliability Standard requirements may be filed with FERC on an expedited basis, and, therefore, start increasing ERO efficiencies as soon as practical. (3) At this time, the standard drafting team has identified a list of Reliability Standard requirements to be included in the initial phase that satisfy the criteria set forth below. (4) During each phase, as a list of Reliability Standard requirements is identified, the standard drafting team will also assist NERC staff to file these requirements with FERC so the requirements are removed from the FERC-approved list, including providing additional technical justification, as needed.

[2] The Standards Drafting Team will work with NERC staff to determine the manner to eliminate the identified Reliability Standard requirements.

SAR Information
Identify the Objectives of the proposed standard's requirements (What specific reliability deliverables are required to achieve the goal?):
The objectives of this SAR for all phases of this project are to retire or modify FERC-approved Reliability Standard requirements that provide little protection to the reliable operations of the BES, are redundant or unnecessary, or to retire or modify a FERC-approved Reliability Standard requirement to increase the efficiency of the ERO's compliance programs.
Brief Description (Provide a paragraph that describes the scope of this standard action.)
The scope of this SAR is all FERC-approved Reliability Standards.[3]
Detailed Description (Provide a description of the proposed project with sufficient details for the standard drafting team to execute the SAR. Also provide a justification for the development or revision of the standard, including an assessment of the reliability and market interface impacts of implementing or not implementing the standard action.)
The standard drafting team shall implement a phased process. The Initial Phase shall identify all FERC-approved Reliability Standard requirements that satisfy **both**: (i) Criteria A (the overarching criteria) and (ii) at least one of the Criteria B listed below (identifying criteria). In addition, for all phases, the standard drafting team shall also consider the data and reference points set forth below in Criterion C when deciding whether a Reliability Standard requirement should be retired or modified. **A. Overarching Criterion:** The Reliability Standard requirement requires responsible entities to conduct an activity or task that does little, if anything, to benefit or protect the reliable operation of the BES. Section 215(a)(4) of the Federal Power Act defines "reliable operation" as: "… operating the elements of the bulk-power system within equipment and electric system thermal, voltage, and stability limits so

[3] The scope of this SAR with regard to those requirements that are proposed for retirement includes any currently pending versions of the listed Reliability Standards and any additional version of these Reliability Standards that may be submitted. In other words, the intent is to carry forward these retirements based on substance which is not dependent on the exact numbering or placement within a Reliability Standard.

SAR Information

that instability, uncontrolled separation, or cascading failures of such system will not occur as a result of a sudden disturbance, including a cybersecurity incident, or unanticipated failure of system elements."

B. Identifying Criteria:

1. Administrative

The Reliability Standard requirement requires responsible entities to perform a function that is administrative in nature, does not support reliability and is needlessly burdensome.

2. Data Collection/Data Retention

These are requirements that obligate responsible entities to produce and retain data which document prior events or activities, and should be collected via some other method under NERC's rules and processes.

3. Documentation

The Reliability Standard requirement requires responsible entities to develop a document (*e.g.,* plan, policy or procedure) which is not necessary to protect BES reliability.

4. Reporting

The Reliability Standard requirement obligates responsible entities to report to a Regional Entity, NERC or another party or entity. These are requirements that obligate responsible entities to report to a Regional Entity on activities which have no discernible impact on promoting the reliable operation of the BES and if the entity failed to meet this requirement there would be little reliability impact.

5. Periodic Updates

The Reliability Standard requirement requires responsible entities to periodically update (*e.g.,* annually) documentation, such as a plan, procedure or policy without an operational benefit to reliability.

6. Commercial or Business Practice

The Reliability Standard requirement is a commercial or business practice, or implicates commercial rather than reliability issues.

SAR Information

7. Redundant

The Reliability Standard requirement is redundant with (i) another FERC-approved Reliability Standard requirement; (ii) the ERO compliance and monitoring program; or (iii) a governmental regulation (*e.g.,* Open Access Transmission Tariff, North American Energy Standards Board ("NAESB"), etc.).

C. Additional data and reference points

In those instances where there is a need for additional information to assist in the determination of whether a Reliability Standard requirement satisfies both Criteria A and B, the standard drafting team shall consider the following data and reference points to make a more informed decision:

1. Was the Reliability Standard requirement part of a Find, Fix and Track filing?

2. Is the Reliability Standard requirement being reviewed in an on-going Standards Development Project?

3. What is the Violation Risk Factor of the Reliability Standard requirement?

4. In which tier of the 2013 Actively Monitored List does the Reliability Standard requirement fall?

5. Is there a possible negative impact on NERC's published and posted reliability principles?

6. Is there any negative impact on the defense-in-depth protection of the BES?

7. Does the retirement promote results- or performance-based Reliability Standards?

To facilitate the standard drafting team's consideration of the above questions, NERC staff will provide the team with relevant known data and statistics.

SAR Information

List of Initial Phase Reliability Standard requirements that satisfy both Criteria A and B, with consideration of Criterion C

To be retired:[4]

BAL-005-0.2b R2

Each Balancing Authority shall maintain Regulating Reserve that can be controlled by AGC to meet the Control Performance Standard.

Criterion B 7.

Statement:[5] BAL-005-0.2b is redundant with the Control Performance Standard defined in BAL-001-0.1a R1 and R2. This is also redundant in that it is measured by whether or not BAL-001-0.1a R1 and R2 are met.

Conclusion: This is redundant with the Control Performance Standard defined in BAL-001-0.1a R1 and R2. This is also redundant in that it is measured by whether or not BAL-001-0.1a R1 and R2 are met. This may be double jeopardy in that failure to achieve compliance with BAL-001-0.1a R1 and R2 could imply failure of this standard as well. This is misleading in requiring entities to maintain Regulating

[4] The following requirements that were originally presented in the draft SAR, and now in this final SAR are denoted with a "*" are so denoted because research shows that they are already scheduled to be retired via another Standards Development Project that has been approved by stakeholders and the NERC Board of Trustees (or due to be before the Board in November – *i.e.,* PRC-005-2), and, thus, are presented here for informational purposes only: COM-001-1.1 R6, EOP-009-0 R2; FAC-008-1 R1.3.5; PRC-008-0 R1; PRC-008-0 R2; PRC-009-0 R1; PRC-009-0 R1.1; PRC-009-0 R1.2; PRC-009-0 R1.3; PRC-009-0 R1.4; PRC-009-0 R2; TOP-001-1a R3 and TOP-005-2a R1. These requirements are generally scheduled to be retired within the next year, and, therefore, to subject them to additional stakeholder vote, comment and Board of Trustees approval does not seem warranted or efficient. Consequently, these requirements will not be presented to stakeholders for comment and vote.

[5] The "Statement" and "Conclusion" sections are brief statements that provide context. The technical justification for each Reliability Standards requirement is contained in a separate Technical White Paper that will also be posted for comment.

SAR Information
Reserve, but providing no way to measurably comply, apart from achieving compliance with BAL-001-0.1a R1 and R2. **CIP-001-2a R4.** Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, and Load-Serving Entity shall establish communications contacts, as applicable, with local Federal Bureau of Investigation (FBI) or Royal Canadian Mounted Police (RCMP) officials and develop reporting procedures as appropriate to their circumstances. Criterion B 1, 2 and 3. **Statement:** CIP-001-2a is administrative, documentation and data collection in nature, because the establishment of communication contacts, in and of itself, with the FBI and RCMP has little or no impact on protection or the reliable operation of the BES. Instead, compliance with R1 through R3 of CIP-001-2a provides the actions that responsible entities take to protect the BES in the event of sabotage. Specifically, R1 through R3 require that the Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, and Load Serving Entity have procedures for the recognition of sabotage, reporting of sabotage and communication of sabotage events to appropriate parties in the Interconnection, which may include local law enforcement, the FBI, etc. Thus, CIP-001-2a R1 through R3 serve a reliability function, while R4 is a static, administrative requirement that has no clear results-based nexus to protecting the BES. **Conclusion**: Since this requirement provides little protection to the BES and is administrative in nature, Requirement 4 should be removed from Reliability Standard CIP-001-2a. **CIP-003-3, -4 R1.2** The cyber security policy is readily available to all personnel who have access to, or are responsible for, Critical Cyber Assets. Criterion B 1.

SAR Information

Statement: Whether there is a robust CIP compliance plan on which employees are trained may impact reliability, not whether the cyber security policy is readily available. Employees that are responsible for executing the cyber security policy are required to undergo a variety of training and follow multiple processes and procedures that are already required by the CIP requirements. Simply requiring that the policy be readily available is an administrative task that provides little, if any, benefit to reliability of the BES.

Conclusion: Since this requirement provides little protection to the BES and is purely administrative in nature, Requirement 1.2 should be removed from Reliability Standards CIP-003-3 and CIP-003-4.

CIP-003-3, -4 R3, R3.1, R3.2, R3.3

R3 Exceptions – Instances where the Responsible Entity cannot conform to its cyber security policy must be documented as exceptions and authorized by the senior manager or delegate(s).

R3.1 Exceptions to the Responsible Entity's cyber security policy must be documented within thirty days of being approved by the senior manager or delegate(s).

R3.2 Documented exceptions to the cyber security policy must include an explanation as to why the exception is necessary and any compensating measures.

R3.3 Authorized exceptions to the cyber security policy must be reviewed and approved annually by the senior manager or delegate(s) to ensure the exceptions are still required and valid. Such review and approval shall be documented.

Criterion B 1 and 3.

Statement: Over time, these exception requirements have proven to not be useful and have been subject to misinterpretation, including responsible entities believing they can exempt themselves from compliance with the CIP requirements.

SAR Information

Conclusion: For regulatory efficiency, since these requirements provide little protection to the BES and are open to misinterpretation, in addition to being entirely documentation, Requirement 3 and its sub-requirements should be removed from Reliability Standards CIP-003-3 and CIP-003-4.

CIP-003-3, -4 R4.2.

The Responsible Entity shall classify information to be protected under this program based on the sensitivity of the Critical Cyber Asset information.

Criterion B 1, 3 and 7.

Statement: CIP-003-3, -4 R4 already requires the classification of information associated with Critical Cyber Assets, which makes R4.2 redundant. The only difference in R4.2 is the term, "based on the sensitivity" has been added. The addition of this term can be viewed as overly managing the responsible entities' process of classification or simply not adding sufficient value to reliability to require a new requirement over and above R4.

Conclusion: Since this requirement is redundant and provides little protection to the BES, Requirement 4.2 should be removed from both Reliability Standards CIP-003-3 and CIP-003-4.

CIP-005-3a, -4a R2.6.

Appropriate Use Banner -- Where technically feasible, electronic access control devices shall display an appropriate use banner on the user screen upon all interactive access attempts. The Responsible Entity shall maintain a document identifying the content of the banner.

Criterion B 1 and 3.

Statement: Over time, the banner requirement (or no trespass sign) has not been shown to be useful or consistent with a results-based approach to implementing a cyber security program. Additionally, it is administrative in nature.

SAR Information

Conclusion: Since this requirement provides little protection to the BES and is purely administrative in nature, Requirement R2 should be removed from Reliability Standards CIP-005-3a and CIP-005-4.

CIP-007-3, -4 R7.3

The Responsible Entity shall maintain records that such assets were disposed of or redeployed in accordance with documented procedures.

Criterion B 1 and 2.

Statement: CIP-007-3, -4 R7.3 is evidence collection and possible for inclusion in an RSAW.

Conclusion: Since this requirement provides little protection to the BES and is data collection in nature, it should be removed from CIP-007-3, -4.

***COM-001-1.1 R6.**

Each NERCNet User Organization shall adhere to the requirements in Attachment 1-COM-001-0, "NERCNet Security Policy."

Criterion B 6 and 7.

Statement: This requirement has been approved by stakeholders for removal per Project 2006-06 (Reliability Coordination) and will be presented to the NERC Board of Trustees for approval in November. Thus, COM-001-1.1 R6 is presented here for informational purposes only.

EOP-004-1 R1.

Each Regional Reliability Organization shall establish and maintain a Regional reporting procedure to facilitate preparation of preliminary and final disturbance reports.

SAR Information
Criterion B 1 and 3. **Statement:** Whether or not there is a Regional Entity procedure to report disturbances has no impact on reliability. In other words, while a procedure for the collection of reports on disturbances may be useful information for purposes of Regional Entities to stay informed during events, is not an activity that protects the reliability of BES. The collection of such information should be established outside mandatory Reliability Standards. **Conclusion:** Since this requirement provides little protection to the BES and is purely documentation, Requirement 1 should be removed from Reliability Standard EOP-004-1. **EOP-005-2 R3.1**. If there are no changes to the previously submitted restoration plan, the Transmission Operator shall confirm annually on a predetermined schedule to its Reliability Coordinator that it has reviewed its restoration plan and no changes were necessary. Criterion B 1, 5 and 7. **Statement:** EOP-005-2 R3 reads: "Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually agreed predetermined schedule." This requirement requires the Transmission Operator to submit its restoration plan to the Reliability Coordinator whether or not there have been changes. Therefore, R3.1 only adds a duplicative administrative burden for the entity to also confirm that there were no changes based upon another possible pre-determined schedule. Whether or not there was a change from year to year in the restoration plan will be documented in the revision history of the restoration plan, and thus the Reliability Coordinator will be able to ascertain whether or not there were changes based on R3. Thus, EOP-005-2 R3.1 provides little, if any, value to promoting the protection of the BES. **Conclusion:** For regulatory efficiency, and since this requirement appears redundant to R3, Requirement 3.1 should be removed from Reliability Standard EOP-005-2.

SAR Information

***EOP-009-0 R2.**

The Generator Owner or Generator Operator shall provide documentation of the test results of the startup and operation of each blackstart generating unit to the Regional Reliability Organizations and upon request to NERC.

Criterion B 4.

Statement: In Order No. 749, the Commission approved the retirement of EOP-009-0 R2 as of July 1, 2013, and, thus, it is presented here for informational purposes only.

FAC-002-1 R2.

The Planning Authority, Transmission Planner, Generator Owner, Transmission Owner, Load-Serving Entity, and Distribution Provider shall each retain its documentation (of its evaluation of the reliability impact of the new facilities and their connections on the interconnected transmission systems) for three years and shall provide the documentation to the Regional Reliability Organization(s) and NERC on request (within 30 calendar days).

Criterion B 1 and 2.

Statement: Requiring the retention of studies for three years has no impact on protecting or the reliable operation of the BES, and is merely a data retention requirement that is better suited to be considered during an audit or in the context of compliance monitoring.

Conclusion: Since this requirement provides little protection to the BES and is purely data collection/retention, Requirement 2 should be removed from Reliability Standard FAC-002-1.

***FAC-008-1 R1.3.5.**

Other assumptions.

SAR Information

Criterion B 1.

Statement: The term “other assumptions" has already been removed via FAC-008-3, which will be effective on January 1, 2013, and, thus, it is presented here for informational purposes only.

FAC-008-1 R2; FAC-008-1 R3; FAC-008-3 R4; FAC-008-3 R5

FAC-008-1 R2 The Transmission Owner and Generator Owner shall each make its Facility Ratings Methodology available for inspection and technical review by those Reliability Coordinators, Transmission Operators, Transmission Planners, and Planning Authorities that have responsibility for the area in which the associated Facilities are located, within 15 business days of receipt of a request.

FAC-008-1 R3 If a Reliability Coordinator, Transmission Operator, Transmission Planner, or Planning Authority provides written comments on its technical review of a Transmission Owner’s or Generator Owner’s Facility Ratings Methodology, the Transmission Owner or Generator Owner shall provide a written response to that commenting entity within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Facility Ratings Methodology and, if no change will be made to that Facility Ratings Methodology, the reason why.

FAC-008-3 R4 Each Transmission Owner shall make its Facility Ratings methodology and each Generator Owner shall each make its documentation for determining its Facility Ratings and its Facility Ratings methodology available for inspection and technical review by those Reliability Coordinators, Transmission Operators, Transmission Planners and Planning Coordinators that have responsibility for the area in which the associated Facilities are located, within 21 calendar days of receipt of a request.

FAC-008-3 R5 If a Reliability Coordinator, Transmission Operator, Transmission Planner or Planning Coordinator provides documented comments on its technical review of a Transmission Owner’s Facility Ratings methodology or Generator Owner’s documentation for determining its Facility Ratings and its Facility Rating methodology, the Transmission Owner or Generator Owner shall provide a response to that commenting entity within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Facility Ratings methodology and, if no change will be made to that Facility Ratings methodology, the reason why.

SAR Information

Criterion B 1, 4 and 6.

Statement: For purposes of reliability, facility ratings are transmitted and used via the FAC (System Operating Limits), MOD and TPL Standards,[6] and posting the rating methodology for comment and responding to comments in and of itself has no reliability benefit. Furthermore, these requirements do not appear appropriate given the possible commercial or market related implications of sharing and debating with a competitor the facility ratings methodology of a facility.

Conclusion: For regulatory efficiency and possible commercial or market implications in sharing the facility ratings, and since these requirements are purely administrative in nature along with reporting activities, Requirements R2 and R3 of Reliability Standard FAC-008-1 and Requirements 4 and 5 of Reliability Standard FAC-008-3 should be removed from the Standards.

FAC-010-2.1 R5; FAC-011-2 R5

FAC-010-2.1 R5 If a recipient of the SOL Methodology provides documented technical comments on the methodology, the Planning Authority shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the SOL Methodology and, if no change will be made to that SOL Methodology, the reason why.

FAC-011-2 R5 If a recipient of the SOL Methodology provides documented technical comments on the methodology, the Reliability Coordinator shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the SOL Methodology and, if no change will be made to that SOL Methodology, the reason why.

[6] MOD-001-1a R9, MOD-028-1 R2.3; MOD-029-1a R2.1; MOD-030-02 R3.1, PRC-023-2, Attachment A 2.7; TPL-001-0.1 Footnote a; TPL-002-1b, footnotes a and b; TPL-003-0a, footnote a and TPL-004-0, footnote a. Also, via FAC-011-2 the System Operating Limits methodology of Reliability Coordinator may also use facility ratings as a key element. Also, FAC-008-3 R7 and R8 require the transmission of facility ratings to reliability entities.

SAR Information
Criterion B 1, 4 and 6. **Statement:** A review of FAC-010-2.1 R5 and FAC-011-2 R5 indicate they are administrative requirements for the Planning Authority and Reliability Coordinator to respond to comments on its SOL methodology. Thus, similar to FAC-008-3 R4 and R5, there is no or little protection for BES reliability for a Planning Coordinator or Reliability Coordinator to enter into a give and take with the recipient on its SOL methodology. **Conclusion:** Since these requirements are purely administrative, FAC-010-2.1 R5 and FAC-011-2 R5 should be removed from the Standards. **FAC-013-2 R3** If a recipient of the Transfer Capability methodology provides documented concerns with the methodology, the Planning Coordinator shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Transfer Capability methodology and, if no change will be made to that Transfer Capability methodology, the reason why. Criterion B 1, 4 and 6. **Statement:** Similar to the concerns with FAC-008, the FAC-013-2 requirement to reply to comments on a transfer capability methodology has no reliability benefit, and, moreover, a back and forward on transfer capability could have commercial or market implications. **Conclusion:** For regulatory efficiency and possible commercial or market implications in sharing transfer capability methodology, and since these requirements are purely administrative in nature along with reporting activities, Requirement R3 of Reliability Standard FAC-013-2 should be removed from the Standards. **INT-007-1 R1.2**

SAR Information
All reliability entities involved in the Arranged Interchange are currently in the NERC registry. Criterion B 1. **Statement:** INT-007-1 R1.2 is administrative in nature, and adds little to reliability. **Conclusion:** Since INT-007-1 R1.2 provides little protection to the BES, it should be removed. **IRO-016-1 R2** The Reliability Coordinator shall document (via operator logs or other data sources) its actions taken for either the event or for the disagreement on the problem(s) or for both. Criterion B 1 and 2. **Statement:** IRO-016-1 R2 is an evidence requirement and is a candidate to go into an RSAW. **Conclusion:** Since IRO-016-1 R2 provides little protection to the BES and is data collection in nature, it should be removed. **NUC-001-2 R9.1; NUC-001-2 R9.1.1; NUC-001-2 R9.1.2; NUC-001-2 R9.1.3; NUC-001-2 R9.1.4** R9.1 Administrative elements: R9.1.1 Definitions of key terms used in the agreement. R9.1.2 Names of the responsible entities, organizational relationships, and responsibilities related to the NPIRs.

SAR Information
R9.1.3 A requirement to review the agreement(s) at least every three years. R9.1.4 A dispute resolution mechanism. Criterion B 1. **Statement:** These requirements of NUC-001-2 do not address reliability, rather they address administrative and commercial terms of an agreement. Given there is no clear nexus between these requirements and reliability, they should be retired. **Conclusion:** Since these requirements are purely administrative in nature, provide for a periodic update and commercial terms of the agreement, they provide little protection to the BES. Requirement 9.1 and associated sub-requirements should be removed from Reliability Standard NUC-001-2. ***PRC-008-0 R1; *PRC-008-0 R2; *PRC-009-0 R1; *PRC-009-0 R1.1; *PRC-009-0 R1.2; *PRC-009-0 R1.3; *PRC-009-0 R1.4; *PRC-009-0 R2; PRC-010-0 R2; PRC-022-1 R2.** PRC-008-0 R1 The Transmission Owner and Distribution Provider with a UFLS program (as required by its Regional Reliability Organization) shall have a UFLS equipment maintenance and testing program in place. This UFLS equipment maintenance and testing program shall include UFLS equipment identification, the schedule for UFLS equipment testing, and the schedule for UFLS equipment maintenance. PRC-008-0 R2 The Transmission Owner and Distribution Provider with a UFLS program (as required by its Regional Reliability Organization) shall implement its UFLS equipment maintenance and testing program and shall provide UFLS maintenance and testing program results to its Regional Reliability Organization and NERC on request (within 30 calendar days). PRC-009-0 R1 The Transmission Owner, Transmission Operator, Load-Serving Entity and Distribution Provider that owns or operates a UFLS program (as required by its Regional Reliability Organization)

SAR Information
shall analyze and document its UFLS program performance in accordance with its Regional Reliability Organization's UFLS program. The analysis shall address the performance of UFLS equipment and program effectiveness following system events resulting in system frequency excursions below the initializing set points of the UFLS program. The analysis shall include, but not be limited to: PRC-009-0 R1.1 A description of the event including initiating conditions. PRC-009-0 R1.2 A review of the UFLS set points and tripping times. PRC-009-0 R1.3 A simulation of the event. PRC-009-0 R1.4 A summary of the findings. PRC-009-0 R2 The Transmission Owner, Transmission Operator, Load-Serving Entity, and Distribution Provider that owns or operates a UFLS program (as required by its Regional Reliability Organization) shall provide documentation of the analysis of the UFLS program to its Regional Reliability Organization and NERC on request 90 calendar days after the system event. PRC-010-0 R2 The Load-Serving Entity, Transmission Owner, Transmission Operator, and Distribution Provider that owns or operates a UVLS program shall provide documentation of its current UVLS program assessment to its Regional Reliability Organization and NERC on request (30 calendar days). PRC-022-1 R2 Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program shall provide documentation of its analysis of UVLS program performance to its Regional Reliability Organization within 90 calendar days of a request. Criterion B 1 and 2. **Statement:** Under Standards Development Project 2007-17 Protection System Maintenance, which recently passed on August 27, 2012, PRC-008-0 is scheduled to be retired and replaced with PRC-005-2.

SAR Information
PRC-005-2 will likely be presented to the NERC Board of Trustees in November for approval, and, thus, PRC-008-0 is only presented here for informational purposes. In Order No. 763 at Paragraph 103 the Commission accepted the retirement of PRC-009-0 as appropriately replaced with PRC-006-1. Consistent with Order No. 763, PRC-009-0 will become inactive on September 30, 2013 and will be replaced by PRC-006-1. Thus, PRC-009-0 is presented here for informational purposes only. Conversely, PRC-010-0 R2 and PRC-022-1 R2 are not scheduled to be retired and are purely administrative and data collection requirements that are better and more appropriately handled via spot checks/compliance audit request for evidence and the applicable RSAW. **Conclusion:** Since PRC-010-0 R2 and PRC-022-1 R2 provide little protection to the BES and better handled via the compliance and monitoring program. ***TOP-001-1a R3** Each Transmission Operator, Balancing Authority, and Generator Operator shall comply with reliability directives issued by the Reliability Coordinator, and each Balancing Authority and Generator Operator shall comply with reliability directives issued by the Transmission Operator, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances the Transmission Operator, Balancing Authority, or Generator Operator shall immediately inform the Reliability Coordinator or Transmission Operator of the inability to perform the directive so that the Reliability Coordinator or Transmission Operator can implement alternate remedial actions. Criterion B 7. **Statement:** Although there is redundancy between TOP-001-1a R3 and IRO-001-1a R8 related to Reliability Coordinators, this redundancy was addressed in Standards Development Project 2007-03 (Real-time Operations). Specifically, Project 2007-03 eliminated the redundancy in the current version of TOP-001-2 R1 that replaces TOP-001-1a R3 and reads: Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Reliability Directive issued and identified as such by its

SAR Information

Transmission Operator(s), unless such action would violate safety, equipment, regulatory, or statutory requirements.

TOP-001-2 has been approved by the NERC Board of Trustees and will be filed with the Commission for approval; therefore, TOP-001-1a R3 is presented for informational purposes only.

***TOP-005-2a R1**

As a condition of receiving data from the Interregional Security Network (ISN), each ISN data recipient shall sign the NERC Confidentiality Agreement for "Electric System Reliability Data."

Criterion B 3.

Statement:

TOP-005-2a R1 is better suited for ROP than reliability requirement. A review of Standards Development Project 2007-03 Real-time Transmission Operations indicates it proposes R1 of TOP-005-1 to be retired. As stated above in the context of TOP-001, this project was approved by the NERC Board of Trustees and will be filed with the Commission for approval; therefore, TOP-005-2a R1 is presented for informational purposes only.

Conclusion: Since TOP-005-2a R1 provides little protection to the BES and is purely documentation in nature, it should be removed.

VAR-001-2 R5

Each Purchasing-Selling Entity and Load Serving Entity shall arrange for (self-provide or purchase) reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching; and controllable load– to satisfy its reactive requirements identified by its Transmission Service Provider.

Criterion B 7.

SAR Information
Statement: VAR-001-2 R5 is redundant with FERC's pro forma open access transmission tariff (OATT) Specifically, the requirement provides for the PSE and LSE to arrange for reactive resources to satisfy the reactive requirements of the Transmission Service Provider, which is already required under Schedule No. 2 of the OATT. **Conclusion**: Since VAR-001-2 R5 is redundant with requirements already under FERC's OATT, and, thus, it should be removed.

Reliability Functions		
The Standard will Apply to the Following Functions (Check each one that applies.)		
☒	Regional Reliability Organization	Conducts the regional activities related to planning and operations, and coordinates activities of responsible entities to secure the reliability of the Bulk Electric System within the region and adjacent regions.
☒	Reliability Coordinator	Responsible for the real-time operating reliability of its Reliability Coordinator Area in coordination with its neighboring Reliability Coordinator's wide area view.
☒	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within a Balancing Authority Area and supports Interconnection frequency in real time.
☒	Interchange Authority	Ensures communication of interchange transactions for reliability evaluation purposes and coordinates implementation of valid and balanced interchange schedules between Balancing Authority Areas.
☒	Planning Coordinator	Assesses the longer-term reliability of its Planning Coordinator Area.
☒	Resource Planner	Develops a >one year plan for the resource adequacy of its specific loads within a Planning Coordinator area.
☒	Transmission Planner	Develops a >one year plan for the reliability of the interconnected Bulk

Reliability Functions		
		Electric System within its portion of the Planning Coordinator area.
☒	Transmission Service Provider	Administers the transmission tariff and provides transmission services under applicable transmission service agreements (e.g., the pro forma tariff).
☒	Transmission Owner	Owns and maintains transmission facilities.
☒	Transmission Operator	Ensures the real-time operating reliability of the transmission assets within a Transmission Operator Area.
☒	Distribution Provider	Delivers electrical energy to the End-use customer.
☒	Generator Owner	Owns and maintains generation facilities.
☒	Generator Operator	Operates generation unit(s) to provide real and reactive power.
☒	Purchasing-Selling Entity	Purchases or sells energy, capacity, and necessary reliability-related services as required.
☐	Market Operator	Interface point for reliability functions with commercial functions.
☒	Load-Serving Entity	Secures energy and transmission service (and reliability-related services) to serve the End-use Customer.

Reliability and Market Interface Principles	
Applicable Reliability Principles (Check all that apply).	
☒	1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.
☒	2. The frequency and voltage of interconnected bulk power systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.
☒	3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.
☒	4. Plans for emergency operation and system restoration of interconnected bulk power systems shall be developed, coordinated, maintained and implemented.
☒	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk power systems.

Reliability and Market Interface Principles	
☒	6. Personnel responsible for planning and operating interconnected bulk power systems shall be trained, qualified, and have the responsibility and authority to implement actions.
☒	7. The security of the interconnected bulk power systems shall be assessed, monitored and maintained on a wide area basis.
☒	8. Bulk power systems shall be protected from malicious physical or cyber attacks.

Does the proposed Standard comply with all of the following Market Interface Principles?	Enter (yes/no)
1. A reliability standard shall not give any market participant an unfair competitive advantage.	Yes
2. A reliability standard shall neither mandate nor prohibit any specific market structure.	Yes
3. A reliability standard shall not preclude market solutions to achieving compliance with that standard.	Yes
4. A reliability standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards.	Yes

Standards Authorization Request Form

NERC welcomes suggestions to improve the reliability of the bulk power system through improved reliability standards. Please use this form to submit your request to propose a new or a revision to a NERC's Reliability Standard.

Request to propose a new or a revision to a Reliability Standard			
Title of Proposed Standard:	Retirement of Reliability Standard Requirements		
Date Submitted:	September 12~~June 29~~, 2012		
SAR Requester Information			
Name:	Brian J. Murphy on behalf of the following:		
Organization:	P81 Interim Standards Drafting Team, as originally supported by Edison Electric Institute, American Public Power Association, National Rural Electric Cooperative Association, Large Public Power Council, Electricity Consumers Resource Council, The Electric Power Supply Association, Transmission Access Policy Study Group, the North American Electric Reliability Corporation, and the Regional Entity Management Group		
Telephone:	305-442-5132		
SAR Type (Check as many as applicable)			
☐ New Standard		☒ Withdrawal of existing Standard	
☒ Revision to existing Standard		☐ Urgent Action	

SAR Information
Industry Need (What is the industry problem this request is trying to solve?):
On March 15, 2012, the Federal Energy Regulatory Commission (FERC) issued an order on NERC's Find, Fix and Track process that stated: "The Commission notes that NERC's FFT initiative is predicated on the view that many violations of requirements currently included in Reliability Standards pose lesser

SAR Information

risk to the Bulk-Power System. If so, some current requirements likely provide little protection for Bulk-Power System reliability or may be redundant. The Commission is interested in obtaining views on whether such requirements could be removed from the Reliability Standards with little effect on reliability and an increase in efficiency of the ERO compliance program. If NERC believes that specific Reliability Standards or specific requirements within certain Standards should be revised or removed, we invite NERC to make specific proposals to the Commission identifying the Standards or requirements and setting forth in detail the technical basis for its belief. In addition, or in the alternative, we invite NERC, the Regional Entities and other interested entities to propose appropriate mechanisms to identify and remove from the Commission-approved Reliability Standards unnecessary or redundant requirements. We will not impose a deadline on when these comments should be submitted, but ask that to the extent such comments are submitted NERC, the Regional Entities, and interested entities coordinate to submit their respective comments concurrently."

North American Electric Reliability Corporation, 138 FERC ¶ 61,193 at p 81 (March 15, 2012) ("P81").

Consistent with P81, the problem this SAR is resolving is to identify Reliability Standards requirements that either: (a) provide little protection to the BPS;[1] (b) are unnecessary or (c) are redundant; and, thereafter, to have NERC file the identified Reliability Standard requirements with FERC to have them removed from the FERC-approved list of Reliability Standards.

In addition to addressing P81, this SAR is also consistent with Recommendation #4 set forth in *NERC's Recommendations to Improve The Standards Development Process* at page 12 (April 2012), which states:

> **Recommendation 4: Standards Product Issues** — The NERC board is encouraged to require that the standards development process address: . . . The retirement of standards no longer needed to meet an adequate level of reliability.

[1] Given NERC's Reliability Standards are based on the definition of a Bulk Electric System (BES), the remainder of this SAR will use the term BES rather than Bulk Power System or BPS.

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information
Purpose or Goal (How does this request propose to address the problem described above?):
The SAR addresses the problem identified above by: (1) Setting forth the initial phase-specific criteria (below) to evaluate whether a Reliability Standard requirement provides little protection to BES reliability or is unnecessary or redundant. (2) Establishing a multi-phased process for addressing these Reliability Standard requirements. During the initial phase~~Initial Phase~~, the standard drafting team~~Standards Drafting Team~~ will identify those Reliability Standard requirements that ~~easily~~ satisfy the criteria, set forth below, without the need for extensive technical justification or a modification to the requirement, and ~~either~~ recommend~~: (a)~~ the retirement of the requirement.[2] During subsequent[3] ~~or (b) a modification to the requirement,~~[4] ~~while future~~ phases, the standard drafting team may build upon the initial phase criteria, as applicable, to that phase that will identify the remaining appropriate Reliability Standard requirements that ~~satisfy the criteria, but~~ could not be included in the initial phase~~Initial Phase~~ due to the need for additional analysis or a modification of language. This multi-phased approach is also proposed to address FERC's interest in increasing the efficiency of the ERO compliance program, so that the first set of identified Reliability Standard requirements may be filed with FERC on an expedited basis, and, therefore, start increasing ERO efficiencies as soon as practical. (3) At this time,~~To facilitate~~ the standard drafting team has identified~~Initial Phase of the Standard Drafting Team's process,~~ a list of Reliability Standard requirements to be included in the initial phase that ~~appear to easily~~ satisfy the criteria ~~are~~ set forth below.

[2] The Standards Drafting Team will work with NERC staff to determine the manner to eliminate the identified Reliability Standard requirements.

[3] ~~The Standards Drafting Team will work with NERC staff to determine the manner to eliminate the identified Reliability Standards requirements.~~

[4] ~~Given the expedited nature of the Initial Phase, it is unlikely there will be a large number of modifications considered, and the Standards Drafting Team may decide to defer all requested modifications to subsequent phases.~~

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information
(4) During each phase, as a list of Reliability Standard requirements is identified, the standard drafting team ~~and passes through the Standards Development Process, the Standards Drafting Team~~[5] will also assist NERC staff to file these requirements with FERC so the requirements are removed from the FERC-approved list, including providing additional technical justification, as needed.
Identify the Objectives of the proposed standard's requirements (What specific reliability deliverables are required to achieve the goal?):
The objectives of this SAR for all phases of this project are to retire or modify FERC-approved Reliability Standard requirements that provide little protection to the reliable operations of the BES, are redundant or unnecessary, or to retire or modify a FERC-approved Reliability Standard requirement to increase the efficiency of the ERO's compliance programs.
Brief Description (Provide a paragraph that describes the scope of this standard action.)
The scope of this SAR is all FERC-approved Reliability Standards.[6]
Detailed Description (Provide a description of the proposed project with sufficient details for the standard drafting team to execute the SAR. Also provide a justification for the development or revision of the standard, including an assessment of the reliability and market interface impacts of implementing or not implementing the standard action.)
The standard drafting team~~Standard Drafting Team~~ shall implement a phased process. The Initial Phase shall identify all FERC- approved Reliability Standard requirements that ~~easily satisfy the criteria set forth below, while future phases shall identify FERC-approved Reliability Standard requirements that satisfy the criteria set forth below, but could not be included in the Initial Phase due to the need for additional analysis or an editing of language. During each phase the Standards Drafting Team shall~~

~~[5] While this SAR applies to all phases of the P81 project, it is understood that the composition of the Standard Drafting Team may need to change or be supplemented in subsequent phases depending on the technical expertise required.~~

[6] The scope of this SAR with regard to those requirements that are proposed for retirement includes any currently pending versions of the listed Reliability Standards and any additional version of these Reliability Standards that may be submitted. In other words, the intent is to carry forward these retirements based on substance which is not dependent on the exact numbering or placement within a Reliability Standard.

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information

~~identify Reliability Standard requirements that~~ satisfy **both**: (i) Criteria A ~~(~~) ~~the~~ overarching criteria) and (ii~~B~~) at least one of the Criteria B listed below (identifying~~technical~~ criteria). ~~.~~ In addition, for all phases, the standard drafting team~~Standards Drafting Team~~ shall also consider the data and reference points set forth below in Criterion C when deciding whether a Reliability Standard requirement should be retired or modified.

A. Overarching Criterion:

The~~In the event no responsible entity performed the FERC-approved~~ Reliability Standard requirement requires responsible entities to conduct an activity or task that does~~, there would be~~ little, if anything, ~~or no impact~~ to benefit~~the protection~~ or protect the reliable operation of the BES.

Formatted: Right: 0.5"

Section 215(a)(4) of the Federal Power Act defines "reliable operation" as: "… operating the elements of the bulk-power system within equipment and electric system thermal, voltage, and stability limits so that instability, uncontrolled separation, or cascading failures of such system will not occur as a result of a sudden disturbance, including a cybersecurity incident, or unanticipated failure of system elements."

B. Identifying~~Technical~~ Criteria:

1. Administrative

The Reliability Standard requirement requires responsible entities to perform a function that is administrative in nature, does not support reliability and is needlessly burdensome.

2. Data Collection/Data Retention

~~The Reliability Standard requirement requires responsible entities to collect or retain data and does not contribute to: (a) the reliable operation of the BES or (b) an effective compliance enforcement processes.~~ These are requirements that obligate responsible entities to produce and retain data which document prior events or activities, and should be collected via some other method under NERC's rules and processes ~~or addressed in the data retention sections of Reliability Standards~~.

3. ~~Purely~~ Documentation

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information
The Reliability Standard requirement requires responsible entities to develop a document (*e.g.,* plan, policy or procedure) which is not necessary to protect BES reliability.
4. ~~Purely~~ Reporting The Reliability Standard requirement obligates responsible entities to report ~~out~~ to a Regional Entity, NERC or another party or entity. These are requirements that obligate responsible entities to report to a Regional Entity on activities which have no discernible ~~discernable~~ impact on promoting the reliable operation of the BES and if the entity failed to meet this requirement there ~~it~~ would be ~~have~~ little reliability impact ~~on the reliable operation of the BES~~.
5. Periodic Updates The Reliability Standard requirement requires responsible entities to periodically update (*e.g.,* annually) documentation, such as a plan, procedure or policy without an operational benefit to reliability.
6. Commercial or Business Practice The Reliability Standard requirement is a commercial or business practice, or implicates commercial rather than reliability issues. ~~*e.g.,* better served as a NAESB standard or as part of NAESB Electric Industry Registry (EIR).~~
7. Redundant The Reliability Standard requirement is redundant with (i) ~~either~~ another FERC-approved Reliability Standard requirement; (ii) the ERO compliance and monitoring program; or (iii) a ~~or~~ governmental regulation (*e.g.,* Open Access Transmission Tariff, North American Energy Standards Board ("NAESB"), ~~,~~ etc.).
~~**8. Hinders the protection or reliable operation of the BES**~~ ~~The Reliability Standard requirement requires responsible entities to conduct an activity or task that hinders, distracts or is counterproductive to the protection or reliable operation of the BES.~~
~~**9. Little, if any, value as a reliability requirement**~~

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information

~~The tasks or activities in the Reliability Standard requirement do little, if anything, to promote the protection the BES.~~

C. Additional data and reference points

In those instances where~~when~~ there is a~~the~~ need for additional information to assist in the determination of whether a Reliability Standard requirement satisfies both Criteria A and B, the standard drafting team~~Standards Drafting Team~~ shall consider the following data and reference points to make a more informed decision:

1. Was the Reliability Standard requirement part of a Find, Fix and Track filing?

2. Is the Reliability Standard requirement being reviewed in an on-going Standards Development Project?

3. What is the Violation Risk Factor of the Reliability Standard requirement?

4. In which tier of the 2013 Actively Monitored List~~Standards~~ does the Reliability Standard requirement fall?

5. Is there a possible~~Any~~ negative impact on NERC's published and posted reliability principles?

6. Is there any~~Any~~ negative impact on the defense-in-depth protection of the BES?

7. Does the retirement ~~or modification~~ promote results- or performance-based Reliability Standards?

To facilitate the standard drafting team's~~Standard Drafting Team's~~ consideration of the above questions, NERC staff will provide the team with relevant known data and statistics.

Formatted: Font: Bold

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information

List of Initial Phase~~To facilitate the Standard Drafting Team's Initial Phase, below is a list of Reliability Standard requirements that appear to satisfy both Criteria A and B, with consideration of Criterion C. To assist the Team's review of these requirements, Criterion B coding is provided, along with a brief statement explaining why the requirement provides little protection to the BES, is unnecessary or is redundant.~~

~~List of Phase One~~ Reliability Standard requirements that satisfy both Criteria A and B, with consideration of Criterion C

To be retired:[7]

BAL-005-0.2b~~1b~~ R2

Each Balancing Authority shall maintain Regulating Reserve that can be controlled by AGC to meet the Control Performance Standard.

Criterion B 7.

Statement:[8] BAL-005-0.2b~~1b~~ is redundant with the Control Performance Standard defined in BAL-001-0.1a R1 and R2. This is also redundant in that it is measured by whether or not BAL-001-0.1a R1 and R2

[7] The following requirements that were originally presented in the draft SAR, and now in this final SAR are denoted with a "*" are so denoted because research shows that they are already scheduled to be retired via another Standards Development Project that has been approved by stakeholders and the NERC Board of Trustees (or due to be before the Board in November – *i.e.*, PRC-005-2), and, thus, are presented here for informational purposes only: COM-001-1.1 R6, EOP-009-0 R2; FAC-008-1 R1.3.5; PRC-008-0 R1; PRC-008-0 R2; PRC-009-0 R1; PRC-009-0 R1.1; PRC-009-0 R1.2; PRC-009-0 R1.3; PRC-009-0 R1.4; PRC-009-0 R2; TOP-001-1a R3 and TOP-005-2a R1. These requirements are generally scheduled to be retired within the next year, and, therefore, to subject them to additional stakeholder vote, comment and Board of Trustees approval does not seem warranted or efficient. Consequently, these requirements will not be presented to stakeholders for comment and vote.

Formatted: Font: Not Bold

Formatted: Left

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information

are met.

Conclusion: This is redundant with the Control Performance Standard defined in BAL-001-0.1a R1 and R2. This is also redundant in that it is measured by whether or not BAL-001-0.1a R1 and R2 are met. This may be double jeopardy in that failure to achieve compliance with BAL-001-0.1a R1 and R2 could imply failure of this standard as well. This is misleading in requiring entities to maintain Regulating Reserve, but providing no way to measurably comply, apart from achieving compliance with BAL-001-0.1a R1 and R2.

CIP-001-2a -R4.

Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, and Load-Serving Entity shall establish communications contacts, as applicable, with local Federal Bureau of Investigation (FBI) or Royal Canadian Mounted Police (RCMP) officials and develop reporting procedures as appropriate to their circumstances.

Criterion B 1, 2~~, 3, 8~~ and 3~~9~~.

Statement: CIP-001-2a is administrative, documentation and data collection in nature, because the establishment of communication contacts, in and of itself, with the FBI and RCMP has little or no impact on protection or the reliable operation of the BES. Instead, compliance with R1 through -R3 of CIP-001-2a provides the actions that responsible entities take to protect the BES in the event of sabotage. Specifically, R1 through R3 require that the Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, and Load Serving Entity ~~to~~ have procedures for the recognition of sabotage, reporting of sabotage and communication of sabotage events to appropriate parties in the Interconnection, which may include local law enforcement, the FBI, etc. Thus, ~~in~~ CIP-001-2a~~,~~ R1 through R3 serve a reliability function, while R4 is a static, administrative requirement that has no clear results-based nexus to protecting the BES.~~Bulk Electric System (BES).~~

[8] The "Statement" and "Conclusion" sections are brief statements that provide context. The technical justification for each Reliability Standards requirement is contained in a separate Technical White Paper that will also be posted for comment.

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information
Conclusion: Since this requirement provides little protection to the BES and is administrative in nature, Requirement 4 should be removed from Reliability Standard CIP-001-2a. **CIP-003-3, -4 R1.2** The cyber security policy is readily available to all personnel who have access to, or are responsible for, Critical Cyber Assets. Criterion B 1. **Statement:** Whether there is a robust CIP compliance plan on which employees are trained -may impact reliability, not whether the cyber security policy is readily available. Employees that are responsible for executing the cyber security policy are required to undergo a variety of training and, follow multiple processes and procedures that are already required by the CIP requirements. Simply requiring that the policy be readily available is an administrative task that provides little, if any, benefit to reliability of the BES. **Conclusion:** Since this requirement provides little protection to the BES and is purely administrative in nature, Requirement 1.2 should be removed from Reliability Standards CIP-003-3 and CIP-003-4. **CIP-003-3, -4 R3, R3.1, R3.2, R3.3** R3 Exceptions – Instances where the Responsible Entity cannot conform to its cyber security policy must be documented as exceptions and authorized by the senior manager or delegate(s). R3.1 Exceptions to the Responsible Entity's cyber security policy must be documented within thirty days of being approved by the senior manager or delegate(s). R3.2 Documented exceptions to the cyber security policy must include an explanation as to why the exception is necessary and any compensating measures. R3.3 Authorized exceptions to the cyber security policy must be reviewed and approved

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information
annually by the senior manager or delegate(s) to ensure the exceptions are still required and valid. Such review and approval shall be documented. Criterion B 1~~, 3~~ and 3~~8~~. **Statement:** Over time, these exception requirements have proven to not be useful and have been subject to misinterpretation, including responsible entities believing they can exempt themselves from compliance with the CIP requirements. **Conclusion:** For regulatory efficiency, since these requirements provide little protection to the BES and are open to misinterpretation, in addition to being entirely documentation, Requirement 3 and its sub-requirements~~subrequirements~~ should be removed from Reliability Standards~~Standard~~ CIP-003-3 and CIP-003-4. **CIP-003-3, -4 R4.2.** The Responsible Entity shall classify information to be protected under this program based on the sensitivity of the Critical Cyber Asset information. Criterion B 1, 3 and 7. **Statement:** CIP-003-3, -4 R4 already requires the classification of information associated with Critical Cyber Assets, which makes R4.2 redundant. The only difference in R4.2 is the term, "based on the sensitivity" has been added. The addition of this term can be viewed as overly managing the responsible entities' process of classification or simply not adding sufficient value to reliability to require a new requirement over and above R4. **Conclusion:** Since this requirement is~~these requirements are~~ redundant and provides~~provide~~ little protection to the BES, Requirement 4.2 should be removed from both Reliability Standards CIP-003-3 and CIP-003-4.

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information
CIP-005-3a, -4a R2.6. Appropriate Use Banner -- Where technically feasible, electronic access control devices shall display an appropriate use banner on the user screen upon all interactive access attempts. The Responsible Entity shall maintain a document identifying the content of the banner. ~~devices shall display an appropriate use banner on the user screen upon all interactive access attempts. The Responsible Entity shall maintain a document identifying the content of the banner.~~ Criterion B 1~~, 3, 8~~ and 3~~9~~. **Statement:** Over time, the banner requirement (or no trespass sign) has not been shown to be useful or consistent with a results-based approach to implementing a cyber security program. Additionally, it is administrative in nature. **Conclusion:** Since this requirement provides little protection to the BES and is purely administrative in nature, Requirement R2 should be removed from Reliability Standards CIP-005-3a and CIP-005-4. **CIP-007-3, -4 R7.3** The Responsible Entity shall maintain records that such assets were disposed of or redeployed in accordance with documented procedures. Criterion B 1 and 2. **Statement:** CIP-007-3, -4 R7.3 is evidence collection and possible for inclusion in an RSAW. **Conclusion:** Since this requirement provides little protection to the BES and is data collection in nature, it should be removed from CIP-007-3, -4. ***COM-001-1.1 R6.**

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information
Each NERCNet User Organization shall adhere to the requirements in Attachment 1-COM-001-0, "NERCNet Security Policy." Criterion B 6 and 7. **Statement:** ~~Whether the entity has a robust up-to-date CIP compliance plan may impact reliability, but not whether it employs a specific business practice such as the NERCNet. NOTE:~~ This requirement has been approved by stakeholders~~is proposed~~ for removal per Project 2006-06 (Reliability Coordination) and will ~~with the rationale: "The RC SDT is recommending that R6~~ be presented to the NERC Board of Trustees for approval~~retired. This is an ERO procedural issue and should not be~~ in November. Thus,~~a reliability standard. It should be included in the ERO Rules of Procedure."~~ ~~**Conclusion:** Since this requirement provides little protection to the BES and is more appropriate as a Commercial and Business Practice, Requirement 6 should be removed from Reliability Standard~~ COM-001-1.1 R6 is presented here for informational purposes only. **EOP-004-1 R1.** Each Regional Reliability Organization shall establish and maintain a Regional reporting procedure to facilitate preparation of preliminary and final disturbance reports. Criterion B 1~~, 3~~ and 3~~4~~. **Statement:** Whether or not there is a Regional Entity procedure to report disturbances has no impact on reliability. In other words, while a procedure for the collection of reports on disturbances may be useful information for purposes of Regional Entities to stay informed during events, is not an activity that protects the reliability of BES. The collection of such information should be established outside mandatory Reliability Standards. **Conclusion:** Since this requirement provides little protection to the BES and is purely documentation, Requirement 1 should be removed from Reliability Standard EOP-004-1.

Formatted: Highlight

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information

EOP-005-2 R3.1.

If there are no changes to the previously submitted restoration plan, the Transmission Operator shall confirm annually on a predetermined schedule to its Reliability Coordinator that it has reviewed its restoration plan and no changes were necessary.

Criterion B 1, 5~~, 7~~ and 79.

Statement: EOP-005-2 R3 reads: "Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually agreed predetermined schedule." This requirement requires the Transmission Operator to submit its restoration plan to the Reliability Coordinator whether or not there have been changes. Therefore, R3.1 only adds a duplicative administrative burden for the entity to also confirm that there were no changes based upon another possible pre-determined schedule. Whether or not there was a change from year to year in the restoration plan will be documented in the revision history of the restoration plan, and thus the Reliability Coordinator will be able to ascertain whether or not there were changes based on R3. Thus, EOP-005-2 R3.1 provides little, if any, value to promoting the protection of the BES.

Conclusion: For regulatory efficiency, and since this requirement appears redundant to R3, Requirement 3.1 should be removed from Reliability Standard EOP-005-2.

***EOP-009-0 R2.**

The Generator Owner or Generator Operator shall provide documentation of the test results of the startup and operation of each blackstart generating unit to the Regional Reliability Organizations and upon request to NERC.

Criterion B 4.

Statement: In Order No. 749, the Commission approved the retirement of EOP-009-0 R2 as of July 1, 2013, and, thus, it is presented here for informational purposes only.

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information

~~**Statement:** The requirement to report blackstart test results to the Regional Entity and NERC has no impact on reliability. If the Regional Entity desires to review or track this information, a better vehicle to obtain it is via a Compliance Audit or Spot-Check, or some other compliance monitoring procedure.~~

~~**Conclusion:** For regulatory efficiency and since this requirement is purely a reporting activity, Requirement 2 should be removed from Reliability Standard EOP-009-0.~~

FAC-002-1 R2.

The Planning Authority, Transmission Planner, Generator Owner, Transmission Owner, Load-Serving Entity, and Distribution Provider shall each retain its documentation (of its evaluation of the reliability impact of the new facilities and their connections on the interconnected transmission systems) for three years and shall provide the documentation to the Regional Reliability Organization(s) and NERC on request (within 30 calendar days).

Criterion B 1~~2, 3~~ and 2~~4~~.

Statement: Requiring the retention of studies for three years has no impact on protecting or the reliable operation of the BES, and is merely a data retention requirement that is better suited to be considered during an audit or in the context of compliance monitoring.

Conclusion: Since this requirement provides little protection to the BES and is purely data collection/retention, Requirement 2 should be removed from Reliability Standard FAC-002-1.

***FAC-008-1 R1.3.5.**

Other assumptions.

Criterion B 1~~8~~.

Statement: The term “other assumptions" has already been removed via FAC-008-3, which will be

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information

effective on January 1, 2013, and, thus, it is presented here for informational purposes only~~in the context of facility ratings is very close to meaningless from a technical standpoint, generic and, therefore, yields no protection of the BES~~.

~~**Conclusion:** Since this requirement provides little or no protection to the BES and is unnecessary, Requirement 1.3.5 should be removed from Reliability Standard FAC-008-1.~~

FAC-008-1 R2; FAC-008-1 R3; FAC-008-3 R4; FAC-008-3 R5

FAC-008-1 R2 The Transmission Owner and Generator Owner shall each make its Facility Ratings Methodology available for inspection and technical review by those Reliability Coordinators, Transmission Operators, Transmission Planners, and Planning Authorities that have responsibility for the area in which the associated Facilities are located, within 15 business days of receipt of a request.

FAC-008-1 R3 If a Reliability Coordinator, Transmission Operator, Transmission Planner, or Planning Authority provides written comments on its technical review of a Transmission Owner's or Generator Owner's Facility Ratings Methodology, the Transmission Owner or Generator Owner shall provide a written response to that commenting entity within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Facility Ratings Methodology and, if no change will be made to that Facility Ratings Methodology, the reason why.

FAC-008-3 R4 Each Transmission Owner shall make its Facility Ratings methodology and each Generator Owner shall each make its documentation for determining its Facility Ratings and its Facility Ratings methodology available for inspection and technical review by those Reliability Coordinators, Transmission Operators, Transmission Planners and Planning Coordinators that have responsibility for the area in which the associated Facilities are located, within 21 calendar days of receipt of a request.

FAC-008-3 R5 If a Reliability Coordinator, Transmission Operator, Transmission Planner or Planning Coordinator provides documented comments on its technical review of a Transmission Owner's Facility Ratings methodology or Generator Owner's documentation for determining its Facility Ratings and its Facility Rating methodology, the Transmission Owner or Generator Owner shall provide a response to that commenting entity within 45 calendar days of receipt of those comments. The response shall

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information
indicate whether a change will be made to the Facility Ratings methodology and, if no change will be made to that Facility Ratings methodology, the reason why. Criterion B 1, ~~2,~~ 4 and 6. **Statement:** For purposes of reliability, facility ratings are transmitted and used via the FAC (System Operating Limits), MOD and TPL Standards,[9] and posting the rating methodology for comment and responding to comments in and of itself has no reliability benefit. Furthermore, these requirements do not appear appropriate given the possible commercial or market related implications of sharing and debating with a competitor the facility ratings methodology of a facility. **Conclusion:** For regulatory efficiency and possible commercial or market implications in sharing the facility ratings, and since these requirements are purely administrative in nature along with reporting activities, Requirements R2 and R3 of Reliability Standard FAC-008-1 and Requirements 4 and 5 of Reliability Standard FAC-008-3 should be removed from the Standards. **FAC-010-2.1 R5; FAC-011-2 R5** FAC-010-2.1 R5 If a recipient of the SOL Methodology provides documented technical comments on the methodology, the Planning Authority shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the SOL Methodology and, if no change will be made to that SOL Methodology, the reason why. FAC-011-2 R5 If a recipient of the SOL Methodology provides documented technical comments on the methodology, the Reliability Coordinator shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the SOL Methodology and, if no change will be made to that SOL Methodology, the reason

Formatted: Tab stops: 0.5", Left

[9] MOD-001-1a R9, MOD-028-1 R2.3; MOD-029-1a R2.1; MOD-030-02 R3.1, PRC-023-2, Attachment A 2.7; TPL-001-0.1 Footnote a; TPL-002-1b, footnotes a and b; TPL-003-0a, footnote a and TPL-004-0, footnote a. Also, via FAC-011-2 the System Operating Limits methodology of Reliability Coordinator may also use facility ratings as a key element. Also, FAC-008-3 R7 and R8 require the transmission of facility ratings to reliability entities.

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information

why.

Criterion B 1, 4 and 6.

Statement: A review of FAC-010-2.1 R5 and FAC-011-2 R5 indicate they are administrative requirements for the Planning Authority and Reliability Coordinator to respond to comments on its SOL methodology. Thus, similar to FAC-008-3 R4 and R5, there is no or little protection for BES reliability for a Planning Coordinator or Reliability Coordinator to enter into a give and take with the recipient on its SOL methodology.

Conclusion: Since these requirements are purely administrative, FAC-010-2.1 R5 and FAC-011-2 R5 should be removed from the Standards.

FAC-013-2 R3

If a recipient of the Transfer Capability methodology provides documented concerns with the methodology, the Planning Coordinator shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Transfer Capability methodology and, if no change will be made to that Transfer Capability methodology, the reason why.

Criterion B 1, ~~2,~~ 4 and 6.

Statement: Similar to the concerns with FAC-008, the FAC-013-2 requirement to reply to comments on a transfer capability methodology has no reliability benefit, and, moreover, a back and forward on transfer capability could have commercial or market implications.

Conclusion: For regulatory efficiency and possible commercial or market implications in sharing transfer capability methodology, and since these requirements are purely administrative in nature along with reporting activities, Requirement R3 of Reliability Standard FAC-013-2 should be removed from the Standards.

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information

INT-007-1 R1.2

All reliability entities involved in the Arranged Interchange are currently in the NERC registry.

Criterion B 1.

Statement: INT-007-1~~,~~ R1.2 is administrative in nature, and adds little to reliability.

Conclusion: Since INT-007-1 R1.2 provides little protection to the BES, it should be removed.

IRO-016-1 R2

The Reliability Coordinator shall document (via operator logs or other data sources) its actions taken for either the event or for the disagreement on the problem(s) or for both.

Criterion B 1 and 2.

Statement:

IRO-016-1 R2 is an evidence requirement and is a candidate~~. Candidate~~ to go into an RSAW.

Conclusion: Since IRO-016-1 R2 provides little protection to the BES and is data collection in nature, it should be removed.

~~MOD-004-1 R1; MOD-004-1 R1.1; MOD-004-1 R1.2; MOD-004-1 R1.3; MOD-004-1 R2; MOD-004-1 R3; MOD-004-1 R3.1; MOD-004-1 R3.2; MOD-004-1 R4; MOD-004-1 R4.1; MOD-004-1 R4.2; MOD-004-1 R5; MOD-004-1 R5.1; MOD-004-1 R5.2; MOD-004-1 R6; MOD-004-1 R6.1; MOD-004-1 R6.2; MOD-004-1 R7; MOD-004-1 R8; MOD-004-1 R9; MOD-004-1 R9.1; MOD-004-1 R9.2; MOD-004-1 R10; MOD-004-1 R11; MOD-004-1 R12; MOD-004-1 R12.1; MOD-004-1 R12.2; MOD-004-1 R12.3.~~

SAR Information
~~Reserve margin or resource adequacy requirements established by other entities, such as municipalities, state commissions, regional transmission organizations, independent system operators, Regional Reliability Organizations, or regional entities~~ ~~R3.2. Identifying expected import path(s) or source region(s).~~ ~~R4. Each Resource Planner determining the need for Transmission capacity to be set aside as CBM for imports into a Balancing Authority Area shall determine that need by: [Time Horizon: Operations Planning]~~ ~~R4.1. Using one or more of the following to determine the GCIR:~~ ~~Loss of Load Expectation (LOLE) studies~~ ~~Loss of Load Probability (LOLP) studies~~ ~~Deterministic risk-analysis studies~~ ~~Reserve margin or resource adequacy requirements established by other entities, such as municipalities, state commissions, regional transmission organizations, independent system operators, Regional Reliability Organizations, or regional entities~~ ~~R4.2. Identifying expected import path(s) or source region(s).~~ ~~R5. At least every 13 months, the Transmission Service Provider that maintains CBM shall establish a CBM value for each ATC Path or Flowgate to be used for ATC or Available Flowgate Capability (AFC) calculations during the 13 full calendar months (months 2-14) following the current month (the month in which the Transmission Service Provider is establishing the CBM values). This value shall: [Time Horizon: Operations Planning]~~ ~~R5.1. Reflect consideration of each of the following if available:~~ ~~Any studies (as described in R3.1) performed by Load-Serving Entities for loads within the Transmission Service Provider's area~~ ~~Any studies (as described in R4.1) performed by Resource Planners for loads within the Transmission~~

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information
~~Service Provider's area~~ ~~Any reserve margin or resource adequacy requirements for loads within the Transmission Service Provider's area established by other entities, such as municipalities, state commissions, regional transmission organizations, independent system operators, Regional Reliability Organizations, or regional entities~~ ~~R5.2 Be allocated as follows:~~ ~~For ATC Paths, based on the expected import paths or source regions provided by Load-Serving Entities or Resource Planners~~ ~~For Flowgates, based on the expected import paths or source regions provided by Load-Serving Entities or Resource Planners and the distribution factors associated with those paths or regions, as determined by the Transmission Service Provider~~ ~~R6 At least every 13 months, the Transmission Planner shall establish a CBM value for each ATC Path or Flowgate to be used in planning during each of the full calendar years two through ten following the current year (the year in which the Transmission Planner is establishing the CBM values). This value shall: [Time Horizon: Long-term Planning]~~ ~~R6.1 Reflect consideration of each of the following if available:~~ ~~Any studies (as described in R3.1) performed by Load-Serving Entities for loads within the Transmission Planner's area~~ ~~Any studies (as described in R4.1) performed by Resource Planners for loads within the Transmission Planner's area~~ ~~Any reserve margin or resource adequacy requirements for loads within the Transmission Planner's area established by other entities, such as municipalities, state commissions, regional transmission organizations, independent system operators, Regional Reliability Organizations, or regional entities~~ ~~R6.2 Be allocated as follows:~~ ~~For ATC Paths, based on the expected import paths or source regions provided by Load-Serving Entities or Resource Planners~~

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information

~~For Flowgates, based on the expected import paths or source regions provided by Load-Serving Entities or Resource Planners and the distribution factors associated with those paths or regions, as determined by the Transmission Planner.~~

~~R7. Less than 31 calendar days after the establishment of CBM, the Transmission Service Provider that maintains CBM shall notify all the Load-Serving Entities and Resource Planners that determined they had a need for CBM on the Transmission Service Provider's system of the amount of CBM set aside. [Time Horizon: Operations Planning]~~

~~R8. Less than 31 calendar days after the establishment of CBM, the Transmission Planner shall notify all the Load-Serving Entities and Resource Planners that determined they had a need for CBM on the system being planned by the Transmission Planner of the amount of CBM set aside. [Time Horizon: Operations Planning]~~

~~R9. The Transmission Service Provider that maintains CBM and the Transmission Planner shall each provide (subject to confidentiality and security requirements) copies of the applicable supporting data, including any models, used for determining CBM or allocating CBM over each ATC Path or Flowgate to the following: [Time Horizon: Operations Planning, Long-term Planning]~~

~~R9.1. Each of its associated Transmission Operators within 30 calendar days of their making a request for the data.~~

~~R9.2. To any Transmission Service Provider, Reliability Coordinator, Transmission Planner, Resource Planner, or Planning Coordinator within 30 calendar days of their making a request for the data.~~

~~R10. The Load-Serving Entity or Balancing Authority shall request to import energy over firm Transfer Capability set aside as CBM only when experiencing a declared NERC Energy Emergency Alert (EEA) 2 or higher. [Time Horizon: Same-day Operations]~~

~~R11. When reviewing an Arranged Interchange using CBM, all Balancing Authorities and Transmission Service Providers shall waive, within the bounds of reliable operation, any Real-time timing and ramping~~

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information

~~requirements. [Time Horizon: Same-day Operations]~~

~~R12. The Transmission Service Provider that maintains CBM shall approve, within the bounds of reliable operation, any Arranged Interchange using CBM that is submitted by an "energy deficient entity" under an EEA 2 if: [Time Horizon: Same-day Operations]~~

~~R12.1. The CBM is available~~

~~R12.2. The EEA 2 is declared within the Balancing Authority Area of the "energy deficient entity," and~~

~~R12.3. The Load of the "energy deficient entity" is located within the Transmission Service Provider's area.~~

~~Criterion B 6.~~

~~**Statement:** Capacity Benefit Margin (CBM) is better integrated in marketing functions and is not a reliability function. In the NERC TOP-002 Operations Planning Standard, Requirement R1 specifies that the Transmission Operator shall have an Operating Planning Analysis that represents projected System conditions to assess planned operation for the next day that do not exceed Facility Ratings or Stability Limits for anticipated normal and contingency events. Further, the CBM standard is redundant to the TOP-002 R1 where the marketer would schedule their transmission reserve within the limits established by the Transmission Operator. The Transmission Operator ensures that the established reserve along with other identified schedules are modeled to anticipate next-day conditions and remain within established operating limits.~~

~~In addition, this Standard is not necessary for the support of BES reliability as evidenced by the fact that of the entities that once used CBM, many dropped it when it became effective due to the unnecessary burdens it placed on the entities.~~

~~**Conclusion:** The requirements above relate to commercial and market issues regulated under OATT.~~

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information

~~Furthermore, they provide little protection to the BES and unnecessary as part of NERC Reliability Standards. Requirements 1 through 12 and associated subrequirements should be removed from Reliability Standard MOD-004-1.~~

NUC-001-2 R9.1; NUC-001-2 R9.1.1; NUC-001-2 R9.1.2; NUC-001-2 R9.1.3; NUC-001-2 R9.1.4

R9.1 Administrative elements:

R9.1.1 Definitions of key terms used in the agreement.

R9.1.2 Names of the responsible entities, organizational relationships, and responsibilities related to the NPIRs.

R9.1.3 A requirement to review the agreement(s) at least every three years.

R9.1.4 A dispute resolution mechanism.

Criterion B 1~~, 3, 5, 6~~.

Statement: These requirements of NUC-001-2 do not address reliability, rather they address administrative and commercial terms of an agreement. Given there is no clear nexus between these requirements and reliability, they should be retired.

Conclusion: Since these requirements are purely administrative in nature, provide for a periodic update and commercial terms of the agreement, they provide little protection to the BES. Requirement 9.1 and associated sub-requirements~~subrequirements~~ should be removed from Reliability Standard NUC-001-2.

***PRC-008-0 R1; *PRC-008-0 R2; *PRC-009-0 R1; *PRC-009-0 R1.1; *PRC-009-0 R1.2; *PRC-009-0 R1.3; *PRC-009-0 R1.4; *PRC-009-0 R2; PRC-010-0 R2; PRC-022-1 R2.**

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information
PRC-008-0 R1 The Transmission Owner and Distribution Provider with a UFLS program (as required by its Regional Reliability Organization) shall have a UFLS equipment maintenance and testing program in place. This UFLS equipment maintenance and testing program shall include UFLS equipment identification, the schedule for UFLS equipment testing, and the schedule for UFLS equipment maintenance. PRC-008-0 R2 The Transmission Owner and Distribution Provider with a UFLS program (as required by its Regional Reliability Organization) shall implement its UFLS equipment maintenance and testing program and shall provide UFLS maintenance and testing program results to its Regional Reliability Organization and NERC on request (within 30 calendar days). PRC-009-0 R1 The Transmission Owner, Transmission Operator, Load-Serving Entity and Distribution Provider that owns or operates a UFLS program (as required by its Regional Reliability Organization) shall analyze and document its UFLS program performance in accordance with its Regional Reliability Organization's UFLS program. The analysis shall address the performance of UFLS equipment and program effectiveness following system events resulting in system frequency excursions below the initializing set points of the UFLS program. The analysis shall include, but not be limited to: PRC-009-0 R1.1 A description of the event including initiating conditions. PRC-009-0 R1.2 A review of the UFLS set points and tripping times. PRC-009-0 R1.3 A simulation of the event. PRC-009-0 R1.4 A summary of the findings. PRC-009-0 R2 The Transmission Owner, Transmission Operator, Load-Serving Entity, and Distribution Provider that owns or operates a UFLS program (as required by its Regional Reliability Organization) shall provide documentation of the analysis of the UFLS program to its Regional Reliability Organization and NERC on request 90 calendar days after the system event.

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information

PRC-010-0 R2 The Load-Serving Entity, Transmission Owner, Transmission Operator, and Distribution Provider that owns or operates a UVLS program shall provide documentation of its current UVLS program assessment to its Regional Reliability Organization and NERC on request (30 calendar days).

PRC-022-1 R2 Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program shall provide documentation of its analysis of UVLS program performance to its Regional Reliability Organization within 90 calendar days of a request.

Criterion B 1 and 2~~4, 9~~.

Statement: Under Standards Development Project 2007-17 Protection System Maintenance, which recently passed on August 27, 2012, PRC-008-0 is scheduled to be retired~~Since UVLS~~ and replaced with PRC-005-2. PRC-005-2 will likely be presented to the NERC Board of Trustees in November for approval~~UFLS information is being collected under event analysis~~, and, thus, PRC-008-0 is only presented here for informational purposes. In Order No. 763 at Paragraph 103 the Commission accepted the retirement of PRC-009-0 as appropriately replaced with PRC-006-1. Consistent with Order No. 763, ~~also~~ PRC-009-0 will become inactive on September 30, 2013 and will be replaced by PRC-006-1. Thus, PRC-009-0 is presented here for informational purposes only.

Conversely, PRC-010-0 R2 and PRC-022-1 R2 are not scheduled to be retired and are purely administrative and data collection~~, the above~~ requirements that are better and more appropriately handled via spot checks/compliance audit request for evidence and the applicable RSAW.~~add little to reliability.~~

Conclusion: Since PRC-~~008-0 R1; PRC-008-0 R2; PRC-009-0 R1; PRC-009-0 R1.1; PRC-009-0 R1.2; PRC-009-0 R1.3; PRC-009-0 R1.4; PRC-009-0 R2; PRC-~~010-0 R2 and~~;~~ PRC-022-1 R2 provide~~provides~~ little protection to the BES and better handled via the compliance and monitoring program~~under event analysis and lessons learned papers, it should be removed~~.

***TOP-001-1a R3**

Formatted: Tab stops: 0.5", Left

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information
Each Transmission Operator, Balancing Authority, and Generator Operator shall comply with reliability directives issued by the Reliability Coordinator, and each Balancing Authority and Generator Operator shall comply with reliability directives issued by the Transmission Operator, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances the Transmission Operator, Balancing Authority, or Generator Operator shall immediately inform the Reliability Coordinator or Transmission Operator of the inability to perform the directive so that the Reliability Coordinator or Transmission Operator can implement alternate remedial actions. Criterion B 7. **Statement:** Although there is redundancy between TOP-001-1a R3 and ~~is redundant with~~ IRO-001-1a R8 related to Reliability Coordinators, this redundancy was addressed in Standards Development Project~~. NOTE: per project~~ 2007-03 (Real-time Operations). Specifically, Project 2007-03 eliminated the redundancy in the current version of TOP-001-2 R1 that replaces~~), this requirement was removed from~~ TOP-001-1a R3 and ~~and proposed to be replaced by IRO-001-3, R2, R3, R4.~~ ~~**IRO-001-1a R8**~~ reads: Each~~Transmission Operators,~~ Balancing Authority~~Authorities~~, Generator Operator, Distribution Provider, and ~~Operators, Transmission Service Providers,~~ Load-Serving Entity~~Entities, and Purchasing-Selling Entities~~ shall comply with each Reliability Directive issued and identified as such by its Transmission Operator(s),~~Reliability Coordinator directives~~ unless such action~~actions~~ would violate safety, equipment, ~~or~~ regulatory, or statutory requirements. TOP-001-2 has been approved by ~~Under these circumstances, the Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall immediately inform the Reliability Coordinator of~~ the NERC Board of Trustees and will be filed with~~inability to perform~~ the Commission for approval; therefore, TOP-001-1a R3 is presented for informational purposes only. ~~directive so that the Reliability Coordinator may implement alternate remedial actions.~~

Formatted: Font: Not Bold

Formatted: Adjust space between Latin and Asian text, Adjust space between Asian text and numbers, Tab stops: 0.5", Left

Formatted: Right: 0", Adjust space between Latin and Asian text, Adjust space between Asian text and numbers, Tab stops: 0.5", Left

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information

~~*The next proposed version of IRO-001 for this requirement also reads the same. As is apparent from a comparison of the two requirements, there is no need for TOP-001-1a R3 which is duplicative of IRO-001-1a R8. Also, in the next proposed version of TOP-001, Reliability Coordinator has been deleted from this requirement.~~

~~**Conclusion:** Requirement 3 is redundant to Reliability Standard IRO-001-1a R8 and should be removed from Reliability Standard TOP-001-1a.~~

TOP-005-2a R1

As a condition of receiving data from the Interregional Security Network (ISN), each ISN data recipient shall sign the NERC Confidentiality Agreement for "Electric System Reliability Data."

Criterion B 3.

Statement:

TOP-005-2a R1 is better suited for ROP than reliability requirement. A review of Standards Development Project 2007-03 Real-time Transmission Operations indicates it proposes R1 of TOP-005-1 to be retired. As stated above in the context of TOP-001, this project was approved by the NERC Board of Trustees and will be filed with the Commission for approval; therefore, TOP-005-2a R1 is presented for informational purposes only.

Conclusion: Since TOP-005-2a R1 provides little protection to the BES and is purely documentation in nature, it should be removed.

VAR-001-2 R5

Each Purchasing-Selling Entity and Load Serving Entity shall arrange for (self-provide or purchase) reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching; and controllable load– to satisfy its reactive requirements identified by its Transmission Service Provider.

Formatted: Font: Bold

Formatted: Adjust space between Latin and Asian text, Adjust space between Asian text and numbers

Formatted: Tab stops: 0.5", Left

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information

Criterion B 7.

Statement: VAR-001-2 R5 is redundant with FERC's pro forma open access transmission tariff (OATT) Specifically, the requirement provides for the PSE and LSE to arrange for reactive resources to satisfy the reactive requirements of the Transmission Service Provider, which is already required under Schedule No. 2 of the OATT.

Conclusion: Since VAR-001-2 R5 is redundant with requirements already under FERC's OATT, and, thus, it should be removed.

~~**VAR-002-WECC-1 R2; VAR-501-WECC-1 R2**~~

~~VAR-002-WECC-1 R2 Generator Operators and Transmission Operators shall have documentation identifying the number of hours excluded for each requirement R1.1 through R1.10.~~

~~VAR-501-WECC-1 R2 Generator Operators shall have documentation identifying the number of hours excluded for each requirement in R1.1 through R1.12.~~

~~Criterion B 3 and 4.~~

~~**Statement:** Communication of the status of AVR and PSS with the Transmission Operator may impact reliability, but not documenting or reporting out of this information to a Regional Entity. If the Regional Entity desires to review or track the AVR and PSS hours, such information should be collected via vehicles other than the Reliability Standards, such as Compliance Audits, Spot Checks and other compliance monitoring procedures.~~

~~**Conclusion:** For regulatory efficiency and since the requirements are purely documentation and reporting activities, Requirement 2 in Regional Reliability Standards VAR-002-WECC-1 and VAR-501-WECC-1 should be removed from the Standards.~~

Formatted: Font: (Default) Calibri, Font color: Black

SAR Information

Reliability Functions		
The Standard will Apply to the Following Functions (Check each one that applies.)		
☒	Regional Reliability Organization	Conducts the regional activities related to planning and operations, and coordinates activities of responsible entities to secure the reliability of the Bulk Electric System within the region and adjacent regions.
☒	Reliability Coordinator	Responsible for the real-time operating reliability of its Reliability Coordinator Area in coordination with its neighboring Reliability Coordinator's wide area view.
☒	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within a Balancing Authority Area and supports Interconnection frequency in real time.
☒	Interchange Authority	Ensures communication of interchange transactions for reliability evaluation purposes and coordinates implementation of valid and balanced interchange schedules between Balancing Authority Areas.
☒	Planning Coordinator	Assesses the longer-term reliability of its Planning Coordinator Area.
☒	Resource Planner	Develops a >one year plan for the resource adequacy of its specific loads within a Planning Coordinator area.
☒	Transmission Planner	Develops a >one year plan for the reliability of the interconnected Bulk Electric System within its portion of the Planning Coordinator area.
☒	Transmission Service Provider	Administers the transmission tariff and provides transmission services under applicable transmission service agreements (e.g., the pro forma tariff).
☒	Transmission Owner	Owns and maintains transmission facilities.
☒	Transmission Operator	Ensures the real-time operating reliability of the transmission assets within a Transmission Operator Area.

Formatted: Font: (Default) Calibri, Font color: Black

Reliability Functions		
☒	Distribution Provider	Delivers electrical energy to the End-use customer.
☒	Generator Owner	Owns and maintains generation facilities.
☒	Generator Operator	Operates generation unit(s) to provide real and reactive power.
☒	Purchasing-Selling Entity	Purchases or sells energy, capacity, and necessary reliability-related services as required.
☐	Market Operator	Interface point for reliability functions with commercial functions.
☒	Load-Serving Entity	Secures energy and transmission service (and reliability-related services) to serve the End-use Customer.

Reliability and Market Interface Principles		
Applicable Reliability Principles (Check all that apply).		
☒	1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.	
☒	2. The frequency and voltage of interconnected bulk power systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.	
☒	3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.	
☒	4. Plans for emergency operation and system restoration of interconnected bulk power systems shall be developed, coordinated, maintained and implemented.	
☒	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk power systems.	
☒	6. Personnel responsible for planning and operating interconnected bulk power systems shall be trained, qualified, and have the responsibility and authority to implement actions.	
☒	7. The security of the interconnected bulk power systems shall be assessed, monitored and maintained on a wide area basis.	
☒	8. Bulk power systems shall be protected from malicious physical or cyber attacks.	
Does the proposed Standard comply with all of the following Market Interface Principles?		Enter (yes/no)
	1. A reliability standard shall not give any market participant an unfair competitive advantage.	Yes

Formatted: Font: (Default) Calibri, Font color: Black

Reliability and Market Interface Principles	
2. A reliability standard shall neither mandate nor prohibit any specific market structure.	Yes
3. A reliability standard shall not preclude market solutions to achieving compliance with that standard.	Yes
4. A reliability standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards.	Yes

P81 Project Technical White Paper

October 23, 2012

Table of Contents

P81 Project Technical White Paper

October 23, 2012

I. Introduction

On March 15, 2012, the Federal Energy Regulatory Commission ("FERC" or Commission") issued an order[1] on the North American Electric Reliability Corporation's ("NERC") Find, Fix and Track ("FFT") process that stated in paragraph 81 ("P81"):

> The Commission notes that NERC's FFT initiative is predicated on the view that many violations of requirements currently included in Reliability Standards pose lesser risk to the Bulk-Power System. If so, some current requirements likely provide little protection for Bulk-Power System reliability or may be redundant. The Commission is interested in obtaining views on whether such requirements could be removed from the Reliability Standards with little effect on reliability and an increase in efficiency of the [Electric Reliability Organization] ERO compliance program. If NERC believes that specific Reliability Standards or specific requirements within certain Standards should be revised or removed, we invite NERC to make specific proposals to the Commission identifying the Standards or requirements and setting forth in detail the technical basis for its belief. In addition, or in the alternative, we invite NERC, the Regional Entities and other interested entities to propose appropriate mechanisms to identify and remove from the Commission-approved Reliability Standards unnecessary or redundant requirements. We will not impose a deadline on when these comments should be submitted, but ask that to the extent such comments are submitted NERC, the Regional Entities, and interested entities coordinate to submit their respective comments concurrently.

A. Consensus Process

In response to P81 and the Commission's request for comments to be coordinated,[2] during June and July 2012, various industry stakeholders, Trade Associations,[3] staff from NERC and staff from the NERC Regions jointly discussed consensus criteria and an initial list of Reliability Standard requirements that appeared to easily satisfy the criteria, and, thus, could be retired. Specifically, the three parties (industry stakeholders/Trade Associations, staff from NERC, and staff from the NERC Regions) used the following

[1] *North American Electric Reliability Corporation,* 138 FERC ¶ 61,193 at P 81 (2012).

[2] In addition to addressing P81, the consensus effort was also consistent with recommendation #4 set forth in *NERC's Recommendations to Improve The Standards Development Process* at page 12 (April 2012), which states:

Recommendation 4: Standards Product Issues — The NERC board is encouraged to require that the standards development process address: . . . The retirement of standards no longer needed to meet an adequate level of reliability.

[3] Edison Electric Institute, American Public Power Association, National Rural Electric Cooperative Association, Large Public Power Council, Electricity Consumers Resource Council, The Electric Power Supply Association, and Transmission Access Policy Study Group.

conservative discipline to arrive at the proposed list of requirements to be retired: (i) the development of criteria to determine whether a Reliability Standard requirement should be retired and (ii) the application of this criteria with consultation from Subject Matter Experts ("SME"), with the understanding that if any of the three parties objected to including a requirement it would not be included in the initial phase of the P81 Project. As a result of this process, a draft Standards Authorization Request ("SAR"), including an initial suggested list of requirements for retirement, was drafted and presented to the NERC Standards Committee. Also, the SMEs consulted in this process provided the technical justifications that appear in this technical white paper.

B. Standards Committee

On July 11, 2012, the Standards Committee authorized the draft SAR to be posted for industry comment and formed an interim P81 Standards Drafting Team ("SDT") to review and respond to comments as well as finalize the SAR. The draft SAR was posted on August 3, 2012 with stakeholder comments due on or before September 4, 2012. Based on the stakeholder comments received, the SDT finalized the SAR, including the criteria and the initial list of Reliability Standard requirements proposed for retirement. On September 28, 2012, the Standards Committee Executive Committee authorized: (a) waiving the 30 day initial comment period and (b) posting the SAR and list of requirements proposed for retirement in the initial phase for a 45-day formal comment period with the formation of a ballot pool during the first 30 days and an initial ballot during the last 10 days of that 45-day comment period.[4]

The purpose of this technical white paper is to set forth the background and technical justification for each of the Reliability Standard requirements proposed for retirement. Stakeholders are requested to review this technical white paper and provide the SDT any: (1) supplemental, additional technical justifications for a requirement(s) and/or (2) concerns with the technical justifications for a requirement(s).

[4] The following requirements that were presented in the draft SAR were already scheduled to be retired or subsumed via another Standards Development Project that has been approved by stakeholders and the NERC Board of Trustees (or due to be before the Board in November), and, thus, are presented in this technical white paper in Section V for informational purposes only: COM-001-1.1 R6; EOP-009-0 R2; FAC-008-1 R1.3.5; PRC-008-0 R1; PRC-008-0 R2; PRC-009-0 R1; PRC-009-0 R1.1; PRC-009-0 R1.2; PRC-009-0 R1.3; PRC-009-0 R1.4; PRC-009-0 R2; TOP-001-1a R3; and TOP-005-2a R1. For regulatory efficiency, these requirements will not be presented for comment and vote, and, therefore, will not be presented to the Board of Trustees for retirement or filed with the Commission or Canadian governmental authorities as part of the P81 Project. Those requirements that were not part of the draft SAR, but were added based on stakeholder comments are denoted by a "**" throughout this technical white paper. More detail on each of these requirements is provided below.

II. Executive Summary

The SDT developed a set of three criteria and used them to identify requirements that could be eligible for retirement. A summary of the criteria are as follows:

A. Criterion A (Overarching Criterion): little, if any, benefit or protection to the reliable operation of the BES

B. Criteria B (Identifying Criteria)
   - B1. Administrative
   - B2. Data Collection/Data Retention
   - B3. Documentation
   - B4. Reporting
   - B5. Periodic Updates
   - B6. Commercial or Business Practice
   - B7. Redundant

C. Criteria C (Additional data and reference points)
   - C1. Part of a FFT filing
   - C2. Being reviewed in an ongoing Standards Development Project
   - C3. Violation Risk Factor ("VRF") of the requirement
   - C4. Tier in the 2013 Actively Monitored List ("AML")
   - C5. Negative impact on NERC's reliability principles
   - C6. Negative impact on the defense in depth protection of the BES
   - C7. Promotion of results or performance based Reliability Standards

Specifically, for a requirement to be proposed for retirement, it must satisfy both, Criterion A and at least one of the Criteria B. Criteria C were considered as additional information to make a more informed decision.

Based on the criteria above, the SDT proposes to retire the following 38 requirements in 23 Reliability Standard versions:

- BAL-005-0.2b R2
- CIP-001-2a R4
- CIP-003-3 R1.2
- CIP-003-3 R3
- CIP-003-3 R3.1
- CIP-003-3 R3.2
- CIP-003-3 R3.3
- CIP-003-3 R4.2
- CIP-003-4 R1.2
- CIP-003-4 R3
- CIP-003-4 R3.1
- CIP-003-4 R3.2

- CIP-003-4 R3.3
- CIP-003-4 R4.2
- CIP-005-3a R2.6
- CIP-005-4a R2.6
- CIP-007-3 R7.3
- CIP-007-4 R7.3
- EOP-004-1 R1
- EOP-005-2 R3.1
- FAC-002-1 R2
- FAC-008-1 R2
- FAC-008-1 R3
- FAC-008-3 R4
- FAC-008-3 R5
- FAC-010-2.1 R5**
- FAC-011-2 R5**
- FAC-013-2 R3
- INT-007-1 R1.2
- IRO-016-1 R2
- NUC-001-2 R9.1
- NUC-001-2 R9.1.1
- NUC-001-2 R9.1.2
- NUC-001-2 R9.1.3
- NUC-001-2 R9.1.4
- PRC-010-0 R2
- PRC-022-1 R2
- VAR-001-2 R5**

A table is included in Appendix A with the Reliability Standard requirements proposed for retirement and a cross-reference to the associated criteria.

III. Criteria

The P81 Project focuses on identifying FERC-approved Reliability Standard requirements that satisfy the criteria set forth below.[5] Specifically, for a Reliability Standard requirement to be proposed for retirement it must satisfy **both**: (i) Criterion A (the overarching criterion) and (ii) at least one of the Criteria B listed below (identifying criteria). The purpose of having these two levels of criteria was to confine the review and consideration of requirements to only those requirements that clearly need not be included in the mandatory Reliability Standards. Also, Criteria A and B were designed

[5] The scope of future phases of the P81 Project has not yet been determined. When the scope is considered, the criteria set forth herein may be a useful guide to appropriate criteria for those phases.

so there would be no rewriting or consolidation of requirements, and the technical merits of retiring the requirements did not require significant research and vetting. In addition, for each Reliability Standard requirement proposed for retirement, the data and reference points set forth below in Criteria C were considered to make a more informed decision on whether to proceed with retirement. Lastly, for each requirement proposed for retirement, any increase to the efficiency of the ERO compliance program is addressed.

Criterion A (Overarching Criterion)
The Reliability Standard requirement requires responsible entities to conduct an activity or task that does little, if anything, to benefit or protect the reliable operation of the BES.

Section 215(a) (4) of the United States Federal Power Act defines "reliable operation" as: "… operating the elements of the bulk-power system within equipment and electric system thermal, voltage, and stability limits so that instability, uncontrolled separation, or cascading failures of such system will not occur as a result of a sudden disturbance, including a cybersecurity incident, or unanticipated failure of system elements."

Criteria B (Identifying Criteria)
B1. Administrative
The Reliability Standard requirement requires responsible entities ("entities") to perform a function that is administrative in nature, does not support reliability and is needlessly burdensome.

This criterion is designed to identify requirements that can be removed with little effect on reliability and whose removal will result in an increase in the efficiency of the ERO compliance program. Administrative functions may include a task that is or is not related to developing procedures or plans, such as establishing communication contacts. Thus, for certain requirements, Criterion B1 is closely related to Criteria B2, B3 and B4. Strictly administrative functions do not inherently negatively impact reliability directly and, where possible, should be eliminated for purposes of efficiency and to allow the ERO and entities to appropriately allocate resources.

B2. Data Collection/Data Retention
These are requirements that obligate responsible entities to produce and retain data which document prior events or activities, and should be collected via some other method under NERC's rules and processes.

This criterion is designed to identify requirements that can be removed with little effect on reliability. The collection and/or retention of data do not necessarily have a reliability benefit and yet are often required to demonstrate compliance. Where data collection and/or data retention is unnecessary for reliability purposes, such requirements should be eliminated in order to increase the efficiency of the ERO compliance program.

B3. Documentation
The Reliability Standard requirement requires responsible entities to develop a document (*e.g.*, plan, policy or procedure) which is not necessary to protect BES reliability.

This criterion is designed to identify requirements that require the development of a document that is unrelated to reliability or has no performance or results-based function. In other words, the document is required, but no execution of a reliability activity or task is associated with or required by the document.

B4. Reporting
The Reliability Standard requirement obligates responsible entities to report to a Regional Entity, NERC or another party or entity. These are requirements that obligate responsible entities to report to a Regional Entity on activities which have no discernible impact on promoting the reliable operation of the BES and if the entity failed to meet this requirement there would be little reliability impact.

B5. Periodic Updates
The Reliability Standard requirement requires responsible entities to periodically update (*e.g.*, annually) documentation, such as a plan, procedure or policy without an operational benefit to reliability.

This criterion is designed to identify requirements that impose an updating requirement that is out of sync with the actual operations of the BES, unnecessary or duplicative.

B6. Commercial or Business Practice
The Reliability Standard requirement is a commercial or business practice, or implicates commercial rather than reliability issues.

This criterion is designed to identify those requirements that require: (i) implementing a best or outdated business practice or (ii) implicating the exchange of or debate on commercially sensitive information while doing little, if anything, to promote the reliable operation of the BES.

B7. Redundant
The Reliability Standard requirement is redundant with (i) another FERC-approved Reliability Standard requirement(s); (ii) the ERO compliance and monitoring program or (iii) a governmental regulation (*e.g.*, Open Access Transmission Tariff, North American Energy Standards Board ("NAESB"), etc.).

This criterion is designed to identify requirements that are redundant with other requirements and are, therefore, unnecessary. Unlike the other criteria listed in Criterion B, in the case of redundancy, the task or activity itself may contribute to a reliable BES, but it is not necessary to have two duplicative requirements on the same or similar task or activity. Such requirements can be removed with little or no effect on reliability and removal will result in an increase in efficiency of the ERO compliance program.

Criteria C (Additional data and reference points)
In those instances where there is a need for additional information to assist in the determination of whether a Reliability Standard requirement satisfies both Criteria A and B, the following data and reference points shall be considered to make a more informed decision:

C1. Was the Reliability Standard requirement part of a FFT filing?

The application of this criterion involves determining whether the requirement was included in a FFT filing.

C2. Is the Reliability Standard requirement being reviewed in an on-going Standards Development Project?

The application of this criterion involves determining whether the requirement proposed for retirement is part of an active on-going Standards Development Project, with a consideration of the point in the process that Project is at. If the requirement has been passed by the stakeholders and is scheduled to be presented to the NERC Board of Trustees, in most cases it will not be included in the P81 project to promote regulatory efficiency. The exception would be a requirement, such as the Critical Information Protection ("CIP") requirements for Version 3 and 4, that is not due to be retired for an extended period of time; or, other requirements that based on the specific facts and circumstances of that requirement indicate it should be retired via the P81 Project first rather than waiting for another Standards Development Project to retire it, particularly as a way to increase the efficiencies of the ERO compliance program. Also, for informational purposes, whether the requirement is included in a future or pending Standards Development Project will be identified and discussed.

C3. What is the VRF of the Reliability Standard requirement?

The application of this criterion involves identifying the VRF of the requirement proposed for retirement, with particular consideration of any requirement that has been assigned as having a Medium or High VRF. Also, the fact that a requirement has a Lower VRF is not dispositive that it qualifies for retirement. In this regard, Criterion C3 is considered in light of Criterion C5 (Reliability Principles) and C6 (Defense in Depth) to ensure that no reliability gap would be created by the retirement of the Lower VRF requirement. For example, no requirement, including a Lower VRF requirement, should be retired if its retirement harms the effectiveness of a larger scheme of requirements that are purposely designed to protect the reliable operation of the BES.

C4. In which tier of the 2013 AML does the Reliability Standard requirement fall?

The application of this criterion involves identifying whether the requirement proposed for retirement is on the 2013 AML, with particular consideration for any requirement in the first tier of the 2013 AML.

C5. Is there a possible negative impact on NERC's published and posted reliability principles?

The application of this criterion involves consideration of the eight following reliability principles published on the NERC webpage.

> **Reliability Principles**
> NERC Reliability Standards are based on certain reliability principles that define the foundation of reliability for North American bulk power systems. Each reliability standard shall enable or support one or more of the reliability principles, thereby ensuring that each standard serves a purpose in support of reliability of the North American bulk power systems. Each reliability standard shall also be consistent with all of the reliability principles, thereby ensuring that no standard undermines reliability through an unintended consequence.
>
> Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.
>
> Principle 2. The frequency and voltage of interconnected bulk power systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.
>
> Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.
>
> Principle 4. Plans for emergency operation and system restoration of interconnected bulk power systems shall be developed, coordinated, maintained, and implemented.

Principle 5. Facilities for communication, monitoring, and control shall be provided, used, and maintained for the reliability of interconnected bulk power systems.

Principle 6. Personnel responsible for planning and operating interconnected bulk power systems shall be trained, qualified, and have the responsibility and authority to implement actions.

Principle 7. The reliability of the interconnected bulk power systems shall be assessed, monitored, and maintained on a wide-area basis.

Principle 8. Bulk power systems shall be protected from malicious physical or cyber attacks. (footnote omitted).

C6. Is there any negative impact on the defense in depth protection of the BES?

The application of this criterion considers whether the requirement proposed for retirement is part of a defense in depth protection strategy. In order words, the assessment is to verify whether other requirements rely on the requirement proposed for retirement to protect the BES.

C7. Does the retirement promote results or performance based Reliability Standards?

The application of this criterion considers whether the requirement, if retired, will promote the initiative to implement results- and/or performance-based Reliability Standards.

IV. The Initial Phase Reliability Standards Requirements Proposed for Retirement

The following lists the requirements proposed for retirement with details of the assessment resulting from the applicability of the criteria above.

BAL-005-0.2b R2 – Automatic Generation Control

R2. Each Balancing Authority shall maintain Regulating Reserve that can be controlled by AGC to meet the Control Performance Standard.

Background/Commission Directives

BAL-005-0 was filed for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[6] Also, the Commission accepted an errata filing to BAL-005-0.1b, which replaced Appendix 1 with a corrected version of a Commission-approved interpretation, and made an internal reference correction in the interpretation, thus resulting in BAL-005-0.2b.[7]

In Order No. 693 at paragraph 387, the Commission stated that:

> The goal of this Reliability Standard is to maintain Interconnection frequency by requiring that all generation, transmission, and customer load be within the metered boundaries of a balancing authority area, and establishing the functional requirements for the balancing authority's regulation service, including its calculation of ACE.

At paragraph 396, the Commission stated:

> On this issue, the Commission directs the ERO to modify BAL-005-0 through the Reliability Standards development process to develop a process to calculate the minimum regulating reserve for a balancing authority, taking into account expected load and generation variation and transactions being ramped into or out of the balancing authority.

This Commission directive is unaffected by the proposed retirement of BAL-005-0.2b R2.

Additionally, when adjusting the VRF for the previous version, BAL-005-0.1b R2, from Lower to High, the Commission stated that:[8]

> While theoretically, CPS can be met without the use of AGC, for example, when the AGC system is malfunctioning, the Commission believes, in practice, that AGC is the most dependable and effective means for multiple balancing authorities in an Interconnection to collectively meet CPS requirements in tandem while minimizing assistance from each other in this regard. Human reaction is neither fast enough nor dependable enough in this repetitive task to provide the immediate and continuous support to correct for Interconnection frequency drift. Further, the failure to use AGC presents a higher risk that immediate load shedding will need to be implemented after the sudden loss of generation or an unforeseen

[6] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

[7] Letter Order, Petition of the North American Electric Reliability Corporation for Approval of Errata Changes to Seven Reliability Standards, Docket No. RD12-4-000 (September 13, 2012).

[8] *North American Electric Reliability Corporation*, 121 FERC ¶ 61,179 at P 50 (2007).

> significant load increase and, thus, the failure to use AGC subjects the Bulk-Power System to a higher risk of instability.

However, the fact that the VRF for BAL-005-0.2b R2 is High is not indicative of its actual impact on the BES as explained in further detail below. Also, no Commission directive is impacted by BAL-005-0.2b R2.

Technical Justification

The stated reliability purpose of BAL-005-0.2b is to establish requirements for Balancing Authority Automatic Generation Control ("AGC") necessary to calculate Area Control Error ("ACE") and to routinely deploy the Regulating Reserve. The standard also ensures that all facilities and load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. The reliability purpose and objectives of BAL-005-0.2b are unaffected by the proposed retirement of R2.

A Balancing Authority must use AGC to control its Regulating Reserves to meet the Control Performance Standards ("CPS") as set forth in BAL-001-0.1a R1 and R2. Although for a short period of time (as the Commission stated during an AGC malfunction) a Balancing Authority may be able to meet its CPS obligations without AGC, it cannot do so for any extended period of time, and, therefore, Balancing Authorities must use AGC to control its Regulating Reserves to satisfy its obligations under BAL-001-0.1a R1 and R2. Given this fact, it is redundant to also have BAL-005-0.2b R2 set forth the following statement: "Each Balancing Authority shall maintain Regulating Reserve that can be controlled by AGC to meet the Control Performance Standard." (Criterion B7). It is the duplicative nature of having two requirements requiring the same activity that does little, if anything, to benefit or protect reliable operation of the BES. (Criterion A). In other words, without the existence of BAL-005-0.2b R2, Balancing Authorities must still have Regulating Reserves that can be controlled by AGC to satisfy the CPS in BAL-001-0.1a R1 and R2.

Also, the retirement of BAL-005-0.2b R2 would increase the efficiency of the ERO compliance program because NERC and the Regional Entities would be able to focus their time and resources on monitoring compliance on BAL-001-0.1a R1 and R2, which are results-based requirements, versus monitoring compliance with both BAL-001-0.1a R1 and R2 as well as the static statement in BAL-005-0.2b R2. Therefore, retiring BAL-005-0.2b R2 will provide for increased efficiencies in the ERO compliance program.

Criterion A

Without the existence of BAL-005-0.2b R2, Balancing Authorities must still have Regulating Reserves that can be controlled by AGC to satisfy the CPS in BAL-001-0.1a R1 and R2. Having two requirements requiring a Balancing Authority to conduct the same activity or task does little, if anything, to benefit or protect the reliable operation of the BES because it is duplicative.

Criteria B

- Criterion B7 (Redundant)

Criteria C

1. BAL-005-0.2b R2 has not been part of a FFT filing.

2. BAL-005-0.2b R2 is currently scheduled to be included in Standards Development Project 2010-14.2, which is Phase II of Balancing Authority Reliability-based Controls: Time Error, AGC, and Inadvertent. Given that Project 2010-14.2 is currently not an active Standards Development Project, it remains appropriate to retire BAL-005-0.2b R2 via the P81 Project.

3. The VRF for BAL-005-0.2b R2 is High. Given the redundant nature of BAL-005-0.2b R2, the High VRF is not dispositive of whether or not it should be retired since BAL-001-0.1a R1 and R2 accomplishes the important reliability requirement of Balancing Authorities maintaining Regulating Reserves that can be controlled by AGC to satisfy CPS.

4. BAL-005-0.2b R2 is not part of the 2013 AML.

5. The redundant nature of BAL-005-0.2b R2 with BAL-001-0.1a R1 and R2 also indicates that the retirement of BAL-005-0.2b R2 does not pose a negative impact to NERC's published and posted reliability principles. The two reliability principles applicable to BAL-005-0.2b R2 are the following:

    Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

    Principle 2. The frequency and voltage of interconnected bulk power systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.

6. Retirement of BAL-005-0.2b R2 does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability. As discussed above, given that BAL-001-0.1a R1 and R2 already require that AGC be used to control Regulating Reserves, there is no risk or gap to reliability resulting from the retirement of BAL-005-0.2b R2.

7. Retirement of BAL-005-0.2b R2 promotes a results-based approach, because it is retiring a static requirement while BAL-001.1a R1 and R2, which are more dynamic and results-based requirements, will remain in effect.

Accordingly, for the above reasons, it is appropriate to retire BAL-005-0.2b R2.

CIP-001-2a R4 Sabotage Reporting

R4. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, and Load-Serving Entity shall establish communications contacts, as applicable, with local Federal Bureau of Investigation (FBI) or Royal Canadian Mounted Police (RCMP) officials and develop reporting procedures as appropriate to their circumstances.

Background/Commission Directives

CIP-001-1 was filed for Commission approval on November 15, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[9] CIP-001-1a was filed for Commission approval on April 21, 2010 in Docket No. RD10-11-000, and was approved by an unpublished letter order on February 2, 2011.[10]

CIP-001-2a was filed for Commission approval as a Regional Variance for the ERCOT Region, containing an interpretation of CIP-001-1, on June 21, 2011 in Docket No. RD11-6-000 and was approved by unpublished letter order on August 2, 2011.[11]

In Order No. 693 at paragraph 460, the Commission stated:

> For these reasons, the Commission remains concerned that a wider application of CIP-001-1 may be appropriate for Bulk-Power System reliability. Balancing these concerns with our earlier discussion of the applicability of Reliability Standards to smaller entities, we will not direct the ERO to make any specific modification to CIP-001-1 to address applicability. However, we direct the ERO, as part of its Work Plan, to consider in the Reliability Standards development process, possible revisions to CIP-001-1 that address our concerns regarding the need for wider application of the Reliability Standard. Further, when addressing such applicability issues, the ERO should consider whether separate, less burdensome requirements for smaller entities may be appropriate to address these concerns.

In Order No. 693 at paragraphs 445 and 467 through 470, the Commission stated that:

> The goal of CIP-001-1 is to ensure that operating entities recognize sabotage events and inform appropriate authorities and each other to

[9] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[10] Letter Order, Petition of the North American Electric Reliability Corporation for Approval of Interpretation to Reliability Standard CIP-001-1 —Cyber Security— Sabotage Reporting, Requirement R2, Docket No. RD10-11-000 (February 2, 2011).
[11] Letter Order, Petition of the North American Electric Reliability Corporation for Approval of the Reliability Standard CIP-001-2a – Sabotage Reporting with a Regional Variance for Texas Reliability Entity, Docket No. RD11-6-000 (August 2, 2011).

properly respond to the sabotage to minimize the impact on the Bulk-Power System. The Reliability Standard requires that each reliability coordinator, balancing authority, transmission operator, generation operator and LSE have procedures for recognizing and for making operating personnel aware of sabotage events, and communicating information concerning sabotage events to appropriate "parties" in the Interconnection.

* * *

CIP-001-1, Requirement R4, requires that each applicable entity establish communications contacts, as applicable, with the local FBI or Royal Canadian Mounted Police officials and develop reporting procedures as appropriate to its circumstances. The Commission in the NOPR expressed concern that the Reliability Standard does not require an applicable entity to actually contact the appropriate governmental or regulatory body in the event of sabotage. Therefore, the Commission proposed that NERC modify the Reliability Standard to require an applicable entity to "contact appropriate federal authorities, such as the Department of Homeland Security, in the event of sabotage within a specified period of time."

As mentioned above, NERC and others object to the wording of the proposed directive as overly prescriptive and note that the reference to "appropriate federal authorities" fails to recognize the international application of the Reliability Standard. The example of the Department of Homeland Security as an "appropriate federal authority" was not intended to be an exclusive designation. Nonetheless, the Commission agrees that a reference to "federal authorities" could create confusion. Accordingly, we modify the direction in the NOPR and now direct the ERO to address our underlying concern regarding mandatory reporting of a sabotage event. The ERO's Reliability Standards development process should develop the language to implement this directive.

* * *

Thus, the Commission directs the ERO to modify CIP-001-1 to require an applicable entity to contact appropriate governmental authorities in the event of sabotage within a specified period of time, even if it is a preliminary report. The ERO, through its Reliability Standards development process, is directed to determine the proper reporting period. In doing so, the ERO should consider suggestions raised by commenters such as FirstEnergy and Xcel to define the specified period for reporting an incident beginning from when an event is discovered or suspected to be sabotage, and APPA's concerns regarding events at unstaffed or remote

> facilities, and triggering events occurring outside staffed hours at small entities. (Footnotes omitted).

The Commission's suggestion to modify CIP-001-1 to require an applicable entity to contact appropriate federal authorities, such as the Department of Homeland Security, is being considered in Standards Development Project 2009-01 (EOP-004-2). CIP-001-2a R4 is proposed for retirement because it does not require an action when sabotage is suspected or actually occurs, rather that action is addressed via CIP-001-2a R2.

Technical Justification

The practices and procedures set forth in CIP-001-2a R2 provides the results-based foundation for contacting communication of information concerning sabotage events to appropriate parties in the Interconnection, including when necessary, the FBI or RCMP, when there is an event of suspected or actual sabotage, while the task in R4 does little, if anything, to benefit or protect the reliable operation of the BES. (Criterion A). Consistent with CIP-001-2a R1 (identification of sabotage), R2 (communication of sabotage) and R3 (reporting of sabotage),[12] a responsible entity generally contacts local law enforcement authorities when there is any suspicion that sabotage has occurred at a BES facility. The entity's corporate security and site personnel will consult with local law enforcement to assess the situation and facts to determine whether a suspected or actual act of sabotage has occurred. If they find a suspected or actual act of sabotage has occurred, the FBI or RCMP, as appropriate, will be contacted in accordance with R2.[13] Thus, pursuant to the different steps and actions in R1 through R3, when there is an instance of sabotage that warrants contacting the FBI or RCMP or any other federal/national governmental authority, the responsible entities will contact them. Conversely, CIP-001-2a R4 does not require that the FBI or RCMP be contacted when an act of suspected or actual sabotage has occurred; instead, R4 only requires that the entity establish communication contacts with these agencies, as appropriate, and "develop reporting procedures. . . ." While the development of reporting procedures in R4 is generic, the procedures and processes associated with R1, R2, and R3 are specific to the steps of identifying, communicating and reporting issues related to sabotage. This view was confirmed in the interpretation of R2 that states:

> . . . the phrase "appropriate parties in the Interconnection" to refer collectively to entities with whom the reporting party has responsibilities and/or obligations for the communication of physical or cyber security event information.

[12] "**R2.** Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, and Load Serving Entity shall have procedures for the communication of information concerning sabotage events to appropriate parties in the Interconnection."

[13] In addition, the requirement, as written, does not reflect current reporting and investigation procedures in some of the Canadian Provinces as protocol for sabotage reporting and investigation varies in each Canadian Province. For example, in the Provinces of Ontario and Quebec, the reports are given to local police (municipal/provincial) and not to the RCMP as the standard specifies. The fact is that the RCMP does not perform Provincial level law enforcement in the Provinces of Ontario and Quebec.

Consequently, the R4 requirement to establish communication contacts and develop reporting procedures does not support reliability, and, instead, is an administrative, documentation and data collection task requirement (Criteria B1, B2 and B3). Also, in the overall context of CIP-001-2a R1 through R3, which already require sabotage related procedures and guidelines, the tasks in R4 are unnecessary and needlessly burdensome. Furthermore, corporate security departments that are involved in the investigation of sabotage related events are well aware of how to contact the FBI and RCMP, as applicable, and, in fact, some corporate security employees to have a law enforcement background, including past positions in federal agencies such as the Secret Service. To have these security professionals establish contacts with agencies they are readily familiar with and to generic develop reporting procedures that do not require action is unnecessarily burdensome. The administrative aspect of R4 is further illuminated when compared to the more results-based activities in CIP-001-2a R1 through R3, which are the requirements that serve reliability by requiring action when suspected or actual sabotage occurs. Accordingly, CIP-001-2a R1 through R3 serve the results-based reliability function, while R4 is a static, administrative requirement that has no direct or clear nexus to protecting BES reliability.

Also, the retirement of CIP-001-2a R4 should increase the efficiencies of the ERO compliance program, because ERO and Regional Entity time and resources would be able to focus more attention, if needed, on monitoring compliance with CIP-001-2a R1 through R3.

Criterion A

CIP-001-2a R2 provides the results-based foundation for contacting communication of information concerning sabotage events to appropriate parties in the Interconnection, including when necessary, the FBI or RCMP, when there is an event of suspected or actual sabotage, while the task in R4 does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B

- Criterion B1 (Administrative)
- Criterion B2 (Data Collection/Data Retention)
- Criterion B3 (Documentation)

Criteria C

1. CIP-001-2a R4 has been part of a FFT filing.[14]

[14] NERC FFT Informational Filing, Docket No. RC12-15-000 (August 31, 2012); NERC FFT Informational Filing, Docket No. RC12-13-000 (June 29, 2012); NERC FFT Informational Filing, Docket No. RC12-11-000 (April 30, 2012); NERC FFT Informational Filing, Docket No. RC12-6-000 (December 30, 2011); NERC FFT Informational Filing, Docket No. RC12-2-000 (November 30, 2011); NERC FFT Informational Filing, Docket No. RC12-1-000 (October 31, 2011); NERC FFT Informational Filing, Docket No. RC11-6-000 (September 30, 2011).

2. CIP-001-2a R4 is part of an on-going Standards Development Project 2009-01 (EOP 004-2). At this time, EOP-004-2 has not been approved by stakeholders and the NERC Board of Trustees, and, therefore, it is appropriate to retain CIP-001-2a R4 within the scope of P81. However, if EOP-004-2 does receive stakeholder approval and is adopted by the NERC Board of Trustees, the SDT will reconsider retirement via the P81 Project and may include CIP-001-2a R4 for informational purposes only.

3. CIP-001-2a R4 has a Medium VRF. All of CIP-001-2a has a Medium VRF, thus the fact that R4 is a Medium VRF is not dispositive of whether it should be retired.

4. CIP-001-2a R4 is in the second tier of the AML. Similar to the VRF, having CIP-001-2a R4 in the second tier of the AML is not dispositive of whether it should be retired, particularly when considered with the fact that R2 and R3, the more results-based requirements, are in the first tier.

5. Given its lack of requiring a reliability based action, the retirement of CIP-001-2a R4 does not negatively impact NERC's published and posted reliability principles. The only principles applicable to CIP-001-2a R4 appear to be the following:

   Principle 6. Personnel responsible for planning and operating interconnected bulk power systems shall be trained, qualified, and have the responsibility and authority to implement actions.

   Principle 8. Bulk power systems shall be protected from malicious physical or cyber attacks.

6. The retirement of CIP-001-2a R4 does not impact a defense in depth strategy between multiple requirements. CIP-001-2a R1 through R3 provide the foundation for the identification, communication and reporting of suspected and actual sabotage, while R4 is an administrative task of establishing contacts and developing generic reporting procedures. Therefore, there is no reliability risk or gap that will result from the retirement of CIP-001-2a R4.

7. As mentioned above, CIP-001-2a R4 is not a results-based requirement.

Accordingly, for the above reasons, it is appropriate to retire CIP-001-2a R4.

CIP-003-3, -4 R1.2 – Cyber Security – Security Management Controls

R1.2. The cyber security policy is readily available to all personnel who have access to, or are responsible for, Critical Cyber Assets.

Background/Commission Directives

CIP-003-1 was filed for Commission approval on August 28, 2006 in Docket No. RM06-16-000 and was approved on January 18, 2008 in Order No. 706.[15] CIP-003-2 was filed for Commission approval on May 22, 2009 in Docket Nos. RM06-22-000 and RD09-7-000 and was approved on September 30, 2009.[16] CIP-003-3 was filed for Commission approval on December 29, 2009 in Docket No. RD09-7-002 and was approved on March 31, 2010.[17] CIP-003-4 was submitted for Commission approval on February 10, 2011 in Docket No. RM11-11-000 and was approved on April 19, 2012.[18]

In Order No. 706 at paragraph 342 the Commission stated that:

> Reliability Standard CIP-003-1 seeks to ensure that each responsible entity has minimum security management controls in place to protect the critical cyber assets identified pursuant to CIP-002-1. To achieve this goal, a responsible entity must develop a cyber security policy that represents management's commitment and ability to secure its critical cyber assets. It also must designate a senior manager to direct the cyber security program and to approve any exception to the policy.

All outstanding directives in Order No. 706 will be addressed in Version 5 of the CIP Standards and the retirement of CIP-003-3, -4 R1.2 does not impact a Commission directive.

Technical Justification

The importance of the cyber security policy as representing management's commitment and ability to secure critical cyber assets is overshadowed by the rigorous and specific training, procedural and process related requirements of the CIP Standards. These trainings, procedures and processes render having the cyber security policy readily available an unnecessary requirement. In other words, whether CIP personnel are completing a typical CIP requirement cyber security task or responding to an immediate situation, they will act via their specific training, processes and procedures and not the overarching cyber security policy. Consequently, the cyber security policy's generalized guidance on compliance with the CIP requirements is not a document that adds value to personnel protecting the BES from a cyber attack on a day-to-day basis.

---

[15] *Mandatory Reliability Standards for Critical Infrastructure Protection*, 122 FERC ¶ 61,040 (2008) ("Order No. 706"), *order on reh'g*, Order No. 706-A, 123 FERC ¶ 61,174 (2008), *order on clarification*, Order No. 706-B, 126 FERC ¶ 61,229, order on clarification, Order No. 706-C, 127 FERC ¶ 61,273 (2009).

[16] *Order Approving Revised Reliability Standard for Critical Infrastructure Protection and Requiring Compliance Filing*, 128 FERC ¶ 61,291 (2009), *order denying reh'g and granting clarification*, 129 FERC ¶ 61,236 (2009) (approving Version 2 of the CIP Reliability Standards)).

[17] *Order on Compliance* 130 FERC ¶ 61,271 (2010).

[18] *Version 4 Critical Infrastructure Protection Reliability Standards*, 139 FERC ¶ 61,058 (2012).

Furthermore, to implement CIP-003-3, -4 R1.2 entities have undertaken a variety of administrative solutions including kiosks dedicated to computers with the cyber security policy, posting the policy on the company intranet, having copies available in work stations, at common area desks in generating stations and substations, etc. Therefore, although the cyber security policy is readily available for all personnel who have access to, or are responsible for, Critical Cyber Assets, these personnel are specifically and appropriately focused on implementing the procedures and processes required by CIP Reliability Standards such as CIP-007-3 R1, which states as follows:

> Test Procedures — The Responsible Entity shall ensure that new Cyber Assets and significant changes to existing Cyber Assets within the Electronic Security Perimeter do not adversely affect existing cyber security controls. For purposes of Standard CIP-007-3, a significant change shall, at a minimum, include implementation of security patches, cumulative service packs, vendor releases, and version upgrades of operating systems, applications, database platforms, or other third-party software or firmware.

Generally the cyber security policy will cite CIP-007-3 R1 as a requirement, and may refer to procedures related to CIP-007-3 R1, but will not have, nor is it required to have, the detail necessary to implement CIP-007-3 R1. In some larger companies, it is also common to have specific procedures on how to accomplish requirements such as CIP-007-3 R1 in a control center versus a generating plant or substation, and it may be different CIP personnel implementing these procedures in locations many hundreds of miles, states or Interconnections away from each other. The value of a more general cyber security policy to these individuals is minimal, at best, and, therefore, does not support reliability. Also, making it readily available at all office locations is an unnecessarily burdensome administrative task.

Moreover, to place every procedure and process to comply with CIP in the cyber security policy is also not practical or effective, because such a large policy will only distract from CIP personnel being able to specifically focus on the task before them. As already stated, there are likely some differences between implementing a requirement like CIP-007-1 R1 in a control center that may be located in one state and for generators located several states and hundreds of miles away. Thus, making the cyber security policy readily available is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES (Criteria A and B1).

In this context, also consider the inefficiencies CIP-003-3, -4 R1.2 may be causing the ERO compliance program. In companies with hundreds of personnel who have access to, or are responsible for, Critical Cyber Assets in multiple states and Interconnections, the ERO may expend a significant amount of time and resources to monitor compliance with CIP-003-3, -4 R1.2 via a review of kiosks, intranet sites, office cubicles, desks, etc in

multiple locations. Accordingly, considerable efficiency gains will be obtained for the ERO's compliance program if CIP-003-3, -4 R1.2 is retired.

Criterion A
Making the cyber security policy readily available is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B

- Criterion B1 (Administrative)

Criteria C

1. CIP-003-3, -4 R1.2 has been part of a FFT filing.[19]

2. As is the case with all the CIP requirements (other than CIP-001-2a R4) proposed for retirement in this technical paper, CIP-003-3, -4 R1.2 is part of an on-going Standards Development Project 2008-06 (Cyber Security) ("CIP V5"). The P81 SDT has coordinated its efforts with the chair of Project 2008-06. There is no conflict between CIP requirements proposed in this technical white paper for retirement and the direction of Project 2008-06. The CIP V5 requirements are not Board of Trustee or Commission approved, and, even if they were, the effective date of CIP V5 is unknown and likely at least a year, maybe more, into the future. Thus, unlike the other requirements presented here for informational purposes, it is appropriate to maintain all the CIP requirements discussed in this technical paper within the scope of the P81 Project to secure the efficiency gains resulting to the ERO compliance program from their retirement.

3. CIP-003-3, -4 R4.2 has a Lower VRF. As explained above, CIP-003-3, -4 R4.2 is not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

4. CIP-003-3,-4 R1.2 is in the second tier of the AML. As explained above, CIP-003-3, -4 R4.2 is not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

5. Given its administrative nature, CIP-003-3, -4 R1.2 does not negatively impact NERC's published and posted reliability principles. The two reliability principles that appear applicable to CIP-003-3, -4 R1.2 are the following:

   Principle 6. Personnel responsible for planning and operating interconnected bulk power systems shall be trained, qualified, and have the responsibility and authority to implement actions.

[19] NERC FFT Informational Filing, Docket No. RC12-1-000 (October 31, 2011).

Principle 8. Bulk power systems shall be protected from malicious physical or cyber attacks.

As stated above, other CIP requirements are replete with the requirements that CIP personnel implement to protect the BES from cyber attacks.

6. Retiring CIP-003-3, -4 R1.2 does not negatively impact defense in depth because no other requirement depends on the cyber security policy being readily available. Therefore, the removal of CIP-003,-3,-4 R1.2 cannot have a negative impact on defense in depth.

7. Retirement of CIP-003-3, -4 R1.2 promotes a results-based approach because the requirement is mechanistic and administrative, and does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire CIP-003-3, -4 R1.2.

CIP-003-3, -4 R3, R3.1, R3.2, R3.3 – Cyber Security – Security Management Controls

R3. Exceptions – Instances where the Responsible Entity cannot conform to its cyber security policy must be documented as exceptions and authorized by the senior manager or delegate(s).

R3.1. Exceptions to the Responsible Entity's cyber security policy must be documented within thirty days of being approved by the senior manager or delegate(s).

R3.2. Documented exceptions to the cyber security policy must include an explanation as to why the exception is necessary and any compensating measures.

R3.3. Authorized exceptions to the cyber security policy must be reviewed and approved annually by the senior manager or delegate(s) to ensure the exceptions are still required and valid. Such review and approval shall be documented.

Background/Commission Directives

CIP-003-1 was filed for Commission approval on August 28, 2006 in Docket No. RM06-16-000 and was approved on January 18, 2008 in Order No. 706.[20] CIP-003-2 was filed for Commission approval on May 22, 2009 in Docket Nos. RM06-22-000 and RD09-7-

[20] *Mandatory Reliability Standards for Critical Infrastructure Protection*, 122 FERC ¶ 61,040 (2008) ("Order No. 706"), *order on reh'g*, Order No. 706-A, 123 FERC ¶ 61,174 (2008), *order on clarification*, Order No. 706-B, 126 FERC ¶ 61,229, order on clarification, Order No. 706-C, 127 FERC ¶ 61,273 (2009).

000 and was approved on September 30, 2009.[21] CIP-003-3 was filed for Commission approval on December 29, 2009 in Docket No. RD09-7-002 and was approved on March 31, 2010.[22] CIP-003-4 was submitted for Commission approval on February 10, 2011 in Docket No. RM11-11-000 and was approved on April 19, 2012.[23]

In Order No. 706 at paragraphs 373 and 376 the Commission stated that:

> Requirement R3 provides that a responsible entity must document exceptions to its policy with documentation and senior management approval. The Commission is concerned that, if exceptions mount, there would come a point where the exceptions rather than the rule prevail. In such a situation, it is questionable whether the responsible entity is actually implementing a security policy. We therefore believe that the Regional Entities should perform an oversight role in providing accountability of a responsible entity that excepts itself from compliance with the provisions of its cyber security policy. Further, we believe that such oversight would impose a limited additional burden on a responsible entity because Requirement R3 currently requires documentation of exceptions.
>
> Further, the Commission adopts its CIP NOPR proposal and directs the ERO to clarify that the exceptions mentioned in Requirements R2.3 and R3 of CIP-003-1 do not except responsible entities from the Requirements of the CIP Reliability Standards. In response to EEI, we believe that this clarification is needed because, for example, it is important that a responsible entity understand that exceptions that individually may be acceptable must not lead cumulatively to results that undermine compliance with the Requirements themselves.

All outstanding directives in Order No. 706 will be addressed in Version 5 of the CIP Standards and the retirement of CIP-003-3, -4 R3, R3.1, R3.2, and R3.3 do not impact a Commission directive.

Technical Justification

CIP-003-3, -4 R3, R3.1, R3.2, and R3.3 (CIP exception requirements) have proven not to be useful and have been subject to misinterpretation. For instance, although the CIP exception requirements have not been available for use to exempt an entity from compliance with any requirement of any Reliability Standard, based on questions received by NERC CIP Staff, entities may be interpreting the CIP exception requirements to allow for such an exemption. The CIP exception requirements only apply to

[21] *Order Approving Revised Reliability Standard for Critical Infrastructure Protection and Requiring Compliance Filing*, 128 FERC ¶ 61,291 (2009), *order denying reh'g and granting clarification*, 129 FERC ¶ 61,236 (2009) (approving Version 2 of the CIP Reliability Standards)).

[22] *Order on Compliance* 130 FERC ¶ 61,271 (2010).

[23] *Version 4 Critical Infrastructure Protection Reliability Standards*, 139 FERC ¶ 61,058 (2012).

exceptions to internal corporate policy, and only in cases where the policy exceeds a Reliability Standard requirement or addresses an issue that is not covered in a Reliability Standard. For example, if an internal corporate policy statement requires that all passwords be a minimum of eight characters in length, and be changed every 30 days, which is over and above what is required in CIP-007-3 R5.3, the CIP exception requirements could be invoked for internal governance purposes to lessen the corporate requirement back to the password requirements in CIP-007-3 R5.3, but under no circumstances do the CIP exception requirements authorize the implementation of security measures less than what is required in CIP-007-3 R5.3.

The retirement of the CIP exception requirements would not impact an entity's ability to maintain such an exception process within their corporate policy governance procedures, if it so desired. Consequently, the CIP exception requirements were always an internal administrative and documentation requirement that is outside the scope of the other CIP requirements (Criteria B1 and B3). In this context, the CIP exception requirements do not support the level of reliability set forth in the Reliability Standards, and are unnecessarily burdensome because they have resulted in entities implementing practices due to a misinterpretation of the requirement that has caused them to allocate time and resources to tasks that are misaligned with the requirements themselves. Unfortunately, this misunderstanding has also impacted the efficiency of the ERO compliance program because of the amount of time and resources needed to clear up the misunderstanding and coach entities on the meaning of the CIP exception requirements. These inefficiencies would be eliminated with the retirement of the CIP exception requirements. Accordingly, as explained, the CIP exception requirements are an administrative tool for internal corporate governance procedures, and, therefore, are not requirements that are necessary or directly protect the BES from a cyber attack, the tasks associated with these requirements do little, if anything, to benefit or protect the reliable operation of the BES. (Criterion A).

Criterion A
The CIP exception requirements are a tool for internal corporate governance procedures and is not a requirement directly protecting the BES from a cyber attack, and, therefore, the tasks associated with these requirements do little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B

- Criterion B1 (Administrative)
- Criterion B3 (Documentation)

Criteria C

1. The CIP exception requirements have been part of a FFT filing.[24]

[24] NERC FFT Informational Filing, Docket No. RC12-7-000 (January 31, 2012); NERC FFT Informational Filing, Docket No. RC12-6-000 (December 30, 2011).

2. The CIP exception requirements are part of an on-going Standards Development Project 2008-06 (Cyber Security). As detailed in the discussion of CIP-003-3, -4 R1.2, the P81 SDT has coordinated its efforts with the chair of Project 2008-06 and there is no conflict between the CIP exception requirements proposed in this technical white paper for retirement and the direction of Project 2008-06.

3. The CIP exception requirements each have a Lower VRF. As explained above, they are not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

4. The CIP exception requirements are on the third tier of the AML. As explained above, they are not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

5. Given the administrative and unnecessary nature of the CIP exception requirements in relation to protecting the BES from cyber attacks, retirement does not pose any negative impact to NERC's published and posted reliability principles, of which only Principle 8 appears to apply: "Bulk power systems shall be protected from malicious physical or cyber attacks."

6. Retiring the CIP exception requirements does not negatively impact any defense in depth strategy because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. Retirement of the CIP exception requirements promotes a results-based approach because the CIP exception requirements are approaches that entities may voluntarily take to handle internal corporate governance procedures, and, therefore, do not provide the foundation for performing a required reliability task.

Accordingly, for the above reasons, it is appropriate to retire the following CIP exception requirements: CIP-003-3, -4 R3, R3.1, R3.2, and R3.3.

CIP-003-3, -4 R4.2 - Cyber Security – Security Management Controls

> **R4.2.** The Responsible Entity shall classify information to be protected under this program based on the sensitivity of the Critical Cyber Asset information.

Background/Commission Directives

CIP-003-1 was filed for Commission approval on August 28, 2006 in Docket No. RM06-16-000 and was approved on January 18, 2008 in Order No. 706.[25] CIP-003-2 was filed for Commission approval on May 22, 2009 in Docket Nos. RM06-22-000 and RD09-7-

[25] *Mandatory Reliability Standards for Critical Infrastructure Protection*, 122 FERC ¶ 61,040 (2008) ("Order No. 706").

000 and was approved on September 30, 2009.[26] CIP-003-3 was filed for Commission approval on December 29, 2009 in Docket No. RD09-7-002 and was approved on March 31, 2010.[27] CIP-003-4 was submitted for Commission approval on February 10, 2011 in Docket No. RM11-11-000 and was approved on April 19, 2012.[28] In Order No. 706, the Commission did not specifically address CIP-003-3, -4 R4.2.

All outstanding directives in Order No. 706 will be addressed in Version 5 of the CIP Standards and the retirement of CIP-003-3, -4 R4.2 does not impact a Commission directive.

Technical Justification

The task of classifying Critical Cyber Information "based on the sensitivity" does little, if anything, to benefit or protect the reliable operation of the BES, and is an unnecessarily administrative and a documentation task that is redundant with CIP-003-3, -4 R4 (Criteria A, B1, B3 and B7). Specifically, CIP-003-3, -4 R4[29] already requires the classification of information associated with Critical Cyber Assets. The only difference between R4 and R4.2 is that the subjective term "based on the sensitivity" has been added, thus, making it essentially redundant. Further, CIP-003-3, -4 R4 since requires the entity to develop classifications based on a subjective understanding of sensitivity (*i.e.*, no clear connection to serving reliability), the requirement does not support reliability. In this context, classifying based on sensitivity becomes an administrative that becomes necessarily burdensome, because of all the possible ramifications "based on sensitivity" can produce, and, therefore, require SMEs to decide on and reduce to writing in a documented program. This is time and effort that could be better spent on other CIP activities that provide value to cyber security and actively protect the BES. For similar reasons, retiring CIP-003-3, -4 R4.2 and the term "based on sensitivity" would increase the efficiencies of the ERO compliance program on several levels. The ERO would not spend time and resources on reviewing whether an entity's documentation contained classifications "based on sensitivity," and, instead would be able to focus its time and resources monitoring compliance with the entity's program to identify, classify, and protect information associated with Critical Cyber Assets (R4), without any distraction on monitoring the subjective implementation of classifications based on sensitivity (R4.2).

Criterion A

The task of classifying Critical Cyber Information "based on the sensitivity" does little, if anything, to benefit or protect the reliable operation of the BES, and is an administrative and a documentation task that is redundant with CIP-003-3, -4 R4.

[26] *Order Approving Revised Reliability Standard for Critical Infrastructure Protection and Requiring Compliance Filing*, 128 FERC ¶ 61,291 (2009), *order denying reh'g and granting clarification*, 129 FERC ¶ 61,236 (2009) (approving Version 2 of the CIP Reliability Standards)).
[27] *Order on Compliance* 130 FERC ¶ 61,271 (2010).
[28] *Version 4 Critical Infrastructure Protection Reliability Standards*, 139 FERC ¶ 61,058, (2012).
[29] "**R4**. Information Protection — The Responsible Entity shall implement and document a program to identify, classify, and protect information associated with Critical Cyber Assets."

Criteria B

- Criterion B1 (Administrative)
- Criterion B3 (Documentation)
- Criterion B7 (Redundant)

Criteria C

1. CIP-003-3, -4 R4.2 has been part of a FFT filing.[30]

2. CIP-003-3, -4 R4.2 is part of an on-going Standards Development Project 2008-06 (Cyber Security). As detailed in the discussion of CIP-003-3, -4 R1.2, the P81 SDT has coordinated its efforts with the chair of Project 2008-06 and there is no conflict between retirement of CIP-003-3, -4 R4.2 and the direction of Project 2008-06.

3. CIP-003-3, -4 R4.2 has a Lower VRF. As explained above, CIP-003-3, -4 R4.2 is not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

4. CIP-003-3, -4 R4.2 is on the third tier of the AML. As explained above, CIP-003-3, -4 R4.2 is not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

5. Given the unnecessary and redundant nature of this requirement, retirement does not pose any negative impact to NERC's published and posted reliability principle No. 8 which appears to apply: "Bulk power systems shall be protected from malicious physical or cyber attacks."

6. Retirement of CIP-003-3, -4 R4.2 does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. Retirement of CIP-003-3, -4 R4.2 promotes a results-based approach because retiring CIP-003-3, -4 R4.2 moves away from prescriptive, checklist of documentation approach to Reliability Standard requirements.

Accordingly, for the above reasons, it is appropriate to retire CIP-003-3, -4 R4.2.

CIP-005-3a, -4a R2.6 – Cyber Security – Electronic Security Perimeter(s)

R2.6. Appropriate Use Banner -- Where technically feasible, electronic access control devices shall display an appropriate use banner on the user screen

[30] NERC FFT Informational Filing, Docket No. RC12-7-000 (January 31, 2012); NERC FFT Informational Filing, Docket No. RC12-1-000 (October 31, 2011).

upon all interactive access attempts. The Responsible Entity shall maintain a document identifying the content of the banner.

Background/Commission Directives

CIP-005-1 was filed for Commission approval on August 28, 2006 in Docket No. RM06-16-000 and was approved on January 18, 2008 in Order No. 706.[31] CIP-005-2 was filed for Commission approval on May 22, 2009 in Docket Nos. RD09-7-000 and RM06-22-000 and was approved on September 30, 2009.[32] CIP-005-2a was filed for Commission approval on April 21, 2010 in Docket No. RD10-12-000 and was approved by unpublished letter order on February 2, 2011.[33] CIP-005-3 was filed for Commission approval on December 29, 2009 in Docket No. RD09-7-002 and was approved on March 31, 2010.[34] CIP-005-3a was filed for Commission approval on April 21, 2010 in Docket No. RD10-12-000 and was approved by an unpublished letter order on February 2, 2011.[35] CIP-005-4 was filed for Commission approval on February 10, 2011 in Docket No. RM11-11-000 and was approved on April 19, 2012 in Order No. 761.[36] CIP-005-4a was filed for Commission approval as errata to the CIP Version 4 Petition on April 12, 2011 in Docket No. RM11-11-000 and was approved on April 19, 2012 in Order No 761, the Final Rule on the CIP Version 4 standards.[37]

In Order 706 at paragraph 505 the Commission noted that:

> Requirement R2 of CIP-005-1 requires a responsible entity to implement organizational processes and technical and procedural mechanisms for control of electronic access at all electronic access points to the electronic security perimeter.

All outstanding directives in Order No. 706 will be addressed in Version 5 of the CIP Standards and the retirement of CIP-005-3, -4 R2.6 does not impact a Commission directive.

[31] *Mandatory Reliability Standards for Critical Infrastructure Protection*, 122 FERC ¶ 61,040 (2008) ("Order No. 706").
[32] *Order Approving Revised Reliability Standard for Critical Infrastructure Protection and Requiring Compliance Filing*, 128 FERC ¶ 61,291 (2009), *order denying reh'g and granting clarification*, 129 FERC ¶ 61,236 (2009) (approving Version 2 of the CIP Reliability Standards)).
[33] Letter Order, Petition of the North American Electric Reliability Corporation for Approval of Interpretation to Reliability Standard CIP-005-1, Cyber Security, Electronic Security Perimeter(s), Section 4.2.2 and Requirement R1.3., Docket RD10-12-000, (February 2, 2011).
[34] *Order on Compliance* 130 FERC ¶ 61,271 (2010).
[35] Letter Order, Petition of the North American Electric Reliability Corporation for Approval of Interpretation to Reliability Standard CIP-005-1, Cyber Security, Electronic Security Perimeter(s), Section 4.2.2 and Requirement R1.3., Docket RD10-12-000, (February 2, 2011).
[36] *Version 4 Critical Infrastructure Protection Reliability Standards*, 139 FERC ¶ 61,058 (2012).
[37] *Id.*

Technical Justification

The implementation of an appropriate use banner ("banner") on a user's screen for all interactive access attempts into the Electronic Security Perimeter ("ESP") is an activity or task that does little, if anything, to benefit or protect the reliable operation of the BES. Specifically, the banner does not support reliability because people who intend to inappropriately use sites will simply ignore the banner. (Criterion A). The banner is also is an administrative task since it simply requires a message be displayed on an access screen. Furthermore, the implementation and administration of a non-beneficial tool, such as the banner, therefore creates a needlessly burdensome task. As mentioned, above, the ineffectiveness of the banner also indicates that it does not support reliability. (Criteria B1 and B3). In addition, banners of this type are generally considered to be a form of legal protection or mitigation of liability, rather than security protection. Furthermore, the banner does not ensure a proper or secure access point configuration which is generally the purpose of CIP-005-3a, -4a. Further, this requirement has also been the subject of numerous TFEs for devices that cannot support such a banner, and hence has diverted resources from more productive efforts. Thus, the ERO's compliance program would become more efficient if CIP-005-3a, -4a R2.6 was retired, because ERO time and resources could be reallocated to monitor compliance with the remainder of CIP-005-3a, -4a, which provides for more effective controls of electronic access at all electronic access points into the ESP.

Criterion A

The implementation of an appropriate use banner on a user's screen for all interactive access attempts into the ESP is an activity or task that does little, if anything, to benefit or protect reliable operation of the BES, because it is administrative and a static electronic message that is not an effective deterrent or control against unauthorized access.

Criteria B

- Criterion B1 (Administrative)
- Criterion B3 (Documentation)

Criteria C

1. CIP-005-3a, -4a R2.6 has been part of a FFT filing.[38]

2. CIP-005-3a, -4a R2.6 is part of an on-going Standards Development Project 2008-06 (Cyber Security). As detailed in the discussion of CIP-003-3, -4 R1.2, the P81 SDT has coordinated its efforts with the chair of Project 2008-06 and there is no conflict between retirement of CIP-005-3a, -4a R2.6 and the direction of Project 2008-06.

[38] NERC FFT Informational Filing, Docket No. RC12-13-000 (June 29, 2012); NERC FFT Informational Filing, Docket No. RC12-7-000 (January 31, 2012).

3. The VRF for CIP-005-3a, -4a R2.6 is Lower. As explained above, CIP-005-3a, -4a R2.6 is not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

4. CIP-005-3a, -4a R2.6 is on the first tier of the AML; however, given its clear ineffective nature the placement on the first tier is not dispositive of whether it should be retired.

5. Reliability principle No. 8 – "Bulk power systems shall be protected from malicious physical or cyber attacks" – is not implicated or negatively impacted by the retirement of CIP-005-3a, -4a R2.6, because it is not an effective deterrent or control to unauthorized access into an ESP.

6. The retirement of this requirement does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability. Furthermore, the remainder of CIP-005-3a, -4a provides for actual controls of electronic access at all electronic access points which addresses the reliability risk associated with unauthorized access into an ESP.

7. Its retirement also promotes a results-based approach because CIP-005-3a, -4a R2.6 is an ineffective administrative task, and, therefore, does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire CIP-005-3a, -4a R2.6.

CIP-007-3, -4 R7.3 – Cyber Security – Systems Security Management

R7.3. The Responsible Entity shall maintain records that such assets were disposed of or redeployed in accordance with documented procedures.

Background/Commission Directives

CIP-007-1 was filed for Commission approval on August 28, 2006 in Docket No. RM06-16-000 and was approved on January 18, 2008 in Order No. 706.[39] CIP-007-2 was filed for Commission approval on May 22, 2009 in Docket Nos. RM06-22-000 and RD09-7-000 and was approved on September 30, 2009.[40] CIP-007-2a was filed for Commission approval on November 17, 2009 in Docket No. RD10-3-000 and was approved on March 18, 2010.[41] CIP-007-3 was filed for Commission approval on December 29, 2009 in Docket No. RD09-7-002 and was approved on March 31, 2010.[42] CIP-007-4 was filed

[39] *Mandatory Reliability Standards for Critical Infrastructure Protection*, 122 FERC ¶ 61,040 (2008) ("Order No. 706").
[40] *Order Approving Revised Reliability Standard for Critical Infrastructure Protection and Requiring Compliance Filing*, 128 FERC ¶ 61,291 (2009), *order denying reh'g and granting clarification*, 129 FERC ¶ 61,236 (2009) (approving Version 2 of the CIP Reliability Standards)).
[41] Order Approving Reliability Standard Interpretation, 130 FERC ¶ 61,184 (2010).
[42] *Order on Compliance* 130 FERC ¶ 61,271 (2010).

for Commission approval on February 10, 2011 in Docket No. RM11-11-000 and was approved on April 19, 2012.[43]

In Order No. 706 at paragraph 631 the Commission stated that:

> Requirement R7 of CIP-007-1 requires the responsible entity to establish formal methods, processes and procedures for disposal or redeployment of cyber assets. In the CIP NOPR, the Commission addressed the concern that solely to "erase the data," as stated several times in Requirement R7, may not be adequate because technology exists that allows retrieval of "erased" data from storage devices, and that effective protection requires discarded or redeployed assets to undergo high quality degaussing. We noted that erasure is as much a method as it is a goal, and that the requirement ultimately needs to assure that there is no opportunity for unauthorized retrieval of data from a cyber asset prior to discarding it or redeploying it. Degaussing is not the sole means for achieving this goal. The Commission therefore proposed to direct the ERO to modify Requirement R7 to clarify this point. (Footnote omitted)

This Commission directive is unaffected by the retirement of CIP-007-3,-4 R7.3 as explained below.

Technical Justification

Outside the context of a Reliability Standard, under Section 400 of the NERC Rules of Procedure, NERC and the Regional Entities have the authority to require an entity to submit data and information for purposes of monitoring compliance. [44] CIP-007-3, -4 R7.3 requires the maintaining of records for the purpose of demonstrating compliance with disposing of or redeploying of Cyber Assets in accordance with documented procedures. NERC and the Regions Entities, however, under Section 400 already have the ability to require the production of records to demonstrate compliance, thus it is unnecessary to also state the same in CIP-007-3, -4 R7.3. The maintaining of records is an administrative task, not a task directly related to the protection of the BES from a cyber attack. The maintaining of records is not a task that by itself, or in conjunction with other requirements, supports reliability. Also, the maintaining of the records becomes unnecessarily burdensome in that it requires all records be maintained, which

[43] *Version 4 Critical Infrastructure Protection Reliability Standards*, 139 FERC ¶ 61,058 (2012).

[44] Section 401 of NERC's Rules of Procedure provide for collection of data and information necessary to monitor compliance outside the context of Reliability Standards:

> **Data Access** — All Bulk Power System owners, operators, and users shall provide to NERC and the applicable Regional Entity such information as is necessary to monitor compliance with the Reliability Standards. NERC and the applicable Regional Entity will define the data retention and reporting requirements in the Reliability Standards *and compliance reporting procedures.* (emphasis added).

may or may not be necessary to demonstrate compliance via the production of information under Section 400. (Criteria B1 and B2). As mentioned, CIP-007-3, -4 R7.3 does not promote reliability because it does not protect the BES from a cyber attack, instead it is a record retention activity. Therefore, CIP-007-3, -4 R7.3 requires an activity or task that in and of itself, does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A).

In contrast, the remaining substantive requirements in R7 read as follows:

> R7. Disposal or Redeployment — The Responsible Entity shall establish and implement formal methods, processes, and procedures for disposal or redeployment of Cyber Assets within the Electronic Security Perimeter(s) as identified and documented in Standard CIP-005-3.
>
> R7.1. Prior to the disposal of such assets, the Responsible Entity shall destroy or erase the data storage media to prevent unauthorized retrieval of sensitive cyber security or reliability data.
>
> R7.2. Prior to redeployment of such assets, the Responsible Entity shall, at a minimum, erase the data storage media to prevent unauthorized retrieval of sensitive cyber security or reliability data.

An entity's following of these requirements may help to protect BES reliability, but the retention of evidence associated with these requirements does not. Hypothetically, an entity could perform R7, R7.1 and R7.2 flawlessly and protect the BES, but not have any record of it. While this situation may impact a demonstration of compliance, the lack of records does not necessarily directly impact the reliability of the BES or protect it from a cyber attack.

Also, there are some inherent inefficiencies resulting from a small number of Reliability Standard requirements mandating the collection of data, evidence and records, while most data and information is collected for ERO compliance monitoring purposes outside the context of Reliability Standards. In this regard, for the ERO, Regional Entities and the entities, arguably Reliability Standards are more difficult to understand because of this inconsistent approach (typically only implicitly requiring documentation as a part of an obligation to prove compliance, but occasionally explicitly requiring it with no discernible pattern or rationale).

Criterion A

CIP-007-3, -4 R7.3 does promote reliability because it does not protect the BES from a cyber attack, instead it is a record retention activity. Therefore, CIP-007-3, -4 R7.3 requires an activity or task that in and of itself, does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B

- Criterion B1 (Administrative)
- Criterion B2 (Data Collection/Data Retention)

Criteria C

1. CIP-007-3, -4 R7.3 has not been part of a FFT filing.

2. CIP-007-3, -4 R7.3 is part of an on-going Standards Development Project 2008-06 (Cyber Security). As detailed in the discussion of CIP-003-3, -4 R1.2, the P81 SDT has coordinated its efforts with the chair of Project 2008-06 and there is no conflict between retirement of CIP-007-3, -4 R7.3 and the direction of Project 2008-06.

3. The VRF for CIP-007-3, -4 R7.3 is Lower. As explained above, CIP-007-3, -4 R7.3 is not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

4. CIP-007-3, -4 R7.3 is on the first tier of the AML; however, given that it is simply requiring the retention of records the fact that is on the first tier is not dispositive of whether it should be retired.

5. Given the administrative, data collection nature of this requirement, retirement does not pose any negative impact to NERC's published and posted reliability principle No. 8: "Bulk power systems shall be protected from malicious physical or cyber attacks."

6. The retirement does not negatively impact defense in depth because data retention in-and-of-itself is not an activity that other requirements depend on to help cover a reliability gap or risk to reliability.

7. Its retirement promotes a results-based approach because the data collection/retention does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire CIP-007-3, -4 R7.3.

EOP-004-1 R1 – Disturbance Reporting

R1. Each Regional Reliability Organization shall establish and maintain a Regional reporting procedure to facilitate preparation of preliminary and final disturbance reports.

Background/Commission Directives

EOP-004-1 was submitted to the Commission for approval on November 15, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[45] Although the Commission did not address EOP-004-1 R1 directly, in Order No. 693 at paragraph 617 it stated that EOP-004-1:

> . . . serves an important purpose in establishing requirements for reporting and analysis of system disturbances. Accordingly, the Commission approves Reliability Standard EOP-004-1 as mandatory and enforceable. In addition, pursuant to section 215(d)(5) of the FPA and § 39.5(f) of our regulations, the Commission directs the ERO to develop a modification to EOP-004-1 through the Reliability Standards development process that includes any Requirements necessary for users, owners and operators of the Bulk-Power System to provide data that will assist NERC in the investigation of a blackout or disturbance.

The directive to provide data that will assist NERC in the investigation of a blackout or disturbance is not affected by the EOP-004-1 R1, because that is accomplished via other requirements in EOP-004-1 and is also under consideration for enhancement in the development of EOP-004-2.

Technical Justification

The reliability purpose of EOP-004-1 is to ensure that disturbances or unusual occurrences that jeopardize the operation of the BES, or result in system equipment damage or customer interruptions, are studied and understood in order to minimize the likelihood of similar events in the future. The reliability purpose of EOP-004-1 is unaffected by the proposed retirement of R1.

EOP-004-1 R1 is an anomaly in the Reliability Standards, given that it requires the Regional Reliability Organization to develop a reporting procedure. Although the development of such a reporting procedure may be helpful guidance to responsible entities on reporting of disturbances to Regional Entities, in and of itself is an administrative and documentation task that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1 and B3). It is worth noting that EOP-004-1 R1, like CIP-001-2a R4, is administrative in that it only requires the development of procedures, it does not require that they be followed. More importantly, the mandatory processes for reporting preliminary and final disturbance reports are set forth in EOP-004-1 R3 and its sub-requirements which read as follows:

> R3. A Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator or Load Serving Entity experiencing a reportable incident shall provide a preliminary written report to its Regional Reliability Organization and NERC.

[45] *Mandatory Reliability Standards for the Bulk-Power System*, Order No. 693, FERC Stats. & Regs. ¶ 31,242, *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

> R3.1. The affected Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator or Load Serving Entity shall submit within 24 hours of the disturbance or unusual occurrence either a copy of the report submitted to DOE, or, if no DOE report is required, a copy of the NERC Interconnection Reliability Operating Limit and Preliminary Disturbance Report form. Events that are not identified until some time after they occur shall be reported within 24 hours of being recognized.
>
> R3.2. Applicable reporting forms are provided in Attachments 1-EOP-004 and 2- EOP-004.
>
> R3.3. Under certain adverse conditions, e.g., severe weather, it may not be possible to assess the damage caused by a disturbance and issue a written Interconnection Reliability Operating Limit and Preliminary Disturbance Report within 24 hours. In such cases, the affected Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, or Load Serving Entity shall promptly notify its Regional Reliability Organization(s) and NERC, and verbally provide as much information as is available at that time. The affected Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, or Load Serving Entity shall then provide timely, periodic verbal updates until adequate information is available to issue a written Preliminary Disturbance Report.
>
> R3.4. If, in the judgment of the Regional Reliability Organization, after consultation with the Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, or Load Serving Entity in which a disturbance occurred, a final report is required, the affected Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, or Load Serving Entity shall prepare this report within 60 days. As a minimum, the final report shall have a discussion of the events and its cause, the conclusions reached, and recommendations to prevent recurrence of this type of event. The report shall be subject to Regional Reliability Organization approval.

There is no reliability gap created by the passive retirement of EOP-004-1 R1, because EOP-004-1 R3 and its sub-requirements require considerable action to report on disturbances.[46] Also, consider that the EOP-004-1 R1 regional procedures may take the lead from NERC, and, therefore, the regional procedures become a reiteration or a hybrid of mandatory (EOP-004-1 R3 and its sub-requirements) and voluntary rules (NERC

[46] While not dispositive, the NERC voluntary event analysis process is also being used to report and analyze events. A link to NERC's event analysis process is http://www.nerc.com/page.php?cid=5|365.

Event Analysis Process).[47] It is an unnecessarily burdensome task to require such reiterations of NERC reporting requirements on a regional level. Also, if there was a need for particular regional procedures such procedures could exist as guidance even without the existence of EOP-004-1 R1. Thus, the value of EOP-004-1 R1 as a Reliability Standard requirement to support reliability is diminutive.

Furthermore, the retirement of EOP-004-1 R1 will increase the efficiency of the ERO compliance program in that the time and resources spent monitoring EOP-004-1 and checking off whether or not a Regional Entity has the specified procedure, and can be utilized to focus attention on an entity's compliance with EOP-004-1 R3 and its sub-requirements, which produce the information related to disturbances.

Criterion A
A requirement that Regional Entities develop a reporting procedure in and of itself is an administrative and documentation task that does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B
- Criterion B1 (Administrative)
- Criterion B3 (Documentation)

Criteria C
1. EOP-004-1 R1 has not been part of a FFT filing.

2. EOP-004-1 R1 is part of an on-going Standards Development Project 2009-01 (EOP-004-2) and is being proposed for retirement as unnecessary. At this time, EOP-004-2 has not been approved by stakeholders and the NERC Board of Trustees, and, therefore, it is appropriate to retain EOP-004-1 R1 within the scope of the P81 Project. However, if EOP-004-2 does receive stakeholder approval and is adopted by the NERC Board of Trustees, the SDT will reconsider retirement via the P81 Project and may include EOP-004-1 R1 for informational purposes only.

3. The VRF for EOP-004-1 R1 is Lower.

4. EOP-004-1 R1 is in the third tier of the AML.

5. The retirement of EOP-004-1 R1 does not pose any negative impact to NERC's published and posted reliability principles, as none of the principles are directly implicated.

[47] *See, e.g.*, FRCC Disturbance Reporting Procedure, FRCC – RE – OP – 001-0 Effective Date – February 10, 2012.

6. The retirement does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of EOP-004-1 R1 promotes a results-based approach because the requirement is an administrative task of developing a procedure with no associated actionable performance of a task that impacts reliability.

Accordingly, for the above reasons, it is appropriate to retire EOP-004-1 R1.

EOP-005-2 R3.1– System Restoration from Blackstart Resources

R3.1. If there are no changes to the previously submitted restoration plan, the Transmission Operator shall confirm annually on a predetermined schedule to its Reliability Coordinator that it has reviewed its restoration plan and no changes were necessary.

Background/Commission Directives

EOP-005-1 was submitted for Commission approval on August 28, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[48] EOP-005-2 was submitted for Commission approval on December 31, 2009 in Docket No. RM10-16-000 and was approved on March 17, 2011 in Order No. 749.[49] Although the Commission did not address EOP-005-2 R3 directly in Order No. 749, it stated at paragraph 17 the following:

> EOP-005-2 and EOP-006-2 clarify the responsibilities of the reliability coordinator and transmission operator in the restoration process and restoration planning and address the Commission's directives in Order No. 693 related to the EOP Standards. By enhancing the rigor of the restoration planning process, the Reliability Standards represent an improvement from the current Standards and will improve the reliability of the Bulk-Power System. The Commission is not directing any modifications to the three new Reliability Standards. Nevertheless, as discussed below, commenters raised several issues for consideration, at the time these standards are next revisited, which we believe could improve these new Reliability Standards

There are no outstanding Commission directives that are affected by the proposed retirement of EOP-005-2 R3.1.

[48] *Mandatory Reliability Standards for the Bulk-Power System*, Order No. 693, FERC Stats. & Regs. ¶ 31,242 (2007).
[49] *System Restoration Reliability Standards*, 134 FERC ¶ 61,215, (March 17, 2011) ("Order No. 749"), *order on clarification*, 136 FERC ¶ 61,030 ("Order No. 749-A") (2011).

Technical Justification

The reliability purpose of EOP-005-2 is to ensure that plans, Facilities, and personnel are prepared to enable System restoration from Blackstart Resources to assure that reliability is maintained during restoration and priority is placed on restoring the Interconnection. This reliability purpose is unaffected by the proposed retirement of R3.1.

A review of EOP-005-2 R3.1 indicates that this requirement is redundant with EOP-005-2 R3 and a duplicative administrative update that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1, B5 and B7). The primary reason EOP-005-2 R3.1 is unnecessary is that EOP-005-2 R3 already requires the Transmission Operator to submit its restoration plan to its Reliability Coordinator whether or not the plan includes changes. EOP-005-2 R3 reads:

> Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually agreed predetermined schedule.

Consequently, since R3 requires the Transmission Operator to submit its restoration plan to the Reliability Coordinator whether or not there has been a change, R3.1 only adds a separate, duplicative administrative burden for the entity to also confirm that there were no changes based upon another pre-determined schedule. While R3.1 may have attempted to capture the likelihood that unless there have been significant changes to the entity's BES, there would be no change to the restoration plan, this is an insufficient reason to impose a needlessly burdensome, duplicative administrative requirement relative to the language in R3. EOP-005-2 R3.1 is also clearly needlessly burdensome if one considers that the time and resources of Transmission Operators is better spent reliably operating the BES, rather than submitting paperwork to a Reliability Coordinator on possibly two different pre-determined schedules – one for changes and one for no changes. For these reasons, there is no reliability gap resulting from the retirement of EOP-005-2 R3.1 because Transmission Operators already have an obligation to review and provide its restoration plan annually on a mutually agreed predetermined schedule to its Reliability Coordinator. It could also be argued that a reason for both R3 and R3.1 is for the Reliability Coordinator to organize the Transmission Operator submittals into changes versus no changes. However, with the requirement to annually review restoration plans comes the need to demonstrate and track annual reviews via the revision history index, for example, which quickly shows the Reliability Coordinator when changes have and have not occurred.

The retirement of EOP-005-2 R3.1 would also increase the efficiencies of the ERO compliance program because the ERO would be able to focus its time and resources on R3 which already captures R3.1 and not be concerned with tracking the submission of restoration plans on multiple pre-determined schedules, some with changes and some without changes. Instead, the focus of the ERO compliance program would be on whether the Transmission Operators annually submitted its restoration plan to its

Reliability Coordinator on one pre-determined schedule. Thus, the retirement of EOP-005-2 R3.1 appears to benefit the ERO compliance program.

Criterion A
EOP-005-2 R3.1 is redundant and a duplicative administrative update that does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B
- Criterion B1 (Administrative)
- Criterion B5 (Periodic Updates)
- Criterion B7 (Redundant)

Criteria C
1. EOP-005-2 R3.1 has not been part of a FFT filing.

2. EOP-005-2 R3.1 is not part of an on-going Standards Development Project.

3. EOP-005-2 R3.1 does not yet have a FERC-approved VRF.

4. EOP-005-2 R3.1 is on the second tier of the AML; however, the duplicative nature of R3 and R3.1 discounts any indication that R3.1 being in the second tier is a reason not to proceed with its retirement.

5. Since EOP-005-2 R3 already requires the Transmission Operator to submit its restoration plan to its Reliability Coordinator whether or not the plan includes changes, retirement of EOP-005-2 R3.1 does not pose any negative impact to the following of NERC's published and posted reliability principles that appear to apply:

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

   Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

   Principle 4. Plans for emergency operation and system restoration of interconnected bulk power systems shall be developed, coordinated, maintained, and implemented.

6. Retirement of EOP-005-2 R3.1 does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of EOP-005-2 R3.1 promotes a results-based approach because the requirement is administrative and unnecessary, and, therefore, does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire EOP-005-2 R3.1.

FAC-002-1 R2 – Coordination of Plans for New Facilities

R2. The Planning Authority, Transmission Planner, Generator Owner, Transmission Owner, Load-Serving Entity, and Distribution Provider shall each retain its documentation (of its evaluation of the reliability impact of the new facilities and their connections on the interconnected transmission systems) for three years and shall provide the documentation to the Regional Reliability Organization(s) and NERC on request (within 30 calendar days).

Background/Commission Directives
FAC-002-0 was submitted to the Commission for approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[50] FAC-002-1 was submitted for Commission approval on September 9, 2010 in Docket No. RD10-15-000 and was approved on January 10, 2011.[51] When approving FAC-002-0 in Order No. 693 at paragraphs 692 and 693, and FAC-002-1 in a subsequent order,[52] the Commission did not directly address R2.

There are no outstanding Commission directives that are affected by the proposed retirement of FAC-002-1 R2.

Technical Justification
Outside the context of a Reliability Standard, under Section 400 of the NERC Rules of Procedure, NERC and the Regional Entities have the authority to require an entity to submit data and information for purposes of monitoring compliance. Thus, without the existence of FAC-002-1 R2, a Regional Entity or NERC has the ability to request and receive "documentation (of its evaluation of the reliability impact of the new facilities and their connections on the interconnected transmission systems)." This generally would occur during a spot check or compliance audit where entities have the obligation to provide documentation sufficient to demonstrate compliance. In this regard, entities already have the obligation to produce the same information required in R2 to demonstrate compliance to R1 and its sub-requirements, thus making R2 unnecessary. To have a Reliability Standard requirement that is setting forth a data retention requirement and a requirement for the entity to deliver, upon request, that data to NERC

[50] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[51] NERC Petition for Approval of Proposed Modifications to Reliability Standards BAL-002-1; EOP-002-3; FAC-002-1; MOD-021-2; PRC-004-2; and VAR-001-2 RD10-15-000 (January 10, 2011).
[52] *North American Electric Reliability Corporation*, 134 FERC ¶ 61,015 (2011).

or a Regional Entity is unnecessary and also repetitive with the NERC Rules of Procedure. Accordingly, retiring FAC-002-1 R2 presents no gap to reliability or to the information NERC and the Regional Entity need to monitor compliance. Thus, FAC-002-1 R2 is not necessary to support reliability. Consequently, a review of R2 indicates that it is an administrative and data collection requirement that that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1 and B2). The compilation of three years of data is a burdensome task, particularly when one considers the resources and time spent on stockpiling this information is better spent coordinating the studies, executing an interconnection agreement and ensuring that interconnections are safely and reliably energized, maintained and operated. Also, there are some inherent inefficiencies that result from a small number of requirements, such as CIP-007-3, -4 R7.3 and FAC-002-1 R2 being data, evidence and record retention requirements, while there are other and more appropriate established methods to collect and review the data than a Reliability Standard via Rules of Procedure Section 401. In this regard, for the ERO, Regional Entities and the entities, arguably Reliability Standards are more difficult to understand because of this inconsistent approach (typically only implicitly requiring documentation as a part of an obligation to prove compliance, but occasionally explicitly requiring it with no discernible pattern or rationale).

Criterion A

A review of FAC-002-1 R2 indicates that it is an administrative and data collection requirement that does little, if anything, to benefit or protect reliable operation of the BES.

Criteria B

- Criterion B1 (Administrative)
- Criterion B2 (Data Collection/Data Retention)

Criteria C

1. FAC-002-1 R2 has not been part of a FFT filing.

2. FAC-002-1 R2 is subject to a future Project 2010-02 Connecting New Facilities to the Grid (a review of FAC-001 and FAC-002) that is scheduled to begin in the second quarter of 2015. It seems appropriate to retire FAC-002-1 R2 at this time as it may also make the review of FAC-001 and FAC-002 more effective and efficient.

3. FAC-002-1 R2 has a Lower VRF.

4. FAC-002-1 R2 is in the third tier of the AML.

5. The retirement of FAC-002-1 R2 does not pose any negative impact to NERC's published and posted reliability principles, since there are no directly applicable reliability principles.

6. The retirement does not negatively impact defense in depth because the compilation of studies for three years has no operational or planning relationship with any other requirement.

7. The retirement of FAC-002-1 R2 promotes a results-based approach since the requirement is administrative and data collection, and, therefore, does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire FAC-002-1 R2.

FAC-008-1 R2; FAC-008-1 R3;[53] - Facility Ratings Methodology

R2. The Transmission Owner and Generator Owner shall each make its Facility Ratings Methodology available for inspection and technical review by those Reliability Coordinators, Transmission Operators, Transmission Planners, and Planning Authorities that have responsibility for the area in which the associated Facilities are located, within 15 business days of receipt of a request.

R3. If a Reliability Coordinator, Transmission Operator, Transmission Planner, or Planning Authority provides written comments on its technical review of a Transmission Owner's or Generator Owner's Facility Ratings Methodology, the Transmission Owner or Generator Owner shall provide a written response to that commenting entity within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Facility Ratings Methodology and, if no change will be made to that Facility Ratings Methodology, the reason why.

Background/Commission Directives
FAC-008-1 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[54]

There are no outstanding Commission directives that are affected by the proposed retirement of FAC-008-1 R2 and R3.

[53] Unlike the other requirements presented for informational purposes only, FAC-008-1 R2 and FAC-008-1 R3 have been maintained within the scope of P81 given that they are essentially identical to FAC-008-3 R4; FAC-008-3 R5 which are due be effective on January 1, 2013. Inclusion would also appear to be consistent with increasing ERO compliance program efficiencies, given that retirement would exempt these requirements from being included in spot checks or compliance audits that are backward looking via FAC-008-1 R2 and R3.

[54] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

Technical Justification

FAC-008-1 R2 and R3 require that a Transmission Owner and Generator Owner must make its facilities ratings methodology available for inspection and technical review by Reliability Coordinators, Transmission Operators, Transmission Planners, and Planning Authorities that have responsibility for the area in which the associated facilities are located and also require them to respond to any comments received including whether a change will be made to the facility ratings methodology. The retirement of FAC-008-1 R2 and R3 does not create a reliability gap, because Transmission Owners and Generator Owners must comply with the substantive requirements of FAC-008-1 regarding their facility rating methodologies whether or not the exchange envisioned by FAC-008-1 R2 and R3 occurs. Furthermore, neither FAC-008-1 R2 and R3 require that the Transmission Owner and Generator Owner change its methodology, rather FAC-008-1 R2 and R3 are designed as an exchange of comments that may be an avenue to advance commercial interests.

For example, if a Generator Owner's methodology provides for derating its generator step up ("GSU") transformers below the nameplate in an effort to extend the life of its GSUs, that is a commercial decision it has made, and should not be subject to review by a Reliability Coordinator, Transmission Operator, Transmission Planner, and Planning Authority, some of which may have affiliated parts of their company that could benefit from the Generator Owner changing its methodology and operating its GSUs at nameplate. In contrast, the reliability objective that facility ratings produced by the methodologies of the Transmission Owner or Generator Owner shall equal the most limiting applicable equipment rating, and consider, for example, emergency and normal conditions, operating conditions, nameplate ratings, etc. is not significantly or substantively advanced by FAC-008-1 R2 (available for inspection) and R3 (comment and responsive comments). Furthermore, the reliability objective that facility ratings produced by the methodologies of the Transmission Owner or Generator Owner are provided to the reliability entities for the establishment of System Operating Limits ("SOLs"), Interconnection Reliability Operating Limits ("IROLs"), calculations for MOD requirements and compliance with the TPL Standards is accomplished without FAC-008-1 R2 (available for inspection) and R3 (comment and responsive comments).[55] Accordingly, the requirements in FAC-008-1 R2 and FAC-008-1 R3 to make the facility ratings methodology available for comment (and if comments are received to respond to those comments) is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues. (Criteria A, B1, B4 and B6). In this context, it would seem unnecessarily burdensome to engage in the exchange of comments, given there is no nexus between the exchange of comments and compliance with the substantive

[55] See MOD-001-1a R9, MOD-028-1 R2.3; MOD-029-1a R2.1; MOD-030-02 R3.1, PRC-023-2, Attachment A 2.7; TPL-001-0.1 Footnote a; TPL-002-1b, footnotes a and b; TPL-003-0a, footnote a and TPL-004-0, footnote a. Also, via FAC-011-2 the System Operating Limits methodology of Reliability Coordinator may also use facility ratings as a key element.

requirements of FAC-008-1. Instead of spending time and resources on FAC-008-1 R2 and R3, Generator Owners' and Transmission Owners' time and resources would be better spent complying with the substantive requirements of FAC-008-1. For these same reasons, the ERO compliance program would gain efficiencies by no longer having to track whether requests for technical review had occurred, comments provided and reallocate time and resources to monitoring the Transmission Owner's or Generator Owner's adherence to substantive requirements of FAC-008-1.

Criterion A

The requirements in FAC-008-1 R2 and R3 to make the facility ratings methodology available for comment (and if comments are received to respond to those comments) is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues.

Criteria B

- Criterion B1 (Administrative)
- Criterion B4 (Reporting)
- Criterion B6 (Commercial or Business Practice)

Criteria C

1. FAC-008-1 R2 and R3 have not been part of a FFT filing.

2. FAC-008-1 R2 and R3 are not subject to an on-going Standards Development Project.

3. FAC-008-1 R2 and R3 have a Lower VRF.

4. FAC-008-1 R2 and R3 are in the third tier of the AML.

5. The retirement of FAC-008-1 R2 and R3 does not pose any negative impact to the following applicable NERC's published and posted reliability principles:

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

   Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

   It is the adherence to the substantive requirements of FAC-008-1 that promotes these posted reliability principles, and not receiving comments on the facility

ratings methodology from outside entities and then responding to those comments.

6. Retirement of FAC-008-1 R2 and R3, does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability. These requirements may invite entities to engage in an exchange or debate over commercially sensitive information.

7. The retirement of FAC-008-1 R2 and R3 promotes a results-based approach because the requirements do not require the performance of a reliability task.

Accordingly, for the above reasons, it is appropriate to retire FAC-008-1 R2 and R3.

FAC-008-3 R4; FAC-008-3 R5 – Facility Ratings

R4. Each Transmission Owner shall make its Facility Ratings methodology and each Generator Owner shall each make its documentation for determining its Facility Ratings and its Facility Ratings methodology available for inspection and technical review by those Reliability Coordinators, Transmission Operators, Transmission Planners and Planning Coordinators that have responsibility for the area in which the associated Facilities are located, within 21 calendar days of receipt of a request.

R5. If a Reliability Coordinator, Transmission Operator, Transmission Planner or Planning Coordinator provides documented comments on its technical review of a Transmission Owner's Facility Ratings methodology or Generator Owner's documentation for determining its Facility Ratings and its Facility Rating methodology, the Transmission Owner or Generator Owner shall provide a response to that commenting entity within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Facility Ratings methodology and, if no change will be made to that Facility Ratings methodology, the reason why.

Background/Commission Directives

FAC-008-1 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[56] "On May 12, 2010, the NERC Board of Trustees approved the proposed FAC-008-2 Reliability Standard that addressed the first two of the FERC directives in Order No. 693. NERC's proposed FAC-008-2 Reliability Standard was not filed with FERC for approval, but instead was revisited by the standard drafting team so that the third Order

[56] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

No. 693 directive could be addressed in response to FERC's March 18, 2010 Order…"[57] FAC-008-3 was submitted for Commission approval on June 15, 2011 in Docket No. RD11-10-000 and was approved on November 17, 2011.[58]

There are no outstanding Commission directives that are affected by the proposed retirement of FAC-008-3 R4 and R5.

Technical Justification

FAC-008-3 R4 and R5 require that a Transmission Owner and Generator Owner must make its facilities ratings methodology available for inspection and technical review by Reliability Coordinators, Transmission Operators, Transmission Planners, and Planning Authorities that have responsibility for the area in which the associated facilities are located and also require them to respond to any comments received including whether a change will be made to the facility ratings methodology. The retirement of FAC-008-3 R4 and R5 does not create a reliability gap, because Transmission Owners and Generator Owners must comply with the substantive requirements of FAC-008-3 regarding their facility rating methodologies whether or not the exchange envisioned by FAC-008-3 R4 and R5 occurs. Further, neither FAC-008-3 R4 nor R5 require that the Transmission Owner and Generator Owner change its methodology, rather FAC-008-3 R4 and R5 are designed as an exchange of comments that may be an avenue to advance commercial interests.

For example, if a Generator Owner's methodology provides for derating its GSU transformers below the nameplate in an effort to extend the life of its GSUs, that is a commercial decision it has made, and should not be subject to review by a Reliability Coordinator, Transmission Operator, Transmission Planner, and Planning Authority, some of which may have affiliated parts of their company that could benefit from the Generator Owner changing its methodology and operating its GSUs at nameplate. In contrast, the reliability objective that facility ratings produced by the methodologies of the Transmission Owner or Generator Owner shall equal the most limiting applicable equipment rating, and consider, for example, emergency and normal conditions, historical performance, nameplate ratings, etc. is not significantly or substantively advanced by FAC-008-3 R4 (available for inspection) and R5 (comment and responsive comments). Furthermore, the reliability objective that facility ratings produced by the methodologies of the Transmission Owner or Generator Owner are provided to the reliability entities for the establishment of SOLs, IROLs, calculations for MOD requirements and compliance with the TPL Standards is accomplished without FAC-008-3 R4 (available for inspection) and R5 (comment and responsive comments).[59] Accordingly, the

[58] *Order Approving Reliability Standard*, 137 FERC ¶ 61,123 (2011).
[59] See MOD-001-1a R9, MOD-028-1 R2.3; MOD-029-1a R2.1; MOD-030-2 R3.1, PRC-023-2, Attachment A 2.7; TPL-001-0.1 Footnote a; TPL-002-1b, footnotes a and b; TPL-003-0a, footnote a and TPL-004-0, footnote a. Also, via FAC-011-2 the System Operating Limits methodology of Reliability Coordinator may

requirements in FAC-008-3 R4 and R5 to make the facility ratings methodology available for comment (and if comments are received to respond to those comments) is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues. (Criteria A, B1, B4 and B6). In this context, it would seem unnecessarily burdensome to engage in the exchange of comments, given there is no nexus between the exchange and compliance with the substantive requirements of FAC-008-3. Instead of spending time and resources on FAC-008-3 R4 and R5, Generator Owners' and Transmission Owners' time and resources would be better spent complying with the substantive requirements of FAC-008-3. For these same reasons, the ERO compliance program would gain efficiencies by no longer having to track whether requests for technical review had occurred, comments provided and reallocate time and resources to monitoring the Transmission Owner's or Generator Owner's adherence to substantive requirements of FAC-008-3.

Criterion A

The requirements in FAC-008-3 R4 and R5 to make the facility ratings methodology available for comment (and if comments are received to respond to those comments) is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues.

Criteria B

- Criterion B1 (Administrative)
- Criterion B4 (Reporting)
- Criterion B6 (Commercial or Business Practice)

Criteria C

1. FAC-008-3 R4 and R5 have not been part of a FFT filing.

2. FAC-008-3 R4 and R5 are not subject to an on-going Standards Development Project.

3. FAC-008-3 R4 and R5 have a Lower VRF.

4. FAC-008-3 R4 and R5 are in the third tier of the AML.

5. The retirement of FAC-008-3 R4 and R5 does not pose any negative impact to the following applicable NERC's published and posted reliability principles:

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under

---

also use facility ratings as a key element. Also, FAC-008-3 R7 and R8 require the transmission of facility ratings to reliability entities.

normal and abnormal conditions as defined in the NERC Standards.

Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

It is the adherence to the substantive requirements of FAC-008-3 that promotes these posted reliability principles, and not receiving comments on the facility ratings methodology from outside entities and then responding to those comments.

6. Retirement of FAC-008-3 R4 and R5, does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability. These may invite entities to engage in an exchange or debate over commercially sensitive information.

7. The retirement of FAC-008-3 R4 and R5 promotes a results-based approach because the requirements do not require the performance of a reliability task.

Accordingly, for the above reasons, it is appropriate to retire FAC-008-3 R4 and R5.

****FAC-010-2.1 R5 – System Operating Limits Methodology for the Planning Horizon**

R5. If a recipient of the SOL Methodology provides documented technical comments on the methodology, the Planning Authority shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the SOL Methodology and, if no change will be made to that SOL Methodology, the reason why.

Background/Commission Directives

FAC-010-1 was filed for Commission approval on November 15, 2006 in Docket Nos. RM06-16-000 and RM07-3-000 and was approved on December 27, 2007 in Order No. 705.[60] FAC-010-2 was filed for Commission approval on June 30, 2008 in Docket No. RM08-11-000 and was approved on March 20, 2009 in Order No. 722.[61] FAC-010-2.1 was filed for Commission approval on November 20, 2009 in Docket No. RD10-9-000

[60] *Facilities Design, Connections and Maintenance Reliability Standards,* 121 FERC ¶ 61,296 (December 27, 2007) (Order No. 705).

[61] *Version Two Facilities Design, Connections and Maintenance Reliability Standards,* 126 FERC ¶ 61,255 (March 20, 2009) (Order No. 722).

and was approved on April 19, 2010.[62] In Order No. 722,[63] the Commission approved FAC-010-2.1 R5 without specifically addressing R5.

There are no outstanding Commission directives with respect to this R5.

Technical Justification

The reliability purpose of FAC-010-2.1, to ensure that System Operating Limits used in the reliable planning of the BES are determined based on an established methodology, is unaffected by the proposed retirement of R5. FAC-010-2.1 R5 requires that when a Planning Authority receives comments on its SOL methodology, it must respond and indicate whether it has changed its methodology. The retirement of FAC-010-2.1 R5 does not create a reliability gap, because the Planning Authority must comply with the substantive requirements of FAC-010-2.1 whether or not the exchange envisioned by FAC-010-2.1 R5 occurs. FAC-010-2.1 R5 may support an avenue to advance commercial interests.

For example, if a Transmission Operator or Transmission Planner is also a Transmission Owner it may have a commercial interest in lowering SOLs on its transmission lines in an effort to extend the life of its equipment and, therefore, challenge the Planning Authority's methodology to reduce its SOLs. The Transmission Owner's interests are better considered in the context of its development of a facility ratings methodology under FAC-008-1, -3 than the Planning Authority's methodology. FAC-010-2.1 R5, however, is an invitation to advance commercial interests not through established means, but by challenging the Planning Authority's SOL methodology. Accordingly, FAC-010-2.1 R5 sets forth an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues. (Criteria A, B1, B4 and B6). In this context, it would seem unnecessarily burdensome to engage in the exchange of comments, given there is no nexus between the exchange and compliance with the substantive requirements of FAC-010-2.1. Instead of spending time and resources on FAC-010-2.1, a Planning Authority's time and resources would be better spent complying with the substantive requirements of FAC-010-2.1. For these same reasons, the ERO compliance program would gain efficiencies by no longer having to track whether requests for technical review had occurred, comments provided and reallocate time and resources to monitoring the Planning Authority's adherence to substantive requirements of FAC-010-2.1.

Criterion A

The requirement in FAC-010-2.1 R5 to respond to comments on the SOL methodology is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES.

[62] Letter Order, Electric Reliability Organization Errata Petition Updating Accepted Transmission Operations Reliability Standards, Docket No. RD10-9-000 (April 19, 2010).

[63] *Version Two Facilities Design, Connections and Maintenance Reliability Standards* 125 FERC ¶ 61,040 (2009).

Criteria B

- Criterion B1 (Administrative)
- Criterion B4 (Reporting)
- Criterion B6 (Commercial or Business Practice)

Criteria C

1. FAC-010-2.1 R5 has not been part of a FFT filing.

2. FAC-010-2.1 R5 is subject to future Standards Development Project 2012-11 FAC Review, which is a placeholder for the five year review of FAC-010 and FAC-011. Thus, it is appropriate to process the retirement of this requirement as part of the P81 Project.

3. FAC-010-2.1 R5 has a Lower VRF.

4. FAC-010-2.1 R5 is not on the AML.

5. The retirement of this requirement does not pose any negative impact to NERC's published and posted reliability principles No. 1 or No. 3.

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

   Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

   It is the adherence to the substantive requirements of FAC-010-2.1 that promotes these posted reliability principles, and not receiving comments on the facility ratings methodology from outside entities and then responding to those comments.

6. The retirement of this requirement does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of FAC-010-2.1 R5 also promotes a results-based approach because the requirements have no direct nexus to the performance of a reliability task.

Accordingly, for the above reasons, it is appropriate to retire FAC-010-2.1 R5.

****FAC-011-2 R5– System Operating Limits Methodology for the Operations Horizon**

R5. If a recipient of the SOL Methodology provides documented technical comments on the methodology, the Reliability Coordinator shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the SOL Methodology and, if no change will be made to that SOL Methodology, the reason why.

Background/Commission Directives

FAC-011-1 was filed for Commission approval on November 15, 2006 in Docket Nos. RM06-16-000 and RM07-3-000 and was approved on December 27, 2007 in Order No. 705.[64] FAC-011-2 was filed for Commission approval on June 30, 2008 in Docket No. RM08-11-000 and was approved on March 20, 2009 in Order No. 722.[65] In Order No. 722, the Commission approved FAC-011-2 R5 without specifically addressing R5.

There are no outstanding Commission directives with respect to this R5.

Technical Justification

FAC-011-2 R5 requires that when a Reliability Coordinator receives comments on its SOL methodology that it must respond and indicate whether it has changed its methodology. The retirement of FAC-011-2 R5 does not create a reliability gap, because the Reliability Coordinator must comply with the substantive requirements of FAC-011-2 R5 whether or not the exchange envisioned by FAC-011-2 R5 occurs. FAC-011-2 R5 may support an avenue to advance commercial interests.

For example, similar to FAC-010-2.1 R5, if a Transmission Operator or Transmission Planner also is a Transmission Owner it may have a commercial interest in lowering SOLs on its transmission lines in an effort to extend the life of its equipment and, therefore, challenge the Reliability Coordinator's methodology to reduce its SOLs. The Transmission Owner's interests are better considered in the context of the development of its facility ratings methodology under FAC-008-1, -3 than the Reliability Coordinator's methodology. FAC-011-2 R5, however, is an invitation to advance commercial interests not through established means, but by challenging the Reliability Coordinator's SOL methodology. Accordingly, FAC-011-2 R5 sets forth an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues. (Criteria A, B1, B4 and B6). In

[64] *Facilities Design, Connections and Maintenance Reliability Standards,* 121 FERC ¶ 61,296 (December 27, 2007) (Order No. 705).

[65] *Version Two Facilities Design, Connections and Maintenance Reliability Standards,* 126 FERC ¶ 61,255 (March 20, 2009) (Order No. 722).

this context, it would seem unnecessarily burdensome to engage in the exchange of comments, given there is no nexus between the exchange and compliance with the substantive requirements of FAC-011-2. Instead of spending time and resources on FAC-011-2 R5 a Reliability Coordinator's time and resources would be better spent complying with the substantive requirements of FAC-011-2 R5. For these same reasons, the ERO compliance program would gain efficiencies by no longer having to track whether requests for technical review had occurred, comments provided and reallocate time and resources to monitoring the Reliability Coordinator's adherence to substantive requirements of FAC-011-2 R5.

Criterion A
The requirement in FAC-011-2 R5 to respond to comments on the SOL methodology is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues.

Criteria B
- Criterion B1 (Administrative)
- Criterion B4 (Reporting)
- Criterion B6 (Commercial or Business Practice)

Criteria C
1. FAC-011-2 R5 has not been part of a FFT filing.

2. FAC-011-2 R5 is subject to future Standards Development Project 2012-11 FAC Review, which is a placeholder for the five year review of FAC-010 and FAC-011which is not currently scheduled and thus it is appropriate to process the retirement of this requirement as part of the P81 Project.

3. FAC-011-2 R5 has a Lower VRF.

4. FAC-011-2 R5 is not on the AML.

5. The retirement of this requirement does not pose any negative impact to NERC's published and posted reliability principles No. 1 or No. 3.

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

   Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

It is the adherence to the substantive requirements of FAC-011-2 that promotes these posted reliability principles, and not receiving comments on the facility ratings methodology from outside entities and then responding to those comments.

6. The retirement of this requirement does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of FAC-011-2 R5 also promotes a results-based approach because the requirements have no direct nexus to the performance of a reliability task.

Accordingly, for the above reasons, it is appropriate to retire FAC-011-2 R5.

FAC-013-2 R3 – Assessment of Transfer Capability for the Near-term Transmission Planning Horizon

R3. If a recipient of the Transfer Capability methodology provides documented concerns with the methodology, the Planning Coordinator shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Transfer Capability methodology and, if no change will be made to that Transfer Capability methodology, the reason why.

Background/Commission Directives

FAC-013-1 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[66] FAC-013-2 was submitted for Commission approval on January 28, 2011 in Docket No. RD11-3-000 and was approved on November 17, 2011.[67]

In Order No. 729, the Commission denied NERC's request to withdraw FAC-012-1 and retire FAC-013-1, and directed as follows at paragraph 291:

> 291. The Commission hereby adopts its NOPR proposal to deny NERC's request to withdraw FAC-012-1 and retire FAC-013-1. Instead, pursuant to section 215(d)(5) of the FPA and section 39.5(f) of our regulations, the Commission directs the ERO to develop modifications to FAC-012-1 and FAC-013-1 to comply with the relevant directives of Order No. 693 and, as otherwise necessary, to make the requirements of those Reliability Standards consistent with those of the MOD Reliability Standards approved herein as well as this Final Rule. These

[66] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[67] *Order Approving Reliability Standard*, 137 FERC ¶ 61,131 (2011).

> modifications should also remove redundant provisions for the calculation of transfer capability addressed elsewhere in the MOD Reliability Standards. In making these revisions, the ERO should consider the development of a methodology for calculation of inter-regional and intra-regional transfer capabilities. The Commission accepts the ERO's request for additional time to prepare the modifications and so directs the ERO to submit the modifications to FAC-012-1 and FAC-013-1 no later than 60 days before the MOD Reliability Standards become effective.

Although the Commission did not directly address the merits of FAC-013-2 R3 when approving FAC-013-2,[68] similar to FAC-008-3, the developer of the Transfer Capability methodology and data must follow specific technical requirements and provide the data to reliability entities for use in their models. There are no outstanding Commission directives with respect to this R3.

Technical Justification

A review of FAC-013-2 R3 indicates that it is a needlessly burdensome administrative task that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1 and B4). Specifically, FAC-013-2 R1 and its sub-requirements set forth the information that each Planning Authority must include when developing its Transfer Capability methodology. FAC-013-2 R3 sets forth a requirement that if an entity comments on this methodology, the Planning Authority must respond and indicate whether or not it will make a change to its Transfer Capability methodology. Thus, while R1 sets forth substantive requirements, R3 sets forth more of an administrative task of the Planning Authority responding to comments on its methodology.

The following NERC glossary definition of Transfer Capability states:

> The measure of the ability of interconnected electric systems to move or transfer power *in a reliable manner* from one area to another over all transmission lines (or paths) between those areas under specified system conditions. The units of transfer capability are in terms of electric power, generally expressed in megawatts (MW). The transfer capability from "Area A" to "Area B" is *not g*enerally equal to the transfer capability from "Area B" to "Area A."

In the context of a Planning Authority engaging in an exchange with an entity over the Transfer Capability there is a possibility of a scenario that a group of generators[69] try to get the Planning Authority to revise its Transfer Capability methodology to advance commercial interests via changes to the methodology that would increase or decrease transfer capability from Area A to Area B. (Criterion B6). Such issues should be raised

[68] *Id.* (approval of FAC-013-2).

[69] Generators that receive the Transfer Capability methodology via an association with one of the entities in the R2 sub-requirements.

in the context of receipt of transmission services, not the Reliability Standards. Moreover, even without the possible commercial motivation of certain entities to get the Planning Authority to revise its Transfer Capability methodology, implementing an exchange between entities and the Planning Authority seems much better suited via regional planning committees, than mandatory Reliability Standards.

In this context, it would seem unnecessarily burdensome to engage in the exchange of comments, given there is no nexus between the exchange and compliance with the substantive requirements of FAC-013-2. Instead of spending time and resources on FAC-013-2 R3, time and resources would be better spent complying with the substantive requirements of FAC-013-2. For these same reasons, the ERO compliance program would gain efficiencies by no longer having to track whether requests for technical review had occurred, comments provided and reallocate time and resources to monitoring the Reliability Coordinator's adherence to substantive requirements of FAC-013-2.

Criterion A
The requirement in FAC-013-2 R3 to respond to comments on the Transfer Capability methodology is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues.

Criteria B
- Criterion B1 (Administrative)
- Criterion B4 (Reporting)
- Criterion B6 (Commercial or Business Practice)

Criteria C
1. FAC-013-2 R3 has not been part of a FFT filing.

2. FAC-013-2 R3 is not subject to an on-going Standards Development Project.

3. FAC-013-2 R3 has a Lower VRF.

4. FAC-013-2 R3 is not on the AML.

5. The retirement of FAC-013-2 R3 does not pose any negative impact to NERC's published and posted reliability principles No. 1 or No. 3.

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

It is the adherence to the substantive requirements of FAC-013-2 that promotes these posted reliability principles, and not receiving comments on the facility ratings methodology from outside entities and then responding to those comments.

6. The retirement of FAC-013-2 R3 does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of FAC-013-2 R3 promotes a results-based approach because the requirements do not require the performance of a reliability task.

Accordingly, for the above reasons, it is appropriate to retire FAC-013-2 R3.

INT-007-1 R1.2 – Interchange Confirmation

R1.2. All reliability entities involved in the Arranged Interchange are currently in the NERC registry.

Background/Commission Directives
INT-007-1 was submitted for Commission approval on August 28, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[70] The Commission did not directly address INT-007-1 R1.2 when it approved the Reliability Standard in Order No. 693 at paragraph 867.

There are no outstanding Commission directives with respect to R1.2.

Technical Justification
The reliability purpose of INT-007-1 is to ensure that each Arranged Interchange is checked for reliability before it is implemented. The reliability purpose of INT-007-1 is unaffected by the proposed retirement of R1.2.

INT-007-1 R1.2 is a needlessly burdensome administrative task that does not support reliability because it is now outdated. (Criterion B1). At one time the identification number came from the NERC TSIN system, by now it is handled via NAESB Electric

[70] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

Industry Registry.[71] Also, under the E-Tag protocols, no entity may engage in an Interchange transaction without first registering with the E-Tag system and receiving an identification number. Further, the entity desiring the transaction enters this identification number in the E-Tag system to pre-qualify and engage in an Arranged Interchange. Accordingly, the task set forth in INT-007-1 R1.2 is an outdated activity that is no longer necessary, and thus, does little, if anything, to benefit or protect the reliable operation of the BES. (Criterion A). The ERO compliance program would benefit and be more efficient if it was not monitoring an outdated requirement.

Criterion A
The task set forth in INT-007-1 R1.2 is an outdated activity that is no longer necessary, and thus, does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B

- Criterion B1 (Administrative)

Criteria C

1. INT-007-1 R1.2 has not been part of a FFT filing.

2. INT-007-1 R1.2 is part of a pending Standards Development Project – Project 2008-12 Coordinate Interchange Standards, which is estimated to start in the second quarter of 2013. Given this timeline, it is appropriate to move forward with the retirement of INT-007-1 R1.2. Such a retirement may also help to streamline Project 2008-12 once it is active and progressing.

3. INT-007-1 R1.2 has a Lower VRF.

4. INT-007-1 R1.2 is not on the AML.

5. The retirement of INT-007-1 R1.2 does not pose any negative impact to NERC's published and posted reliability principles No. 1 or No. 3.

    Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

    Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

[71] *See, North American Energy Standards Board Webregistry Technical Guide v1.4* (Proprietary) (July 2012). The new NAESB system has updated and implemented more automation to the process.

It is the adherence to the substantive requirements of INT-007-1 that promotes these posted reliability principles, not R1.2.

6. The retirement of INT-007-1 R1.2 does not impact any defense in depth strategies because the task is no longer necessary.

7. The retirement of INT-007-1 R1.2 promotes a results-based approach because the requirement does not require the performance of a reliability task.

Accordingly, for the above reasons, it is appropriate to retire INT-007-1 R1.2.

IRO-016-1 R2 – Coordination of Real-time Activities Between Reliability Coordinators

R2. The Reliability Coordinator shall document (via operator logs or other data sources) its actions taken for either the event or for the disagreement on the problem(s) or for both.

Background/Commission Directives
IRO-016-1 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693. The Commission did not directly address R2 when approving IRO-016-1 in Order No. 693 at paragraphs 1004 and 1005. There are no outstanding Commission directives with respect to R2.

Technical Justification
The reliability purpose of IRO-016-1 is to ensure that each Reliability Coordinator's operations are coordinated such that they will not have an adverse reliability impact on other Reliability Coordinator Areas and to preserve the reliability benefits of interconnected operations. To implement the purpose, IRO-016-1 R1 and its sub-requirements state:

> **R1.** The Reliability Coordinator that identifies a potential, expected, or actual problem that requires the actions of one or more other Reliability Coordinators shall contact the other Reliability Coordinator(s) to confirm that there is a problem and then discuss options and decide upon a solution to prevent or resolve the identified problem.
>
> **R1.1.** If the involved Reliability Coordinators agree on the problem and the actions to take to prevent or mitigate the system condition, each involved Reliability Coordinator shall implement the agreed-upon solution, and notify the involved Reliability Coordinators of the action(s) taken.

> **R1.2.** If the involved Reliability Coordinators cannot agree on the problem(s) each Reliability Coordinator shall re-evaluate the causes of the disagreement (bad data, status, study results, tools, etc.).
>
> **R1.2.1.** If time permits, this re-evaluation shall be done before taking corrective actions.
>
> **R1.2.2.** If time does not permit, then each Reliability Coordinator shall operate as though the problem(s) exist(s) until the conflicting system status is resolved.

These requirements are specific actions and decision points among Reliability Coordinators that promote the reliable operation of the BES. In contrast, a review of R2 indicates that it is a needlessly burdensome administrative and data collection requirement that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1 and B2). Therefore, the reliability purpose of IRO-016-1 is unaffected by the proposed retirement of R2.

Furthermore, outside the context of a Reliability Standard, under Section 400 of the NERC Rules of Procedure, NERC and the Regional Entities have the authority to require an entity to submit data and information for purposes of monitoring compliance. Thus, the retirement of IRO-016-1 R2 does not affect the ability for NERC and the Regional Entities to require Reliability Coordinators to produce documentation to demonstrate compliance with IRO-016-1 R1 and its sub-requirements. Accordingly, retiring IRO-016-1 R2 presents no gap to reliability or to the information NERC and the Regional Entities need to monitor compliance. Thus, IRO-016-1 R1 does not support reliability. Consequently, R2 is an administrative and data collection requirement that that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1 and B2). Also, there are some inherent inefficiencies that result by a small number of requirements, such as IRO-016-1 R2 being a data, evidence and record retention requirement, while there are other and more appropriate established methods to collect and review the data than a Reliability Standard via Rules of Procedure Section 401. In this regard, for the ERO, Regional Entities and the entities, arguably Reliability Standards are more difficult to understand because of this inconsistent approach (typically only implicitly requiring documentation as a part of an obligation to prove compliance, but occasionally explicitly requiring it with no discernible pattern or rationale).

Criterion A
A review of R2 indicates that it is a needlessly burdensome administrative and data collection requirement that does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B

- Criterion B1 (Administrative)

- Criterion B2 (Data Collection/Data Retention)

Criteria C

1. IRO-016-1 R2 has not been part of a FFT filing

2. IRO-016-1 R2 is not subject to an on-going Standards Development project.

3. IRO-016-1 R2 has a Lower VRF.

4. IRO-016-1 R2 is not on the AML.

5. The retirement of IRO-016-1 R2 does not pose any negative impact to NERC's published and posted reliability principles, since none of the principles appear to apply to a data retention requirement.

6. IRO-016-1 R2 does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of IRO-016-1 R2 promotes a results-based approach because the requirement is administrative and data collection, and, therefore, does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire IRO-016-1 R2.

NUC-001-2 R9.1; NUC-001-2 R9.1.1; NUC-001-2 R9.1.2; NUC-001-2 R9.1.3; NUC-001-2 R9.1.4 – Nuclear Plant Interface Coordination

R9.1. Administrative elements:

R9.1.1. Definitions of key terms used in the agreement.

R9.1.2. Names of the responsible entities, organizational relationships, and responsibilities related to the NPIRs.

R9.1.3. A requirement to review the agreement(s) at least every three years.

R9.1.4. A dispute resolution mechanism.

Background/Commission Directives

NUC-001-1 was submitted for Commission approval on November 19, 2007 in Docket No. RM08-3-000 and was approved on October 16, 2008.[72] NUC-001-2 was submitted

[72] *Mandatory Reliability Standard for Nuclear Plant Interface Coordination*, 125 FERC ¶ 61,065 (2008) ("Order No. 716"), *order on reh'g*, Order No. 716-A, 126 FERC ¶ 61,122 (2009).

for Commission approval on August 14, 2009 in Docket No. RD09-10-000 and was approved on January 21, 2010.[73]

Although in Order No. 716 the merits of R9.1 and its sub-requirements were not directly addressed, the Commission did state the following in the context of the VRFs for all of R9:[74]

> Consistent with the NOPR, the Commission directs the ERO to revise the violation risk factor assignment for Requirement R9 from lower to medium. The Commission disagrees with commenters that a lower violation risk factor is appropriate because Requirement R9 is an administrative requirement to include the specified provisions. While the Commission recognized in the NOPR that many of the requirements of the proposed Reliability Standard are administrative in nature, these same requirements provide for the development of procedures to ensure the safe and reliable operation of the grid, and responses to potential emergency conditions.

There are no outstanding Commission directives with respect to these requirements.

Technical Justification

The reliability purpose of NUC-001-2 is to ensure the coordination between Nuclear Plant Generator Operators and Transmission Entities for nuclear plant safe operation and shutdown. The reliability purpose of NUC-001-2 is unaffected by the proposed retirement of requirements 9.1, 9.1.1, 9.1.2, 9.1.3 and 9.1.4. Requirement 9.1 and its sub-requirements specify certain administrative elements that must be included in the agreement (required by R2) between the Nuclear Plant Generator Operator and the applicable Transmission Entities. These are a mix of technical, communication, training and administrative requirements. Of those that may be classified as administrative, R9.1 and its sub-requirements clearly stand out as unnecessarily burdensome administrative tasks that do little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A and B1). R9.1 and its sub-requirements are a check list of certain non-technical boilerplate provisions generally included in modern agreements. These provisions do not directly relate to protecting BES reliability. Further, requiring via a mandatory Reliability Standard the inclusion of boilerplate provisions is an unnecessarily burdensome relative to the other significant requirements in NUC-001-2 that pertain to performance based reliability coordination and protocols between Transmission Entities and Nuclear Plant Generator Operators. Therefore, the retirement of NUC-001-2 R9.1 and all its sub-requirements creates no reliability gap and are the type of provisions that would likely be in a modern agreement anyway.

---

[73] *Order Approving Reliability Standard*, 130 FERC ¶ 61,051 (2010).

[74] NUC-001-1 was approved in Order No. 716, while NUC-001-2 was approved without discussion of R9.1 and its sub-requirements in a subsequent order. *Mandatory Reliability Standard for Nuclear Plant Interface Coordination*, 125 FERC ¶ 61,065 (2008); 130 FERC ¶ 61,051 (2010).

For these same reasons, the ERO compliance program efficiency will increase with the retirement of NUC-001-2 R9.1 and its sub-requirements because compliance monitoring time and resources will not be spent conducting a checklist of whether an agreement includes boilerplate provisions, and instead, the time and resources may be spent reviewing adherence with the technical, substantive coordination and protocol provisions of NUC-001-2.

Criterion A
R9.1 and its sub-requirements are unnecessarily burdensome administrative tasks that do little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B
- Criterion B1 (Administrative)

Criteria C
1. NUC-001-2 R9.1 and its sub-requirements have not been part of a FFT filing.

2. NUC-001-2 R9.1 and its sub-requirements are not part of an on-going Standards Development Project, but NUC-001-2 is part of Project 2012-13, which is a placeholder for a five year review. Given the as yet undetermined start date for Project 2012-13, it is appropriate to move forward with the retirement of NUC-001-2 R9.1 and its sub-requirements.

3. Individual VRFs are not assigned to the sub-requirements of NUC-001-2 R9.

4. NUC-001-2 R9.1 and its sub-requirements are in the third tier of the AML.

5. The retirement of NUC-001-2 R9.1 and its sub-requirements do not pose any negative impact to NERC's published and posted reliability principles, since none of them seem to apply to the inclusion of boilerplate contractual provisions.

6. There is no impact on a defense in depth strategy because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of NUC-001-2 R9.1 and its sub-requirements promote a results-based approach by eliminating administrative check-list requirements.

Accordingly, for the above reasons, it is appropriate to retire NUC-001-2 R9.1 and its sub-requirements.

PRC-010-0 R2 – Assessment of the Design and Effectiveness of UVLS Program;

R2. The Load-Serving Entity, Transmission Owner, Transmission Operator, and Distribution Provider that owns or operates a UVLS program shall provide

> documentation of its current UVLS program assessment to its Regional Reliability Organization and NERC on request (30 calendar days).

Background/Commission Directives

PRC-010-0 was filed for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[75] Although not specifically addressing PRC-010-0 R2, in Order No. 693 at paragraph 1506 and 1507 the Commission stated that:

> With regard to ISO-NE's disagreement on integration of various system protections "because such integration cannot be technologically accomplished", we note that the evidence collected in the Blackout Report indicates that "the relay protection settings for the transmission lines, generators and underfrequency load shedding in the northeast may not be entirely appropriate and are certainly not coordinated and integrated to reduce the likelihood and consequence of a cascade – nor were they intended to do so." In addition, the Blackout Report stated that one of the common causes of major outages in North America is a lack of coordination on system protection. The Commission agrees with the protection experts who participated in the investigation, formulated Blackout Recommendation No. 21 and recommended that UVLS programs have an integrated approach.
>
> Regarding FirstEnergy's question of whether universal coordination among UVLS programs that address local system problems makes sense, we believe that PRC-010-0's objective in requiring an integrated and coordinated approach is to address the possible adverse interactions of these protection systems among themselves and to determine whether they could aggravate or accelerate cascading events. We do not believe this Reliability Standard is aimed at universal coordination among UVLS programs that address local system problems. (Footnote omitted).

The retirement of PRC-010-0 R2 does not affect a Commission directive.

Technical Justification

Outside the context of a Reliability Standard, under Section 400 of the NERC Rules of Procedure, NERC and the Regional Entities have the authority to require an entity to submit documentation of its current UVLS program assessment for purposes of monitoring compliance. Thus, the retirement of PRC-010-0 R2 does not affect the ability of NERC and the Regional Entities to require Reliability Coordinators to produce documentation to monitor compliance with PRC-010-0 R1 and its sub-requirements.

[75] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

Furthermore, PRC-010-0 R1 requires that the entity document an assessment of the effectiveness of its UVLS program:

> The Load-Serving Entity, Transmission Owner, Transmission Operator, and Distribution Provider that owns or operates a UVLS program shall periodically (at least every five years or as required by changes in system conditions) conduct and document an assessment of the effectiveness of the UVLS program.

Accordingly, retiring PRC-010-0 R2 presents no gap to reliability or to the information NERC and the Regional Entity need to monitor compliance. A review of R2 indicates that it is a needlessly burdensome administrative and data collection/retention requirement that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1 and B2). Also, there are some inherent inefficiencies that result by a small number of requirements, such as PRC-010-0 R2 being a data production requirement, while there are other and more appropriate established methods to collect and review the data than a Reliability Standard via Rules of Procedure Section 401.

Criterion A
R2 is an administrative and data collection requirement that does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B
- Criterion B1(Administrative)
- Criterion B2 (Data Collection/Data Retention)

Criteria C
1. PRC-010-0 R2 has not been part of a FFT filing.

2. PRC-010-0 R2 is subject to Standards Development Project 2008-02 Undervoltage Load Shedding, which is not currently active and is only estimated to be completed until the second quarter of 2014. Since the purpose of Project 2008-02 does not necessarily include a review of R2 and its 2014 completion date is well into the future, it is appropriate to include PRC-010-0 R2 in the P81 Project.

3. This requirement has a Lower VRF.

4. This requirement is not part of the AML.

5. The retirement of PRC-010-0 R2 does not pose any negative impact to NERC's published and posted reliability principles, particularly since submission of a program assessment or documentation of its analysis of UVLS program performance to a Regional Entity does not seem to implicate any of the principles.

6. For similar reasons, there is no negative impact on a defense in depth strategy because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of PRC-010-0 R2 promotes a results-based approach because it is a data collection requirement, and, therefore, does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire PRC-010-0 R2.

PRC-022-1 R2 – Under-Voltage Load Shedding Program Performance

> **R2.** Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program shall provide documentation of its analysis of UVLS program performance to its Regional Reliability Organization within 90 calendar days of a request.

Background/Commission Directives
PRC-022-1 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[76] In Order No. 693 at paragraph 1565 the Commission approved PRC-022-1 without a discussion of R2. There are no outstanding Commission directives with respect to R2.

Technical Justification
Outside the context of a Reliability Standard, under Section 400 of the NERC Rules of Procedure, NERC and the Regional Entities have the authority to require an entity to submit documentation of its analysis of UVLS program performance for purposes of monitoring compliance. Thus, the retirement of PRC-022-1 R2 does not affect the ability for NERC and the Regional Entities to require Reliability Coordinators to produce documentation to monitor compliance with PRC-022-1 R1 and its sub-requirements. Furthermore, PRC-022-1 R1 already requires that the entity document UVLS performance:

> Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program to mitigate the risk of voltage collapse or voltage instability in the BES shall analyze and document all UVLS operations and Misoperations.

Accordingly, retiring PRC-022-1 R2 presents no gap to reliability or to the information NERC and the Regional Entities need to monitor compliance. In this context, a review of R2 indicates that it is a needlessly burdensome administrative and data collection requirement that that does little, if anything, to benefit or protect the reliable operation of

[76] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

the BES. (Criteria A, B1 and B2). Also, similar to the retention of records requirements in CIP-007-3, -4 R7.3, FAC-002-1 R2 and PRC-010-0 R2, the ERO compliance program efficiency will increase since it will no longer need to track a static requirement of whether a UVLS program assessment was submitted within 30 days of a request by NERC or the Regional Entity, and instead, compliance monitoring may focus on the more substantive requirements of PRC-022-1.

Criterion A
R2 is an administrative and data collection requirement that does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B
- Criterion B1(Administrative)
- Criterion B2 (Data Collection/Data Retention)

Criteria C
1. PRC-022-1 R2 has not been part of a FFT filing.

2. PRC-022-1 R2 is subject to Standards Development Project 2008-02 Undervoltage Load Shedding, which is not currently active and is only estimated to be completed until the second quarter of 2014. Since the purpose of Project 2008-02 does not necessarily include a review of R2 and its 2014 completion date is well into the future, it is appropriate to include PRC-022-1 R2 in the P81 Project.

3. PRC-022-1 R2 has a Lower VRF.

4. This requirement is not part of the AML.

5. The retirement of PRC-022-1 R2 does not pose any negative impact to NERC's published and posted reliability principles, particularly since submission of a program assessment or documentation of its analysis of UVLS program performance to a Regional Entity does not seem to implicate any of the principles.

6. For similar reasons, there is no negative impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of PRC-022-1 R2 promotes a results-based approach because it is a data collection requirement, and, therefore, does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire PRC-022-1 R2.

****VAR-001-2 R5 – Voltage and Reactive Control**

R5. Each Purchasing-Selling Entity and Load Serving Entity shall arrange for (self-provide or purchase) reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching;, and controllable load– to satisfy its reactive requirements identified by its Transmission Service Provider.

Background/Commission Directives

VAR-001-1 was submitted for Commission approval on April 4, 2006, in Docket No. RM06-16-000. When approving VAR-001-1, in Order No. 693 at paragraph 1858,[77] the Commission recognized:

> . . . that all transmission customers of public utilities are required to purchase Ancillary Service No. 2 under the OATT or self-supply, but the OATT does not require them to provide information to transmission operators needed to accurately study reactive power needs. The Commission directs the ERO to address the reactive power requirements for LSEs on a comparable basis with purchasing-selling entities.

On September 9, 2010, NERC submitted VAR-001-2, which included revisions to Requirement R5 to satisfy Commission directives in Order No. 693, including the directive in paragraph 1858. This directive was addressed by adding "Load Serving Entities" to the standard as applicable entities and making them subject to the same requirements as Purchasing Selling Entities. These modifications to VAR-001-2 were accepted by the Commission on January 10, 2011.[78]

Technical Justification

VAR-001-2 R5 does little, if anything, to benefit or protect the reliable operation of the BES because it is redundant with FERC's *pro forma* open access transmission tariff ("OATT"). (Criteria A and B7). To elaborate, VAR-001-2 R5 provides for the PSE and LSE (transmission customers) to arrange for or self provide reactive resources the same as required under Schedule 2 of the OATT. Specifically, as a general matter Schedule 2 of the OATT states:

> **Schedule 2 Reactive Supply and Voltage Control from Generation or Other**
>
> In order to maintain transmission voltages on the Transmission Provider's transmission facilities within acceptable limits, generation facilities and non-generation resources capable of providing this service that are under the control of the control area operator) are operated to produce (or absorb) reactive power. Thus, Reactive Supply and Voltage Control from

[77] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[78] *North American Electric Reliability Corp.*, 134 FERC ¶ 61,015 (2011).

> Generation or Other Sources Service must be provided for each transaction on the Transmission Provider's transmission facilities. The amount of Reactive Supply and Voltage Control from Generation or Other Sources Service that must be supplied with respect to the Transmission Customer's transaction will be determined based on the reactive power support necessary to maintain transmission voltages within limits that are generally accepted in the region and consistently adhered to by the Transmission Provider.
>
> Reactive Supply and Voltage Control from Generation or Other Sources Service is to be provided directly by the Transmission Provider (if the Transmission Provider is the Control Area operator) or indirectly by the Transmission Provider making arrangements with the Control Area operator that performs this service for the Transmission Provider's Transmission System. The Transmission Customer must purchase this service from the Transmission Provider or the Control Area operator. A Transmission Customer may satisfy all or part of its obligation through self provision or purchases provided that the self-provided or purchased reactive power reduces the Transmission Provider's reactive power requirements and is from generating facilities under the control of the Transmission Provider or Control Area operator. The Transmission Customer's Service Agreement shall specify any such reactive supply arrangements. To the extent the Control Area operator performs this service for the Transmission Provider, charges to the Transmission Customer are to reflect only a pass-through of the costs charged to the Transmission Provider by the Control Area operator. The Transmission Provider's rates for Reactive Supply and Voltage Control from Generation Sources Services shall be set out in Appendix A to this Schedule.

Given the importance of the procurement or self providing of reactive power, even in a market setting a form of Schedule 2 is found in the tariffs of MISO and PJM, for example. While NERC complied with the Commission's directive to add LSEs to VAR-001-2 R5, a review of this requirement in light of Schedule 2 indicates that the reliability objective of ensuring that PSEs as well as LSEs either acquire or self provide reactive power resources associated with its transmission service requests is accomplished via Schedule 2, and, therefore, there is no need to reiterate it in VAR-001-2 R5. The repetitive nature of VAR-001-2 R5 is also apparent in the context of how a PSE or LSE generally demonstrates compliance – via screenshots from Open Access Same-Time Information System ("OASIS") reservations that show the mandatory acquiring or self providing of reactive power resources per Schedule 2.

The reliability objective of VAR-001-2 is also accomplished in VAR-001-2 R2 (that is not proposed for retirement) which reads:

> Each Transmission Operator shall acquire sufficient reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching;, [sic] and controllable load – within its area to protect the voltage levels under normal and Contingency conditions. This includes the Transmission Operator's share of the reactive requirements of interconnecting transmission circuits.

The Transmission Operator's adherence to R2 is a double check for the obligations under Schedule 2 to ensure there are sufficient reactive power resources to protect the voltage levels under normal and Contingency conditions.

In addition, in the Electric Reliability Council of Texas (ERCOT) region, where there is no FERC approved OATT, reactive power is handled via Section 3.15 of the ERCOT Nodal Protocols that describes how ERCOT establishes a Voltage Profile for the grid, and then in detail explains the responsibilities of the Generators, Distribution Providers and Texas Transmission Service Providers (not to be confused with a NERC TSP), to meet the Voltage Profile and ensure that those entities have sufficient reactive support to do so. There is further Operating Guide detail on the responsibilities for entities to deploy reactive resources approximately, within performance criteria in the Operating Guide Section 3. Thus, as in non-ERCOT regions, ERCOT has protocols that are duplicative of VAR-001-2 R5.

Given the redundant nature of VAR-001-2 R5 it would also assist the ERO compliance program to retire it, so that time and resources can be reallocated to focus on adherence to other Reliability Standard requirements.

Criterion A
VAR-001-2 R5 does little, if anything, to benefit or protect the reliable operation of the BES because it is redundant with FERC's *pro forma* OATT.

Criteria B

- Criterion B7 (Redundant)

Criteria C

1. VAR-001-2 R5 has not been part of a FFT filing.

2. VAR-001-2 R5 is subject to Standards Development Project 2008-01 Voltage and Reactive Planning Control. Given that Project 2008-01 is not currently active and is only estimated to be completed until the second quarter of 2014 and the purpose of this project does not necessarily include a review of R5, it is appropriate to include VAR-001-2 R5 in the P81 Project. Also, retiring this requirement via P81 Project may facilitate the efficiency of Project 2008-01.

3. This requirement has a High VRF. However, the reliability objective of VAR-001-2 R5 will be accomplished via Schedule 2 of the OATT, ERCOT protocols

and R2 of VAR-001-2. Thus, the High VRF is not dispositive, and VAR-001-2 R5 remains appropriate for retirement.

4. VAR-001-2 R5 is in the third tier of the AML.

5. Because VAR-001-2 R5 is redundant with the *pro forma* OATT and ERCOT protocols, (as well as the reliability objective of VAR-001-2 R5 is accomplished via Schedule 2 of the OATT, ERCOT protocols and R2 of VAR-001-2), the retirement of VAR-001-2 R5 does not pose any negative impact to the following NERC published and posted reliability principles:

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

   Principle 2. The frequency and voltage of interconnected bulk power systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.

6. Retirement does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of VAR-001-2 R5 is neutral regarding whether it promotes a results-based approach because the requirement is results-based, but already covered in the *pro forma* OATT, Schedule 2 and ERCOT protocols.

Accordingly, for the above reasons, it is appropriate to retire VAR-001-2 R5.

V. The Initial Phase Reliability Standards Provided for Informational Purposes

The following requirements are already scheduled to be retired or subsumed via another Standards Development Project that has been approved by stakeholders and the NERC Board of Trustees (or due to be before the NERC Board of Trustees in November), and, thus, are presented here for informational purposes only. For regulatory efficiency, these requirements will not be presented for comment and vote, and, therefore, will not be presented to the NERC Board of Trustees for approval or filed with the Commission or Canadian governmental authorities as part of the P81 Project.

COM-001-1.1 R6- Telecommunications

Each NERCNet User Organization shall adhere to the requirements in Attachment 1-COM-001-0, "NERCNet Security Policy."

Background
COM-001-1 was submitted for Commission approval on November 15, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[79] COM-001-1.1 was submitted for Commission approval on February 6, 2009 in Docket No. RD09-2-000 as errata and was approved by unpublished letter order on May 13, 2009.[80]

As part of COM-001-2, on September 17, 2012, stakeholders approved the retirement of COM-001-1.1 R6 in Project 2006-06 (Reliability Coordination). This project is due to be presented to the NERC Board of Trustees in November. Thus, COM-001-1 R6 is presented here for informational purposes only.

EOP-009-0 R2 – Documentation of Blackstart Generating Unit Test Results

R2. The Generator Owner or Generator Operator shall provide documentation of the test results of the startup and operation of each blackstart generating unit to the Regional Reliability Organizations and upon request to NERC.

Background
EOP-009-0 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[81] In Order No. 749, the Commission approved the retirement of EOP-009-0 as of July 1, 2013, based on the approval of EOP-005-2, which did not carry forward R2 of EOP-009-0. Thus, EOP-009-0 R2 is presented here for informational purposes only.

FAC-008-1 R1.3.5 – Facility Ratings Methodology

R1.3.5. Other assumptions.

Background
FAC-008-1 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[82]

"On May 12, 2010, the NERC Board of Trustees approved the proposed FAC-008-2 Reliability Standard that addressed the first two of the FERC directives in Order No. 693. NERC's proposed FAC-008-2 Reliability Standard was not filed with FERC for approval, but instead was revisited by the standard drafting team so that the third Order

[79] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[80] Letter Order, Electric Reliability Organization Errata Petition Updating Accepted Reliability Coordination and Transmission Operations Reliability Standards, Docket No. RD09-2-000 (May 13, 2009).

[82] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

No. 693 directive could be addressed in response to FERC's March 18, 2010 Order…"[83]

FAC-008-3 was submitted for Commission approval on June 15, 2011 in Docket No. RD11-10-000 and was approved on November 17, 2011.[84]

FAC-008-3 (which combined FAC-008 and FAC-009) has been approved by the Commission without the "other assumptions" language.[85] Since FAC-008-3 will become effective on January 1, 2013, FAC-008-1 R1.3.5 is presented here for informational purposes only.

PRC-008-0 R1; PRC-008-0 R2 – Underfrequency Load Shedding Equipment Maintenance Programs

R1. The Transmission Owner and Distribution Provider with a UFLS program (as required by its Regional Reliability Organization) shall have a UFLS equipment maintenance and testing program in place. This UFLS equipment maintenance and testing program shall include UFLS equipment identification, the schedule for UFLS equipment testing, and the schedule for UFLS equipment maintenance.

R2. The Transmission Owner and Distribution Provider with a UFLS program (as required by its Regional Reliability Organization) shall implement its UFLS equipment maintenance and testing program and shall provide UFLS maintenance and testing program results to its Regional Reliability Organization and NERC on request (within 30 calendar days).

Background
PRC-008-0 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[86]

Under Standards Development Project 2007-17 Protection System Maintenance, which recently passed on August 27, 2012, PRC-008-0 is scheduled to be retired, subsumed and replaced with PRC-005-2. PRC-005-2 will likely be presented to the NERC Board of Trustees in November for approval, and, thus, PRC-008-0 is only presented here for informational purposes.

PRC-009-0 R1; PRC-009-0 R1.1; PRC-009-0 R1.2; PRC-009-0 R1.3; PRC-009-0 R1.4; PRC-009-0 R2 – UFLS Performance Following an Underfrequency Event

[83] Petition of the North American Electric Reliability Corporation for Approval of Proposed Reliability Standard FAC-008-3 — Facility Ratings, Docket No. RD11-10-000, (June 15, 2011).
[84] *Order Approving Reliability Standard*, 137 FERC ¶ 61,123 (2011).
[85] *Id.*

[86] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

R1. The Transmission Owner, Transmission Operator, Load-Serving Entity and Distribution Provider that owns or operates a UFLS program (as required by its Regional Reliability Organization) shall analyze and document its UFLS program performance in accordance with its Regional Reliability Organization's UFLS program. The analysis shall address the performance of UFLS equipment and program effectiveness following system events resulting in system frequency excursions below the initializing set points of the UFLS program. The analysis shall include, but not be limited to:

R1.1. A description of the event including initiating conditions.

R1.2. A review of the UFLS set points and tripping times.

R1.3. A simulation of the event.

R1.4. A summary of the findings.

R2. The Transmission Owner, Transmission Operator, Load-Serving Entity, and Distribution Provider that owns or operates a UFLS program (as required by its Regional Reliability Organization) shall provide documentation of the analysis of the UFLS program to its Regional Reliability Organization and NERC on request 90 calendar days after the system event.

Background

PRC-009-0 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[87] In Order No. 763 at paragraph 103[88] the Commission accepted the retirement of PRC-009-0 as appropriately replaced with PRC-006-1. Consistent with Order No. 763, PRC-009-0 will become inactive on September 30, 2013 and will be replaced by PRC-006-1. Thus, PRC-009-0 is presented here for informational purposes only.

TOP-001-1a R3 – Reliability Responsibilities and Authorities

R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall comply with reliability directives issued by the Reliability Coordinator, and each Balancing Authority and Generator Operator shall comply with reliability directives issued by the Transmission Operator, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances the Transmission Operator, Balancing Authority, or

[87] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[88] *Automatic Underfrequency Load Shedding and Load Shedding Plans Re-liability Standards*, 139 FERC ¶ 61,098 (2012).

> Generator Operator shall immediately inform the Reliability Coordinator or Transmission Operator of the inability to perform the directive so that the Reliability Coordinator or Transmission Operator can implement alternate remedial actions.

Background

TOP-001-1 was submitted for Commission approval on November 15, 2006 in Docket No. RM06-16-000 and was approved by the Commission on March 16, 2007 in Order No. 693.[89] TOP-001-1a was submitted for approval on July 16, 2010 in Docket No. RM10-29-000 and was approved on September 15, 2011 in Order No. 753.[90]

IRO-001-1a R8 reads:

> Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall immediately inform the Reliability Coordinator of the inability to perform the directive so that the Reliability Coordinator may implement alternate remedial actions.

Although there is redundancy between TOP-001-1a R3 and IRO-001-1a R8 as related to Reliability Coordinators, this redundancy was addressed in Standards Development Project 2007-03 (Real-time Operations). Specifically, Project 2007-03 eliminated the redundancy in the current version of TOP-001-2 R1 that replaces TOP-001-1a R3 and reads:

> Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Reliability Directive issued and identified as such by its Transmission Operator(s), unless such action would violate safety, equipment, regulatory, or statutory requirements.

TOP-001-2 has been approved by the NERC Board of Trustees and will be filed with the Commission for approval; therefore, TOP-001-1a R3 is presented for informational purposes only.

TOP-005-2a R1 – Operational Reliability Information

[89] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[90] *Electric Reliability Organization Interpretation of Transmission Operations Reliability Standard*, 136 FERC ¶ 61,176, (September 15, 2011) (Order No. 753).

R1. As a condition of receiving data from the Interregional Security Network (ISN), each ISN data recipient shall sign the NERC Confidentiality Agreement for "Electric System Reliability Data."

Background

Without directly addressing R1 of TOP-005-1 or TOP-005-2a the Commission approved both versions of TOP-005. [91] A review of the Standards Development Project 2007-03 Real-time Transmission Operations indicates it proposes R1 of TOP-005-1 to be retired. The reasoning provided by the SDT was the following:

> Confidentiality is not a reliability issue, but a market or business issue. Since this is not a reliability issue, it does not belong in the Reliability Standards and can be deleted.[92]

As stated above, in the context of Project 2007-03, TOP-001-1a was approved by the NERC Board of Trustees and will be filed with the Commission for approval; therefore, TOP-005-2a R1 is presented for informational purposes only.

[91] Order No. 693 at paragraphs 1648 through 1652 (approval of TOP-005-1); *Mandatory Reliability Standards for Interconnection Reliability Operating Limits,* 134 F.E.R.C. ¶ 61,213 (2011) (approval of TOP-005-2a).

Complete Violation Severity Level Matrix (BAL)
Encompassing All Commission-Approved Reliability Standards

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
BAL-001-0.1a	R1.	Each Balancing Authority shall operate such that, on a rolling 12-month basis, the average of the clock-minute averages of the Balancing Authority's Area Control Error (ACE) divided by 10B (B is the clock-minute average of the Balancing Authority Area's Frequency Bias) times the corresponding clock-minute averages of the Interconnection's Frequency Error is less than a specific limit. This limit is a constant derived from a targeted frequency bound (separately calculated for each Interconnection) that is reviewed and set as necessary by the NERC Operating Committee. ***See Standard for Formula.***	The Balancing Authority Area's value of CPS1 is less than 100% but greater than or equal to 95%.	The Balancing Authority Area's value of CPS1 is less than 95% but greater than or equal to 90%.	The Balancing Authority Area's value of CPS1 is less than 90% but greater than or equal to 85%.	The Balancing Authority Area's value of CPS1 is less than 85%.
BAL-001-0.1a	R2.	Each Balancing Authority shall operate such that its average ACE for at least 90% of clock-ten-minute periods (6 non-overlapping periods per hour) during a calendar month is within a specific limit, referred to as L_{10}. ***See Standard for Formula.***	The Balancing Authority Area's value of CPS2 is less than 90% but greater than or equal to 85%.	The Balancing Authority Area's value of CPS2 is less than 85% but greater than or equal to 80%.	The Balancing Authority Area's value of CPS2 is less than 80% but greater than or equal to 75%.	The Balancing Authority Area's value of CPS2 is less than 75%.
BAL-001-0.1a	R3.	Each Balancing Authority providing Overlap Regulation Service shall evaluate Requirement R1 (i.e., Control Performance Standard 1 or CPS1) and Requirement R2 (i.e., Control Performance Standard 2 or CPS2) using the characteristics of the combined ACE and combined Frequency Bias Settings.	N/A	N/A	N/A	The Balancing Authority providing Overlap Regulation Service failed to use a combined ACE and frequency bias.
BAL-001-0.1a	R4.	Any Balancing Authority receiving Overlap Regulation Service shall not	N/A	N/A	N/A	The Balancing Authority receiving

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
		have its control performance evaluated (i.e. from a control performance perspective, the Balancing Authority has shifted all control requirements to the Balancing Authority providing Overlap Regulation Service).				Overlap Regulation Service failed to ensure that control performance was being evaluated in a manner consistent with the calculation methodology as described in BAL-001-01 R3.
BAL-002-1	R1.	Each Balancing Authority shall have access to and/or operate Contingency Reserve to respond to Disturbances. Contingency Reserve may be supplied from generation, controllable load resources, or coordinated adjustments to Interchange Schedules.	N/A	N/A	N/A	The Balancing Authority does not have access to and/or operate Contingency Reserve to respond to Disturbances.
BAL-002-1	R1.1.	A Balancing Authority may elect to fulfill its Contingency Reserve obligations by participating as a member of a Reserve Sharing Group. In such cases, the Reserve Sharing Group shall have the same responsibilities and obligations as each Balancing Authority with respect to monitoring and meeting the requirements of Standard BAL-002.	N/A	N/A	N/A	The Balancing Authority has elected to fulfill its Contingency Reserve obligations by participating as a member of a Reserve Sharing Group and the Reserve Sharing Group has not provided the same responsibilities and obligations as required of the responsible entity with respect to monitoring and meeting the requirements of Standard BAL-002.
BAL-002-1	R2.	Each Regional Reliability Organization, sub-Regional Reliability	The Regional Reliability	The Regional Reliability	The Regional Reliability	The Regional Reliability

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
		Organization or Reserve Sharing Group shall specify its Contingency Reserve policies, including:	Organization, sub-Regional Reliability Organization, or Reserve Sharing Group has failed to specify 1 of the following sub-requirements.	Organization, sub-Regional Reliability Organization, or Reserve Sharing Group has failed to specify 2 or 3 of the following sub-requirements.	Organization, sub-Regional Reliability Organization, or Reserve Sharing Group has failed to specify 4 or 5 of the following sub-requirements.	Organization, sub-Regional Reliability Organization, or Reserve Sharing Group has failed to specify all 6 of the following sub-requirements.
BAL-002-1	R2.1.	The minimum reserve requirement for the group.	N/A	N/A	N/A	The Regional Reliability Organization, sub-Regional Reliability Organization, or Reserve Sharing Group has failed to specify the minimum reserve requirement for the group.
BAL-002-1	R2.2.	Its allocation among members.	N/A	N/A	N/A	The Regional Reliability Organization, sub-Regional Reliability Organization, or Reserve Sharing Group has failed to specify the allocation of reserves among members.
BAL-002-1	R2.3.	The permissible mix of Operating Reserve – Spinning and Operating Reserve – Supplemental that may be included in Contingency Reserve.	N/A	N/A	N/A	The Regional Reliability Organization, sub-Regional Reliability Organization, or Reserve Sharing Group has failed to specify the permissible mix of Operating Reserve –

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						Spinning and Operating Reserve – Supplemental that may be included in Contingency Reserve.
BAL-002-1	R2.4.	The procedure for applying Contingency Reserve in practice.	N/A	N/A	N/A	The Regional Reliability Organization, sub-Regional Reliability Organization, or Reserve Sharing Group has failed to provide the procedure for applying Contingency Reserve in practice.
BAL-002-1	R2.5.	The limitations, if any, upon the amount of interruptible load that may be included.	N/A	N/A	N/A	The Regional Reliability Organization, sub-Regional Reliability Organization, or Reserve Sharing Group has failed to specify the limitations, if any, upon the amount of interruptible load that may be included.
BAL-002-1	R2.6.	The same portion of resource capacity (e.g. reserves from jointly owned generation) shall not be counted more than once as Contingency Reserve by multiple Balancing Authorities.	N/A	N/A	N/A	The Regional Reliability Organization, sub-Regional Reliability Organization, or Reserve Sharing Group has allowed the same portion of resource capacity (e.g., reserves from jointly owned generation) to be

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						counted more than once as Contingency Reserve by multiple Balancing Authorities.
BAL-002-1	R3.	Each Balancing Authority or Reserve Sharing Group shall activate sufficient Contingency Reserve to comply with the DCS.	The Balancing Authority or Reserve Sharing Group's Average Percent Recovery per the NERC DCS quarterly report was less than 100% but greater than or equal to 95%.	The Balancing Authority or Reserve Sharing Group's Average Percent Recovery per the NERC DCS quarterly report was less than 95% but greater than or equal to 90%.	The Balancing Authority or Reserve Sharing Group's Average Percent Recovery per the NERC DCS quarterly report was less than 90% but greater than or equal to 85%.	The Balancing Authority or Reserve Sharing Group's Average Percent Recovery per the NERC DCS quarterly report was less than 85%.
BAL-002-1	R3.1.	As a minimum, the Balancing Authority or Reserve Sharing Group shall carry at least enough Contingency Reserve to cover the most severe single contingency. All Balancing Authorities and Reserve Sharing Groups shall review, no less frequently than annually, their probable contingencies to determine their prospective most severe single contingencies.	The Balancing Authority or Reserve Sharing Group failed to review their probable contingencies to determine their prospective most severe single contingencies annually.	N/A	N/A	The Balancing Authority or Reserve Sharing Group failed to carry at least enough Contingency Reserve to cover the most severe single contingency.
BAL-002-1	R4.	A Balancing Authority or Reserve Sharing Group shall meet the Disturbance Recovery Criterion within the Disturbance Recovery Period for 100% of Reportable Disturbances. The Disturbance Recovery Criterion is:	The Balancing Authority or Reserve Sharing Group met the Disturbance Recovery Criterion within the Disturbance Recovery Period for more than 90% and less than 100% of Reportable Disturbances.	The Balancing Authority or Reserve Sharing Group met the Disturbance Recovery Criterion within the Disturbance Recovery Period for more than 80% and less than or equal to 90% of Reportable Disturbances.	The Balancing Authority or Reserve Sharing Group met the Disturbance Recovery Criterion within the Disturbance Recovery Period for more than 70% and less than or equal to 80% of Reportable Disturbances.	The Balancing Authority or Reserve Sharing Group met the Disturbance Recovery Criterion within the Disturbance Recovery Period for more than 0% and less than or equal to 70% of Reportable Disturbances.

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
BAL-002-1	R4.1.	A Balancing Authority shall return its ACE to zero if its ACE just prior to the Reportable Disturbance was positive or equal to zero. For negative initial ACE values just prior to the Disturbance, the Balancing Authority shall return ACE to its pre-Disturbance value.	N/A	N/A	N/A	The Balancing Authority failed to return its ACE to zero if its ACE just prior to the Reportable Disturbance was positive or equal to zero or for negative initial ACE values failed to return ACE to its pre-Disturbance value.
BAL-002-1	R4.2.	The default Disturbance Recovery Period is 15 minutes after the start of a Reportable Disturbance.	N/A	N/A	N/A	N/A
BAL-002-1	R5.	Each Reserve Sharing Group shall comply with the DCS. A Reserve Sharing Group shall be considered in a Reportable Disturbance condition whenever a group member has experienced a Reportable Disturbance and calls for the activation of Contingency Reserves from one or more other group members. (If a group member has experienced a Reportable Disturbance but does not call for reserve activation from other members of the Reserve Sharing Group, then that member shall report as a single Balancing Authority.) Compliance may be demonstrated by either of the following two methods:	The Reserve Sharing Group met the DCS requirement for more than 90% and less than 100% of Reportable Disturbances.	The Reserve Sharing Group met the DCS requirements for more than 80% and less than or equal to 90% of Reportable Disturbances.	The Reserve Sharing Group met the DCS requirements for more than 70% and less than or equal to 80% of Reportable Disturbances.	The Reserve Sharing Group met the DCS requirements for more than 0% and less than or equal to 70% of Reportable Disturbances.
BAL-002-1	R5.1.	The Reserve Sharing Group reviews group ACE (or equivalent) and demonstrates compliance to the DCS. To be in compliance, the group ACE (or its equivalent) must meet the	N/A	N/A	N/A	N/A

						compensating measure(s) applied to mitigate risk exposure where antivirus and malware prevention tools are not installed.
CIP-007-3	R4.2.	The Responsible Entity shall document and implement a process for the update of anti-virus and malware prevention "signatures." The process must address testing and installing the signatures.	N/A	N/A	N/A	The Responsible Entity did not document or did not implement a process including addressing testing and installing the signatures for the update of anti-virus and malware prevention "signatures."
CIP-007-3	R5.	Account Management — The Responsible Entity shall establish, implement, and document technical and procedural controls that enforce access authentication of, and accountability for, all user activity, and that minimize the risk of unauthorized system access.	N/A	N/A	N/A	The Responsible Entity did not document or did not implement technical and procedural controls that enforce access authentication of, and accountability for, all user activity.
CIP-007-3	R5.1.	The Responsible Entity shall ensure that individual and shared system accounts and authorized access permissions are consistent with the concept of "need to know" with respect to work functions performed.	N/A	N/A	N/A	The Responsible Entity did not ensure that individual and shared system accounts and authorized access permissions are consistent with the concept of "need to

						know" with respect to work functions performed.
CIP-007-3	R5.1.1.	The Responsible Entity shall ensure that user accounts are implemented as approved by designated personnel. Refer to Standard CIP-003-3 Requirement R5.	N/A	N/A	N/A	One or more user accounts implemented by the Responsible Entity were not implemented as approved by designated personnel.
CIP-007-3	R5.1.2.	The Responsible Entity shall establish methods, processes, and procedures that generate logs of sufficient detail to create historical audit trails of individual user account access activity for a minimum of ninety days.	N/A	The Responsible Entity generated logs with sufficient detail to create historical audit trails of individual user account access activity, however the logs do not contain activity for a minimum of 90 days.	The Responsible Entity generated logs with insufficient detail to create historical audit trails of individual user account access activity.	The Responsible Entity did not generate logs of individual user account access activity.
CIP-007-3	R5.1.3.	The Responsible Entity shall review, at least annually, user accounts to verify access privileges are in accordance with Standard CIP-003-3 Requirement R5 and Standard CIP-004-3 Requirement R4.	N/A	N/A	N/A	The Responsible Entity did not review, at least annually, user accounts to verify access privileges are in accordance with Standard CIP-003-3 Requirement R5 and Standard CIP-004-3 Requirement R4.
CIP-007-3	R5.2.	The Responsible Entity shall implement a policy to minimize and manage the	N/A	N/A	N/A	The Responsible Entity did not

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
		scope and acceptable use of administrator, shared, and other generic account privileges including factory default accounts.				implement a policy to minimize and manage the scope and acceptable use of administrator, shared, and other generic account privileges including factory default accounts.
CIP-007-3	R5.2.1.	The policy shall include the removal, disabling, or renaming of such accounts where possible. For such accounts that must remain enabled, passwords shall be changed prior to putting any system into service.	N/A	N/A	The Responsible Entity's policy did not include the removal, disabling, or renaming of such accounts where possible, however for accounts that must remain enabled, passwords were changed prior to putting any system into service.	For accounts that must remain enabled, the Responsible Entity did not change passwords prior to putting any system into service.
CIP-007-3	R5.2.2.	The Responsible Entity shall identify those individuals with access to shared accounts.	N/A	N/A	N/A	The Responsible Entity did not identify all individuals with access to shared accounts.
CIP-007-3	R5.2.3.	Where such accounts must be shared, the Responsible Entity shall have a policy for managing the use of such accounts that limits access to only those with authorization, an audit trail of the account use (automated or manual), and steps for securing the account in the event of personnel changes (for example, change in assignment or termination).	N/A	N/A	N/A	Where such accounts must be shared, the Responsible Entity has not implemented (one or more components of) a policy for managing the use of such accounts that limits

EOP-004-1	R1. (Retired)	Each Regional Reliability Organization shall establish and maintain a Regional reporting procedure to facilitate preparation of preliminary and final disturbance reports.	The Regional Reliability Organization has demonstrated the existence of a regional reporting procedure, but the procedure is missing minor details or minor program/procedural elements.	The Regional Reliability Organization Regional reporting procedure have been is missing one element that would make the procedure meet the requirement.	The Regional Reliability Organization Regional has a regional reporting procedure but the procedure is not current.	The Regional Reliability Organization does not have a regional reporting procedure.
EOP-004-1	R2.	A Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator or Load-Serving Entity shall promptly analyze Bulk Electric System disturbances on its system or facilities.	The responsible entity failed to promptly analyze 5% or less of its disturbances on the BES.	The responsible entity failed to promptly analyze more than 5% up to (and including) 10% of its disturbances on the BES.	The responsible entity failed to promptly analyze more than 10% up to (and including) 15% of its disturbances on the BES.	The responsible entity failed to promptly analyze more than 15% of its disturbances on the BES.
EOP-004-1	R3.	A Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator or Load-Serving Entity experiencing a reportable incident shall provide a preliminary written report to its Regional Reliability Organization and NERC.	N/A	N/A	N/A	The responsible entities failed to provide a preliminary written report as directed by the requirement.
EOP-004-1	R3.1.	The affected Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator or Load-Serving Entity shall submit within 24 hours of the disturbance or unusual occurrence either a copy of the report submitted to DOE, or, if no DOE report is required, a	The responsible entity submitted the report as required in R3.1 more than 24 but less than or equal to 36 hours after the disturbance or unusual occurrence,	The responsible entity submitted the report as required in R3.1 more than 36 hours but less than or equal to 48 hours after the disturbance	The responsible entities submitted the report as required in R3.1 more than 48 hours but less than or equal to 72 hours after the disturbance or unusual	The responsible entities submitted the report as required in R3.1 more than 72-hours after the disturbance or unusual occurrence or

		copy of the NERC Interconnection Reliability Operating Limit and Preliminary Disturbance Report form. Events that are not identified until some time after they occur shall be reported within 24 hours of being recognized.	or discovery of the disturbance or unusual occurrence.	or unusual occurrence, or discovery of the disturbance or unusual occurrence.	occurrence, or discovery of the disturbance or unusual occurrence.	discovery of the disturbance or unusual occurrence.
EOP-004-1	R3.2.	Applicable reporting forms are provided in Attachments 022-1 and 022-2.	N/A	N/A	N/A	N/A
EOP-004-1	R3.3.	Under certain adverse conditions, e.g., severe weather, it may not be possible to assess the damage caused by a disturbance and issue a written Interconnection Reliability Operating Limit and Preliminary Disturbance Report within 24 hours. In such cases, the affected Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, or Load-Serving Entity shall promptly notify its Regional Reliability Organization(s) and NERC, and verbally provide as much information as is available at that time. The affected Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, or Load-Serving Entity shall then provide timely, periodic verbal updates until adequate information is available to issue a written Preliminary Disturbance Report.	N/A	N/A	N/A	The responsible entity did not provide its Regional Reliability Organization(s) and NERC with verbal notification or updates about a disturbance as specified in R3.3.
EOP-004-1	R3.4.	If, in the judgment of the Regional Reliability Organization, after consultation with the Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, or Load-Serving Entity in which a disturbance occurred, a final report is required, the affected Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, or Load-Serving Entity shall prepare this	The responsible entity submitted the final report no more than 30 days past the 60 day due date; or the final report was missing one of the three elements specified in R3.4.	The responsible entity submitted the final report between 31 days and 60 days inclusive past the 60 day due date. OR The final report was missing two of the	The responsible entity submitted the final report between 61 days and 90 days inclusive past the 60 day due date	The responsible entity failed to submit the final report. 		report within 60 days. As a minimum, the final report shall have a discussion of the events and its cause, the conclusions reached, and recommendations to prevent recurrence of this type of event. The report shall be subject to Regional Reliability Organization approval.		three elements specified in R3.4.		OR The responsible entity submitted a final report that was missing all three of the elements specified in R3.4.
EOP-004-1	R4.	When a Bulk Electric System disturbance occurs, the Regional Reliability Organization shall make its representatives on the NERC Operating Committee and Disturbance Analysis Working Group available to the affected Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, or Load-Serving Entity immediately affected by the disturbance for the purpose of providing any needed assistance in the investigation and to assist in the preparation of a final report.	N/A	N/A	N/A	The RRO did not make its representatives on the NERC Operating Committee and Disturbance Analysis Working Group available for the purpose of providing any needed assistance in the investigation and to assist in the preparation of a final report.
EOP-004-1	R5.	The Regional Reliability Organization shall track and review the status of all final report recommendations at least twice each year to ensure they are being acted upon in a timely manner. If any recommendation has not been acted on within two years, or if Regional Reliability Organization tracking and review indicates at any time that any recommendation is not being acted on with sufficient diligence, the Regional Reliability Organization shall notify the NERC Planning Committee and Operating Committee of the status of the recommendation(s) and the steps the Regional Reliability Organization has taken to accelerate implementation.	The Regional Reliability Organization reviewed all final report recommendations less than twice a year.	The Regional Reliability Organization reviewed 75% or more final report recommendations twice a year.	The Regional Reliability Organization has not reported on any recommendation has not been acted on within two years to the NERC Planning and Operating Committees.	The Regional Reliability Organization has not reviewed the final report recommendations or did not notify the NERC Planning and Operating Committees.

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
EOP-005-1	R1.	Each Transmission Operator shall have a restoration plan to reestablish its electric system in a stable and orderly manner in the event of a partial or total shutdown of its system, including necessary operating instructions and procedures to cover emergency conditions, and the loss of vital telecommunications channels. Each Transmission Operator shall include the applicable elements listed in Attachment 1-EOP-005 in developing a restoration plan.	The responsible entity has a restoration plan that includes 75 % or more but less than 100% of the applicable elements listed in Attachment 1.	The responsible entity has a restoration plan that includes 50% to 75% of the applicable elements listed in Attachment 1.	The responsible entity has a restoration plan that includes 25% - 50% of the applicable elements listed in Attachment 1.	The responsible entity has a restoration plan that includes less than 25% of the applicable elements listed in Attachment 1 OR the responsible entity has no restoration plan.
EOP-005-1	R2.	Each Transmission Operator shall review and update its restoration plan at least annually and whenever it makes changes in the power system network, and shall correct deficiencies found during the simulated restoration exercises.	The Transmission Operator failed to review or update its restoration plan when it made changes in the power system network.	The Transmission Operator failed to review and update its restoration plan at least annually.	The Transmission Operator failed to review and update its restoration plan at least annually or whenever it made changes in the power system network, and failed to correct deficiencies found during the simulated restoration exercises.	The Transmission Operator failed to review and update its restoration plan at least annually and whenever it made changes in the power system network, and failed to correct deficiencies found during the simulated restoration exercises.
EOP-005-1	R3.	Each Transmission Operator shall develop restoration plans with a priority of restoring the integrity of the Interconnection.	N/A	N/A	N/A	The Transmission Operator's restoration plans failed to make restoration of the integrity of the Interconnection a priority.
EOP-005-1	R4.	Each Transmission Operator shall coordinate its restoration plans with the Generator Owners and Balancing Authorities within its area, its Reliability Coordinator, and neighboring Transmission Operators and Balancing Authorities.	The Transmission Operator failed to coordinate its restoration plans with 5% or less of the entities identified in the requirement.	The Transmission Operator failed to coordinate its restoration plans with more than 5% up to (and including) 10% of the entities identified in the	The Transmission Operator failed to coordinate its restoration plans with more than 10% up to (and including) 15% of the entities identified in	The Transmission Operator failed to coordinate its restoration plans with more than 15% of the entities identified in the requirement.

				requirement.	the requirement.	
EOP-005-1	R5.	Each Transmission Operator and Balancing Authority shall periodically test its telecommunication facilities needed to implement the restoration plan.	N/A	N/A	N/A	The responsible entity failed to periodically test its telecommunication facilities needed to implement the restoration plan.
EOP-005-1	R6.	Each Transmission Operator and Balancing Authority shall train its operating personnel in the implementation of the restoration plan. Such training shall include simulated exercises, if practicable.	The Transmission Operator or Balancing Authority failed to train 5% or less of its operating personnel in the implementation of the restoration plan.	The Transmission Operator or Balancing Authority failed to train more than 5% up to (and including) 10 % of its operating personnel in the implementation of the restoration plan.	The Transmission Operator or Balancing Authority failed to train more than 10 % up to (and including) 15% of its operating personnel in the implementation of the restoration plan.	The Transmission Operator or Balancing Authority failed to train more than 15% of its operating personnel in the implementation of the restoration plan.
EOP-005-1	R7.	Each Transmission Operator and Balancing Authority shall verify the restoration procedure by actual testing or by simulation.	N/A	N/A	N/A	The Transmission Operator or Balancing Authority did not verify the restoration procedure by actual testing or by simulation.
EOP-005-1	R8.	Each Transmission Operator shall verify that the number, size, availability, and location of system blackstart generating units are sufficient to meet Regional Reliability Organization restoration plan requirements for the Transmission Operator's area.	N/A	N/A	N/A	The Transmission Operator failed to verify that the number, size, availability, and location of system blackstart generating units are sufficient to meet Regional Reliability Organization restoration plan

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						requirements for the Transmission Operator's area.
EOP-005-1	R9.	The Transmission Operator shall document the Cranking Paths, including initial switching requirements, between each blackstart generating unit and the unit(s) to be started and shall provide this documentation for review by the Regional Reliability Organization upon request. Such documentation may include Cranking Path diagrams.	N/A	N/A	The Transmission Operator documented the Cranking Paths, including initial switching requirements, between each blackstart generating unit and the unit(s) to be started, but did not provide the documentation as requested by the Regional Reliability Organization.	The Transmission Operator failed to document the Cranking Paths, including initial switching requirements, between each blackstart generating unit and the unit(s) to be started.
EOP-005-1	R10.	The Transmission Operator shall demonstrate, through simulation or testing, that the blackstart generating units in its restoration plan can perform their intended functions as required in the regional restoration plan.	For less than 25% of the blackstart generating units in its restoration plan, the Transmission Operator failed to demonstrate, through simulation or testing, that these blackstart generating units can perform their intended functions as required in the regional restoration plan.	For 25% or more, but less than 50% of the blackstart generating units in its restoration plan, the Transmission Operator failed to demonstrate, through simulation or testing, that these blackstart generating units can perform their intended functions as required in the regional restoration plan.	For 50% or more, but less than 75% of the blackstart generating units in its restoration plan, the Transmission Operator failed to demonstrate, through simulation or testing, that these blackstart generating units can perform their intended functions as required in the regional restoration plan.	For 75% or more of the blackstart generating units in its restoration plan, the Transmission Operator failed to demonstrate, through simulation or testing, that these blackstart generating units can perform their intended functions as required in the regional restoration plan.
EOP-005-1	R10.1.	The Transmission Operator shall perform this simulation or testing at least once every five years.	N/A	N/A	N/A	The Transmission Operator failed to perform the required simulation or testing at least once every five years.

		coordinated recommendations.				documentation.
FAC-002-1	R2. (Retired)	The Planning Authority, Transmission Planner, Generator Owner, Transmission Owner, Load-Serving Entity, and Distribution Provider shall each retain its documentation (of its evaluation of the reliability impact of the new facilities and their connections on the interconnected transmission systems) for three years and shall provide the documentation to the Regional Reliability Organization(s) and NERC on request (within 30 calendar days).	The responsible entity provided the documentation more than 30 calendar days, but not more than 45 calendar days, after a request.	The responsible entity provided the documentation more than 45 calendar days, but not more than 60 calendar days, after a request.	The responsible entity provided the documentation more than 60 calendar days, but not more than 120 calendar days, after a request.	The responsible entity provided the documentation more than 120 calendar days after a request or was unable to provide the documentation.
FAC-003-1	R1.	The Transmission owner shall prepare, and keep current, a formal transmission vegetation management program (TVMP). The TVMP shall include the Transmission Owner's objectives, practices, approved procedures, and work Specifications. 1. ANSI A300, Tree Care Operations – Tree, Shrub, and Other Woody Plant Maintenance – Standard Practices, while not a requirement of this standard, is considered to be an industry best practice.	The responsible entity did not include and keep current one of the four required elements of its TVMP, as directed by the requirement.	The responsible entity did not include and keep current two of the four required elements of its TVMP, as directed by the requirement.	The responsible entity did not include and keep current three of the four required elements of its TVMP, as directed by the requirement.	The responsible entity did not include and keep current all required elements of the TVMP, as directed by the requirement.
FAC-003-1	R1.1.	The TVMP shall define a schedule for and the type (aerial, ground) of ROW vegetation inspections. This schedule should be flexible enough to adjust for changing conditions. The inspection schedule shall be based on the anticipated growth of vegetation and any other environmental or operational factors that could impact the relationship of vegetation to the Transmission Owner's transmission lines.	N/A	N/A	The applicable entity TVMP did not define a schedule, as directed by the requirement, or the type of ROW vegetation inspections, as directed by the requirement.	The applicable entity TVMP did not define a schedule, as directed by the requirement, nor the type of ROW vegetation inspections, as directed by the requirement.
FAC-003-1	R1.2.	The Transmission Owner, in the TVMP, shall identify and document clearances between vegetation and any overhead, ungrounded supply conductors, taking into	N/A	N/A	N/A	The responsible entity, in its TVMP, failed to identify and document clearances between

VAR-001-2	R1.	Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators.	The applicable entity did not ensure the development and/or maintenance and/or implementation of formal policies and procedures, as directed by the requirement, affecting 5% or less of their individual and neighboring areas voltage levels and Mvar flows.	The applicable entity did not ensure the development and/or maintenance and/or implementation of formal policies and procedures, as directed by the requirement, affecting between 5-10% of their individual and neighboring areas voltage levels and Mvar flows.	The applicable entity did not ensure the development and/or maintenance and/or implementation of formal policies and procedures, as directed by the requirement, affecting 10-15%, inclusive, of their individual and neighboring areas voltage levels and Mvar flows.	The applicable entity did not ensure the development and/or maintenance and/or implementation of formal policies and procedures, as directed by the requirement, affecting greater than 15% of their individual and neighboring areas voltage levels and Mvar flows.
VAR-001-2	R2.	Each Transmission Operator shall acquire sufficient reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching;, and controllable load – within its area to protect the voltage levels under normal and Contingency conditions. This includes the Transmission Operator's share of the reactive requirements of interconnecting transmission circuits.	The Transmission Operator acquired 95% but less than 100% of the reactive resources within its area needed to protect the voltage levels under normal and Contingency conditions including the Transmission Operator's share of the reactive requirements of interconnecting transmission circuits.	The Transmission Operator acquired 90% but less than 95% of the reactive resources within its area needed to protect the voltage levels under normal and Contingency conditions including the Transmission Operator's share of the reactive requirements of interconnecting transmission circuits.	The Transmission Operator acquired 85% but less than 90% of the reactive resources within its area needed to protect the voltage levels under normal and Contingency conditions including the Transmission Operator's share of the reactive requirements of interconnecting transmission circuits.	The Transmission Operator acquired less than 85% of the reactive resources within its area needed to protect the voltage levels under normal and Contingency conditions including the Transmission Operator's share of the reactive requirements of interconnecting transmission circuits.
VAR-001-2	R3.	The Transmission Operator shall specify criteria that exempts generators from compliance with the requirements defined in Requirement 4, and Requirement 6.1.	N/A	N/A	N/A	The Transmission Operator did not specify criteria that exempts generators from compliance with

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						the requirements defined in Requirement 4, and Requirement 6.1. to all of the parties involved.
VAR-001-2	R3.1.	Each Transmission Operator shall maintain a list of generators in its area that are exempt from following a voltage or Reactive Power schedule.	The Transmission Operator maintain the list of generators in its area that are exempt from following a voltage or Reactive Power schedule but is missing one or more entities. The missing entities shall represent less than 25% of those eligible for the list	The Transmission Operator maintain the list of generators in its area that are exempt from following a voltage or Reactive Power schedule but is missing two or more entities. The missing entities shall represent less than 50% of those eligible for the list	The Transmission Operator maintain the list of generators in its area that are exempt from following a voltage or Reactive Power schedule but is missing three or more entities. The missing entities shall represent less than 75% of those eligible for the list	The Transmission Operator maintain the list of generators in its area that are exempt from following a voltage or Reactive Power schedule but is missing four or more entities. The missing entities shall represent 75% or more of those eligible for the list.
VAR-001-2	R3.2.	For each generator that is on this exemption list, the Transmission Operator shall notify the associated Generator Owner.	The Transmission Operator failed to notify up to 25% of the associated Generator Owner of each generator that are on this exemption list.	The Transmission Operator failed to notify 25% up to 50% of the associated Generator Owners of each generator that are on this exemption list.	The Transmission Operator failed to notify 50% up to 75% of the associated Generator Owner of each generator that are on this exemption list.	The Transmission Operator failed to notify 75% up to 100% of the associated Generator Owner of each generator that are on this exemption list.
VAR-001-2	R4.	Each Transmission Operator shall specify a voltage or Reactive Power schedule [4] at the interconnection between the generator facility and the Transmission Owner's facilities to be maintained by each generator. The Transmission Operator shall provide the voltage or Reactive Power schedule to the	N/A	N/A	The Transmission Operator provide Voltage or Reactive Power schedules were for some but not all generating units as required in R4.	The Transmission Operator provide No evidence that voltage or Reactive Power schedules were provided to Generator Operators as required

[4] The voltage schedule is a target voltage to be maintained within a tolerance band during a specified period.

EOP-005-2	R3.1.	Kept in Final SAR for Retirement	If there are no changes to the previously submitted restoration plan, the Transmission Operator shall confirm annually on a predetermined schedule to its Reliability Coordinator that it has reviewed its restoration plan and no changes were necessary.
EOP-009-0	R2.	Kept in Final SAR for Information Only	The Generator Owner or Generator Operator shall provide documentation of the test results of the startup and operation of each blackstart generating unit to the Regional Reliability Organizations and upon request to NERC.
FAC-002-1	R2.	Kept in Final SAR for Retirement	The Planning Authority, Transmission Planner, Generator Owner, Transmission Owner, Load-Serving Entity, and Distribution Provider shall each retain its documentation (of its evaluation of the reliability impact of the new facilities and their connections on the interconnected transmission systems) for three years and shall provide the documentation to the Regional Reliability Organization(s) and NERC on request (within 30 calendar days).
FAC-008-1	R1.3.5.	Kept in Final SAR for Information Only	Other assumptions.
FAC-008-1	R2.	Kept in Final SAR for Retirement	The Transmission Owner and Generator Owner shall each make its Facility Ratings Methodology available for inspection and technical review by those Reliability Coordinators, Transmission Operators, Transmission Planners, and Planning Authorities that have responsibility for the area in which the associated Facilities are located, within 15 business days of receipt of a request.

Standard Version	Requirement Name	Status	Requirement Text
FAC-008-1	R3.	Kept in Final SAR for Retirement	If a Reliability Coordinator, Transmission Operator, Transmission Planner, or Planning Authority provides written comments on its technical review of a Transmission Owner's or Generator Owner's Facility Ratings Methodology, the Transmission Owner or Generator Owner shall provide a written response to that commenting entity within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Facility Ratings Methodology and, if no change will be made to that Facility Ratings Methodology, the reason why.
FAC-008-3	R4.	Kept in Final SAR for Retirement	Each Transmission Owner shall make its Facility Ratings methodology and each Generator Owner shall each make its documentation for determining its Facility Ratings and its Facility Ratings methodology available for inspection and technical review by those Reliability Coordinators, Transmission Operators, Transmission Planners and Planning Coordinators that have responsibility for the area in which the associated Facilities are located, within 21 calendar days of receipt of a request.
FAC-008-3	R5.	Kept in Final SAR for Retirement	If a Reliability Coordinator, Transmission Operator, Transmission Planner or Planning Coordinator provides documented comments on its technical review of a Transmission Owner's Facility Ratings methodology or Generator Owner's documentation for determining its Facility Ratings and its Facility Rating methodology, the Transmission Owner or Generator Owner shall provide a response to that commenting entity within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Facility Ratings methodology and, if no change will be made to that Facility Ratings methodology, the reason why.
FAC-010-2.1	R5.	Added to Final SAR for Retirement	If a recipient of the SOL Methodology provides documented technical comments on the methodology, the Planning Authority shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the SOL Methodology and, if no change will be made to that SOL Methodology, the reason why.
FAC-011-2	R5.	Added to Final SAR for Retirement	If a recipient of the SOL Methodology provides documented technical comments on the methodology, the Reliability Coordinator shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the SOL Methodology and, if no change will be made to that SOL Methodology, the reason why.

Standard Version	Requirement Name	Status	Requirement Text
FAC-013-2	R3.	Kept in Final SAR for Retirement	If a recipient of the Transfer Capability methodology provides documented concerns with the methodology, the Planning Coordinator shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Transfer Capability methodology and, if no change will be made to that Transfer Capability methodology, the reason why.
INT-007-1	R1.2.	Kept in Final SAR for Retirement	All reliability entities involved in the Arranged Interchange are currently in the NERC registry.
IRO-016-1	R2.	Kept in Final SAR for Retirement	The Reliability Coordinator shall document (via operator logs or other data sources) its actions taken for either the event or for the disagreement on the problem(s) or for both.
MOD-004-1	R1.	Deferred to Subsequent Phase	The Transmission Service Provider that maintains CBM shall prepare and keep current a "Capacity Benefit Margin Implementation Document" (CBMID) that includes, at a minimum, the following information:
MOD-004-1	R1.1.	Deferred to Subsequent Phase	The process through which a Load-Serving Entity within a Balancing Authority Area associated with the Transmission Service Provider, or the Resource Planner associated with that Balancing Authority Area, may ensure that its need for Transmission capacity to be set aside as CBM will be reviewed and accommodated by the Transmission Service Provider to the extent Transmission capacity is available.
MOD-004-1	R1.2.	Deferred to Subsequent Phase	The procedure and assumptions for establishing CBM for each Available Transfer Capability (ATC) Path or Flowgate.
MOD-004-1	R1.3.	Deferred to Subsequent Phase	The procedure for a Load-Serving Entity or Balancing Authority to use Transmission capacity set aside as CBM, including the manner in which the Transmission Service Provider will manage situations where the requested use of CBM exceeds the amount of CBM available.
MOD-004-1	R2.	Deferred to Subsequent Phase	The Transmission Service Provider that maintains CBM shall make available its current CBMID to the Transmission Operators, Transmission Service Providers, Reliability Coordinators, Transmission Planners, Resource Planners, and Planning Coordinators that are within or adjacent to the Transmission Service Provider's area, and to the Load Serving Entities and Balancing Authorities within the Transmission Service Provider's area, and notify those entities of any changes to the CBMID prior to the effective date of the change.
MOD-004-1	R3.	Deferred to Subsequent Phase	Each Load-Serving Entity determining the need for Transmission capacity to be set aside as CBM for imports into a Balancing Authority Area shall determine that need by:

Standard Version	Requirement Name	Status	Requirement Text
MOD-004-1	R3.1.	Deferred to Subsequent Phase	Using one or more of the following to determine the GCIR: Loss of Load Expectation (LOLE) studies; Loss of Load Probability (LOLP) studies; Deterministic risk-analysis studies; Reserve margin or resource adequacy requirements established by other entities, such as municipalities, state commissions, regional transmission organizations, independent system operators, Regional Reliability Organizations, or regional entities
MOD-004-1	R3.2.	Deferred to Subsequent Phase	Identifying expected import path(s) or source region(s).
MOD-004-1	R4.	Deferred to Subsequent Phase	Each Resource Planner determining the need for Transmission capacity to be set aside as CBM for imports into a Balancing Authority Area shall determine that need by:
MOD-004-1	R4.1.	Deferred to Subsequent Phase	Using one or more of the following to determine the GCIR: Loss of Load Expectation (LOLE) studies; Loss of Load Probability (LOLP) studies; Deterministic risk-analysis studies; Reserve margin or resource adequacy requirements established by other entities, such as municipalities, state commissions, regional transmission organizations, independent system operators, Regional Reliability Organizations, or regional entities
MOD-004-1	R4.2.	Deferred to Subsequent Phase	Identifying expected import path(s) or source region(s).
MOD-004-1	R5.	Deferred to Subsequent Phase	At least every 13 months, the Transmission Service Provider that maintains CBM shall establish a CBM value for each ATC Path or Flowgate to be used for ATC or Available Flowgate Capability (AFC) calculations during the 13 full calendar months (months 2-14) following the current month (the month in which the Transmission Service Provider is establishing the CBM values). This value shall:
MOD-004-1	R5.1.	Deferred to Subsequent Phase	Reflect consideration of each of the following if available: Any studies (as described in R3.1) performed by Load-Serving Entities for loads within the Transmission Service Provider's area; Any studies (as described in R4.1) performed by Resource Planners for loads within the Transmission Service Provider’s area; Any reserve margin or resource adequacy requirements for loads within the Transmission Service Provider’s area established by other entities, such as municipalities, state commissions, regional transmission organizations, independent system operators, Regional Reliability Organizations, or regional entities
MOD-004-1	R5.2.	Deferred to Subsequent Phase	Be allocated as follows: For ATC Paths, based on the expected import paths or source regions provided by Load-Serving Entities or Resource Planners; For Flowgates, based on the expected import paths or source regions provided by Load-Serving Entities or Resource Planners and the distribution factors associated with those paths or regions, as determined by the Transmission Service Provider

Standard Version	Requirement Name	Status	Requirement Text
MOD-004-1	R6.	Deferred to Subsequent Phase	At least every 13 months, the Transmission Planner shall establish a CBM value for each ATC Path or Flowgate to be used in planning during each of the full calendar years two through ten following the current year (the year in which the Transmission Planner is establishing the CBM values). This value shall:
MOD-004-1	R6.1.	Deferred to Subsequent Phase	Reflect consideration of each of the following if available: Any studies (as described in R3.1) performed by Load-Serving Entities for loads within the Transmission Planner's area; Any studies (as described in R4.1) performed by Resource Planners for loads within the Transmission Planner's area; Any reserve margin or resource adequacy requirements for loads within the Transmission Planner's area established by other entities, such as municipalities, state commissions, regional transmission organizations, independent system operators, Regional Reliability Organizations, or regional entities
MOD-004-1	R6.2.	Deferred to Subsequent Phase	Be allocated as follows: For ATC Paths, based on the expected import paths or source regions provided by Load-Serving Entities or Resource Planners; For Flowgates, based on the expected import paths or source regions provided by Load-Serving Entities or Resource Planners and the distribution factors associated with those paths or regions, as determined by the Transmission Planner.
MOD-004-1	R7.	Deferred to Subsequent Phase	Less than 31 calendar days after the establishment of CBM, the Transmission Service Provider that maintains CBM shall notify all the Load-Serving Entities and Resource Planners that determined they had a need for CBM on the Transmission Service Provider's system of the amount of CBM set aside.
MOD-004-1	R8.	Deferred to Subsequent Phase	Less than 31 calendar days after the establishment of CBM, the Transmission Planner shall notify all the Load-Serving Entities and Resource Planners that determined they had a need for CBM on the system being planned by the Transmission Planner of the amount of CBM set aside.
MOD-004-1	R9.	Deferred to Subsequent Phase	The Transmission Service Provider that maintains CBM and the Transmission Planner shall each provide (subject to confidentiality and security requirements) copies of the applicable supporting data, including any models, used for determining CBM or allocating CBM over each ATC Path or Flowgate to the following:
MOD-004-1	R10.	Deferred to Subsequent Phase	The Load-Serving Entity or Balancing Authority shall request to import energy over firm Transfer Capability set aside as CBM only when experiencing a declared NERC Energy Emergency Alert (EEA) 2 or higher.
MOD-004-1	R11.	Deferred to Subsequent Phase	When reviewing an Arranged Interchange using CBM, all Balancing Authorities and Transmission Service Providers shall waive, within the bounds of reliable operation, any Real-time timing and ramping requirements.

Standard Version	Requirement Name	Status	Requirement Text
MOD-004-1	R12.	Deferred to Subsequent Phase	The Transmission Service Provider that maintains CBM shall approve, within the bounds of reliable operation, any Arranged Interchange using CBM that is submitted by an “energy deficient entity” under an EEA 2 if:
MOD-004-1	R12.1.	Deferred to Subsequent Phase	The CBM is available
MOD-004-1	R12.2.	Deferred to Subsequent Phase	The EEA 2 is declared within the Balancing Authority Area of the “energy deficient entity,” and
MOD-004-1	R12.3.	Deferred to Subsequent Phase	The Load of the “energy deficient entity” is located within the Transmission Service Provider’s area.
MOD-004-1	R9.1.	Deferred to Subsequent Phase	Each of its associated Transmission Operators within 30 calendar days of their making a request for the data.
MOD-004-1	R9.2.	Deferred to Subsequent Phase	To any Transmission Service Provider, Reliability Coordinator, Transmission Planner, Resource Planner, or Planning Coordinator within 30 calendar days of their making a request for the data.
NUC-001-2	R9.1.	Kept in Final SAR for Retirement	Administrative elements:
NUC-001-2	R9.1.1.	Kept in Final SAR for Retirement	Definitions of key terms used in the agreement.
NUC-001-2	R9.1.2.	Kept in Final SAR for Retirement	Names of the responsible entities, organizational relationships, and responsibilities related to the NPIRs.
NUC-001-2	R9.1.3.	Kept in Final SAR for Retirement	A requirement to review the agreement(s) at least every three years.
NUC-001-2	R9.1.4.	Kept in Final SAR for Retirement	A dispute resolution mechanism.
PRC-008-0	R1.	Kept in Final SAR for Information Only	The Transmission Owner and Distribution Provider with a UFLS program (as required by its Regional Reliability Organization) shall have a UFLS equipment maintenance and testing program in place. This UFLS equipment maintenance and testing program shall include UFLS equipment identification, the schedule for UFLS equipment testing, and the schedule for UFLS equipment maintenance.
PRC-008-0	R2.	Kept in Final SAR for Information Only	The Transmission Owner and Distribution Provider with a UFLS program (as required by its Regional Reliability Organization) shall implement its UFLS equipment maintenance and testing program and shall provide UFLS maintenance and testing program results to its Regional Reliability Organization and NERC on request (within 30 calendar days).
PRC-009-0	R1.	Kept in Final SAR for Information Only	The Transmission Owner, Transmission Operator, Load-Serving Entity and Distribution Provider that owns or operates a UFLS program (as required by its Regional Reliability Organization) shall analyze and document its UFLS program performance in accordance with its Regional Reliability Organization’s UFLS program. The analysis shall address the performance of UFLS equipment and program effectiveness following system events resulting in system frequency excursions below the initializing set points of the UFLS program. The analysis shall include, but not be limited to:

Standard Version	Requirement Name	Status	Requirement Text
PRC-009-0	R1.1.	Kept in Final SAR for Information Only	A description of the event including initiating conditions.
PRC-009-0	R1.2.	Kept in Final SAR for Information Only	A review of the UFLS set points and tripping times.
PRC-009-0	R1.3.	Kept in Final SAR for Information Only	A simulation of the event.
PRC-009-0	R1.4.	Kept in Final SAR for Information Only	A summary of the findings.
PRC-009-0	R2.	Kept in Final SAR for Information Only	The Transmission Owner, Transmission Operator, Load-Serving Entity, and Distribution Provider that owns or operates a UFLS program (as required by its Regional Reliability Organization) shall provide documentation of the analysis of the UFLS program to its Regional Reliability Organization and NERC on request 90 calendar days after the system event.
PRC-010-0	R2.	Kept in Final SAR for Retirement	The Load-Serving Entity, Transmission Owner, Transmission Operator, and Distribution Provider that owns or operates a UVLS program shall provide documentation of its current UVLS program assessment to its Regional Reliability Organization and NERC on request (30 calendar days).
PRC-022-1	R2.	Kept in Final SAR for Retirement	Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program shall provide documentation of its analysis of UVLS program performance to its Regional Reliability Organization within 90 calendar days of a request.
TOP-001-1a	R3.	Kept in Final SAR for Information Only	Each Transmission Operator, Balancing Authority, and Generator Operator shall comply with reliability directives issued by the Reliability Coordinator, and each Balancing Authority and Generator Operator shall comply with reliability directives issued by the Transmission Operator, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances the Transmission Operator, Balancing Authority or Generator Operator shall immediately inform the Reliability Coordinator or Transmission Operator of the inability to perform the directive so that the Reliability Coordinator or Transmission Operator can implement alternate remedial actions.
TOP-005-2a	R1.	Kept in Final SAR for Information Only	As a condition of receiving data from the Interregional Security Network (ISN), each ISN data recipient shall sign the NERC Confidentiality Agreement for “Electric System Reliability Data.”

Standard Version	Requirement Name	Status	Requirement Text
VAR-001-2	R5.	Added to Final SAR for Retirement	Each Purchasing-Selling Entity and Load Serving Entity shall arrange for (self-provide or purchase) reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching;, and controllable load– to satisfy its reactive requirements identified by its Transmission Service Provider.
VAR-002-WECC-1	R2.	Deferred to Subsequent Phase	Generator Operators and Transmission Operators shall have documentation identifying the number of hours excluded for each requirement in R1.1 through R1.10.
VAR-501-WECC-1	R2.	Deferred to Subsequent Phase	Generator Operators shall have documentation identifying the number of hours excluded for each requirement in R1.1 through R1.12.

NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION

Project 2013-02 Retirement of Reliability Standard Requirements

Unofficial Comment Form for Paragraph 81 (P81) Project —Retirement of Reliability Standard Requirements

This form is provided in a Word format for the development of your internal drafts only.

Please use the electronic comment form located at the link below to submit official comments on the P81 Project. Comments must be submitted by **December 10, 2012.** If you have questions, please contact Kristin Iwanechko at Kristin.Iwanechko@nerc.net or by telephone at 404-446-9736.

http://www.nerc.com/filez/standards/Project2013-02_Paragraph_81.html

Background Information:
On September 30, 2011, the North American Electric Reliability Corporation (NERC) filed a petition with the Federal Energy Regulatory Commission (FERC) requesting approval of its proposal to make informational filings in a "Find, Fix, Track and Report" (FFT) spreadsheet of lesser-risk, remediated possible violations of Reliability Standards. On March 15, 2012, the FERC issued an order conditionally accepting NERC's FFT proposal. In paragraph 81 (P81) of that order, the FERC stated:

> The Commission notes that NERC's FFT initiative is predicated on the view that many violations of requirements currently included in Reliability Standards pose lesser risk to the Bulk-Power System. If so, some current requirements likely provide little protection for Bulk-Power System reliability or may be redundant. The Commission is interested in obtaining views on whether such requirements could be removed from the Reliability Standards with little effect on reliability and an increase in efficiency of the ERO compliance program. If NERC believes that specific Reliability Standards or specific requirements within certain Standards should be revised or removed, we invite NERC to make specific proposals to the Commission identifying the Standards or requirements and setting forth in detail the technical basis for its belief. In addition, or in the alternative, we invite NERC, the Regional Entities and other interested entities to propose appropriate mechanisms to identify and remove from the Commission-approved Reliability Standards unnecessary or redundant requirements. We will not impose a deadline on when these comments should be submitted, but ask that to the extent such comments are submitted NERC, the Regional Entities, and interested entities coordinate to submit their respective comments concurrently. *North American Electric Reliability Corporation,* 138 FERC ¶ 61,193 at p 81 (March 15, 2012) ("P81").

Consistent with P81, a draft Standards Authorization Request (SAR) was drafted to set forth criteria and a process to identify Reliability Standard requirements that either: (a) provide little protection to the Bulk Electric System; (b) are unnecessary or (c) are redundant; and, thereafter, to have NERC file the identified Reliability Standard requirements with FERC to have them removed from the FERC-approved list of Reliability Standards.

Standards Process Input Group (SPIG)

In addition to addressing P81, the draft SAR was drafted consistent with what the SPIG developed as Recommendation No. 4, as set forth in *NERC's Recommendations to Improve The Standards Development Process* on page *12* (April 2012), which states:

> Recommendation 4: Standards Product Issues — The NERC board is encouraged to require that the standards development process address: . . . The retirement of standards no longer needed to meet an adequate level of reliability.

Collaborative Process

The draft SAR and a suggested list of Reliability Standard requirements embedded in the SAR for consideration in the Initial Phase was the product of collaborative discussions among the following entities and their members: Edison Electric Institute, American Public Power Association, National Rural Electric Cooperative Association, Large Public Power Council, Electricity Consumers Resource Council, The Electric Power Supply Association, Transmission Access Policy Study Group, the North American Electric Reliability Corporation, and the Regional Entity Management Group. The draft SAR was posted for comment, which were due September 4, 2012. The P81 Standards Drafting Team reviewed the comments and finalized the SAR and the proposed list of Reliability Standard requirements for retirement.

Proposed List

A list of Reliability Standard requirements proposed for retirement is posted along with a technical white paper that sets forth the technical justifications for each requirement. To obtain input on the list of Reliability Standard requirements proposed for retirement and the technical white paper, each are posted for a 45-day comment period. Accordingly, it is requested that you submit your comments by **December 10, 2012** via the electronic comment form.

Questions

1. **If retired, do any Reliability Standard requirements proposed for retirement create a gap in reliability?**

   If yes, please explain in the comment area.

   ☐ Yes

   ☐ No

   Comments:

2. **Do you have any comments on the technical white paper?**

   ☐ Yes

   ☐ No

   Comments:

Standards Announcement

Project 2013-02 Paragraph 81

Initial Ballot now open through 8 p.m. Monday, December 10, 2012

Now Available

An initial ballot for the 22 standards with 38 requirements being proposed for retirement in this project is open through **8 p.m. Eastern on Monday, December 10, 2012**.

The following documents are posted on the project page for review and balloting:

- **Redline of Standards with Proposed Retirements** – A PDF document containing a redline of each of the affected standards, indicating the requirements and associated elements proposed to be retired with a "(Retired)" and with the version number remaining the same. When these Requirements are retired, the version numbers of the standards will NOT be incremented. After evaluating the options and consulting with the Standards Committee and Standards Committee Process Subcommittee, the P81 drafting team determined that this was the most practical approach. Incrementing the version numbers of each standard is impractical because, in some cases, a subsequent version has already been developed. In addition, incrementing the version would require renumbering Requirements where a retired Requirement created a gap in numbering, and this creates an undesirable administrative burden for entities using certain systems to manage their compliance programs.
- **Implementation Plan** – The implementation plan for retiring the Phase I requirements.

Instructions

Members of the ballot pool associated with this project may log in and submit their vote for, by clicking here.

Next Steps

The ballot results will be announced and posted on the project page. The drafting team will consider all comments received during the formal comment period and, if needed, make revisions to the list of requirements being proposed for retirement. If the comments do not show the need for significant revisions, the standards with requirements being proposed for retirement will proceed to a recirculation ballot.

Background

On March 15, 2012, the Federal Energy Regulatory Commission (FERC) issued an order on NERC's Find, Fix and Track process that stated the following in P81:

> "The Commission notes that NERC's FFT initiative is predicated on the view that many violations of requirements currently included in Reliability Standards pose lesser risk to the Bulk-Power System. If so, some current requirements likely provide little protection for Bulk-Power System reliability or may be redundant. The Commission is interested in obtaining views on whether such requirements could be removed from the Reliability Standards with little effect on reliability and an increase in efficiency of the ERO compliance program. If NERC believes that specific Reliability Standards or specific requirements within certain Standards should be revised or removed, we invite NERC to make specific proposals to the Commission identifying the Standards or requirements and setting forth in detail the technical basis for its belief. In addition, or in the alternative, we invite NERC, the Regional Entities and other interested entities to propose appropriate mechanisms to identify and remove from the Commission-approved Reliability Standards unnecessary or redundant requirements. We will not impose a deadline on when these comments should be submitted, but ask that to the extent such comments are submitted NERC, the Regional Entities, and interested entities coordinate to submit their respective comments concurrently."

The purpose of the project is to retire or modify FERC-approved Reliability Standard requirements that as FERC noted, "provide little protection to the reliable operations of the BES," are redundant or unnecessary, or to retire or modify a FERC-approved Reliability Standard requirement to increase the efficiency of the ERO's compliance programs.

The draft SAR, which included criteria for retiring or modifying requirements, defined phases for the project, and a suggested list of requirements put together by NERC, the regions, and the trades and their member companies for consideration in Phase I, was posted for an informal comment period. In September, the P81 SDT met to respond to the comments received and finalize the SAR. The revisions resulted in a list of 38 requirements in 22 Reliability Standard versions being proposed for retirement and an additional 13 requirements included for informational purposes only. The P81 SDT also developed a Technical White Paper which includes the justification for retiring the proposed requirements.

To sign up for the plus list for this project to follow along with meetings and work products, please email Kristin Iwanechko.

Standards Development Process

The Standards Processes Manual contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate.

Standards Announcement

Project 2013-02 Paragraph 81

Formal Comment Period Now Open: October 25 – December 10, 2012
Ballot Pool Forming Now: October 25 – November 23, 2012

Upcoming
Initial Ballot: November 30 – December 10, 2012

Now Available

The Paragraph 81 (P81) standard drafting team (SDT) has posted a single PDF containing redlined versions of 27 standards showing 38 requirements proposed to be retired, and an implementation plan for a formal comment period and initial ballot that will end at 8 p.m. Eastern on Monday, December 10, 2012. A ballot pool is being formed and the ballot pool window is open through 8 a.m. Eastern on **Friday, November 23, 2012** (*please note that ballot pools close at 8 a.m. Eastern and mark your calendar accordingly*).

The following documents are posted on the project page for review and balloting:

- **Redline of Standards with Proposed Retirements** – A PDF document containing a redline of each of the affected standards, indicating the requirements and associated elements proposed to be retired with a "(Retired)" and with the version number remaining the same. When these Requirements are retired, the version numbers of the standards will NOT be incremented. After evaluating the options and consulting with the Standards Committee and Standards Committee Process Subcommittee, the P81 drafting team determined that this was the most practical approach. Incrementing the version numbers of each standard is impractical because, in some cases, a subsequent version has already been developed. In addition, incrementing the version would require renumbering Requirements where a retired Requirement created a gap in numbering, and this creates an undesirable administrative burden for entities using certain systems to manage their compliance programs.
- **Implementation Plan** – The implementation plan for retiring the Phase I requirements.

The following documents are posted on the project page as Supporting Materials to assist stakeholders in their review:

- **Final SAR (clean and redline)** – The final SAR incorporates revisions to the draft SAR by the P81 SDT in response to comments received from the industry.
- **Technical White Paper** – The technical white paper includes the technical justification developed by the P81 SDT to support the retirement of the proposed requirements in Phase I.

- **Redline of VSL Matrix** – This identifies the VSLs (and parts of VSLs) that will be retired when the requirements in Phase I are retired. The matrix may be useful in providing a complete view of the VSLs and parts of VSLs that will be retired when a particular Requirement is retired, since some of the early standards have not had the FERC-approved VSLs incorporated in the standard.
- **Spreadsheet with Proposed Retirements** – This spreadsheet includes a list of the requirements proposed in the draft SAR and their status in the final SAR (kept in final SAR for retirement, kept in final SAR for information only, deferred to subsequent phase). Additionally, the spreadsheet includes requirements that were added to the Phase I list as a result of industry comments on the draft SAR, which are identified as 'added to final SAR for retirement.'
- **Unofficial Comment Form (Word)** – A Word version of the comment form for the development of internal draft responses only (the final must be submitted electronically).

Instructions for Joining Ballot Pool(s)

Registered Ballot Body members must join the ballot pool to be eligible to vote in balloting of the requirements being proposed for retirement. A single ballot pool is being formed, and all of the standards with Requirements being proposed for retirement will be balloted as a group. Registered Ballot Body members may join the ballot pool at the following page: Join Ballot Pool

During the pre-ballot window, members of the ballot pool may communicate with one another by using the "ballot pool list server." (Once the balloting begins, ballot pool members are prohibited from using the ballot pool list server.) The ballot pool list server for this ballot pool is: bp-2013-02_P81_in@nerc.com.

The ballot pool is open **through 8 a.m. Eastern on Friday, November 23, 2012.**

Instructions for Commenting

A formal comment period is open through 8 p.m. Eastern on **Monday, December 10, 2012**. Please use this electronic form to submit comments. If you experience any difficulties in using the electronic form, please contact Monica Benson at monica.benson@nerc.net. An off-line, unofficial copy of the comment form is posted on the project page.

Next Steps

A single ballot for all of the standards with Requirements being proposed for retirements will be conducted Friday, November 30, 2012 through 8 p.m. Monday December 10, 2012.

Background

On March 15, 2012, the Federal Energy Regulatory Commission (FERC) issued an order on NERC's Find, Fix and Track process that stated the following in P81:

> "The Commission notes that NERC's FFT initiative is predicated on the view that many violations of requirements currently included in Reliability Standards pose lesser risk to the Bulk-Power System. If so, some current requirements likely provide little protection for Bulk-Power System reliability or may be redundant. The Commission is interested in obtaining views on whether such requirements could be removed from the Reliability Standards with little effect on reliability and an increase in efficiency of the ERO compliance program. If NERC believes that specific Reliability Standards or specific requirements within certain Standards should be revised or removed, we invite NERC to make specific proposals to the Commission identifying the Standards or requirements and setting forth in detail the technical basis for its belief. In addition, or in the alternative, we invite NERC, the Regional Entities and other interested entities to propose appropriate mechanisms to identify and remove from the Commission-approved Reliability Standards unnecessary or redundant requirements. We will not impose a deadline on when these comments should be submitted, but ask that to the extent such comments are submitted NERC, the Regional Entities, and interested entities coordinate to submit their respective comments concurrently."

The purpose of the project is to retire or modify FERC-approved Reliability Standard requirements that as FERC noted, "provide little protection to the reliable operations of the BES," are redundant or unnecessary, or to retire or modify a FERC-approved Reliability Standard requirement to increase the efficiency of the ERO's compliance programs.

The draft SAR, which included criteria for retiring or modifying requirements, defined phases for the project, and a suggested list of requirements put together by NERC, the regions, and the trades and their member companies for consideration in Phase I, was posted for an informal comment period. In September, the P81 SDT met to respond to the comments received and finalize the SAR. The revisions resulted in a list of 38 requirements in 23 Reliability Standard versions being proposed for retirement and an additional 13 requirements included for informational purposes only. The P81 SDT also developed a Technical White Paper which includes the justification for retiring the proposed requirements.

To sign up for the plus list for this project to follow along with meetings and work products, please email Kristin Iwanechko.

Standards Development Process

The Standards Processes Manual contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate.

For more information or assistance, please contact Wendy Muller, Standards Development Administrator, at wendy.muller@nerc.net or at 404-446-2560.

Standards Announcement

Project 2013-02 Paragraph 81

Initial Ballot Results

Now Available

An initial ballot for the 22 standards with 38 requirements being proposed for retirement in this project concluded at **8 p.m. Eastern on Monday, December 10, 2012**.

Voting statistics are listed below, and the Ballot Results page provides a link to the detailed results.

Approval
Quorum: 75.77% Approval: 96.45%

Next Steps

The drafting team will consider all comments received during the formal comment period and, if needed, make revisions to the list of requirements being proposed for retirement. If the comments do not show the need for significant revisions, the standards with requirements being proposed for retirement will proceed to a recirculation ballot.

Background

On March 15, 2012, the Federal Energy Regulatory Commission (FERC) issued an order on NERC's Find, Fix and Track process that stated the following in P81:

> "The Commission notes that NERC's FFT initiative is predicated on the view that many violations of requirements currently included in Reliability Standards pose lesser risk to the Bulk-Power System. If so, some current requirements likely provide little protection for Bulk-Power System reliability or may be redundant. The Commission is interested in obtaining views on whether such requirements could be removed from the Reliability Standards with little effect on reliability and an increase in efficiency of the ERO compliance program. If NERC believes that specific Reliability Standards or specific requirements within certain Standards should be revised or removed, we invite NERC to make specific proposals to the Commission identifying the Standards or requirements and setting forth in detail the technical basis for its belief. In addition, or in the alternative, we invite NERC, the Regional Entities and other interested entities to propose appropriate mechanisms to identify and remove from the Commission-approved Reliability

> Standards unnecessary or redundant requirements. We will not impose a deadline on when these comments should be submitted, but ask that to the extent such comments are submitted NERC, the Regional Entities, and interested entities coordinate to submit their respective comments concurrently."

The purpose of the project is to retire or modify FERC-approved Reliability Standard requirements that as FERC noted, "provide little protection to the reliable operations of the BES," are redundant or unnecessary, or to retire or modify a FERC-approved Reliability Standard requirement to increase the efficiency of the ERO's compliance programs.

The draft SAR, which included criteria for retiring or modifying requirements, defined phases for the project, and a suggested list of requirements put together by NERC, the regions, and the trades and their member companies for consideration in Phase I, was posted for an informal comment period. In September, the P81 SDT met to respond to the comments received and finalize the SAR. The revisions resulted in a list of 38 requirements in 22 Reliability Standard versions being proposed for retirement and an additional 13 requirements included for informational purposes only. The P81 SDT also developed a Technical White Paper which includes the justification for retiring the proposed requirements.

To sign up for the plus list for this project to follow along with meetings and work products, please email Kristin Iwanechko.

CHG&E believes the reason for retiring CIP-003-3,-4 R3 and its sub-requirements is fallacious. The reason provided in the technical white paper is essentially: " First, and most importantly, that requirement has never been available for use to exempt an entity form compliance with any requirement of any NERC reliability standard. It only applies to exceptions to internal corporate policy, and only in cases where the policy exceeds a NERC standard requirement, or addresses an issue that is not covered in a NERC reliability standard. For example, if an internal corporate policy statement requires that all passwords be a minimum of 8 characters in length, and be changed every 30 days, this provision could be used for internal governance purposes to lessen the corporate requirement, back to the password requirements in CIP-007 R5.3, or in conjunction with a TFE to something else. The removal of this requirement has no effect on the TFE process, or compliance with any other NERC reliability standard requirement." CHG&E wishes to highlight the fact that NERC has no jurisdiction to impose or grant exceptions to internal corporate policies. Therefore, this requirement (and its sub – requirements) can only have been crafted to address exceptions to the NERC CIP requirements. Throughout this standard, the NERC requirements for a 'cyber security policy' are delineated. This requirement specifically addresses exceptions to the 'cyber security policy'. As written, this requirement can only be interpreted to mean that an exception to the NERC CIP required 'cyber security policy' is acceptable if properly documented and approved by the CIP Senior Manager. Central Hudson Gas & Electric Corporation strongly disagrees with the inclusion of CIP-003-3, -4 Requirements R3, R3.1, R3.2, R3.3 as candidates for retirement. The reasons stated in the SAR in favor of inclusion are that these requirements are administrative in nature and are purely examples of a documentation process. Further it is stated in the SAR that they, "…. have been subject to misinterpretation, including responsible entities believing they can exempt themselves from compliance with the CIP requirements." This last statement is precisely the reason why the aforementioned requirements were included in the standard. These requirements allow Registered Entities to, on rare occasions, take an exception to one or several of the CIP requirements (for a

limited period of time) if they (1) have valid cause (major emergency, Force Majeure, etc.), (2) document the occurrence and (3) are reviewed and approved by the CIP Senior Manager. This process supports the Registered Entity's compliance effort and acknowledges the need for special protocols to address emergency circumstances. Without such a process, the only recourse for the Registered Entity is to self-report a violation which is not within their control. In other words, retirement of these requirements would force the Registered Entity to be in full compliance with ALL CIP Standards ALL the time regardless of circumstance. The concept of realistic expectations was undoubtedly the reason these requirements were crafted and included in the standard. Further, with regard to the Registered Entity's decision to claim an exception, a system of checks and balances already exists. At the time of a compliance audit of the standard's requirements, the Regional Entity reviews and makes a determination as to whether the actions taken by the Registered Entity were warranted. Further, the fact that this requirement is included in the FFT process is of little consolation since any exception would still constitute a violation of the NERC Standard on the part of the Registered Entity and would carry with that violation the associated stakeholder liability.

While we agree with retiring all of the Reliability Standard requirements proposed for retirement, we believe the P81 Project Technical White Paper should be more forceful in justifying retirement of the CIP requirements. Specifically, the "not an important part of a scheme of CIP Requirements" phrase is often used in Criteria C sections discussing VFR and AML issues. It would seem that FERC may have difficulty giving this phrase credibility since (i) the industry previously had balloted to approve such requirements, (ii) NERC BOT approved such requirements, and (iii) FERC approved such requirements. All of these approvals seem to indicate that all such entities previously believed that the requirements were important to the CIP scheme. Instead, we suggest that this phrase be replaced in each instance with phrases like the following: "As explained above and since the inception of this requirement, this requirement has not been shown to constitute a [key][integral] part of a scheme of CIP requirements."

Standard revision numbers and Requirement sequence changes should be made at a later date, as future revisions are required to each Standard that contains any retired Requirements. This will relieve the undesirable administrative burden, while reflecting accurate revision numbers and Requirement sequences, as changes are required to the Standards.
Yes
CIP-003-3,-4 R1.2: Technical Justification (page 19): CIP personnel should act based on their cyber security policy; a policy which must address the CIP-002 through CIP-009 standards as required by CIP-003 R1.1. As a result, the specific training processes and procedures will reflect the cyber security policy. We suggest "they will act via their specific training, processes and procedures which reflect the overarching cyber security policy." CIP-007-3, -4 R7.3: (1) Technical Justification (page 32): For

added clarity, we suggest the wording "… small number of Reliability Standard requirements explicitly mandating ….". (2) Data and information collection for ERO compliance monitoring purposes is certainly within the context of the Reliability Standards. For added clarity, we suggest the wording "... for ERO compliance monitoring purposes without specific data collection language in the Reliability Standards." (3) It is unclear who "the entities" are. Should this state "Responsible Entities"? (4) For additional clarity, we suggest the wording "... the Reliability Standards are arguably more difficult to understand ...".

Occidental Energy Ventures Corp.
No
Occidental Energy Ventures Corp ("OEVC"). believes that the retirement of the Phase I requirements will pose little, if any, risk to the BES. However, in our view, this is a good start to a much more extensive restructuring of the regulatory model. Of course, the industry will need to gauge FERC's response to the initial grouping of requirements, but we should be prepared to aggressively push down this path.
Yes
OEVC believes the drafting team did an excellent job researching and defending each proposed retirement. In our view, this is a fundamental necessity as we must assume that FERC will closely scrutinize each one. However, we anticipate that some form of cost/benefit analysis will be requested in each case – particularly since the entire impetus behind the Paragraph 81 project is the shortage of compliance resources. It may be a worthwhile exercise to develop a cost model that accounts for industry and CEA resources accurately and effectively. The results must be weighed against the expected benefit of any requirement – as the industry and regulatory bodies clearly have some important trade-offs to consider. In particular, with FERC's recent emphasis on cyber security, cold weather preparation, and geomagnetic protection, some of the less effective requirements need to be removed. OEVC believes that the Commission will be reluctant to proceed in this manner without data that demonstrates the comparative benefit of each requirement.

Patricia Metro
National Rural Electric Cooperative Association (NRECA)
No
Yes
NRECA is very supportive of the recent ERO, Regional Entities and industry stakeholder efforts in response to the opportunity provided by FERC in P81 of the Find, Fix, Track and Report Order to review and eliminate standard requirements that provide no or minimal reliability benefits. NRECA is disappointed with the small number of requirements that are proposed for retirement in this initial phase of work, but will support this effort as it moves through the NERC standards development process and will continue participating in future phases of work related to the P81 project. It is our goal to ensure future phases of this effort lead to retirement of a much greater number of requirements that are not necessary for the reliability of the Bulk Electric System. NRECA has reviewed the P81 Technical White Paper. It appears that there are many more requirements, in addition to the 38 identified, that meet the criteria for deletion most of which were included in the SAR for this project. Although the phase approach to this project was explained and many of the requirements included in the SAR will be addressed in a subsequent phases of the project, there is a concern that the future phases of the project will not be completed in a timely manner since there is no timeline provided for the future phases in the Implementation Plan for this project. Having such a time-line will demonstrate to the FERC that the industry and the ERO are dedicated to eliminating standard requirements that provide no or minimal reliability benefits. NRECA is concerned that drafting teams are drafting requirements that would meet the criteria for deletion stated in this

Technical White Paper. There must be a mechanism in place to ensure "P81-qualified" requirements are not included in standards that are under development or in standards that are provided to the NERC BOT for approval. In addition, if requirements are retired that include an entity that is only required to comply with the standard because of the specific requirement that is to be retired said entity should be removed from the applicability of the standard. An example of such is VAR-01, R5 where this requirement is the only requirement applicable to a PSE, but the PSE has not been removed from the Applicability of the standard in the red-line version posted for comment.

Page 17 – The 6th through 12th lines are a stretch and do not add anything to the argument for retiring Requirement 3 of CIP-001-2a. It is conjecture on the part of the drafting team and should be removed from the paper. If the drafting team doesn't agree and keeps this portion, please insert the word 'require' between 'some' and 'corporate' in the 8th line. Also, delete 'to generic' in the 11th line. Page 26 – In the 10th line of the Technical Justification paragraph, insert 'task' between 'administrative' and 'that'. Page 29 – At the beginning of the 6th line of the Technical Justification paragraph, delete the 'is'. Page 32 – In the first line of the Criterion A paragraph, insert a 'not' between 'does' and 'promote'. Page 59 – In the 8th line of the 2nd paragraph, the sentence 'Thus,

IRO-016-1 R1 does not support reliability.' doesn't seem right. Shouldn't this be; it does support reliability? Or perhaps you meant to say that R2 does not support reliability. Also, in the next sentence, delete the second 'that'. Page 61 – In the 15th line of the Technical Justification paragraph, delete the 'an' in front of unnecessarily.

Individual

Yes

1. BAL-005-0.2b, R2 – agree 2. CIP-001-2a, R4 – we do not agree this is administrative in nature. Preparedness is an essential element in having the capability to readily respond to pressing reliability issues. Establishing contact with the enforcement authorities is a necessary component in preparing for reporting suspect or detected sabotage. Such reporting can help protect or minimize damages to BES facilities and/or Adverse Reliability Impact due to malicious acts. R1 to R3 do not have such a requirement to report sabotage events to the law enforcement authorities. If these authorities are included in Requirement R3, then the gap may be considered filled and R4 can be retired. However, this is not yet the case. We therefore suggest that R4 not be retired at this time. 3. CIP-003-3, -4 R1.2 – agree 4. CIP-003-3, -4 R3, R3.1, R3.2, R3.3 – while we agree that having the exception documented and approved by Senior Manager adds little to reliability, we do not agree that the entire requirement should be removed since this requirement is intended for implementing control of an entity's adherence to its Cyber Security policy, or document exceptions otherwise. Further, we do not concur with the SDT's view that over time, responsible entities may believe they can exempt themselves from compliance with the CIP requirements. Entities may exempt themselves from having some of their processes/procedures for cyber security not implemented, but their adherence to the policy and documenting exceptions are to be assessed during audit, which is not determined by the entities themselves. Any deviation from the requirement (the proposed "making exemption from compliance with the CIP requirement") will be identified and the entities will be found non-compliant. 5. CIP-003-3, -4 R4.2 – we agree that the action to classify the CCA information is redundant, but we do not think R4.2 can be removed entirely since the element "based on the sensitivity of the Critical Cyber Asset information" needs to be retained. Suggest to revise R4 to capture this element, or, at a minimum, consult the CIP SDT on the merit of retaining this element in R4. 6. CIP-005-3a, -4a R2.6 – agree. 7. CIP-007-3, -4 R7.3 – agree. 8. COM 001-1.1 R6 - agree. 9. EOP-004-1 R1 – we do not agree with retiring this requirement. The RRO should have a formal reporting procedure in place to ensure adequate and detailed reporting is provided on system disturbances or any unusual event. This procedure is necessary for entities to meet the goals of further requirements in this standard that pertain to preliminary and final disturbance reporting . 10. EOP-005-2 R3.1 – agree. 11. EOP-009-0 R2 – agree. 12. FAC-002-1 R2 – we do not agree that the requirement is burdensome. The requirement seems to meet the overarching criterion A from the White Paper (it requires responsible entities to conduct an activity or task that does little, if anything, to benefit or protect the reliable operation of the BES), however, at a careful reading, the requirement seems to fail meeting at least one of the Criteria B: B1 (it is administrative, but not burdensome), B2 (it is data collection/retention, but we are not sure if NERC collects this data by any other method), B3 to B6 (it does not seem to fit any of these criteria). 13. FAC-008-1 R1.3.5 – agree. 14. FAC-008-1 R2; FAC-008-1 R3; FAC-008-3 R4; FAC-008-3 R5 – agree. 15. FAC-010-2.1 R5; FAC-011-2 R5 – agree. 16. FAC-013-2 R3 – agree. 17. INT-007-1 R1.2 – agree, but there needs to be a requirement somewhere to stipulate that all entities involved in the Arranged Interchange must register with NERC such that transactions' participants can be contacted for confirmation of transactions being approved or to make changes when transactions are curtailed. Until such time that this requirement is developed elsewhere, INT-007-1 R1.2 should remain in effect. 18. IRO-016-1 R2 – It does not make sense to retire this requirement, but still keep M1 – the measure associated with requirement R1 - in the standard. M1 states that each RC must have evidence, such as operator log or another data source, of actions taken for the event or disagreement or both. However, R2 is the requirement which states the RC shall document the actions taken via operator log or another data source. Therefore, removing R2 would create inconsistency in the standard. 19. NUC-001-2 R9.1; NUC-001-2 R9.1.1; NUC-001-2 R9.1.2; NUC-001-2 R9.1.3; NUC-001-2 R9.1.4 we agree with retiring all of the 9.1, except R9.1.2: The agreement should contain the names of the applicable entities and the responsibilities assigned to each one in relation to the NPIR. 20. PRC-008-0 R1; PRC-008-0 R2; PRC-009-0 R1; PRC-009-0 R1.1;

PRC-009-0 R1.2; PRC-009-0 R1.3; PRC-009-0 R1.4; PRC-009-0 R2; PRC-010-0 R2; PRC-022-1 R2 – agree. 21. TOP-001-1a R3 – agree. 22. TOP-005-2a R1 – agree. 23. VAR-001-2 R5 – agree.

(1) We do not see any reliability gaps created by the proposed retirements. Many of the requirements that have been moved to the second phase of the project could actually be retired in this phase without creating reliability gaps. We believe the approach to move several requirements to the second phase is overly conservative. However, we understand that drafting team must balance the retirement of requirements in this phase with satisfying concerns of stakeholders that no reliability gaps are created. (2) We are not opposed to the plan to review the linkages between BAL and INT standards in the next phase. However, we continue to believe that reloading of curtailed transactions is a commercial issue not a reliability issue. Thus, INT-004-2 easily meets criteria A and B and should be retired in phase one.
Yes
(1) On page 5, several requirements are marked with two asterisks but there is no footnote or additional information. Please indicate the purpose of the asterisks or remove them. (2) The supporting statement in the technical whitepaper and SAR that Criteria C is needed to make an informed decision "in the determination of whether a Reliability Standard requirement satisfies both Criteria A and B" is inconsistent with the actual Criteria. Criterion C2 questions if the requirement is being reviewed in an on-going standards development project. While this is certainly a relevant question and a valid reason to not include a requirement in the P81 project, the question simply provides no input on whether Criteria A and B are met. We suggest changing the supporting statement to be clearer that Criteria C in essence is more information to make an informed decision but may not necessarily have any indication on whether Criteria A and B are satisfied. (3) The supporting statement in the technical whitepaper and SAR that Criteria C provides "additional information to assist in the determination of whether a Reliability Standard requirement satisfies both Criteria A and B" is inconsistent with the SAR. In the detailed description, the SAR states that the initial phase shall only identify requirements that satisfy both Criteria A and B. These are supposed to be the requirements that easily meet these two criteria sets. Thus, why is Criteria C evaluated in the whitepaper. If these criteria are easily met, Criteria C is not needed to assist in the determination and the associated information while interesting would appear to be superfluous.

While CIP-007-3/4, Requirement R7.3 by itself has no immediate impact on the reliability of the Bulk Electric System, performance of R7.3 is required by the entity in order to be able to demonstrate compliance with CIP-007-3, Requirements R7.1 and R7.2 that, if not performed properly, could result in an impact to reliability. Elimination of this requirement could expose the registered entity to greater

risk of non-compliance with the remaining requirements as it no longer requires the entity to maintain appropriate and sufficient evidence of performance with the remaining requirements. For the reasons described, the SPP RE is opposed to retiring CIP-007-3/4, Requirement R7.3.
Yes
The white paper discussion for CIP-007-3/4, Requirement R7.3 proffers the idea that most data and information is collected for ERO compliance monitoring purposes outside of the context of Reliability Standards. While this might be the case of other standards, the SPP RE does not believe this is the case for the CIP-002 through CIP-009 Cyber Security standards, collectively referred to as the "CIP standards." The CIP standards require the entity to produce a document (e.g., policy, program, procedure, process, or list); to implement a documented program, process, or procedure; and/or to perform and document certain measurable procedural steps. In the absence of disposition records, which are specifically not required by CIP-007-3/4, Requirements R7.1 and R7.2, there will unlikely be any data or information outside of the context of the Reliability Standards demonstrating compliance with R7.1 and R7.2. The authors of the white paper appear to object to the maintenance of process documentation in this instance yet do not object to other requirements in the CIP standards that similarly call for the production and maintenance of documentation. The SPP RE is concerned that the authors of the white paper have chosen to focus on individual requirements in a stand-alone manner and have failed to understand the supportive interrelationships of the CIP standards and their requirements.

FAC-002-1 R2-The comments in the technical white paper concerning FAC-002-1 R2 are correct. Entities already have the obligation to provide the documentation of the evaluation of the reliability impact of new facilities upon request to demonstrate compliance to R1 and its sub-requirements, thus making R2 unnecessary. Furthermore, a requirement to retain documentation does not benefit or protect the reliable operation of the BES. VAR-001-2 R5: While Southern agrees that the elimination of VAR-001-2, R5 is appropriate, there is some concern that the justification that the TOP's adherence to R2 as a double check to ensure there are sufficient reactive power resources to protect the voltage levels under normal and Contingency conditions may be viewed by FERC as redirecting the burden from the PSEs and LSEs to the TOP. The LSE's (particularly) need to make their reactive resources available to the TOP in order for the TOP to acquire/use these reactive resources to protect voltage levels. Also, consider that not all entities necessarily take service under a transmission tariff, so references to other contractual mechanisms such as Interchange Agreements, etc. might be cited in the Technical White Paper for ensuring sufficient reactive resources are provided and made available by transmission customers.

GTC is very supportive of the recent ERO, Regional Entity and industry stakeholder efforts in response to the opportunity provided by FERC in paragraph 81 of the Find, Fix, Track and Report Order to review and eliminate standards that provide no or minimal reliability benefits. However, we are disappointed with the small number of requirements that are proposed for retirement in this initial phase of work. GTC would like to note that because duplicative requirements for subsequent versions of Reliability Standards are never mandatory at the same time, the net impact of requirements being proposed for retirement identified in the "Redline of Standards with Proposed Retirements" for phase 1 is only 28 out of 1650 FERC approved requirements or 1.7%. This small percentage does not seem to reflect well on the view that NERC's FFT initiative is predicated on, of which FERC has extended an invitation to justify without imposing a deadline. From our review of the P81 Technical White Paper, it appears that there are many more requirements in addition to the 28 identified that meet the criteria for deletion. And while a phased approach has been recommended, the certainty associated with subsequent phases occurring in a timely manner is questionable and GTC recommends a big picture approach. We believe the small number of requirements identified in phase I would be more palatable if a big picture perspective was provided once submitting to FERC. For example, a breakdown similar to the one below would provide more confidence that future phases would occur and be successful: • At the end of the day, we believe we can eliminate approximately xx number or xx percentage of requirements • This will be completed in three phases • Phase one will include approximately xx requirements, posted to FERC in fourth quarter, 2012 • Phase two will include approximately xx requirements, posted to FERC in xx quarter, 2013 • Phase three posting will… Laying out the bigger picture keeps the momentum going and also let's FERC know that the first posting only begins to scratch the surface of the issue. Furthermore, we are aware of current standards drafting teams that are drafting requirements that would meet the criteria for deletion stated in this Technical White Paper. There is a pressing need to implement a mechanism to ensure "P81-qualified" requirements are not drafted going forward or eliminated prior to NERC BOT approval. GTC will continue to support this effort as it moves through the NERC standards development process and participate in future phases of work related to the P81 project. Our goal is to ensure future phases of this effort lead to retirement of a much greater number of requirements that are not necessary for the reliability of the BES.
Individual
Daniela Hammons
CenterPoint Energy
No
CenterPoint Energy believes that the Reliability Standard requirements proposed for retirement in the initial phase ("Phase 1") of NERC Project 2013-02 'Paragraph 81' would not create a gap in reliability if they were retired. An increase in efficiency of the ERO compliance program should result with the removal of these Phase 1 requirements and the removal of additional Reliability Standard requirements in subsequent phases of this project.

Albert DiCaprio

The SRC has not identified any reliability gaps caused by the proposed actions, but the SRC believes that there is value in retaining some of the deleted requirements in some other form. Documentation is not an Operating or Assessment obligation but it is a unique topic Chain-of-command should be addressed as a Certification issue or as a Assumption / Definition Issue The following requirements while not appropriate as mandatory Reliability Standards should be retained in some category (highlighted text is a proposed category) BAL-005-0.2b R2 (Current Industry Operating Practice) CIP-003-3 R1.2 CIP-003-3 R3 CIP-003-3 R4.2 CIP-003-4 R3 CIP-003-4 R3.1 CIP-003-4 R3.2 CIP-003-4 R3.3 CIP-003-4 R4.2 CIP-005-3a R2.6 CIP-005-4a R2.6 CIP-007-3 R7.3 CIP-007-4 R7.3 EOP-004-1 R1 (Industry Reports) EOP-005-2 R3.1 (Annual check-up / inspection) FAC-002-1 R2 --- FAC-008-1 R2 (Chain-of-Command) FAC-008-1 R3 --- FAC-008-3 R4 (Chain-of-Command) FAC-008-3 R5 --- FAC-010-2.1 R5** (Current Industry Assessment Practice) FAC-011-2 R5** (Current Industry Assessment Practice) FAC-013-2 R3 (Business Practice – NAESB) IRO-016-1 R2 (Documentation) NUC-001-2 R9.1 (Current Industry Operating Practice) NUC-001-2 R9.1.1 (Annual check-up / inspection) NUC-001-2 R9.1.2 (Documentation) NUC-001-2 R9.1.3 (Documentation) NUC-001-2 R9.1.4 (Certification) PRC-010-0 R2 (Current Industry Assessment Practice) PRC-022-1 R2 (Documentation) Please note the IESO will submit its own comments regarding the following requirements: CIP-001-2a R4 CIP-003-3 R3.1 CIP-003-3 R3.2 CIP-003-3 R3.3 CIP-003-4 R14.2 INT-007-1 R1.2 (Certification) VAR-001-2 R5** (Business Practice – NAESB)
Yes
The SRC agrees with the removal of the identified requirements. The SRC recognizes that the scope of this SAR is to identify inappropriate requirements and not necessarily to suggest what to do with those identified requirements for removal. The SRC suggests that the Technical White Paper recognize that some of these removed requirements can and should be retained (just not retained as Reliability Standards). See response to Q1 for suggestions.

NERC
NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION

Consideration of Comments

Project 2013-02 Paragraph 81

The Paragraph 81 Drafting Team thanks all commenters who submitted comments on the redlined versions of 22 standards showing 38 requirements proposed to be retired. The standards were posted for a 45-day public comment period from October 25, 2012 through December 10, 2012. Stakeholders were asked to provide feedback on the standards through a special electronic comment form. There were 32 sets of comments, including comments from approximately 113 different people from approximately 64 companies representing 8 of the 10 Industry Segments as shown in the table on the following pages.

All comments submitted may be reviewed in their original format on the standard's project page.

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President and Director of Standards, Mark Lauby, at 404-446-2560 or at mark.lauby@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.[1]

[1] The appeals process is in the Standard Processes Manual: http://www.nerc.com/files/Appendix_3A_StandardsProcessesManual_20120131.pdf

Index to Questions, Comments, and Responses

The Industry Segments are:

1 — Transmission Owners
2 — RTOs, ISOs
3 — Load-serving Entities
4 — Transmission-dependent Utilities
5 — Electric Generators
6 — Electricity Brokers, Aggregators, and Marketers
7 — Large Electricity End Users
8 — Small Electricity End Users
9 — Federal, State, Provincial Regulatory or other Government Entities
10 — Regional Reliability Organizations, Regional Entities

If you support the comments submitted by another entity and would like to indicate you agree with their comments, please select "agree" below and enter the entity's name in the comment section (please provide the name of the organization, trade association, group, or committee, rather than the name of the individual submitter).

Summary Consideration: Thank you to Exelon and ISO New England, Inc. for supporting the comments of EEI and SRC, respectively. The Standard Drafting Team (SDT) will address the specific comments of SRC below, and notes that EEI did not submit specific comments.

Organization	Supporting Comments of "Entity Name"
Exelon	Exelon agrees with EEIs position and comments submitted related to this project.
ISO New England Inc.	ISO RTO Council Standards Review Committee (SRC)

1. If retired, do any Reliability Standard requirements proposed for retirement create a gap in reliability? If yes, please explain in the comment area.

Summary Consideration: In summary, no entity showed that a gap in reliability would result from the retirement of the proposed Reliability Standard requirements. Also, in general, the comments were very supportive of the retirement of the proposed Reliability Standard requirements, and the few questions or concerns raised are addressed in the individual responses. Based on comments and the recent approval of EOP-004-2 by the NERC Board of Trustees, CIP-001-2a R4 and EOP-004-1 R1 will be moved to Section V of the technical paper entitled: "The Initial Phase Reliability Standards Provided for Informational Purposes."

Organization	Yes or No	Question 1 Comment
ACES Standards Collaborators	No	(1) We do not see any reliability gaps created by the proposed retirements. Many of the requirements that have been moved to the second phase of the project could actually be retired in this phase without creating reliability gaps. We believe the approach to move several requirements to the second phase is overly conservative. However, we understand that drafting team must balance the retirement of requirements in this phase with satisfying concerns of stakeholders that no reliability gaps are created. (2) We are not opposed to the plan to review the linkages between BAL and INT standards in the next phase. However, we continue to believe that reloading of curtailed transactions is a commercial issue not a reliability issue. Thus, INT-004-2 easily meets criteria A and B and should be retired in phase one.
Response: ACES Standards Collaborators indicates that it did not see any reliability gaps resulting from the proposed Phase 1 retirement of requirements. The SDT acknowledges ACES Standards Collaborators' concern that deferring requirements to Phase 2 may be viewed as overly conservative, and the SDT notes that the requirements proposed in Phase 1 were influenced by the collaborative and expedited nature of Phase 1. The SDT also notes that it took just 5 months from the issuance of the Standards Authorization Request ("SAR") to a vote receiving over 90% approval for the Phase 1 requirements. In addition, on December 13, 2013, the Standards Committee passed a Reliability Standards Development Plan that requires the application of Paragraph 81		

Organization	Yes or No	Question 1 Comment
("P81") concepts to all new projects. One of the Reliability Standards Development Plan's projects is the review of the INT standards, including INT-004-2, which is scheduled to begin in the first quarter of 2013. Thus, the SDT believes that ACES Standards Collaborators' request for consideration of INT-004-2 will be timely and appropriately considered in the review of the INT standards, and, therefore, it is not necessary to include it in Phase 1 of P81.		
American Electric Power	No	AEP is not aware of any reliability gaps that would occur as a result of retiring the proposed Reliability Standards requirements.
Response: The SDT acknowledges AEP's comment that it is not aware of any reliability gaps resulting from the proposed Phase 1 retirement of requirements.		
CenterPoint Energy	No	CenterPoint Energy believes that the Reliability Standard requirements proposed for retirement in the initial phase ("Phase 1") of NERC Project 2013-02 'Paragraph 81' would not create a gap in reliability if they were retired. An increase in efficiency of the ERO compliance program should result with the removal of these Phase 1 requirements and the removal of additional Reliability Standard requirements in subsequent phases of this project.
Response: The SDT acknowledges CenterPoint Energy's comment that it believes that the proposed Phase 1 retirement of requirements should not create a gap in reliability and should also increase the efficiency of the ERO's compliance program.		
Occidental Energy Ventures Corp.	No	Occidental Energy Ventures Corp ("OEVC"). believes that the retirement of the Phase I requirements will pose little, if any, risk to the BES. However, in our view, this is a good start to a much more extensive restructuring of the regulatory model. Of course, the industry will need to gauge FERC's response to the initial grouping of requirements, but we should be prepared to aggressively push down this path.
Response: The SDT acknowledges Occidental Energy Ventures Corp's comment that it believes the proposed Phase 1 retirement of requirements will pose little, if any, risk to the Bulk Electric System, and its support for a more extensive restructuring of the regulatory model.		

Organization	Yes or No	Question 1 Comment
City of Austin dba Austin Energy	No	Please note: CIP-001-2a EA4 should be retired at the same time as CIP-001-2a R4 for the same reasons. We agree with the SDT regarding requirements applicable to the GO/GOP.
Response: During the balloting of the P81 Phase 1 requirements, EOP-004-2 was approved by stakeholders and the NERC Board of Trustees and was filed with its implementation plan on December 31, 2012 with regulatory agencies for approval. As part of the EOP-004-2 implementation plan, all of CIP-001-2a will be retired six months after regulatory approval. In the technical paper at Page 18, it was noted that: "… if EOP-004-2 does receive stakeholder approval and is adopted by the NERC Board of Trustees, the SDT will reconsider retirement via the P81 project and may include CIP-001-2a R4 for informational purposes only." Given that a regulatory filing has been filed to retire all of CIP-001-2a, the SDT has revised the technical paper to include CIP-001-2a R4 for informational purposes only.		
Manitoba Hydro	No	Standard revision numbers and Requirement sequence changes should be made at a later date, as future revisions are required to each Standard that contains any retired Requirements. This will relieve the undesirable administrative burden, while reflecting accurate revision numbers and Requirement sequences, as changes are required to the Standards.
Response: The SDT agrees with Manitoba Hydro's comment that revisions to standard and requirement numbers should not be made at this time, given undesirable administrative burdens. The SDT has consulted with NERC staff on this issue, and no revision numbers will be implemented at this time.		
SERC EC Planning Standards Subcommittee	No	The comments expressed herein represent a consensus of the views of the above-named members of the SERC EC Planning Standards Subcommittee only and should not be construed as the position of SERC Reliability Corporation, its board, or its officers"
Response: The SDT acknowledges that SERC EC Planning Standards subcommittee's comments are not the position of SERC Reliability Corporation.		

Organization	Yes or No	Question 1 Comment
Ontario Power Generation	No	The technical white paper has provided reasonable and well thought-out justifications for the retirement proposal to those reliability standard requirements.
Response: The SDT thanks Ontario Power Generation for its comment and agrees that the technical paper: "… has provided reasonable and well thought-out justifications for the retirement proposal to those reliability standard requirements."		
Southwest Power Pool Regional Entity	No	While CIP-007-3/4, Requirement R7.3 by itself has no immediate impact on the reliability of the Bulk Electric System, performance of R7.3 is required by the entity in order to be able to demonstrate compliance with CIP-007-3, Requirements R7.1 and R7.2 that, if not performed properly, could result in an impact to reliability. Elimination of this requirement could expose the registered entity to greater risk of non-compliance with the remaining requirements as it no longer requires the entity to maintain appropriate and sufficient evidence of performance with the remaining requirements. For the reasons described, the SPP RE is opposed to retiring CIP-007-3/4, Requirement R7.3.
Response: Southwest Power Pool Regional Entity states that while retirement of CIP-007-3, -4 R7.3: "… has no immediate impact on the reliability of the Bulk Electric System…" it is required to demonstrate compliance. As explained in the technical paper at Page 31, Section 400 of the NERC Rules of Procedure provides for a Regional Entity to request evidence to monitor compliance, and, therefore, it is unnecessary to also have a Reliability Standard that also requires the entity to retain records as set forth in CIP-007-3, -4 R7.3. The SDT also notes that the Responsible Entity has the burden to demonstrate compliance with CIP-007-3, -4 R7.1 and R7.2, notwithstanding the existence of CIP-007-3, -4 R7.3. For these reasons, the SDT affirms its decision to retire CIP-007-3, -4 R7.3.

Organization	Yes or No	Question 1 Comment
Entergy Services, Inc. (Transmission)	No	
Independent Electricity System Operator	Yes	1. BAL-005-0.2b, R2 - agree2. CIP-001-2a, R4 - we do not agree this is administrative in nature. Preparedness is an essential element in having the capability to readily respond to pressing reliability issues. Establishing contact with the enforcement authorities is a necessary component in preparing for reporting suspect or detected sabotage. Such reporting can help protect or minimize damages to BES facilities and/or Adverse Reliability Impact due to malicious acts. R1 to R3 do not have such a requirement to report sabotage events to the law enforcement authorities. If these authorities are included in Requirement R3, then the gap may be considered filled and R4 can be retired. However, this is not yet the case. We therefore suggest that R4 not be retired at this time.3. CIP-003-3, -4 R1.2 - agree4. CIP-003-3, -4 R3, R3.1, R3.2, R3.3 - while we agree that having the exception documented and approved by Senior Manager adds little to reliability, we do not agree that the entire requirement should be removed since this requirement is intended for implementing control of an entity's adherence to its Cyber Security policy, or document exceptions otherwise. Further, we do not concur with the SDT's view that over time, responsible entities may believe they can exempt themselves from compliance with the CIP requirements. Entities may exempt themselves from having some of their processes/procedures for cyber security not implemented, but their adherence to the policy and documenting exceptions are to be assessed during audit, which is not determined by the entities themselves. Any deviation from the requirement (the proposed "making exemption from compliance with the CIP requirement") will be identified and the entities will be found non-compliant. 5. CIP-003-3, -4 R4.2 - we agree that the action to classify the CCA information is redundant, but we do not think R4.2 can be removed entirely since the element "based on the sensitivity of the Critical Cyber Asset information" needs to be retained. Suggest to revise R4 to capture this element, or, at a minimum, consult the CIP SDT on the merit of retaining this element in R4.6. CIP-005-3a, -4a R2.6 -

Organization	Yes or No	Question 1 Comment
		agree.7. CIP-007-3, -4 R7.3 - agree.8. COM 001-1.1 R6 - agree.9. EOP-004-1 R1 - we do not agree with retiring this requirement. The RRO should have a formal reporting procedure in place to ensure adequate and detailed reporting is provided on system disturbances or any unusual event. This procedure is necessary for entities to meet the goals of further requirements in this standard that pertain to preliminary and final disturbance reporting .10. EOP-005-2 R3.1 - agree.11. EOP-009-0 R2 - agree.12. FAC-002-1 R2 - we do not agree that the requirement is burdensome. The requirement seems to meet the overarching criterion A from the White Paper (it requires responsible entities to conduct an activity or task that does little, if anything, to benefit or protect the reliable operation of the BES), however, at a careful reading, the requirement seems to fail meeting at least one of the Criteria B: B1 (it is administrative, but not burdensome), B2 (it is data collection/retention, but we are not sure if NERC collects this data by any other method), B3 to B6 (it does not seem to fit any of these criteria).13. FAC-008-1 R1.3.5 - agree.14. FAC-008-1 R2; FAC-008-1 R3; FAC-008-3 R4; FAC-008-3 R5 - agree.15. FAC-010-2.1 R5; FAC-011-2 R5 - agree.16. FAC-013-2 R3 - agree.17. INT-007-1 R1.2 - agree, but there needs to be a requirement somewhere to stipulate that all entities involved in the Arranged Interchange must register with NERC such that transactions' participants can be contacted for confirmation of transactions being approved or to make changes when transactions are curtailed. Until such time that this requirement is developed elsewhere, INT-007-1 R1.2 should remain in effect. 18. IRO-016-1 R2 - It does not make sense to retire this requirement, but still keep M1 - the measure associated with requirement R1 - in the standard. M1 states that each RC must have evidence, such as operator log or another data source, of actions taken for the event or disagreement or both. However, R2 is the requirement which states the RC shall document the actions taken via operator log or another data source. Therefore, removing R2 would create inconsistency in the standard.19. NUC-001-2 R9.1; NUC-001-2 R9.1.1; NUC-001-2 R9.1.2; NUC-001-2 R9.1.3; NUC-001-2 R9.1.4 we agree with retiring all of the 9.1, except R9.1.2: The agreement should contain the names of the applicable entities and the responsibilities assigned to

Organization	Yes or No	Question 1 Comment
		each one in relation to the NPIR.20. PRC-008-0 R1; PRC-008-0 R2; PRC-009-0 R1; PRC-009-0 R1.1; PRC-009-0 R1.2; PRC-009-0 R1.3; PRC-009-0 R1.4; PRC-009-0 R2; PRC-010-0 R2; PRC-022-1 R2 - agree.21. TOP-001-1a R3 - agree.22. TOP-005-2a R1 - agree.23. VAR-001-2 R5 - agree.

Response: With respect to CIP-001-2a R4, Independent Electricity System Operator (IESO) expresses a concern that without R4, entities will not be properly prepared to contact law enforcement in the event of a sabotage event. During the comment and ballot period of the P81 project, EOP-004-2 was approved by stakeholders and the NERC Board of Trustees, and was filed with its implementation plan on December 31, 2012 with regulatory agencies for approval. As part of the EOP-004-2 implementation plan, all of CIP-001-2a will be retired six months after regulatory approval. In the technical paper at Page 18, it was noted that: "… if EOP-004-2 does receive stakeholder approval and is adopted by the NERC Board of Trustees, the SDT will reconsider retirement via the P81 Project and may include CIP-001-2a R4 for informational purposes only." Given that a regulatory filing has been filed to retire all of CIP-001-2a, the SDT has revised the technical paper to include CIP-001-2a R4 for informational purposes only. For the same reasons, in response to IESO's concern on EOP-004-1 R1, the SDT has revised the discussion of EOP-004-1 R1 to include it in the technical paper for informational purposes only.

With respect to CIP-003-3, -4 R3, IESO believes that the entire requirement should not be removed because it is a control for adhering to the Cyber Security Policy. It also states that entities do not view CIP-003-3, -4 R3 and its sub-requirements as a way to exempt themselves from compliance with the Critical Infrastructure Protection (CIP) requirements. As stated in the technical paper at page 24, an entity has the ability to implement a Cyber Security Policy that exceeds the CIP requirements without the need for CIP-003-3, -4 R3 – which could also include implementing appropriate controls. The SDT does not find that retiring CIP-003-3, -4 R3 and its sub-requirements impacts the ability of an entity to implement appropriate controls to its Cyber Security Policy. Also, as stated in the technical paper at page 24, the SDT understands that the intent of CIP-003-3-, -4 R3 and its sub-requirements has been subject to misinterpretation, notwithstanding IESO's disagreement with the SDT on this matter. Therefore, the SDT affirms that CIP-003-3, -4 R3 and its sub-requirements should be retired.

In addition, IESO believes that the language in CIP-003-3, -4, R4.2 related to: "… based on the sensitivity of the Critical Cyber Asset information …" should be retained. In the technical paper at Page 26, it was explained that this language:

". . . requires the entity to develop classifications based on a subjective understanding of sensitivity (i.e., no clear connection to serving reliability) the requirement does not support reliability. In this context, classifying based on sensitivity becomes an

Organization	Yes or No	Question 1 Comment
administrative function that becomes necessarily burdensome because of all the possible ramifications 'based on sensitivity' can produce, and, therefore, require SMEs to decide on and reduce to writing in a documented program. This is time and effort that could be better spent on other CIP activities that provide value to cyber security and actively protect the BES." IESO has not presented sufficient rationale for the SDT to reconsider its decision as explained in the technical paper. Given the rationale in the technical paper on the lack of a nexus between the language "based on the sensitivity" and reliability, the SDT affirms its decision to retire CIP-003-3, -4 R.4.2. IESO does not agree that FAC-002-1 R2 is burdensome and while it seems to meet criterion A, it believes that the requirement fails to meet at least one of the Criteria B. As stated in the technical paper on Pages 40 and 41, FAC-002-1 R2 meets Criteria B1 (administrative) and B2 (data collection/retention) because it is an administrative documentation requirement and NERC and the Regional Entities have the authority under Section 400 of the NERC Rules of Procedure to require an entity to submit data and information for purposes of monitoring compliance. This would generally occur during a spot check or compliance audit where entities would already have the obligation to produce the information required in R2 to demonstrate compliance with R1 and its sub-requirements, even without the existence of R2. Therefore, the SDT affirms that FAC-002-1 R2 should be retired. IESO further believes that INT-007-1 R1.2 may not be retired until there is another requirement requiring entities involved in Arranged Interchange to register with NERC so that participants in those transactions can contact each other when transactions are curtailed. As explained in the technical paper at Pages 56 and 57, the North American Energy Standards Board has established registry and other rules related to entities entering into Arranged Interchange, and, therefore, INT-007-1 R1.2 is no longer necessary. Therefore, the SDT affirms its decision to retire INT-007-1 R1.2. IESO states that with the retirement of IRO-016-1 R2, Measure M1 should also be retired as it relates to R2. The SDT notes that Measure M1 was not retired because it identifies how to measure compliance with IRO-016-1 R1. IESO does not agree with retiring NUC-001-2 R9.1.2, stating that "… the agreement should contain the names of the applicable entities and the responsibilities assigned to each one in relation to the NPIR." Although the SDT understands the usefulness of an agreement stating who has responsibilities for the duties set forth in the agreement, as set forth in the technical paper at Page 61, this language is contractual boilerplate and has no direct nexus to reliability. Therefore, the SDT affirms its decision to retire NUC-001-2 R9.1.2.		
Exelon	Yes	Exelon believes that if a company takes an exception it should be documented

Organization	Yes or No	Question 1 Comment
		and proposes the following revision to R3: R3. Exceptions - Instances where the Responsible Entity cannot conform to its cyber security policy must be documented as exceptions and authorized by the senior manager or delegate(s).R3.1. Exceptions to the Responsible Entity's cyber security policy must be documented. R3.2. Documented exceptions to the cyber security policy must include an explanation as to why the exception is necessary and any compensating measures.
Response: Exelon prefers a modification to CIP-003-3, -4 R3 and the sub-requirements than retirement. As explained in the technical paper at Page 26, entities have the ability to develop its own procedures to take an exemption to its Cyber Security Policy in situations that it chooses to exceed the CIP requirements without the existence of CIP-003-3, -4 R3 and the sub-requirements. Thus, an entity has the flexibility to implement the revised exemption provision after the retirement of CIP-003-3, -4 R3 and the sub-requirements. Accordingly, the SDT affirms its decision to retire the CIP-003-3, -4 R3.		
ISO/RTO Standards Review Committee		The SRC has not identified any reliability gaps caused by the proposed actions, but the SRC believes that there is value in retaining some of the deleted requirements in some other form. Documentation is not an Operating or Assessment obligation but it is a unique topic Chain-of-command should be addressed as a Certification issue or as a Assumption / Definition Issue The following requirements while not appropriate as mandatory Reliability Standards should be retained in some category (highlighted text is a proposed category)BAL-005-0.2b R2 (Current Industry Operating Practice) CIP-003-3 R1.2 CIP-003-3 R3 CIP-003-3 R4.2 CIP-003-4 R3 CIP-003-4 R3.1 CIP-003-4 R3.2CIP-003-4 R3.3 CIP-003-4 R4.2 CIP-005-3a R2.6 CIP-005-4a R2.6 CIP-007-3 R7.3 CIP-007-4 R7.3 EOP-004-1 R1 (Industry Reports)EOP-005-2 R3.1 (Annual check-up / inspection)FAC-002-1 R2 ---FAC-008-1 R2 (Chain-of-Command)FAC-008-1 R3 ---FAC-008-3 R4 (Chain-of-Command)FAC-008-3 R5 ---FAC-010-2.1 R5** (Current Industry Assessment Practice)FAC-011-2 R5** (Current Industry Assessment Practice)FAC-013-2 R3 (Business Practice - NAESB)IRO-016-1 R2 (Documentation)NUC-001-2 R9.1 (Current Industry Operating Practice)NUC-001-2 R9.1.1 (Annual check-up / inspection)NUC-001-2 R9.1.2 (Documentation)NUC-001-2 R9.1.3 (Documentation)NUC-001-2 R9.1.4

Organization	Yes or No	Question 1 Comment
		(Certification)PRC-010-0 R2 (Current Industry Assessment Practice)PRC-022-1 R2 (Documentation)Please note the IESO will submit its own comments regarding the following requirements: CIP-001-2a R4CIP-003-3 R3.1 CIP-003-3 R3.2 CIP-003-3 R3.3 CIP-003-4 R14.2INT-007-1 R1.2 (Certification)VAR-001-2 R5** (Business Practice - NAESB)

Response: The SRC states that it does not see any reliability gap with the proposed retirements; however, it provides ideas on how some requirements may be useful in another format or forum. The SDT appreciates the SRC's ideas and encourages the SRC to work with the appropriate NERC committees to discuss and possibly implement its approach.

2. Do you have any comments on the technical white paper?

Summary Consideration: A few entities provided clarifying comments for consideration in the technical white paper, and those comments have been incorporated to enhance the readability and clarity of the technical white paper. A few commenters had concerns with the discussion of specific requirements and whether this was the time to renumber requirements; these concerns are addressed in the individual comments below. There were also comments related to possible formats for Phase 2, and while not within the scope of this SDT information, was provided based on the Standard Committee's approval of the Reliability Standards Developmental Plan. A few commenters also expressed concerns that were compliance related. The SDT reminds stakeholder that the focus of the P81 effort was to retire requirements that had little or no benefit to reliability.

Organization	Yes or No	Question 2 Comment
SERC EC Planning Standards Subcommittee	No	The comments expressed herein represent a consensus of the views of the above-named members of the SERC EC Planning Standards Subcommittee only and should not be construed as the position of SERC Reliability Corporation, its board, or its officers"
Response: The SDT acknowledges that SERC EC Planning Standards subcommittee's comments are not the position of SERC Reliability Corporation.

Pepco Holdings Inc.	Yes	As part of this effort, a new revision number for any standard that is changed should be used. Also any measurements or registered entities (e.g. RRO) that would no longer apply should be deleted.

Response: The SDT agrees with Pepco Holdings that measurements associated with retired requirements should be concurrently retired. The SDT points Pepco Holdings to the posted redline of the Reliability Standards that retires measurements associated with retired requirements. For administrative efficiency, the Reliability Standards will not be renumbered and functional entities will not be deleted at this time, but the next time the standard is revised it is understood that renumbering and removal of

Organization	Yes or No	Question 2 Comment
entities that are no longer applicable will occur.		
ACES Standards Collaborators	Yes	(1) On page 5, several requirements are marked with two asterisks but there is no footnote or additional information. Please indicate the purpose of the asterisks or remove them. (2) The supporting statement in the technical whitepaper and SAR that Criteria C is needed to make an informed decision "in the determination of whether a Reliability Standard requirement satisfies both Criteria A and B" is inconsistent with the actual Criteria. Criterion C2 questions if the requirement is being reviewed in an on-going standards development project. While this is certainly a relevant question and a valid reason to not include a requirement in the P81 project, the question simply provides no input on whether Criteria A and B are met. We suggest changing the supporting statement to be clearer that Criteria C in essence is more information to make an informed decision but may not necessarily have any indication on whether Criteria A and B are satisfied. (3) The supporting statement in the technical whitepaper and SAR that Criteria C provides "additional information to assist in the determination of whether a Reliability Standard requirement satisfies both Criteria A and B" is inconsistent with the SAR. In the detailed description, the SAR states that the initial phase shall only identify requirements that satisfy both Criteria A and B. These are supposed to be the requirements that easily meet these two criteria sets. Thus, why is Criteria C evaluated in the whitepaper. If these criteria are easily met, Criteria C is not needed to assist in the determination and the associated information while interesting would appear to be superfluous.
Response: ACES Standards Collaborators seeks clarification of the use of ** on Page 5 of the technical white paper. The SDT refers ACES Standards Collaborators to Footnote 4 of the technical white paper that states: "Those requirements that were not part of the draft SAR, but were added based on stakeholder comments are denoted by a '' throughout this technical white paper."** **ACES Standards Collaborators also seeks clarification on the role of Criteria C. The SDT notes that Criteria C was only considered after a requirement met both Criteria A and B. The application of Criteria C provided additional information that in some cases**		

Organization	Yes or No	Question 2 Comment
emphasized the need to retire the requirement (*e.g.,* was not results-based) and other times indicated that it may not be necessary to continue with retirement (*e.g.,* the requirement was already scheduled in a reasonable period of time to be retired through another standards project). The SDT believes this approach is consistent with the clarification sought by ACES Standards Collaborators, and, thus will clarify the language in the technical white paper on the application of Criteria C. The SDT also notes that the SAR states that, "…for all phases, the standard drafting team shall also consider the data and reference points set forth below in Criterion C when deciding whether a Reliability Standard requirement should be retired or modified."		
Bonneville Power Administration	Yes	BPA appreciates the drafting team's decision to include TOP-001-1 R3 in the technical white paper for informational purposes rather than proposing to retire it.
Response: The SDT is appreciative of Bonneville Power Administration's understanding of the treatment of TOP-001-1 R3.		
Central Hudson Gas & Electric Corporation	Yes	CHG&E believes the reason for retiring CIP-003-3,-4 R3 and its sub-requirements is fallacious. The reason provided in the technical white paper is essentially: " First, and most importantly, that requirement has never been available for use to exempt an entity form compliance with any requirement of any NERC reliability standard. It only applies to exceptions to internal corporate policy, and only in cases where the policy exceeds a NERC standard requirement, or addresses an issue that is not covered in a NERC reliability standard. For example, if an internal corporate policy statement requires that all passwords be a minimum of 8 characters in length, and be changed every 30 days, this provision could be used for internal governance purposes to lessen the corporate requirement, back to the password requirements in CIP-007 R5.3, or in conjunction with a TFE to something else. The removal of this requirement has no effect on the TFE process, or compliance with any other NERC reliability standard requirement."CHG&E wishes to highlight the fact that NERC has no jurisdiction to impose or grant exceptions to internal corporate policies. Therefore, this requirement (and its sub - requirements) can only have been crafted to address exceptions to the NERC CIP requirements. Throughout this standard, the NERC requirements for a 'cyber security policy' are delineated. This requirement specifically addresses exceptions

Organization	Yes or No	Question 2 Comment
		to the 'cyber security policy'. As written, this requirement can only be interpreted to mean that an exception to the NERC CIP required 'cyber security policy' is acceptable if properly documented and approved by the CIP Senior Manager. Central Hudson Gas & Electric Corporation strongly disagrees with the inclusion of CIP-003-3, -4 Requirements R3, R3.1, R3.2, R3.3 as candidates for retirement. The reasons stated in the SAR in favor of inclusion are that these requirements are administrative in nature and are purely examples of a documentation process. Further it is stated in the SAR that they, ".... have been subject to misinterpretation, including responsible entities believing they can exempt themselves from compliance with the CIP requirements." This last statement is precisely the reason why the aforementioned requirements were included in the standard. These requirements allow Registered Entities to, on rare occasions, take an exception to one or several of the CIP requirements (for a limited period of time) if they (1) have valid cause (major emergency, Force Majeure, etc.), (2) document the occurrence and (3) are reviewed and approved by the CIP Senior Manager. This process supports the Registered Entity's compliance effort and acknowledges the need for special protocols to address emergency circumstances. Without such a process, the only recourse for the Registered Entity is to self-report a violation which is not within their control. In other words, retirement of these requirements would force the Registered Entity to be in full compliance with ALL CIP Standards ALL the time regardless of circumstance. The concept of realistic expectations was undoubtedly the reason these requirements were crafted and included in the standard. Further, with regard to the Registered Entity's decision to claim an exception, a system of checks and balances already exists. At the time of a compliance audit of the standard's requirements, the Regional Entity reviews and makes a determination as to whether the actions taken by the Registered Entity were warranted. Further, the fact that this requirement is included in the FFT process is of little consolation since any exception would still constitute a violation of the NERC Standard on the part of the Registered Entity and would carry with that violation the associated stakeholder

Organization	Yes or No	Question 2 Comment
		liability.
Response: CHG&E disagrees with retiring CIP-003-3,-4 R3 and its sub-requirements. CHG&E is concerned that the language in the technical white paper on CIP-003-3,-4 R3 and its sub-requirements could be interpreted as NERC having jurisdiction to impose or grant exceptions to internal corporate policies and would require that entities be in compliance with all CIP requirements all of the time regardless of the circumstance and with no avenue to take an exemption to the CIP requirements. On the former point, the SDT clarifies that it was not the intent of the language in the technical white paper on CIP-003-3,-4 R3 and its sub-requirements to opine on the jurisdiction of NERC over "internal corporate policies." With respect to CHG&E's latter concern, it appears more compliance-related than reliability-based. The criteria set forth in the SAR and technical white paper are focused on impacts to reliability, not compliance. The SDT believes CHG&E's compliance concerns are more appropriately discussed with its Regional Entity's or NERC's compliance and enforcement monitoring staff. For informational purposes only, the SDT points to the language in CIP-003-3, -4 R1.1 "… including provision for emergency situations …" and R2.4 "The senior manager or delegate(s), shall authorize and document any exception from the requirements of the cyber security policy" as language CHG&E may wish to consider in light of its concerns." In addition, in R1 there is a requirement to "document and implement" a Cyber Security policy which at a *minimum* must contain the following: "… addresses the requirements in Standards CIP-002-3 through CIP-009-3, including provision for emergency situations." In discussing this with the CIP SDT leadership, it was their intent in developing this requirement to allow entities to only waive the portions of those implemented policies which were in excess of the CIP-002-3 through CIP-009-3 set of requirements. In other words, NERC and FERC would not approve this R3 requirement if it allowed waiving other requirements by simply documenting an exception. The SDT finds no reason presented by CHG&E that indicates that it should reverse its decision to retire CIP-003-3,-4 R3 and its sub-requirements. Thus, the SDT affirms its decision to retire CIP-003-3,-4 R3 and its sub-requirements.		
Manitoba Hydro	Yes	CIP-003-3,-4 R1.2: Technical Justification (page 19): CIP personnel should act based on their cyber security policy; a policy which must address the CIP-002 through CIP-009 standards as required by CIP-003 R1.1. As a result, the specific training processes and procedures will reflect the cyber security policy. We suggest "they will act via their specific training, processes and procedures which reflect the overarching cyber security policy." CIP-007-3, -4 R7.3: (1) Technical Justification (page 32): For added clarity, we suggest the wording "... small number of Reliability Standard requirements explicitly mandating ....". (2) Data and information collection for ERO compliance monitoring purposes is certainly within

Organization	Yes or No	Question 2 Comment
		the context of the Reliability Standards. For added clarity, we suggest the wording "... for ERO compliance monitoring purposes without specific data collection language in the Reliability Standards." (3) It is unclear who "the entities" are. Should this state "Responsible Entities"? (4) For additional clarity, we suggest the wording "... the Reliability Standards are arguably more difficult to understand ...".
Response: The SDT appreciates Manitoba Hydro suggested enhancements and has worked them into the technical white paper. The SDT also notes that the term Responsible Entities is defined as "entities" on Page 6 of the technical white paper.		
Southern Company	Yes	FAC-002-1 R2-The comments in the technical white paper concerning FAC-002-1 R2 are correct. Entities already have the obligation to provide the documentation of the evaluation of the reliability impact of new facilities upon request to demonstrate compliance to R1 and its sub-requirements, thus making R2 unnecessary. Furthermore, a requirement to retain documentation does not benefit or protect the reliable operation of the BES.VAR-001-2 R5: While Southern agrees that the elimination of VAR-001-2, R5 is appropriate, there is some concern that the justification that the TOP's adherence to R2 as a double check to ensure there are sufficient reactive power resources to protect the voltage levels under normal and Contingency conditions may be viewed by FERC as redirecting the burden from the PSEs and LSEs to the TOP. The LSE's (particularly) need to make their reactive resources available to the TOP in order for the TOP to acquire/use these reactive resources to protect voltage levels. Also, consider that not all entities necessarily take service under a transmission tariff, so references to other contractual mechanisms such as Interchange Agreements, etc. might be cited in the Technical White Paper for ensuring sufficient reactive resources are provided and made available by transmission customers.
Response: The SDT agrees with the clarifications suggested by Southern Company and has worked them into the technical paper.		
Georgia Transmission Corporation	Yes	GTC is very supportive of the recent ERO, Regional Entity and industry stakeholder efforts in response to the opportunity provided by FERC in paragraph 81 of the

Organization	Yes or No	Question 2 Comment
		Find, Fix, Track and Report Order to review and eliminate standards that provide no or minimal reliability benefits. However, we are disappointed with the small number of requirements that are proposed for retirement in this initial phase of work. GTC would like to note that because duplicative requirements for subsequent versions of Reliability Standards are never mandatory at the same time, the net impact of requirements being proposed for retirement identified in the "Redline of Standards with Proposed Retirements" for phase 1 is only 28 out of 1650 FERC approved requirements or 1.7%. This small percentage does not seem to reflect well on the view that NERC's FFT initiative is predicated on, of which FERC has extended an invitation to justify without imposing a deadline. From our review of the P81 Technical White Paper, it appears that there are many more requirements in addition to the 28 identified that meet the criteria for deletion. And while a phased approach has been recommended, the certainty associated with subsequent phases occurring in a timely manner is questionable and GTC recommends a big picture approach. We believe the small number of requirements identified in phase I would be more palatable if a big picture perspective was provided once submitting to FERC. For example, a breakdown similar to the one below would provide more confidence that future phases would occur and be successful: o At the end of the day, we believe we can eliminate approximately xx number or xx percentage of requirements o This will be completed in three phases o Phase one will include approximately xx requirements, posted to FERC in fourth quarter, 2012 o Phase two will include approximately xx requirements, posted to FERC in xx quarter, 2013 o Phase three posting will...Laying out the bigger picture keeps the momentum going and also let's FERC know that the first posting only begins to scratch the surface of the issue. Furthermore, we are aware of current standards drafting teams that are drafting requirements that would meet the criteria for deletion stated in this Technical White Paper. There is a pressing need to implement a mechanism to ensure "P81-qualified" requirements are not drafted going forward or eliminated prior to NERC BOT approval.GTC will continue to support this effort as it moves through the NERC standards development process and participate in future phases

Organization	Yes or No	Question 2 Comment
		of work related to the P81 project. Our goal is to ensure future phases of this effort lead to retirement of a much greater number of requirements that are not necessary for the reliability of the BES.
Response: Georgia Transmission Corporation raises points related to whether Phase 1 of P81 included sufficient requirements and the uncertainty and the timing of subsequent phases. As noted above, the Standards Committee recently approved a Reliability Standards Development Plan that requires P81 concepts to be applied to all Standard projects. Training will be offered to SDTs to ensure no new requirements would be introduced that might contradict this effort. The SDT is also encouraged that the Reliability Standards Development Plan has set forth an aggressive schedule to review the entire set of standards in 2013, many of which were identified by stakeholders in response to the draft P81 SAR.		
Hydro One Networks Inc.	Yes	Hydro One very much appreciates the efforts of the SDT in trying to streamline and focus current standards to focus on requirement that impact to reliability. In addition to this, we hope that:- Phase II of this project will continue along the same path and advance the approach to other approved standards, and- Work on new and reviewed standards will include the criteria developed in this project (i.e. SDTs are fully directed to use Paragraph 81 criteria while developing new and reviewing existing standards).
Response: As noted above, the Standards Committee recently approved a Reliability Standards Development Plan that requires P81 concepts to be applied to all standard projects. The SDT is also encouraged that the Reliability Standards Development Plan has set forth an aggressive schedule to review the entire set of standards in 2013, many of which were identified by stakeholders in response to the draft P81 SAR. Thus, the SDT is hopeful that the recent approval of the Reliability Standards Development Plan will help continue on the Phase 1 path as recommended by Hydro One Networks Inc.		
National Rural Electric Cooperative Association (NRECA)	Yes	NRECA is very supportive of the recent ERO, Regional Entities and industry stakeholder efforts in response to the opportunity provided by FERC in P81 of the Find, Fix, Track and Report Order to review and eliminate standard requirements that provide no or minimal reliability benefits. NRECA is disappointed with the small number of requirements that are proposed for retirement in this initial phase of work, but will support this effort as it moves through the NERC standards

Organization	Yes or No	Question 2 Comment
		development process and will continue participating in future phases of work related to the P81 project. It is our goal to ensure future phases of this effort lead to retirement of a much greater number of requirements that are not necessary for the reliability of the Bulk Electric System. NRECA has reviewed the P81 Technical White Paper. It appears that there are many more requirements, in addition to the 38 identified, that meet the criteria for deletion most of which were included in the SAR for this project. Although the phase approach to this project was explained and many of the requirements included in the SAR will be addressed in a subsequent phases of the project, there is a concern that the future phases of the project will not be completed in a timely manner since there is no timeline provided for the future phases in the Implementation Plan for this project. Having such a time-line will demonstrate to the FERC that the industry and the ERO are dedicated to eliminating standard requirements that provide no or minimal reliability benefits. NRECA is concerned that drafting teams are drafting requirements that would meet the criteria for deletion stated in this Technical White Paper. There must be a mechanism in place to ensure "P81-qualified" requirements are not included in standards that are under development or in standards that are provided to the NERC BOT for approval. In addition, if requirements are retired that include an entity that is only required to comply with the standard because of the specific requirement that is to be retired said entity should be removed from the applicability of the standard. An example of such is VAR-01, R5 where this requirement is the only requirement applicable to a PSE, but the PSE has not been removed from the Applicability of the standard in the red-line version posted for comment.
Response: Similar to our response to Georgia Transmission Corporation and Hydro One Networks Inc, the SDT hopes that the recent approval of the Reliability Standards Development Plan will help to alleviate any concerns of National Rural Electric Cooperative Association on the timing and content of Phase 2, as the Reliability Standards Development Plan requires P81 concepts to be applied to all standard projects. Training will also be offered to SDTs to ensure no new requirements would be introduced that might contradict this effort. The SDT also notes that the issue identified related to removing the PSE from the applicability section of VAR-001 will occur the next time that standard is reviewed and re-numbered, which based on the		

Organization	Yes or No	Question 2 Comment
Reliability Standards Developmental Plan, is scheduled for 2013.		
Occidental Energy Ventures Corp.	Yes	OEVC believes the drafting team did an excellent job researching and defending each proposed retirement. In our view, this is a fundamental necessity as we must assume that FERC will closely scrutinize each one. However, we anticipate that some form of cost/benefit analysis will be requested in each case - particularly since the entire impetus behind the Paragraph 81 project is the shortage of compliance resources. It may be a worthwhile exercise to develop a cost model that accounts for industry and CEA resources accurately and effectively. The results must be weighed against the expected benefit of any requirement - as the industry and regulatory bodies clearly have some important trade-offs to consider. In particular, with FERC's recent emphasis on cyber security, cold weather preparation, and geomagnetic protection, some of the less effective requirements need to be removed. OEVC believes that the Commission will be reluctant to proceed in this manner without data that demonstrates the comparative benefit of each requirement.
Response: Occidental Energy Ventures Corp. suggests that the SDT consider using a cost benefit analysis or exercise that accounts for industry and CEA resources. The SDT notes that the Standards Committee has approved a cost effectiveness analysis process ("CEAP") and will be implementing a pilot of this process on two standards projects in the first half of 2013. At this time, cost effectiveness considerations are not sufficiently developed to be applicable to the requirements proposed in Phase 1, nor does P81 express an expectation that such analysis for this project would be undertaken, and is focused on deletion of requirements that do little or nothing to contribute to reliability. Thus, while the SDT will not apply a cost effective test to the requirements proposed for retirement, the SDT suggests that Occidental Energy Ventures Corp. follow the developments on the CEAP Project as posted on the NERC "Standards Under Development" webpage through the Standards Committee.		
SPP Standards Review Group	Yes	Page 17 - The 6th through 12th lines are a stretch and do not add anything to the argument for retiring Requirement 3 of CIP-001-2a. It is conjecture on the part of the drafting team and should be removed from the paper. If the drafting team doesn't agree and keeps this portion, please insert the word 'require' between 'some' and 'corporate' in the 8th line. Also, delete 'to generic' in the 11th line.

Organization	Yes or No	Question 2 Comment
		Page 26 - In the 10th line of the Technical Justification paragraph, insert 'task' between 'administrative' and 'that'. Page 29 - At the beginning of the 6th line of the Technical Justification paragraph, delete the 'is'. Page 32 - In the first line of the Criterion A paragraph, insert a 'not' between 'does' and 'promote'. Page 59 - In the 8th line of the 2nd paragraph, the sentence 'Thus, IRO-016-1 R1 does not support reliability.' doesn't seem right. Shouldn't this be; it does support reliability? Or perhaps you meant to say that R2 does not support reliability. Also, in the next sentence, delete the second 'that'. Page 61 - In the 15th line of the Technical Justification paragraph, delete the 'an' in front of unnecessarily.
Response: SPP Standards Review Group suggests that the SDT remove CIP-001-2a R4 from the technical paper. As noted above, this requirement is already proposed for retirement through EOP-004-2, and, therefore, will be included in the technical paper for informational purposes only. **The SDT appreciates SPP Standards Review Group's suggestions to improve the readability of the technical paper and have made the suggested changes.**		
City of Austin dba Austin Energy	Yes	Please note: CIP-001-2a EA4 should be retired at the same time as CIP-001-2a R4 for the same reasons. We agree with the SDT regarding requirements applicable to the GO/GOP.
Response: Please see response to the City of Austin's comments to question 1.		
ISO/RTO Standards Review Committee	Yes	The SRC agrees with the removal of the identified requirements. The SRC recognizes that the scope of this SAR is to identify inappropriate requirements and not necessarily to suggest what to do with those identified requirements for removal. The SRC suggests that the Technical White Paper recognize that some of these removed requirements can and should be retained (just not retained as Reliability Standards). See response to Q1 for suggestions.

Organization	Yes or No	Question 2 Comment
Response: Please see the SDT's response to the SRC's comments to question 1.		
Southwest Power Pool Regional Entity	Yes	The white paper discussion for CIP-007-3/4, Requirement R7.3 proffers the idea that most data and information is collected for ERO compliance monitoring purposes outside of the context of Reliability Standards. While this might be the case of other standards, the SPP RE does not believe this is the case for the CIP-002 through CIP-009 Cyber Security standards, collectively referred to as the "CIP standards." The CIP standards require the entity to produce a document (e.g., policy, program, procedure, process, or list); to implement a documented program, process, or procedure; and/or to perform and document certain measurable procedural steps. In the absence of disposition records, which are specifically not required by CIP-007-3/4, Requirements R7.1 and R7.2, there will unlikely be any data or information outside of the context of the Reliability Standards demonstrating compliance with R7.1 and R7.2. The authors of the white paper appear to object to the maintenance of process documentation in this instance yet do not object to other requirements in the CIP standards that similarly call for the production and maintenance of documentation. The SPP RE is concerned that the authors of the white paper have chosen to focus on individual requirements in a stand-alone manner and have failed to understand the supportive interrelationships of the CIP standards and their requirements.
Response: Southwest Power Pool Regional Entity states that data and information related to CIP requirements are collected through the CIP requirements. Southwest Power Pool Regional Entity is particularly concerned that with the "… absence of disposition records, which are specifically not required by CIP-007-3/4, Requirements R7.1 and R7.2, there will unlikely be any data or information outside of the context of the Reliability Standards demonstrating compliance with R7.1 and R7.2." As explained above, Section 400 of the NERC Rules of Procedure provides Regional Entities with the authority to request information needed to monitor compliance and the Responsible Entity has the burden of proof to demonstrate compliance. As stated in the technical white paper at Pages 31 and 32, there is no direct nexus between data retention and reliability. This is a compliance issue that is better served through procedures promulgated outside of the Reliability Standards. Thus, the SDT affirms its decision to retire CIP-007-3, -4 R7.3.		

Organization	Yes or No	Question 2 Comment
Southwest Power Pool Regional Entity also generally questions whether the SDT understands the interrelationship between the CIP requirements, because other CIP data retention requirements are not proposed for retirement in Phase 1. The SDT notes that the number and type of CIP requirements proposed for retirement in Phase 1 was shaped to some degree by the collaborative process between stakeholders and the staffs of the Regional Entities and NERC. The SDT also collaborated with the leadership of the CIP V5 SDT on the CIP requirements proposed for retirement. The SDT's evaluations and discussions confirmed the appropriateness to retire the proposed CIP requirements. That is not to say, there are not other CIP data retention requirements that should be considered for retirement in the future. Thus, while the SDT understands Southwest Power Pool Regional Entity's concern, it affirms its decision to retire the selected CIP requirements in Phase 1.		
Duke Energy	Yes	While we agree with retiring all of the Reliability Standard requirements proposed for retirement, we believe the P81 Project Technical White Paper should be more forceful in justifying retirement of the CIP requirements. Specifically, the "not an important part of a scheme of CIP Requirements" phrase is often used in Criteria C sections discussing VFR and AML issues. It would seem that FERC may have difficulty giving this phrase credibility since (i) the industry previously had balloted to approve such requirements, (ii) NERC BOT approved such requirements, and (iii) FERC approved such requirements. All of these approvals seem to indicate that all such entities previously believed that the requirements were important to the CIP scheme. Instead, we suggest that this phrase be replaced in each instance with phrases like the following: "As explained above and since the inception of this requirement, this requirement has not been shown to constitute a [key][integral] part of a scheme of CIP requirements."
Response: The SDT appreciates Duke Energy's suggestions to clarify the technical white paper. The SDT believes that the intent of the language in the technical white paper is consistent with the suggestions of Duke Energy.		

END OF REPORT

A. Introduction

1. **Title:** **Automatic Generation Control**

2. **Number:** BAL-005-0.2b

3. **Purpose:** This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the Regulating Reserve. The standard also ensures that all facilities and load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved.

4. **Applicability:**

   4.1. Balancing Authorities

   4.2. Generator Operators

   4.3. Transmission Operators

   4.4. Load Serving Entities

5. **Effective Date:** May 13, 2009

B. Requirements

R1. All generation, transmission, and load operating within an Interconnection must be included within the metered boundaries of a Balancing Authority Area.

R1.1. Each Generator Operator with generation facilities operating in an Interconnection shall ensure that those generation facilities are included within the metered boundaries of a Balancing Authority Area.

R1.2. Each Transmission Operator with transmission facilities operating in an Interconnection shall ensure that those transmission facilities are included within the metered boundaries of a Balancing Authority Area.

R1.3. Each Load-Serving Entity with load operating in an Interconnection shall ensure that those loads are included within the metered boundaries of a Balancing Authority Area.

R2. Each Balancing Authority shall maintain Regulating Reserve that can be controlled by AGC to meet the Control Performance Standard. (Retired)

R3. A Balancing Authority providing Regulation Service shall ensure that adequate metering, communications, and control equipment are employed to prevent such service from becoming a Burden on the Interconnection or other Balancing Authority Areas.

R4. A Balancing Authority providing Regulation Service shall notify the Host Balancing Authority for whom it is controlling if it is unable to provide the service, as well as any Intermediate Balancing Authorities.

R5. A Balancing Authority receiving Regulation Service shall ensure that backup plans are in place to provide replacement Regulation Service should the supplying Balancing Authority no longer be able to provide this service.

R6. The Balancing Authority's AGC shall compare total Net Actual Interchange to total Net Scheduled Interchange plus Frequency Bias obligation to determine the Balancing Authority's ACE. Single Balancing Authorities operating asynchronously may employ alternative ACE calculations such as (but not limited to) flat frequency control. If a Balancing Authority is unable to calculate ACE for more than 30 minutes it shall notify its Reliability Coordinator.

R7. The Balancing Authority shall operate AGC continuously unless such operation adversely impacts the reliability of the Interconnection. If AGC has become inoperative, the Balancing Authority shall use manual control to adjust generation to maintain the Net Scheduled Interchange.

R8. The Balancing Authority shall ensure that data acquisition for and calculation of ACE occur at least every six seconds.

R8.1. Each Balancing Authority shall provide redundant and independent frequency metering equipment that shall automatically activate upon detection of failure of the primary source. This overall installation shall provide a minimum availability of 99.95%.

R9. The Balancing Authority shall include all Interchange Schedules with Adjacent Balancing Authorities in the calculation of Net Scheduled Interchange for the ACE equation.

R9.1. Balancing Authorities with a high voltage direct current (HVDC) link to another Balancing Authority connected asynchronously to their Interconnection may choose to omit the Interchange Schedule related to the HVDC link from the ACE equation if it is modeled as internal generation or load.

R10. The Balancing Authority shall include all Dynamic Schedules in the calculation of Net Scheduled Interchange for the ACE equation.

R11. Balancing Authorities shall include the effect of ramp rates, which shall be identical and agreed to between affected Balancing Authorities, in the Scheduled Interchange values to calculate ACE.

R12. Each Balancing Authority shall include all Tie Line flows with Adjacent Balancing Authority Areas in the ACE calculation.

R12.1. Balancing Authorities that share a tie shall ensure Tie Line MW metering is telemetered to both control centers, and emanates from a common, agreed-upon source using common primary metering equipment. Balancing Authorities shall ensure that megawatt-hour data is telemetered or reported at the end of each hour.

R12.2. Balancing Authorities shall ensure the power flow and ACE signals that are utilized for calculating Balancing Authority performance or that are transmitted for Regulation Service are not filtered prior to transmission, except for the Anti-aliasing Filters of Tie Lines.

R12.3. Balancing Authorities shall install common metering equipment where Dynamic Schedules or Pseudo-Ties are implemented between two or more Balancing Authorities to deliver the output of Jointly Owned Units or to serve remote load.

R13. Each Balancing Authority shall perform hourly error checks using Tie Line megawatt-hour meters with common time synchronization to determine the accuracy of its control equipment. The Balancing Authority shall adjust the component (e.g., Tie Line meter) of ACE that is in error (if known) or use the interchange meter error (I_{ME}) term of the ACE equation to compensate for any equipment error until repairs can be made.

R14. The Balancing Authority shall provide its operating personnel with sufficient instrumentation and data recording equipment to facilitate monitoring of control performance, generation response, and after-the-fact analysis of area performance. As a minimum, the Balancing Authority shall provide its operating personnel with real-time values for ACE, Interconnection frequency and Net Actual Interchange with each Adjacent Balancing Authority Area.

R15. The Balancing Authority shall provide adequate and reliable backup power supplies and shall periodically test these supplies at the Balancing Authority's control center and other critical

locations to ensure continuous operation of AGC and vital data recording equipment during loss of the normal power supply.

R16. The Balancing Authority shall sample data at least at the same periodicity with which ACE is calculated. The Balancing Authority shall flag missing or bad data for operator display and archival purposes. The Balancing Authority shall collect coincident data to the greatest practical extent, i.e., ACE, Interconnection frequency, Net Actual Interchange, and other data shall all be sampled at the same time.

R17. Each Balancing Authority shall at least annually check and calibrate its time error and frequency devices against a common reference. The Balancing Authority shall adhere to the minimum values for measuring devices as listed below:

Device	Accuracy
Digital frequency transducer	≤ 0.001 Hz
MW, MVAR, and voltage transducer	≤ 0.25 % of full scale
Remote terminal unit	≤ 0.25 % of full scale
Potential transformer	≤ 0.30 % of full scale
Current transformer	≤ 0.50 % of full scale

C. Measures

Not specified.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Balancing Authorities shall be prepared to supply data to NERC in the format defined below:

1.1.1. Within one week upon request, Balancing Authorities shall provide NERC or the Regional Reliability Organization CPS source data in daily CSV files with time stamped one minute averages of: 1) ACE and 2) Frequency Error.

1.1.2. Within one week upon request, Balancing Authorities shall provide NERC or the Regional Reliability Organization DCS source data in CSV files with time stamped scan rate values for: 1) ACE and 2) Frequency Error for a time period of two minutes prior to thirty minutes after the identified Disturbance.

1.2. Compliance Monitoring Period and Reset Timeframe

Not specified.

1.3. Data Retention

1.3.1. Each Balancing Authority shall retain its ACE, actual frequency, Scheduled Frequency, Net Actual Interchange, Net Scheduled Interchange, Tie Line meter error correction and Frequency Bias Setting data in digital format at the same scan rate at which the data is collected for at least one year.

1.3.2. Each Balancing Authority or Reserve Sharing Group shall retain documentation of the magnitude of each Reportable Disturbance as well as the ACE charts and/or samples used to calculate Balancing Authority or

Reserve Sharing Group disturbance recovery values. The data shall be retained for one year following the reporting quarter for which the data was recorded.

1.4. Additional Compliance Information

Not specified.

2. Levels of Non-Compliance

Not specified.

E. Regional Differences

None identified.

F. Associated Documents

1. Appendix 1 — Interpretation of Requirement R17 (February 12, 2008).

Version History

Version	Date	Action	Change Tracking
0	February 8, 2005	Adopted by NERC Board of Trustees	New
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed "Proposed" from Effective Date	Errata
0a	December 19, 2007	Added Appendix 1 – Interpretation of R17 approved by BOT on May 2, 2007	Addition
0a	January 16, 2008	Section F: added "1."; changed hyphen to "en dash." Changed font style for "Appendix 1" to Arial	Errata
0b	February 12, 2008	Replaced Appendix 1 – Interpretation of R17 approved by BOT on February 12, 2008 (BOT approved retirement of Interpretation included in BAL-005-0a)	Replacement
0.1b	October 29, 2008	BOT approved errata changes; updated version number to "0.1b"	Errata
0.1b	May 13, 2009	FERC approved – Updated Effective Date	Addition
0.2b	March 8, 2012	Errata adopted by Standards Committee; (replaced Appendix 1 with the FERC-approved revised interpretation of R17 and corrected standard version referenced in Interpretation by changing from "BAL-005-1" to "BAL-005-0)	Errata

0.2b	TBD	R2 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

Appendix 1

Effective Date: August 27, 2008 (U.S.)

Interpretation of BAL-005-0 Automatic Generation Control, R17

Request for Clarification received from PGE on July 31, 2007

PGE requests clarification regarding the measuring devices for which the requirement applies, specifically clarification if the requirement applies to the following measuring devices:

- *Only equipment within the operations control room*
- *Only equipment that provides values used to calculate AGC ACE*
- *Only equipment that provides values to its SCADA system*
- *Only equipment owned or operated by the BA*
- *Only to new or replacement equipment*
- *To all equipment that a BA owns or operates*

BAL-005-0

R17. Each Balancing Authority shall at least annually check and calibrate its time error and frequency devices against a common reference. The Balancing Authority shall adhere to the minimum values for measuring devices as listed below:

Device	Accuracy
Digital frequency transducer	≤ 0.001 Hz
MW, MVAR, and voltage transducer	≤ 0.25% of full scale
Remote terminal unit	≤ 0.25% of full scale
Potential transformer	≤ 0.30% of full scale
Current transformer	≤ 0.50% of full scale

Existing Interpretation Approved by Board of Trustees May 2, 2007

BAL-005-0, Requirement 17 requires that the Balancing Authority check and calibrate its control room time error and frequency devices against a common reference at least annually. The requirement to "annually check and calibrate" does not address any devices outside of the operations control room.

The table represents the design accuracy of the listed devices. There is no requirement within the standard to "annually check and calibrate" the devices listed in the table, unless they are included in the control center time error and frequency devices.

Interpretation provided by NERC Frequency Task Force on September 7, 2007 and Revised on November 16, 2007

As noted in the existing interpretation, BAL-005-0 Requirement 17 applies only to the time error and frequency devices that provide, or in the case of back-up equipment may provide, input into the reporting or compliance ACE equation or provide real-time time error or frequency information to the system

operator. Frequency inputs from other sources that are for reference only are excluded. The time error and frequency measurement devices may not necessarily be located in the system operations control room or owned by the Balancing Authority; however the Balancing Authority has the responsibility for the accuracy of the frequency and time error measurement devices. No other devices are included in R 17. The other devices listed in the table at the end of R17 are for reference only and do not have any mandatory calibration or accuracy requirements.

New or replacement equipment that provides the same functions noted above requires the same calibrations. Some devices used for time error and frequency measurement cannot be calibrated as such. In this case, these devices should be cross-checked against other properly calibrated equipment and replaced if the devices do not meet the required level of accuracy.

A. Introduction

1. Title: Cyber Security — Security Management Controls

2. Number: CIP-003-3

3. Purpose: Standard CIP-003-3 requires that Responsible Entities have minimum security management controls in place to protect Critical Cyber Assets. Standard CIP-003-3 should be read as part of a group of standards numbered Standards CIP-002-3 through CIP-009-3.

4. Applicability:

4.1. Within the text of Standard CIP-003-3, "Responsible Entity" shall mean:

4.1.1 Reliability Coordinator.

4.1.2 Balancing Authority.

4.1.3 Interchange Authority.

4.1.4 Transmission Service Provider.

4.1.5 Transmission Owner.

4.1.6 Transmission Operator.

4.1.7 Generator Owner.

4.1.8 Generator Operator.

4.1.9 Load Serving Entity.

4.1.10 NERC.

4.1.11 Regional Entity.

4.2. The following are exempt from Standard CIP-003-3:

4.2.1 Facilities regulated by the U.S. Nuclear Regulatory Commission or the Canadian Nuclear Safety Commission.

4.2.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.3 Responsible Entities that, in compliance with Standard CIP-002-3, identify that they have no Critical Cyber Assets shall only be required to comply with CIP-003-3 Requirement R2.

5. Effective Date: The first day of the third calendar quarter after applicable regulatory approvals have been received (or the Reliability Standard otherwise becomes effective the first day of the third calendar quarter after BOT adoption in those jurisdictions where regulatory approval is not required).

B. Requirements

R1. Cyber Security Policy — The Responsible Entity shall document and implement a cyber security policy that represents management's commitment and ability to secure its Critical Cyber Assets. The Responsible Entity shall, at minimum, ensure the following:

R1.1. The cyber security policy addresses the requirements in Standards CIP-002-3 through CIP-009-3, including provision for emergency situations.

R1.2. The cyber security policy is readily available to all personnel who have access to, or are responsible for, Critical Cyber Assets. (Retired)

R1.3. Annual review and approval of the cyber security policy by the senior manager assigned pursuant to R2.

R2. Leadership — The Responsible Entity shall assign a single senior manager with overall responsibility and authority for leading and managing the entity's implementation of, and adherence to, Standards CIP-002-3 through CIP-009-3.

R2.1. The senior manager shall be identified by name, title, and date of designation.

R2.2. Changes to the senior manager must be documented within thirty calendar days of the effective date.

R2.3. Where allowed by Standards CIP-002-3 through CIP-009-3, the senior manager may delegate authority for specific actions to a named delegate or delegates. These delegations shall be documented in the same manner as R2.1 and R2.2, and approved by the senior manager.

R2.4. The senior manager or delegate(s), shall authorize and document any exception from the requirements of the cyber security policy.

R3. Exceptions — Instances where the Responsible Entity cannot conform to its cyber security policy must be documented as exceptions and authorized by the senior manager or delegate(s). (Retired)

R3.1. Exceptions to the Responsible Entity's cyber security policy must be documented within thirty days of being approved by the senior manager or delegate(s). (Retired)

R3.2. Documented exceptions to the cyber security policy must include an explanation as to why the exception is necessary and any compensating measures. (Retired)

R3.3. Authorized exceptions to the cyber security policy must be reviewed and approved annually by the senior manager or delegate(s) to ensure the exceptions are still required and valid. Such review and approval shall be documented. (Retired)

R4. Information Protection — The Responsible Entity shall implement and document a program to identify, classify, and protect information associated with Critical Cyber Assets.

R4.1. The Critical Cyber Asset information to be protected shall include, at a minimum and regardless of media type, operational procedures, lists as required in Standard CIP-002-3, network topology or similar diagrams, floor plans of computing centers that contain Critical Cyber Assets, equipment layouts of Critical Cyber Assets, disaster recovery plans, incident response plans, and security configuration information.

R4.2. The Responsible Entity shall classify information to be protected under this program based on the sensitivity of the Critical Cyber Asset information. (Retired)

R4.3. The Responsible Entity shall, at least annually, assess adherence to its Critical Cyber Asset information protection program, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.

R5. Access Control — The Responsible Entity shall document and implement a program for managing access to protected Critical Cyber Asset information.

R5.1. The Responsible Entity shall maintain a list of designated personnel who are responsible for authorizing logical or physical access to protected information.

R5.1.1. Personnel shall be identified by name, title, and the information for which they are responsible for authorizing access.

R5.1.2. The list of personnel responsible for authorizing access to protected information shall be verified at least annually.

R5.2. The Responsible Entity shall review at least annually the access privileges to protected information to confirm that access privileges are correct and that they correspond with the Responsible Entity's needs and appropriate personnel roles and responsibilities.

R5.3. The Responsible Entity shall assess and document at least annually the processes for controlling access privileges to protected information.

R6. Change Control and Configuration Management — The Responsible Entity shall establish and document a process of change control and configuration management for adding, modifying, replacing, or removing Critical Cyber Asset hardware or software, and implement supporting configuration management activities to identify, control and document all entity or vendor-related changes to hardware and software components of Critical Cyber Assets pursuant to the change control process.

C. Measures

M1. The Responsible Entity shall make available documentation of its cyber security policy as specified in Requirement R1. Additionally, the Responsible Entity shall demonstrate that the cyber security policy is available as specified in Requirement R1.2. (R1.2 retired)

M2. The Responsible Entity shall make available documentation of the assignment of, and changes to, its leadership as specified in Requirement R2.

M3. The Responsible Entity shall make available documentation of the exceptions, as specified in Requirement R3. (Retired)

M4. The Responsible Entity shall make available documentation of its information protection program as specified in Requirement R4.

M5. The Responsible Entity shall make available its access control documentation as specified in Requirement R5.

M6. The Responsible Entity shall make available its change control and configuration management documentation as specified in Requirement R6.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

1.1.1 Regional Entity for Responsible Entities that do not perform delegated tasks for their Regional Entity.

1.1.2 ERO for Regional Entity.

1.1.3 Third-party monitor without vested interest in the outcome for NERC.

1.2. Compliance Monitoring Period and Reset Time Frame

Not applicable.

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

1.4.1 The Responsible Entity shall keep all documentation and records from the previous full calendar year unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

1.4.2 The Compliance Enforcement Authority in conjunction with the Registered Entity shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

1.5.1 None

2. Violation Severity Levels (To be developed later.)

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
2		Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a responsible entity. Rewording of Effective Date. Requirement R2 applies to all Responsible Entities, including Responsible Entities which have no Critical Cyber Assets. Modified the personnel identification information requirements in R5.1.1 to include name, title, and the information for which they are responsible for authorizing access (removed the business phone information). Changed compliance monitor to Compliance Enforcement Authority.	
3		Update version number from -2 to -3	
3	12/16/09	Approved by the NERC Board of Trustees	Update

	3	TBD	R1.2, R3, R3.1, R3.2, R3.3, and R4.2 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. Title: Cyber Security — Security Management Controls

2. Number: CIP-003-4

3. Purpose: Standard CIP-003-4 requires that Responsible Entities have minimum security management controls in place to protect Critical Cyber Assets. Standard CIP-003-4 should be read as part of a group of standards numbered Standards CIP-002-4 through CIP-009-4.

4. Applicability:

4.1. Within the text of Standard CIP-003-4, "Responsible Entity" shall mean:

4.1.1 Reliability Coordinator.

4.1.2 Balancing Authority.

4.1.3 Interchange Authority.

4.1.4 Transmission Service Provider.

4.1.5 Transmission Owner.

4.1.6 Transmission Operator.

4.1.7 Generator Owner.

4.1.8 Generator Operator.

4.1.9 Load Serving Entity.

4.1.10 NERC.

4.1.11 Regional Entity.

4.2. The following are exempt from Standard CIP-003-4:

4.2.1 Facilities regulated by the Canadian Nuclear Safety Commission.

4.2.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.3 In nuclear plants, the systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F. R. Section 73.54

4.2.4 Responsible Entities that, in compliance with Standard CIP-002-4, identify that they have no Critical Cyber Assets shall only be required to comply with CIP-003-4 Requirement R2.

5. Effective Date: The first day of the eighth calendar quarter after applicable regulatory approvals have been received (or the Reliability Standard otherwise becomes effective the first day of the ninth calendar quarter after BOT adoption in those jurisdictions where regulatory approval is not required).

B. Requirements

R1. Cyber Security Policy — The Responsible Entity shall document and implement a cyber security policy that represents management's commitment and ability to secure its Critical Cyber Assets. The Responsible Entity shall, at minimum, ensure the following:

R1.1. The cyber security policy addresses the requirements in Standards CIP-002-4 through CIP-009-4, including provision for emergency situations.

R1.2. The cyber security policy is readily available to all personnel who have access to, or are responsible for, Critical Cyber Assets. (Retired)

R1.3. Annual review and approval of the cyber security policy by the senior manager assigned pursuant to R2.

R2. Leadership — The Responsible Entity shall assign a single senior manager with overall responsibility and authority for leading and managing the entity's implementation of, and adherence to, Standards CIP-002-4 through CIP-009-4.

R2.1. The senior manager shall be identified by name, title, and date of designation.

R2.2. Changes to the senior manager must be documented within thirty calendar days of the effective date.

R2.3. Where allowed by Standards CIP-002-4 through CIP-009-4, the senior manager may delegate authority for specific actions to a named delegate or delegates. These delegations shall be documented in the same manner as R2.1 and R2.2, and approved by the senior manager.

R2.4. The senior manager or delegate(s), shall authorize and document any exception from the requirements of the cyber security policy.

R3. Exceptions — Instances where the Responsible Entity cannot conform to its cyber security policy must be documented as exceptions and authorized by the senior manager or delegate(s). (Retired)

R3.1. Exceptions to the Responsible Entity's cyber security policy must be documented within thirty days of being approved by the senior manager or delegate(s). (Retired)

R3.2. Documented exceptions to the cyber security policy must include an explanation as to why the exception is necessary and any compensating measures. (Retired)

R3.3. Authorized exceptions to the cyber security policy must be reviewed and approved annually by the senior manager or delegate(s) to ensure the exceptions are still required and valid. Such review and approval shall be documented. (Retired)

R4. Information Protection — The Responsible Entity shall implement and document a program to identify, classify, and protect information associated with Critical Cyber Assets.

R4.1. The Critical Cyber Asset information to be protected shall include, at a minimum and regardless of media type, operational procedures, lists as required in Standard CIP-002-4, network topology or similar diagrams, floor plans of computing centers that contain Critical Cyber Assets, equipment layouts of Critical Cyber Assets, disaster recovery plans, incident response plans, and security configuration information.

R4.2. The Responsible Entity shall classify information to be protected under this program based on the sensitivity of the Critical Cyber Asset information. (Retired)

R4.3. The Responsible Entity shall, at least annually, assess adherence to its Critical Cyber Asset information protection program, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.

R5. Access Control — The Responsible Entity shall document and implement a program for managing access to protected Critical Cyber Asset information.

R5.1. The Responsible Entity shall maintain a list of designated personnel who are responsible for authorizing logical or physical access to protected information.

R5.1.1. Personnel shall be identified by name, title, and the information for which they are responsible for authorizing access.

R5.1.2. The list of personnel responsible for authorizing access to protected information shall be verified at least annually.

R5.2. The Responsible Entity shall review at least annually the access privileges to protected information to confirm that access privileges are correct and that they correspond with the Responsible Entity's needs and appropriate personnel roles and responsibilities.

R5.3. The Responsible Entity shall assess and document at least annually the processes for controlling access privileges to protected information.

R6. Change Control and Configuration Management — The Responsible Entity shall establish and document a process of change control and configuration management for adding, modifying, replacing, or removing Critical Cyber Asset hardware or software, and implement supporting configuration management activities to identify, control and document all entity or vendor-related changes to hardware and software components of Critical Cyber Assets pursuant to the change control process.

C. Measures

M1. The Responsible Entity shall make available documentation of its cyber security policy as specified in Requirement R1. Additionally, the Responsible Entity shall demonstrate that the cyber security policy is available as specified in Requirement R1.2. (R1.2 retired)

M2. The Responsible Entity shall make available documentation of the assignment of, and changes to, its leadership as specified in Requirement R2.

M3. The Responsible Entity shall make available documentation of the exceptions, as specified in Requirement R3. (Retired)

M4. The Responsible Entity shall make available documentation of its information protection program as specified in Requirement R4.

M5. The Responsible Entity shall make available its access control documentation as specified in Requirement R5.

M6. The Responsible Entity shall make available its change control and configuration management documentation as specified in Requirement R6.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

1.2. The RE shall serve as the CEA with the following exceptions:

1.2.1 For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.

1.2.2 For Reliability Coordinators and other functional entities that work for their Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

1.2.3 For Responsible Entities that are also Regional Entities, the ERO or a Regional Entity approved by the ERO and FERC or other applicable governmental authorities shall serve as the Compliance Enforcement Authority.

1.2.4 For the ERO, a third-party monitor without vested interest in the outcome for the ERO shall serve as the Compliance Enforcement Authority.

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

1.4.1 The Responsible Entity shall keep all documentation and records from the previous full calendar year unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

1.4.2 The Compliance Enforcement Authority in conjunction with the Registered Entity shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

1.5.1 None

2. Violation Severity Levels

Requirement	VRF	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	MEDIUM	N/A	N/A	The Responsible Entity has documented but not implemented a cyber security policy.	The Responsible Entity has not documented nor implemented a cyber security policy.
R1.1.	LOWER	N/A	N/A	N/A	The Responsible Entity's cyber security policy does not address all the requirements in Standards CIP-002-4 through CIP-009-4, including provision for emergency situations.
R1.2. (Retired)	LOWER	N/A	N/A	N/A	The Responsible Entity's cyber security policy is not readily available to all personnel who have access to, or are responsible for, Critical Cyber Assets.
R1.3	LOWER	N/A	N/A	The Responsible Entity's senior manager, assigned pursuant to R2, annually reviewed but did not annually approve its cyber security policy.	The Responsible Entity's senior manager, assigned pursuant to R2, did not annually review nor approve its cyber security policy.
R2.	LOWER	N/A	N/A	N/A	The Responsible Entity has not assigned a single senior manager with overall responsibility and authority for leading and managing the entity's implementation of, and adherence to, Standards CIP-002-4 through CIP-009-4.
R2.1.	LOWER	N/A	N/A	N/A	The senior manager is not identified by name, title, and date of designation.
R2.2.	LOWER	Changes to the senior manager were documented in greater than 30 but less than 60 days of the effective date.	Changes to the senior manager were documented in 60 or more but less than 90 days of the effective date.	Changes to the senior manager were documented in 90 or more but less than 120 days of the effective date.	Changes to the senior manager were documented in 120 or more days of the effective date.
R2.3.	LOWER	N/A	N/A	The identification of a senior manager's delegate does not include at least one of the following; name, title, or date of the designation, OR The document is not approved by the senior manager, OR Changes to the delegated authority are not documented	A senior manager's delegate is not identified by name, title, and date of designation; the document delegating the authority does not identify the authority being delegated; the document delegating the authority is not approved by the senior manager; AND changes to the delegated authority are not documented within thirty calendar days of the effective date.

Requirement	VRF	Lower VSL	Moderate VSL	High VSL	Severe VSL
				within thirty calendar days of the effective date.	
R2.4	LOWER	N/A	N/A	N/A	The senior manager or delegate(s) did not authorize and document any exceptions from the requirements of the cyber security policy as required.
R3. (Retired)	LOWER	N/A	N/A	In Instances where the Responsible Entity cannot conform to its cyber security policy (pertaining to CIP 002 through CIP 009), exceptions were documented, but were not authorized by the senior manager or delegate(s).	In Instances where the Responsible Entity cannot conform to its cyber security policy (pertaining to CIP 002 through CIP 009), exceptions were not documented, and were not authorized by the senior manager or delegate(s).
R3.1. (Retired)	LOWER	Exceptions to the Responsible Entity's cyber security policy were documented in more than 30 but less than 60 days of being approved by the senior manager or delegate(s).	Exceptions to the Responsible Entity's cyber security policy were documented in 60 or more but less than 90 days of being approved by the senior manager or delegate(s).	Exceptions to the Responsible Entity's cyber security policy were documented in 90 or more but less than 120 days of being approved by the senior manager or delegate(s).	Exceptions to the Responsible Entity's cyber security policy were documented in 120 or more days of being approved by the senior manager or delegate(s).
R3.2. (Retired)	LOWER	N/A	N/A	The Responsible Entity has a documented exception to the cyber security policy (pertaining to CIP 002-4 through CIP 009-4) but did not include either: 1) an explanation as to why the exception is necessary, or 2) any compensating measures.	The Responsible Entity has a documented exception to the cyber security policy (pertaining to CIP 002-4 through CIP 009-4) but did not include both: 1) an explanation as to why the exception is necessary, and 2) any compensating measures.
R3.3. (Retired)	LOWER	N/A	N/A	Exceptions to the cyber security policy (pertaining to CIP 002-4 through CIP 009-4) were reviewed but not approved annually by the senior manager or delegate(s) to ensure the exceptions are still required and valid.	Exceptions to the cyber security policy (pertaining to CIP 002-4 through CIP 009-4) were not reviewed nor approved annually by the senior manager or delegate(s) to ensure the exceptions are still required and valid.
R4.	MEDIUM	N/A	The Responsible Entity implemented but did not document a program to identify, classify, and protect information associated with Critical Cyber Assets.	The Responsible Entity documented but did not implement a program to identify, classify, and protect information associated with Critical Cyber Assets.	The Responsible Entity did not implement nor document a program to identify, classify, and protect information associated with Critical Cyber Assets.
R4.1.	MEDIUM	N/A	N/A	The information protection program does not include one of the minimum information types to be protected as detailed in R4.1.	The information protection program does not include two or more of the minimum information types to be protected as detailed in R4.1.

Requirement	VRF	Lower VSL	Moderate VSL	High VSL	Severe VSL
R4.2. (Retired)	LOWER	N/A	N/A	N/A	The Responsible Entity did not classify the information to be protected under this program based on the sensitivity of the Critical Cyber Asset information.
R4.3.	LOWER	N/A	The Responsible Entity annually assessed adherence to its Critical Cyber Asset information protection program, documented the assessment results, which included deficiencies identified during the assessment but did not implement a remediation plan.	The Responsible Entity annually assessed adherence to its Critical Cyber Asset information protection program, did not document the assessment results, and did not implement a remediation plan.	The Responsible Entity did not annually, assess adherence to its Critical Cyber Asset information protection program, document the assessment results, nor implement an action plan to remediate deficiencies identified during the assessment.
R5.	LOWER	N/A	The Responsible Entity implemented but did not document a program for managing access to protected Critical Cyber Asset information.	The Responsible Entity documented but did not implement a program for managing access to protected Critical Cyber Asset information.	The Responsible Entity did not implement nor document a program for managing access to protected Critical Cyber Asset information.
R5.1.	LOWER	N/A	N/A	The Responsible Entity maintained a list of designated personnel for authorizing either logical or physical access but not both.	The Responsible Entity did not maintain a list of designated personnel who are responsible for authorizing logical or physical access to protected information.
R5.1.1.	LOWER	N/A	N/A	The Responsible Entity did identify the personnel by name and title but did not identify the information for which they are responsible for authorizing access.	The Responsible Entity did not identify the personnel by name and title nor the information for which they are responsible for authorizing access.
R5.1.2.	LOWER	N/A	N/A	N/A	The Responsible Entity did not verify at least annually the list of personnel responsible for authorizing access to protected information.
R5.2.	LOWER	N/A	N/A	N/A	The Responsible Entity did not review at least annually the access privileges to protected information to confirm that access privileges are correct and that they correspond with the Responsible Entity's needs and appropriate personnel roles and responsibilities.
R5.3.	LOWER	N/A	N/A	N/A	The Responsible Entity did not assess and document at least annually the processes for controlling access privileges to protected information.
R6. Version History

Version	Date	Action	Change Tracking
2		Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a responsible entity. Rewording of Effective Date. Requirement R2 applies to all Responsible Entities, including Responsible Entities which have no Critical Cyber Assets. Modified the personnel identification information requirements in R5.1.1 to include name, title, and the information for which they are responsible for authorizing access (removed the business phone information). Changed compliance monitor to Compliance Enforcement Authority.	
3		Update version number from -2 to -3	
3	12/16/09	Approved by the NERC Board of Trustees	Update
4	Board approved 01/24/2011	Update version number from “3” to “4”	Update to conform to changes to CIP-002-4 (Project 2008-06)
4	4/19/12	FERC Order issued approving CIP-003-4 (approval becomes effective June 25, 2012) Added approved VRF/VSL table to section D.2.	
3, 4	TBD	R1.2, R3, R3.1, R3.2, R3.3, and R4.2 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. Title: Cyber Security — Electronic Security Perimeter(s)

2. Number: CIP-005-3a

3. Purpose: Standard CIP-005-3 requires the identification and protection of the Electronic Security Perimeter(s) inside which all Critical Cyber Assets reside, as well as all access points on the perimeter. Standard CIP-005-3 should be read as part of a group of standards numbered Standards CIP-002-3 through CIP-009-3.

4. Applicability

4.1. Within the text of Standard CIP-005-3, "Responsible Entity" shall mean:

4.1.1 Reliability Coordinator.

4.1.2 Balancing Authority.

4.1.3 Interchange Authority.

4.1.4 Transmission Service Provider.

4.1.5 Transmission Owner.

4.1.6 Transmission Operator.

4.1.7 Generator Owner.

4.1.8 Generator Operator.

4.1.9 Load Serving Entity.

4.1.10 NERC.

4.1.11 Regional Entity

4.2. The following are exempt from Standard CIP-005-3:

4.2.1 Facilities regulated by the U.S. Nuclear Regulatory Commission or the Canadian Nuclear Safety Commission.

4.2.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.3 Responsible Entities that, in compliance with Standard CIP-002-3, identify that they have no Critical Cyber Assets.

5. Effective Date: The first day of the third calendar quarter after applicable regulatory approvals have been received (or the Reliability Standard otherwise becomes effective in those jurisdictions where regulatory approval is not required).

B. Requirements

R1. Electronic Security Perimeter — The Responsible Entity shall ensure that every Critical Cyber Asset resides within an Electronic Security Perimeter. The Responsible Entity shall identify and document the Electronic Security Perimeter(s) and all access points to the perimeter(s).

R1.1. Access points to the Electronic Security Perimeter(s) shall include any externally connected communication end point (for example, dial-up modems) terminating at any device within the Electronic Security Perimeter(s).

R1.2. For a dial-up accessible Critical Cyber Asset that uses a non-routable protocol, the Responsible Entity shall define an Electronic Security Perimeter for that single access point at the dial-up device.

R1.3. Communication links connecting discrete Electronic Security Perimeters shall not be considered part of the Electronic Security Perimeter. However, end points of these communication links within the Electronic Security Perimeter(s) shall be considered access points to the Electronic Security Perimeter(s).

R1.4. Any non-critical Cyber Asset within a defined Electronic Security Perimeter shall be identified and protected pursuant to the requirements of Standard CIP-005-3.

R1.5. Cyber Assets used in the access control and/or monitoring of the Electronic Security Perimeter(s) shall be afforded the protective measures as a specified in Standard CIP-003-3; Standard CIP-004-3 Requirement R3; Standard CIP-005-3 Requirements R2 and R3; Standard CIP-006-3 Requirement R3; Standard CIP-007-3 Requirements R1 and R3 through R9; Standard CIP-008-3; and Standard CIP-009-3.

R1.6. The Responsible Entity shall maintain documentation of Electronic Security Perimeter(s), all interconnected Critical and non-critical Cyber Assets within the Electronic Security Perimeter(s), all electronic access points to the Electronic Security Perimeter(s) and the Cyber Assets deployed for the access control and monitoring of these access points.

R2. Electronic Access Controls — The Responsible Entity shall implement and document the organizational processes and technical and procedural mechanisms for control of electronic access at all electronic access points to the Electronic Security Perimeter(s).

R2.1. These processes and mechanisms shall use an access control model that denies access by default, such that explicit access permissions must be specified.

R2.2. At all access points to the Electronic Security Perimeter(s), the Responsible Entity shall enable only ports and services required for operations and for monitoring Cyber Assets within the Electronic Security Perimeter, and shall document, individually or by specified grouping, the configuration of those ports and services.

R2.3. The Responsible Entity shall implement and maintain a procedure for securing dial-up access to the Electronic Security Perimeter(s).

R2.4. Where external interactive access into the Electronic Security Perimeter has been enabled, the Responsible Entity shall implement strong procedural or technical controls at the access points to ensure authenticity of the accessing party, where technically feasible.

R2.5. The required documentation shall, at least, identify and describe:

R2.5.1. The processes for access request and authorization.

R2.5.2. The authentication methods.

R2.5.3. The review process for authorization rights, in accordance with Standard CIP-004-3 Requirement R4.

R2.5.4. The controls used to secure dial-up accessible connections.

R2.6. Appropriate Use Banner — Where technically feasible, electronic access control devices shall display an appropriate use banner on the user screen upon all interactive access attempts. The Responsible Entity shall maintain a document identifying the content of the banner. (Retired)

R3. Monitoring Electronic Access — The Responsible Entity shall implement and document an electronic or manual process(es) for monitoring and logging access at access points to the Electronic Security Perimeter(s) twenty-four hours a day, seven days a week.

R3.1. For dial-up accessible Critical Cyber Assets that use non-routable protocols, the Responsible Entity shall implement and document monitoring process(es) at each access point to the dial-up device, where technically feasible.

R3.2. Where technically feasible, the security monitoring process(es) shall detect and alert for attempts at or actual unauthorized accesses. These alerts shall provide for appropriate notification to designated response personnel. Where alerting is not technically feasible, the Responsible Entity shall review or otherwise assess access logs for attempts at or actual unauthorized accesses at least every ninety calendar days.

R4. Cyber Vulnerability Assessment — The Responsible Entity shall perform a cyber vulnerability assessment of the electronic access points to the Electronic Security Perimeter(s) at least annually. The vulnerability assessment shall include, at a minimum, the following:

R4.1. A document identifying the vulnerability assessment process;

R4.2. A review to verify that only ports and services required for operations at these access points are enabled;

R4.3. The discovery of all access points to the Electronic Security Perimeter;

R4.4. A review of controls for default accounts, passwords, and network management community strings;

R4.5. Documentation of the results of the assessment, the action plan to remediate or mitigate vulnerabilities identified in the assessment, and the execution status of that action plan.

R5. Documentation Review and Maintenance — The Responsible Entity shall review, update, and maintain all documentation to support compliance with the requirements of Standard CIP-005-3.

R5.1. The Responsible Entity shall ensure that all documentation required by Standard CIP-005-3 reflect current configurations and processes and shall review the documents and procedures referenced in Standard CIP-005-3 at least annually.

R5.2. The Responsible Entity shall update the documentation to reflect the modification of the network or controls within ninety calendar days of the change.

R5.3. The Responsible Entity shall retain electronic access logs for at least ninety calendar days. Logs related to reportable incidents shall be kept in accordance with the requirements of Standard CIP-008-3.

C. Measures

M1. The Responsible Entity shall make available documentation about the Electronic Security Perimeter as specified in Requirement R1.

M2. The Responsible Entity shall make available documentation of the electronic access controls to the Electronic Security Perimeter(s), as specified in Requirement R2.

M3. The Responsible Entity shall make available documentation of controls implemented to log and monitor access to the Electronic Security Perimeter(s) as specified in Requirement R3.

M4. The Responsible Entity shall make available documentation of its annual vulnerability assessment as specified in Requirement R4.

M5. The Responsible Entity shall make available access logs and documentation of review, changes, and log retention as specified in Requirement R5.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

1.1.1 Regional Entity for Responsible Entities that do not perform delegated tasks for their Regional Entity.

1.1.2 ERO for Regional Entity.

1.1.3 Third-party monitor without vested interest in the outcome for NERC.

1.2. Compliance Monitoring Period and Reset Time Frame

Not applicable.

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

1.4.1 The Responsible Entity shall keep logs for a minimum of ninety calendar days, unless: a) longer retention is required pursuant to Standard CIP-008-3, Requirement R2; b) directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

1.4.2 The Responsible Entity shall keep other documents and records required by Standard CIP-005-3 from the previous full calendar year.

1.4.3 The Compliance Enforcement Authority in conjunction with the Registered Entity shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

2. Violation Severity Levels (To be developed later.)

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
1	01/16/06	D.2.3.1 — Change “Critical Assets,” to “Critical Cyber Assets” as intended.	03/24/06
2		Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a responsible entity. Rewording of Effective Date. Revised the wording of the Electronic Access Controls requirement stated in R2.3 to clarify that the Responsible Entity	

		shall “implement and maintain” a procedure for securing dial-up access to the Electronic Security Perimeter(s). Changed compliance monitor to Compliance Enforcement Authority.	
3		Update version from -2 to -3	
3	12/16/09	Approved by the NERC Board of Trustees	Update
3a	02/16/10	Added Appendix 1 – Interpretation of R1.3 approved by BOT on February 16, 2010	Interpretation
3a	02/02/11	Approved by FERC	
3a	TBD	R2.6 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

Appendix 1

Requirement Number and Text of Requirement
Section 4.2.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters. **Requirement R1.3** Communication links connecting discrete Electronic Security Perimeters shall not be considered part of the Electronic Security Perimeter. However, end points of these communication links within the Electronic Security Perimeter(s) shall be considered access points to the Electronic Security Perimeter(s).
Question 1 (Section 4.2.2)
What kind of cyber assets are referenced in 4.2.2 as "associated"? What else could be meant except the devices forming the communication link?
Response to Question 1
In the context of applicability, associated Cyber Assets refer to any communications devices external to the Electronic Security Perimeter, i.e., beyond the point at which access to the Electronic Security Perimeter is controlled. Devices controlling access into the Electronic Security Perimeter are not exempt.
Question 2 (Section 4.2.2)
Is the communication link physical or logical? Where does it begin and terminate?
Response to Question 2
The drafting team interprets the data communication link to be physical or logical, and its termination points depend upon the design and architecture of the communication link.
Question 3 (Requirement R1.3)
Please clarify what is meant by an “endpoint”? Is it physical termination? Logical termination of OSI layer 2, layer 3, or above?
Response to Question 3
The drafting team interprets the endpoint to mean the device at which a physical or logical communication link terminates. The endpoint is the Electronic Security Perimeter access point if access into the Electronic Security Perimeter is controlled at the endpoint, irrespective of which Open Systems Interconnection (OSI) layer is managing the communication.
Question 4 (Requirement R1.3)
If “endpoint” is defined as logical and refers to layer 3 and above, please clarify if the termination points of an encrypted tunnel (layer 3) must be treated as an “access point? If two control centers are owned and managed by the same entity, connected via an encrypted link by properly applied Federal

Information Processing Standards, with tunnel termination points that are within the control center ESPs and PSPs and do not terminate on the firewall but on a separate internal device, and the encrypted traffic already passes through a firewall access point at each ESP boundary where port/protocol restrictions are applied, must these encrypted communication tunnel termination points be treated as "access points" in addition to the firewalls through which the encrypted traffic has already passed?
Response to Question 4
In the case where the “endpoint” is defined as logical and is >= layer 3, the termination points of an encrypted tunnel must be treated as an “access point.” The encrypted communication tunnel termination points referred to above are “access points.”

A. Introduction

1. Title: Cyber Security — Electronic Security Perimeter(s)

2. Number: CIP-005-4a

3. Purpose: Standard CIP-005-4a requires the identification and protection of the Electronic Security Perimeter(s) inside which all Critical Cyber Assets reside, as well as all access points on the perimeter. Standard CIP-005-4a should be read as part of a group of standards numbered Standards CIP-002-4 through CIP-009-4.

4. Applicability

4.1. Within the text of Standard CIP-005-4a, "Responsible Entity" shall mean:

4.1.1 Reliability Coordinator.

4.1.2 Balancing Authority.

4.1.3 Interchange Authority.

4.1.4 Transmission Service Provider.

4.1.5 Transmission Owner.

4.1.6 Transmission Operator.

4.1.7 Generator Owner.

4.1.8 Generator Operator.

4.1.9 Load Serving Entity.

4.1.10 NERC.

4.1.11 Regional Entity

4.2. The following are exempt from Standard CIP-005-4a:

4.2.1 Facilities regulated by the Canadian Nuclear Safety Commission.

4.2.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.3 Responsible Entities that, in compliance with Standard CIP-002-4, identify that they have no Critical Cyber Assets.

4.2.4 In nuclear plants, the systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F. R. Section 73.54.

5. Effective Date: The first day of the eighth calendar quarter after applicable regulatory approvals have been received (or the Reliability Standard otherwise becomes effective the first day of the ninth calendar quarter after BOT adoption in those jurisdictions where regulatory approval is not required).

B. Requirements

R1. Electronic Security Perimeter — The Responsible Entity shall ensure that every Critical Cyber Asset resides within an Electronic Security Perimeter. The Responsible Entity shall identify and document the Electronic Security Perimeter(s) and all access points to the perimeter(s).

R1.1. Access points to the Electronic Security Perimeter(s) shall include any externally connected communication end point (for example, dial-up modems) terminating at any device within the Electronic Security Perimeter(s).

R1.2. For a dial-up accessible Critical Cyber Asset that uses a non-routable protocol, the Responsible Entity shall define an Electronic Security Perimeter for that single access point at the dial-up device.

R1.3. Communication links connecting discrete Electronic Security Perimeters shall not be considered part of the Electronic Security Perimeter. However, end points of these communication links within the Electronic Security Perimeter(s) shall be considered access points to the Electronic Security Perimeter(s).

R1.4. Any non-critical Cyber Asset within a defined Electronic Security Perimeter shall be identified and protected pursuant to the requirements of Standard CIP-005-4a.

R1.5. Cyber Assets used in the access control and/or monitoring of the Electronic Security Perimeter(s) shall be afforded the protective measures as a specified in Standard CIP-003-4; Standard CIP-004-4 Requirement R3; Standard CIP-005-4a Requirements R2 and R3; Standard CIP-006-4c Requirement R3; Standard CIP-007-4 Requirements R1 and R3 through R9; Standard CIP-008-4; and Standard CIP-009-4.

R1.6. The Responsible Entity shall maintain documentation of Electronic Security Perimeter(s), all interconnected Critical and non-critical Cyber Assets within the Electronic Security Perimeter(s), all electronic access points to the Electronic Security Perimeter(s) and the Cyber Assets deployed for the access control and monitoring of these access points.

R2. Electronic Access Controls — The Responsible Entity shall implement and document the organizational processes and technical and procedural mechanisms for control of electronic access at all electronic access points to the Electronic Security Perimeter(s).

R2.1. These processes and mechanisms shall use an access control model that denies access by default, such that explicit access permissions must be specified.

R2.2. At all access points to the Electronic Security Perimeter(s), the Responsible Entity shall enable only ports and services required for operations and for monitoring Cyber Assets within the Electronic Security Perimeter, and shall document, individually or by specified grouping, the configuration of those ports and services.

R2.3. The Responsible Entity shall implement and maintain a procedure for securing dial-up access to the Electronic Security Perimeter(s).

R2.4. Where external interactive access into the Electronic Security Perimeter has been enabled, the Responsible Entity shall implement strong procedural or technical controls at the access points to ensure authenticity of the accessing party, where technically feasible.

R2.5. The required documentation shall, at least, identify and describe:

R2.5.1. The processes for access request and authorization.

R2.5.2. The authentication methods.

R2.5.3. The review process for authorization rights, in accordance with Standard CIP-004-4 Requirement R4.

R2.5.4. The controls used to secure dial-up accessible connections.

R2.6. Appropriate Use Banner — Where technically feasible, electronic access control devices shall display an appropriate use banner on the user screen upon all interactive access attempts. The Responsible Entity shall maintain a document identifying the content of the banner. (Retired)

R3. Monitoring Electronic Access — The Responsible Entity shall implement and document an electronic or manual process(es) for monitoring and logging access at access points to the Electronic Security Perimeter(s) twenty-four hours a day, seven days a week.

R3.1. For dial-up accessible Critical Cyber Assets that use non-routable protocols, the Responsible Entity shall implement and document monitoring process(es) at each access point to the dial-up device, where technically feasible.

R3.2. Where technically feasible, the security monitoring process(es) shall detect and alert for attempts at or actual unauthorized accesses. These alerts shall provide for appropriate notification to designated response personnel. Where alerting is not technically feasible, the Responsible Entity shall review or otherwise assess access logs for attempts at or actual unauthorized accesses at least every ninety calendar days.

R4. Cyber Vulnerability Assessment — The Responsible Entity shall perform a cyber vulnerability assessment of the electronic access points to the Electronic Security Perimeter(s) at least annually. The vulnerability assessment shall include, at a minimum, the following:

R4.1. A document identifying the vulnerability assessment process;

R4.2. A review to verify that only ports and services required for operations at these access points are enabled;

R4.3. The discovery of all access points to the Electronic Security Perimeter;

R4.4. A review of controls for default accounts, passwords, and network management community strings;

R4.5. Documentation of the results of the assessment, the action plan to remediate or mitigate vulnerabilities identified in the assessment, and the execution status of that action plan.

R5. Documentation Review and Maintenance — The Responsible Entity shall review, update, and maintain all documentation to support compliance with the requirements of Standard CIP-005-4a.

R5.1. The Responsible Entity shall ensure that all documentation required by Standard CIP-005-4a reflect current configurations and processes and shall review the documents and procedures referenced in Standard CIP-005-4a at least annually.

R5.2. The Responsible Entity shall update the documentation to reflect the modification of the network or controls within ninety calendar days of the change.

R5.3. The Responsible Entity shall retain electronic access logs for at least ninety calendar days. Logs related to reportable incidents shall be kept in accordance with the requirements of Standard CIP-008-4.

C. Measures

M1. The Responsible Entity shall make available documentation about the Electronic Security Perimeter as specified in Requirement R1.

M2. The Responsible Entity shall make available documentation of the electronic access controls to the Electronic Security Perimeter(s), as specified in Requirement R2.

M3. The Responsible Entity shall make available documentation of controls implemented to log and monitor access to the Electronic Security Perimeter(s) as specified in Requirement R3.

M4. The Responsible Entity shall make available documentation of its annual vulnerability assessment as specified in Requirement R4.

M5. The Responsible Entity shall make available access logs and documentation of review, changes, and log retention as specified in Requirement R5.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

1.2. The RE shall serve as the CEA with the following exceptions:

1.2.1 For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.

1.2.1 For Reliability Coordinators and other functional entities that work for their Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

1.2.1 For Responsible Entities that are also Regional Entities, the ERO or a Regional Entity approved by the ERO and FERC or other applicable governmental authorities shall serve as the Compliance Enforcement Authority.

1.2.2 For the ERO, a third-party monitor without vested interest in the outcome for the ERO shall serve as the Compliance Enforcement Authority.

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

1.4.1 The Responsible Entity shall keep logs for a minimum of ninety calendar days, unless: a) longer retention is required pursuant to Standard CIP-008-4, Requirement R2; b) directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

1.4.2 The Responsible Entity shall keep other documents and records required by Standard CIP-005-4a from the previous full calendar year.

1.4.3 The Compliance Enforcement Authority in conjunction with the Registered Entity shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

2. Violation Severity Levels

Requirement	VRF	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	MEDIUM	The Responsible Entity did not document one or more access points to the Electronic Security Perimeter(s).	The Responsible Entity identified but did not document one or more Electronic Security Perimeter(s).	The Responsible Entity did not ensure that one or more of the Critical Cyber Assets resides within an Electronic Security Perimeter. OR The Responsible Entity did not identify nor document one or more Electronic Security Perimeter(s).	The Responsible Entity did not ensure that one or more Critical Cyber Assets resides within an Electronic Security Perimeter, and the Responsible Entity did not identify and document the Electronic Security Perimeter(s) and all access points to the perimeter(s) for all Critical Cyber Assets.
R1.1.	MEDIUM	N/A	N/A	N/A	Access points to the Electronic Security Perimeter(s) do not include all externally connected communication end point (for example, dial-up modems) terminating at any device within the Electronic Security Perimeter(s).
R1.2.	MEDIUM	N/A	N/A	N/A	For one or more dial-up accessible Critical Cyber Assets that use a non-routable protocol, the Responsible Entity did not define an Electronic Security Perimeter for that single access point at the dial-up device.
R1.3.	MEDIUM	N/A	N/A	N/A	At least one end point of a communication link within the Electronic Security Perimeter(s) connecting discrete Electronic Security Perimeters was not considered an access point to the Electronic Security Perimeter.

The Responsible Entity retained electronic access logs for 60 or more calendar days, but for less than 75 calendar days.	The Responsible Entity retained electronic access logs for 45 or more calendar days , but for less than 60 calendar days.	The Responsible Entity retained electronic access logs for less than 45 calendar days.

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
1	01/16/06	D.2.3.1 — Change "Critical Assets," to "Critical Cyber Assets" as intended.	03/24/06
2	Approved by NERC Board of Trustees 5/6/09	Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a responsible entity. Rewording of Effective Date. Revised the wording of the Electronic Access Controls requirement stated in R2.3 to clarify that the Responsible Entity shall "implement and maintain" a procedure for securing dial-up access to the Electronic Security Perimeter(s). Changed compliance monitor to Compliance Enforcement Authority.	Revised.
3	12/16/09	Changed CIP-005-2 to CIP-005-3. Changed all references to CIP Version "2" standards to CIP Version "3" standards. For Violation Severity Levels, changed, "To be developed later" to "Developed separately."	Conforming revisions for FERC Order on CIP V2 Standards (9/30/2009)
2a	02/16/10	Added Appendix 1 — Interpretation of R1.3 approved by BOT on February 16, 2010	Addition
4a	01/24/11	Adopted by the NERC Board of Trustees	Update to conform to changes to CIP-002-4 (Project 2008-06) Update version number from "3" to "4a"
4a	4/19/12	FERC Order issued approving CIP-005-4a (approval becomes effective June 25, 2012) Added approved VRF/VSL table to section D.2.	
3a, 4a	TBD	R2.6 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

Appendix 1

Requirement Number and Text of Requirement
Section 4.2.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters. **Requirement R1.3** Communication links connecting discrete Electronic Security Perimeters shall not be considered part of the Electronic Security Perimeter. However, end points of these communication links within the Electronic Security Perimeter(s) shall be considered access points to the Electronic Security Perimeter(s).
Question 1 (Section 4.2.2)
What kind of cyber assets are referenced in 4.2.2 as "associated"? What else could be meant except the devices forming the communication link?
Response to Question 1
In the context of applicability, associated Cyber Assets refer to any communications devices external to the Electronic Security Perimeter, i.e., beyond the point at which access to the Electronic Security Perimeter is controlled. Devices controlling access into the Electronic Security Perimeter are not exempt.
Question 2 (Section 4.2.2)
Is the communication link physical or logical? Where does it begin and terminate?
Response to Question 2
The drafting team interprets the data communication link to be physical or logical, and its termination points depend upon the design and architecture of the communication link.
Question 3 (Requirement R1.3)
Please clarify what is meant by an “endpoint”? Is it physical termination? Logical termination of OSI layer 2, layer 3, or above?
Response to Question 3
The drafting team interprets the endpoint to mean the device at which a physical or logical communication link terminates. The endpoint is the Electronic Security Perimeter access point if access into the Electronic Security Perimeter is controlled at the endpoint, irrespective of which Open Systems Interconnection (OSI) layer is managing the communication.
Question 4 (Requirement R1.3)
If “endpoint” is defined as logical and refers to layer 3 and above, please clarify if the termination points of an encrypted tunnel (layer 3) must be treated as an “access point? If two control centers are

owned and managed by the same entity, connected via an encrypted link by properly applied Federal Information Processing Standards, with tunnel termination points that are within the control center ESPs and PSPs and do not terminate on the firewall but on a separate internal device, and the encrypted traffic already passes through a firewall access point at each ESP boundary where port/protocol restrictions are applied, must these encrypted communication tunnel termination points be treated as "access points" in addition to the firewalls through which the encrypted traffic has already passed?
Response to Question 4
In the case where the “endpoint” is defined as logical and is >= layer 3, the termination points of an encrypted tunnel must be treated as an “access point.” The encrypted communication tunnel termination points referred to above are “access points.”

A. Introduction

1. Title: Cyber Security — Systems Security Management

2. Number: CIP-007-3

3. Purpose: Standard CIP-007-3 requires Responsible Entities to define methods, processes, and procedures for securing those systems determined to be Critical Cyber Assets, as well as the other (non-critical) Cyber Assets within the Electronic Security Perimeter(s). Standard CIP-007-3 should be read as part of a group of standards numbered Standards CIP-002-3 through CIP-009-3.

4. Applicability:

4.1. Within the text of Standard CIP-007-3, "Responsible Entity" shall mean:

4.1.1 Reliability Coordinator.

4.1.2 Balancing Authority.

4.1.3 Interchange Authority.

4.1.4 Transmission Service Provider.

4.1.5 Transmission Owner.

4.1.6 Transmission Operator.

4.1.7 Generator Owner.

4.1.8 Generator Operator.

4.1.9 Load Serving Entity.

4.1.10 NERC.

4.1.11 Regional Entity.

4.2. The following are exempt from Standard CIP-007-3:

4.2.1 Facilities regulated by the U.S. Nuclear Regulatory Commission or the Canadian Nuclear Safety Commission.

4.2.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.3 Responsible Entities that, in compliance with Standard CIP-002-3, identify that they have no Critical Cyber Assets.

5. Effective Date: The first day of the third calendar quarter after applicable regulatory approvals have been received (or the Reliability Standard otherwise becomes effective the first day of the third calendar quarter after BOT adoption in those jurisdictions where regulatory approval is not required).

B. Requirements

R1. Test Procedures — The Responsible Entity shall ensure that new Cyber Assets and significant changes to existing Cyber Assets within the Electronic Security Perimeter do not adversely affect existing cyber security controls. For purposes of Standard CIP-007-3, a significant change shall, at a minimum, include implementation of security patches, cumulative service packs, vendor releases, and version upgrades of operating systems, applications, database platforms, or other third-party software or firmware.

R1.1. The Responsible Entity shall create, implement, and maintain cyber security test procedures in a manner that minimizes adverse effects on the production system or its operation.

R1.2. The Responsible Entity shall document that testing is performed in a manner that reflects the production environment.

R1.3. The Responsible Entity shall document test results.

R2. Ports and Services — The Responsible Entity shall establish, document and implement a process to ensure that only those ports and services required for normal and emergency operations are enabled.

R2.1. The Responsible Entity shall enable only those ports and services required for normal and emergency operations.

R2.2. The Responsible Entity shall disable other ports and services, including those used for testing purposes, prior to production use of all Cyber Assets inside the Electronic Security Perimeter(s).

R2.3. In the case where unused ports and services cannot be disabled due to technical limitations, the Responsible Entity shall document compensating measure(s) applied to mitigate risk exposure.

R3. Security Patch Management — The Responsible Entity, either separately or as a component of the documented configuration management process specified in CIP-003-3 Requirement R6, shall establish, document and implement a security patch management program for tracking, evaluating, testing, and installing applicable cyber security software patches for all Cyber Assets within the Electronic Security Perimeter(s).

R3.1. The Responsible Entity shall document the assessment of security patches and security upgrades for applicability within thirty calendar days of availability of the patches or upgrades.

R3.2. The Responsible Entity shall document the implementation of security patches. In any case where the patch is not installed, the Responsible Entity shall document compensating measure(s) applied to mitigate risk exposure.

R4. Malicious Software Prevention — The Responsible Entity shall use anti-virus software and other malicious software ("malware") prevention tools, where technically feasible, to detect, prevent, deter, and mitigate the introduction, exposure, and propagation of malware on all Cyber Assets within the Electronic Security Perimeter(s).

R4.1. The Responsible Entity shall document and implement anti-virus and malware prevention tools. In the case where anti-virus software and malware prevention tools are not installed, the Responsible Entity shall document compensating measure(s) applied to mitigate risk exposure.

R4.2. The Responsible Entity shall document and implement a process for the update of anti-virus and malware prevention "signatures." The process must address testing and installing the signatures.

R5. Account Management — The Responsible Entity shall establish, implement, and document technical and procedural controls that enforce access authentication of, and accountability for, all user activity, and that minimize the risk of unauthorized system access.

R5.1. The Responsible Entity shall ensure that individual and shared system accounts and authorized access permissions are consistent with the concept of "need to know" with respect to work functions performed.

R5.1.1. The Responsible Entity shall ensure that user accounts are implemented as approved by designated personnel. Refer to Standard CIP-003-3 Requirement R5.

R5.1.2. The Responsible Entity shall establish methods, processes, and procedures that generate logs of sufficient detail to create historical audit trails of individual user account access activity for a minimum of ninety days.

R5.1.3. The Responsible Entity shall review, at least annually, user accounts to verify access privileges are in accordance with Standard CIP-003-3 Requirement R5 and Standard CIP-004-3 Requirement R4.

R5.2. The Responsible Entity shall implement a policy to minimize and manage the scope and acceptable use of administrator, shared, and other generic account privileges including factory default accounts.

R5.2.1. The policy shall include the removal, disabling, or renaming of such accounts where possible. For such accounts that must remain enabled, passwords shall be changed prior to putting any system into service.

R5.2.2. The Responsible Entity shall identify those individuals with access to shared accounts.

R5.2.3. Where such accounts must be shared, the Responsible Entity shall have a policy for managing the use of such accounts that limits access to only those with authorization, an audit trail of the account use (automated or manual), and steps for securing the account in the event of personnel changes (for example, change in assignment or termination).

R5.3. At a minimum, the Responsible Entity shall require and use passwords, subject to the following, as technically feasible:

R5.3.1. Each password shall be a minimum of six characters.

R5.3.2. Each password shall consist of a combination of alpha, numeric, and "special" characters.

R5.3.3. Each password shall be changed at least annually, or more frequently based on risk.

R6. Security Status Monitoring — The Responsible Entity shall ensure that all Cyber Assets within the Electronic Security Perimeter, as technically feasible, implement automated tools or organizational process controls to monitor system events that are related to cyber security.

R6.1. The Responsible Entity shall implement and document the organizational processes and technical and procedural mechanisms for monitoring for security events on all Cyber Assets within the Electronic Security Perimeter.

R6.2. The security monitoring controls shall issue automated or manual alerts for detected Cyber Security Incidents.

R6.3. The Responsible Entity shall maintain logs of system events related to cyber security, where technically feasible, to support incident response as required in Standard CIP-008-3.

R6.4. The Responsible Entity shall retain all logs specified in Requirement R6 for ninety calendar days.

R6.5. The Responsible Entity shall review logs of system events related to cyber security and maintain records documenting review of logs.

R7. Disposal or Redeployment — The Responsible Entity shall establish and implement formal methods, processes, and procedures for disposal or redeployment of Cyber Assets within the Electronic Security Perimeter(s) as identified and documented in Standard CIP-005-3.

R7.1. Prior to the disposal of such assets, the Responsible Entity shall destroy or erase the data storage media to prevent unauthorized retrieval of sensitive cyber security or reliability data.

R7.2. Prior to redeployment of such assets, the Responsible Entity shall, at a minimum, erase the data storage media to prevent unauthorized retrieval of sensitive cyber security or reliability data.

R7.3. The Responsible Entity shall maintain records that such assets were disposed of or redeployed in accordance with documented procedures. (Retired)

R8. Cyber Vulnerability Assessment — The Responsible Entity shall perform a cyber vulnerability assessment of all Cyber Assets within the Electronic Security Perimeter at least annually. The vulnerability assessment shall include, at a minimum, the following:

R8.1. A document identifying the vulnerability assessment process;

R8.2. A review to verify that only ports and services required for operation of the Cyber Assets within the Electronic Security Perimeter are enabled;

R8.3. A review of controls for default accounts; and,

R8.4. Documentation of the results of the assessment, the action plan to remediate or mitigate vulnerabilities identified in the assessment, and the execution status of that action plan.

R9. Documentation Review and Maintenance — The Responsible Entity shall review and update the documentation specified in Standard CIP-007-3 at least annually. Changes resulting from modifications to the systems or controls shall be documented within thirty calendar days of the change being completed.

C. Measures

M1. The Responsible Entity shall make available documentation of its security test procedures as specified in Requirement R1.

M2. The Responsible Entity shall make available documentation as specified in Requirement R2.

M3. The Responsible Entity shall make available documentation and records of its security patch management program, as specified in Requirement R3.

M4. The Responsible Entity shall make available documentation and records of its malicious software prevention program as specified in Requirement R4.

M5. The Responsible Entity shall make available documentation and records of its account management program as specified in Requirement R5.

M6. The Responsible Entity shall make available documentation and records of its security status monitoring program as specified in Requirement R6.

M7. The Responsible Entity shall make available documentation and records of its program for the disposal or redeployment of Cyber Assets as specified in Requirement R7.

M8. The Responsible Entity shall make available documentation and records of its annual vulnerability assessment of all Cyber Assets within the Electronic Security Perimeters(s) as specified in Requirement R8.

M9. The Responsible Entity shall make available documentation and records demonstrating the review and update as specified in Requirement R9.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

1.1.1 Regional Entity for Responsible Entities that do not perform delegated tasks for their Regional Entity.

1.1.2 ERO for Regional Entity.

1.1.3 Third-party monitor without vested interest in the outcome for NERC.

1.2. Compliance Monitoring Period and Reset Time Frame

Not applicable.

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

1.4.1 The Responsible Entity shall keep all documentation and records from the previous full calendar year unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

1.4.2 The Responsible Entity shall retain security–related system event logs for ninety calendar days, unless longer retention is required pursuant to Standard CIP-008-3 Requirement R2.

1.4.3 The Compliance Enforcement Authority in conjunction with the Registered Entity shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information.

2. Violation Severity Levels (To be developed later.)

E. Regional Variances

None identified.

A. Introduction

1. Title: Cyber Security — Systems Security Management

2. Number: CIP-007-4

3. Purpose: Standard CIP-007-4 requires Responsible Entities to define methods, processes, and procedures for securing those systems determined to be Critical Cyber Assets, as well as the other (non-critical) Cyber Assets within the Electronic Security Perimeter(s). Standard CIP-007-4 should be read as part of a group of standards numbered Standards CIP-002-4 through CIP-009-4.

4. Applicability:

4.1. Within the text of Standard CIP-007-4, "Responsible Entity" shall mean:

4.1.1 Reliability Coordinator.

4.1.2 Balancing Authority.

4.1.3 Interchange Authority.

4.1.4 Transmission Service Provider.

4.1.5 Transmission Owner.

4.1.6 Transmission Operator.

4.1.7 Generator Owner.

4.1.8 Generator Operator.

4.1.9 Load Serving Entity.

4.1.10 NERC.

4.1.11 Regional Entity.

4.2. The following are exempt from Standard CIP-007-4:

4.2.1 Facilities regulated by the Canadian Nuclear Safety Commission.

4.2.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.3 In nuclear plants, the systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F. R. Section 73.54

4.2.4 Responsible Entities that, in compliance with Standard CIP-002-4, identify that they have no Critical Cyber Assets.

5. Effective Date: The first day of the eighth calendar quarter after applicable regulatory approvals have been received (or the Reliability Standard otherwise becomes effective the first day of the ninth calendar quarter after BOT adoption in those jurisdictions where regulatory approval is not required).

B. Requirements

R1. Test Procedures — The Responsible Entity shall ensure that new Cyber Assets and significant changes to existing Cyber Assets within the Electronic Security Perimeter do not adversely affect existing cyber security controls. For purposes of Standard CIP-007-4, a significant change shall, at a minimum, include implementation of security patches, cumulative service packs, vendor releases, and version upgrades of operating systems, applications, database platforms, or other third-party software or firmware.

R1.1. The Responsible Entity shall create, implement, and maintain cyber security test procedures in a manner that minimizes adverse effects on the production system or its operation.

R1.2. The Responsible Entity shall document that testing is performed in a manner that reflects the production environment.

R1.3. The Responsible Entity shall document test results.

R2. Ports and Services — The Responsible Entity shall establish, document and implement a process to ensure that only those ports and services required for normal and emergency operations are enabled.

R2.1. The Responsible Entity shall enable only those ports and services required for normal and emergency operations.

R2.2. The Responsible Entity shall disable other ports and services, including those used for testing purposes, prior to production use of all Cyber Assets inside the Electronic Security Perimeter(s).

R2.3. In the case where unused ports and services cannot be disabled due to technical limitations, the Responsible Entity shall document compensating measure(s) applied to mitigate risk exposure.

R3. Security Patch Management — The Responsible Entity, either separately or as a component of the documented configuration management process specified in CIP-003-4 Requirement R6, shall establish, document and implement a security patch management program for tracking, evaluating, testing, and installing applicable cyber security software patches for all Cyber Assets within the Electronic Security Perimeter(s).

R3.1. The Responsible Entity shall document the assessment of security patches and security upgrades for applicability within thirty calendar days of availability of the patches or upgrades.

R3.2. The Responsible Entity shall document the implementation of security patches. In any case where the patch is not installed, the Responsible Entity shall document compensating measure(s) applied to mitigate risk exposure.

R4. Malicious Software Prevention — The Responsible Entity shall use anti-virus software and other malicious software ("malware") prevention tools, where technically feasible, to detect, prevent, deter, and mitigate the introduction, exposure, and propagation of malware on all Cyber Assets within the Electronic Security Perimeter(s).

R4.1. The Responsible Entity shall document and implement anti-virus and malware prevention tools. In the case where anti-virus software and malware prevention tools are not installed, the Responsible Entity shall document compensating measure(s) applied to mitigate risk exposure.

R4.2. The Responsible Entity shall document and implement a process for the update of anti-virus and malware prevention "signatures." The process must address testing and installing the signatures.

R5. Account Management — The Responsible Entity shall establish, implement, and document technical and procedural controls that enforce access authentication of, and accountability for, all user activity, and that minimize the risk of unauthorized system access.

R5.1. The Responsible Entity shall ensure that individual and shared system accounts and authorized access permissions are consistent with the concept of "need to know" with respect to work functions performed.

R5.1.1. The Responsible Entity shall ensure that user accounts are implemented as approved by designated personnel. Refer to Standard CIP-003-4 Requirement R5.

R5.1.2. The Responsible Entity shall establish methods, processes, and procedures that generate logs of sufficient detail to create historical audit trails of individual user account access activity for a minimum of ninety days.

R5.1.3. The Responsible Entity shall review, at least annually, user accounts to verify access privileges are in accordance with Standard CIP-003-4 Requirement R5 and Standard CIP-004-4 Requirement R4.

R5.2. The Responsible Entity shall implement a policy to minimize and manage the scope and acceptable use of administrator, shared, and other generic account privileges including factory default accounts.

R5.2.1. The policy shall include the removal, disabling, or renaming of such accounts where possible. For such accounts that must remain enabled, passwords shall be changed prior to putting any system into service.

R5.2.2. The Responsible Entity shall identify those individuals with access to shared accounts.

R5.2.3. Where such accounts must be shared, the Responsible Entity shall have a policy for managing the use of such accounts that limits access to only those with authorization, an audit trail of the account use (automated or manual), and steps for securing the account in the event of personnel changes (for example, change in assignment or termination).

R5.3. At a minimum, the Responsible Entity shall require and use passwords, subject to the following, as technically feasible:

R5.3.1. Each password shall be a minimum of six characters.

R5.3.2. Each password shall consist of a combination of alpha, numeric, and "special" characters.

R5.3.3. Each password shall be changed at least annually, or more frequently based on risk.

R6. Security Status Monitoring — The Responsible Entity shall ensure that all Cyber Assets within the Electronic Security Perimeter, as technically feasible, implement automated tools or organizational process controls to monitor system events that are related to cyber security.

R6.1. The Responsible Entity shall implement and document the organizational processes and technical and procedural mechanisms for monitoring for security events on all Cyber Assets within the Electronic Security Perimeter.

R6.2. The security monitoring controls shall issue automated or manual alerts for detected Cyber Security Incidents.

R6.3. The Responsible Entity shall maintain logs of system events related to cyber security, where technically feasible, to support incident response as required in Standard CIP-008-4.

R6.4. The Responsible Entity shall retain all logs specified in Requirement R6 for ninety calendar days.

R6.5. The Responsible Entity shall review logs of system events related to cyber security and maintain records documenting review of logs.

R7. Disposal or Redeployment — The Responsible Entity shall establish and implement formal methods, processes, and procedures for disposal or redeployment of Cyber Assets within the Electronic Security Perimeter(s) as identified and documented in Standard CIP-005-4.

R7.1. Prior to the disposal of such assets, the Responsible Entity shall destroy or erase the data storage media to prevent unauthorized retrieval of sensitive cyber security or reliability data.

R7.2. Prior to redeployment of such assets, the Responsible Entity shall, at a minimum, erase the data storage media to prevent unauthorized retrieval of sensitive cyber security or reliability data.

R7.3. The Responsible Entity shall maintain records that such assets were disposed of or redeployed in accordance with documented procedures. (Retired)

R8. Cyber Vulnerability Assessment — The Responsible Entity shall perform a cyber vulnerability assessment of all Cyber Assets within the Electronic Security Perimeter at least annually. The vulnerability assessment shall include, at a minimum, the following:

R8.1. A document identifying the vulnerability assessment process;

R8.2. A review to verify that only ports and services required for operation of the Cyber Assets within the Electronic Security Perimeter are enabled;

R8.3. A review of controls for default accounts; and,

R8.4. Documentation of the results of the assessment, the action plan to remediate or mitigate vulnerabilities identified in the assessment, and the execution status of that action plan.

R9. Documentation Review and Maintenance — The Responsible Entity shall review and update the documentation specified in Standard CIP-007-4 at least annually. Changes resulting from modifications to the systems or controls shall be documented within thirty calendar days of the change being completed.

C. Measures

M1. The Responsible Entity shall make available documentation of its security test procedures as specified in Requirement R1.

M2. The Responsible Entity shall make available documentation as specified in Requirement R2.

M3. The Responsible Entity shall make available documentation and records of its security patch management program, as specified in Requirement R3.

M4. The Responsible Entity shall make available documentation and records of its malicious software prevention program as specified in Requirement R4.

M5. The Responsible Entity shall make available documentation and records of its account management program as specified in Requirement R5.

M6. The Responsible Entity shall make available documentation and records of its security status monitoring program as specified in Requirement R6.

M7. The Responsible Entity shall make available documentation and records of its program for the disposal or redeployment of Cyber Assets as specified in Requirement R7.

M8. The Responsible Entity shall make available documentation and records of its annual vulnerability assessment of all Cyber Assets within the Electronic Security Perimeters(s) as specified in Requirement R8.

M9. The Responsible Entity shall make available documentation and records demonstrating the review and update as specified in Requirement R9.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

1.2. The RE shall serve as the CEA with the following exceptions:

1.2.1 For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.

1.2.2 For Reliability Coordinators and other functional entities that work for their Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

1.2.3 For Responsible Entities that are also Regional Entities, the ERO or a Regional Entity approved by the ERO and FERC or other applicable governmental authorities shall serve as the Compliance Enforcement Authority.

1.2.4 For the ERO, a third-party monitor without vested interest in the outcome for the ERO shall serve as the Compliance Enforcement Authority.

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

1.4.1 The Responsible Entity shall keep all documentation and records from the previous full calendar year unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

1.4.2 The Responsible Entity shall retain security–related system event logs for ninety calendar days, unless longer retention is required pursuant to Standard CIP-008-4 Requirement R2.

1.4.3 The Compliance Enforcement Authority in conjunction with the Registered Entity shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information.

2. Violation Severity Levels

Requirement	VRF	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	MEDIUM	N/A	The Responsible Entity did create, implement and maintain the test procedures as required in R1.1, **but did not document** that testing is performed as required in R1.2. OR The Responsible Entity did not document the test results as required in R1.3.	The Responsible Entity did not create, implement and maintain the test procedures as required in R1.1. The Responsible Entity, as technically feasible, did not use anti-virus software and other malicious software ("malware") prevention tools, nor implemented compensating measures, on 15% or more Cyber Assets within the Electronic Security Perimeter(s).
R4.1.	MEDIUM	N/A	N/A	N/A	The Responsible Entity did not document the implementation of antivirus and malware prevention tools for cyber assets within the electronic security perimeter. OR The Responsible Entity did not document the implementation of compensating measure(s) applied to mitigate risk exposure where antivirus and malware prevention tools are not installed.
R4.2.	MEDIUM	The Responsible Entity, as technically feasible, documented and implemented a process for the update of anti-virus and malware prevention "signatures.", but the process did not address testing and installation of the signatures.	The Responsible Entity, as technically feasible, did not document but implemented a process, including addressing testing and installing the signatures, for the update of anti-virus and malware prevention "signatures."	The Responsible Entity, as technically feasible, documented but did not implement a process, including addressing testing and installing the signatures, for the update of anti-virus and malware prevention "signatures."	The Responsible Entity, as technically feasible, did not document nor implement a process including addressing testing and installing the signatures for the update of anti-virus and malware prevention "signatures."
R5.	LOWER	N/A	The Responsible Entity implemented but did not document technical and procedural controls that enforce access authentication of, and accountability for, all user activity.	The Responsible Entity documented but did not implement technical and procedural controls that enforce access authentication of, and accountability for, all user activity.	The Responsible Entity did not document nor implement technical and procedural controls that enforce access authentication of, and accountability for, all user activity.

R5.1.	MEDIUM	N/A	N/A	N/A	The Responsible Entity did not ensure that individual and shared system accounts and authorized access permissions are consistent with the concept of "need to know" with respect to work functions performed.
R5.1.1.	LOWER	At least one user account but less than 1% of user accounts implemented by the Responsible Entity, were not approved by designated personnel.	One (1) % or more of user accounts but less than 3% of user accounts implemented by the Responsible Entity were not approved by designated personnel.	Three (3) % or more of user accounts but less than 5% of user accounts implemented by the Responsible Entity were not approved by designated personnel.	Five (5) % or more of user accounts implemented by the Responsible Entity were not approved by designated personnel.
R5.1.2.	LOWER	N/A	The Responsible Entity generated logs with sufficient detail to create historical audit trails of individual user account access activity, however the logs do not contain activity for a minimum of 90 days.	The Responsible Entity generated logs with insufficient detail to create historical audit trails of individual user account access activity.	The Responsible Entity did not generate logs of individual user account access activity.
R5.1.3.	MEDIUM	N/A	N/A	N/A	The Responsible Entity did not review, at least annually, user accounts to verify access privileges are in accordance with Standard CIP-003-4 Requirement R5 and Standard CIP-004-4 Requirement R4.
R5.2.	LOWER	N/A	N/A	N/A	The Responsible Entity did not implement a policy to minimize and manage the scope and acceptable use of administrator, shared, and other generic account privileges including factory default accounts.
R5.2.1.	MEDIUM	N/A	N/A	The Responsible Entity's policy did not include the removal, disabling, or renaming of such accounts where possible, however for accounts that must remain enabled, passwords were changed prior to putting any system into service.	For accounts that must remain enabled, the Responsible Entity did not change passwords prior to putting any system into service.
R5.2.2.	LOWER	N/A	N/A	N/A	The Responsible Entity did not identify all individuals with access to shared accounts.
R5.2.3.	MEDIUM	N/A	Where such accounts must be shared, the Responsible Entity has a policy for managing the use of such accounts, but is missing 1 of the following 3 items: a) limits access to only those with authorization, b) has an audit trail of the account use (automated or	Where such accounts must be shared, the Responsible Entity has a policy for managing the use of such accounts, but is missing 2 of the following 3 items: a) limits access to only those with authorization, b) has an audit trail of the account use (automated or manual), c) has specified steps for securing the account in the event of personnel changes (for example, change in assignment or termination).	Where such accounts must be shared, the Responsible Entity does not have a policy for managing the use of such accounts that limits access to only those with authorization, an audit trail of the account use (automated or manual), and steps for securing the account in the event of personnel changes (for example, change in assignment or termination).

			manual), c) has specified steps for securing the account in the event of personnel changes (for example, change in assignment or termination).		
R5.3.	LOWER	The Responsible Entity requires and uses passwords as technically feasible, but only addresses 2 of the requirements in R5.3.1, R5.3.2., R5.3.3.	The Responsible Entity requires and uses passwords as technically feasible but only addresses 1 of the requirements in R5.3.1, R5.3.2., R5.3.3.	The Responsible Entity requires but does not use passwords as required in R5.3.1, R5.3.2., R5.3.3 and did not demonstrate why it is not technically feasible.	The Responsible Entity does not require nor use passwords as required in R5.3.1, R5.3.2., R5.3.3 and did not demonstrate why it is not technically feasible.
R5.3.1.	LOWER	N/A	N/A	N/A	N/A
R5.3.2.	LOWER	N/A	N/A	N/A	N/A
R5.3.3.	MEDIUM	N/A	N/A	N/A	N/A
R6.	LOWER	The Responsible Entity, as technically feasible, did not implement automated tools or organizational process controls to monitor system events that are related to cyber security for at least one but less than 5% of Cyber Assets inside the Electronic Security Perimeter(s).	The Responsible Entity, as technically feasible, did not implement automated tools or organizational process controls to monitor system events that are related to cyber security for 5% or more but less than 10% of Cyber Assets inside the Electronic Security Perimeter(s).	The Responsible Entity did not implement automated tools or organizational process controls, as technically feasible, to monitor system events that are related to cyber security for 10% or more but less than 15% of Cyber Assets inside the Electronic Security Perimeter(s).	The Responsible Entity did not implement automated tools or organizational process controls, as technically feasible, to monitor system events that are related to cyber security for 15% or more of Cyber Assets inside the Electronic Security Perimeter(s).
R6.1.	MEDIUM	N/A	The Responsible Entity implemented but did not document the organizational processes and technical and procedural mechanisms for monitoring for security events on all Cyber Assets within the Electronic Security Perimeter.	The Responsible Entity documented but did not implement the organizational processes and technical and procedural mechanisms for monitoring for security events on all Cyber Assets within the Electronic Security Perimeter.	The Responsible Entity did not implement nor document the organizational processes and technical and procedural mechanisms for monitoring for security events on all Cyber Assets within the Electronic Security Perimeter.

R6.2.	MEDIUM	N/A	N/A	N/A	The Responsible entity's security monitoring controls do not issue automated or manual alerts for detected Cyber Security Incidents.
R6.3.	MEDIUM	N/A	N/A	N/A	The Responsible Entity did not maintain logs of system events related to cyber security, where technically feasible, to support incident response as required in Standard CIP-008-4.
R6.4.	LOWER	The Responsible Entity retained the logs specified in Requirement R6, for at least 60 days, but less than 90 days.	The Responsible Entity retained the logs specified in Requirement R6, for at least 30 days, but less than 60 days.	The Responsible Entity retained the logs specified in Requirement R6, for at least one day, but less than 30 days.	The Responsible Entity did not retain any logs specified in Requirement R6.
R6.5.	LOWER	N/A	N/A	N/A	The Responsible Entity did not review logs of system events related to cyber security nor maintain records documenting review of logs.
R7.	LOWER	The Responsible Entity established and implemented formal methods, processes, and procedures for disposal and redeployment of Cyber Assets within the Electronic Security Perimeter(s) as identified and documented in Standard CIP- 005-4 **but** did not maintain records as specified in R7.3. Version History

Version	Date	Action	Change Tracking
2		Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment and acceptance of risk. Revised the Purpose of this standard to clarify that Standard CIP-007-2 requires Responsible Entities to define methods, processes, and procedures for securing Cyber Assets and other (non-Critical) Assets within an Electronic Security Perimeter. Replaced the RRO with the RE as a responsible entity. Rewording of Effective Date. R9 changed ninety (90) days to thirty (30) days Changed compliance monitor to Compliance Enforcement Authority.	
3		Updated version numbers from -2 to -3	
3	12/16/09	Approved by the NERC Board of Trustees	
4	Board approved 01/24/2011	Update version number from “3” to “4”	Update to conform to changes to CIP-002-4 (Project 2008-06)
4	4/19/12	FERC Order issued approving CIP-007-4 (approval becomes effective June 25, 2012) Added approved VRF/VSL table to section D.2.	
3, 4	TBD	R7.3 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. Title: **System Restoration from Blackstart Resources**

2. Number: EOP-005-2

3. Purpose: Ensure plans, Facilities, and personnel are prepared to enable System restoration from Blackstart Resources to assure reliability is maintained during restoration and priority is placed on restoring the Interconnection.

4. Applicability:

4.1. Transmission Operators.

4.2. Generator Operators.

4.3. Transmission Owners identified in the Transmission Operators restoration plan.

4.4. Distribution Providers identified in the Transmission Operators restoration plan.

5. Proposed Effective Date: Twenty-four months after the first day of the first calendar quarter following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all requirements go into effect twenty-four months after Board of Trustees adoption.

B. Requirements

R1. Each Transmission Operator shall have a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shut down area to service, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: *[Time Horizon = Operations Planning]*

R1.1. Strategies for system restoration that are coordinated with the Reliability Coordinator's high level strategy for restoring the Interconnection.

R1.2. A description of how all Agreements or mutually agreed upon procedures or protocols for off-site power requirements of nuclear power plants, including priority of restoration, will be fulfilled during System restoration.

R1.3. Procedures for restoring interconnections with other Transmission Operators under the direction of the Reliability Coordinator.

R1.4. Identification of each Blackstart Resource and its characteristics including but not limited to the following: the name of the Blackstart Resource, location, megawatt and megavar capacity, and type of unit.

R1.5. Identification of Cranking Paths and initial switching requirements between each Blackstart Resource and the unit(s) to be started.

R1.6. Identification of acceptable operating voltage and frequency limits during restoration.

R1.7. Operating Processes to reestablish connections within the Transmission Operator's System for areas that have been restored and are prepared for reconnection.

R1.8. Operating Processes to restore Loads required to restore the System, such as station service for substations, units to be restarted or stabilized, the Load needed to stabilize generation and frequency, and provide voltage control.

R1.9. Operating Processes for transferring authority back to the Balancing Authority in accordance with the Reliability Coordinator's criteria.

R2. Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan. *[Time Horizon = Operations Planning]*

R3. Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually agreed predetermined schedule. *[Time Horizon = Operations Planning]*

R3.1. If there are no changes to the previously submitted restoration plan, the Transmission Operator shall confirm annually on a predetermined schedule to its Reliability Coordinator that it has reviewed its restoration plan and no changes were necessary. (Retired)

R4. Each Transmission Operator shall update its restoration plan within 90 calendar days after identifying any unplanned permanent System modifications, or prior to implementing a planned BES modification, that would change the implementation of its restoration plan. *[Time Horizon = Operations Planning]*

R4.1. Each Transmission Operator shall submit its revised restoration plan to its Reliability Coordinator for approval within the same 90 calendar day period.

R5. Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its implementation date. *[Time Horizon = Operations Planning]*

R6. Each Transmission Operator shall verify through analysis of actual events, steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed every five years at a minimum. Such analysis, simulations or testing shall verify: *[Time Horizon = Long-term Planning]*

R6.1. The capability of Blackstart Resources to meet the Real and Reactive Power requirements of the Cranking Paths and the dynamic capability to supply initial Loads.

R6.2. The location and magnitude of Loads required to control voltages and frequency within acceptable operating limits.

R6.3. The capability of generating resources required to control voltages and frequency within acceptable operating limits.

R7. Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, each

affected Transmission Operator shall implement its restoration plan. If the restoration plan cannot be executed as expected the Transmission Operator shall utilize its restoration strategies to facilitate restoration. *[Time Horizon = Real-time Operations]*

R8. Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, the Transmission Operator shall resynchronize area(s) with neighboring Transmission Operator area(s) only with the authorization of the Reliability Coordinator or in accordance with the established procedures of the Reliability Coordinator. *[Time Horizon = Real-time Operations]*

R9. Each Transmission Operator shall have Blackstart Resource testing requirements to verify that each Blackstart Resource is capable of meeting the requirements of its restoration plan. These Blackstart Resource testing requirements shall include: *[Time Horizon = Operations Planning]*

R9.1. The frequency of testing such that each Blackstart Resource is tested at least once every three calendar years.

R9.2. A list of required tests including:

R9.2.1. The ability to start the unit when isolated with no support from the BES or when designed to remain energized without connection to the remainder of the System.

R9.2.2. The ability to energize a bus. If it is not possible to energize a bus during the test, the testing entity must affirm that the unit has the capability to energize a bus such as verifying that the breaker close coil relay can be energized with the voltage and frequency monitor controls disconnected from the synchronizing circuits.

R9.3. The minimum duration of each of the required tests.

R10. Each Transmission Operator shall include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. This training program shall include training on the following: *[Time Horizon = Operations Planning]*

R10.1. System restoration plan including coordination with the Reliability Coordinator and Generator Operators included in the restoration plan.

R10.2. Restoration priorities.

R10.3. Building of cranking paths.

R10.4. Synchronizing (re-energized sections of the System).

R11. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System restoration training every two calendar years to their field switching personnel identified as performing unique tasks associated with the Transmission Operator's restoration plan that are outside of their normal tasks. *[Time Horizon = Operations Planning]*

R12. Each Transmission Operator shall participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator. *[Time Horizon = Operations Planning]*

R13. Each Transmission Operator and each Generator Operator with a Blackstart Resource shall have written Blackstart Resource Agreements or mutually agreed upon procedures or protocols, specifying the terms and conditions of their arrangement. Such Agreements shall include references to the Blackstart Resource testing requirements. *[Time Horizon = Operations Planning]*

R14. Each Generator Operator with a Blackstart Resource shall have documented procedures for starting each Blackstart Resource and energizing a bus. *[Time Horizon = Operations Planning]*

R15. Each Generator Operator with a Blackstart Resource shall notify its Transmission Operator of any known changes to the capabilities of that Blackstart Resource affecting the ability to meet the Transmission Operator's restoration plan within 24 hours following such change. *[Time Horizon = Operations Planning]*

R16. Each Generator Operator with a Blackstart Resource shall perform Blackstart Resource tests, and maintain records of such testing, in accordance with the testing requirements set by the Transmission Operator to verify that the Blackstart Resource can perform as specified in the restoration plan. *[Time Horizon = Operations Planning]*

R16.1. Testing records shall include at a minimum: name of the Blackstart Resource, unit tested, date of the test, duration of the test, time required to start the unit, an indication of any testing requirements not met under Requirement R9.

R16.2. Each Generator Operator shall provide the blackstart test results within 30 calendar days following a request from its Reliability Coordinator or Transmission Operator.

R17. Each Generator Operator with a Blackstart Resource shall provide a minimum of two hours of training every two calendar years to each of its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. The training program shall include training on the following: *[Time Horizon = Operations Planning]*

R17.1. System restoration plan including coordination with the Transmission Operator.

R17.2. The procedures documented in Requirement R14.

R18. Each Generator Operator shall participate in the Reliability Coordinator's restoration drills, exercises, or simulations as requested by the Reliability Coordinator. *[Time Horizon = Operations Planning]*

C. Measures

M1. Each Transmission Operator shall have a dated, documented System restoration plan developed in accordance with Requirement R1 that has been approved by its Reliability Coordinator as shown with the documented approval from its Reliability Coordinator.

M2. Each Transmission Operator shall have evidence such as e-mails with receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan in accordance with Requirement R2.

M3. Each Transmission Operator shall have documentation such as a dated review signature sheet, revision histories, e-mails with receipts, or registered mail receipts, that it has annually reviewed and submitted the Transmission Operator's restoration plan to its Reliability Coordinator in accordance with Requirement R3.

M4. Each Transmission Operator shall have documentation such as dated review signature sheets, revision histories, e-mails with receipts, or registered mail receipts, that it has updated its restoration plan and submitted it to its Reliability Coordinator in accordance with Requirement R4.

M5. Each Transmission Operator shall have documentation that it has made the latest Reliability Coordinator approved copy of its restoration plan available in its primary and backup control rooms and its System Operators prior to its implementation date in accordance with Requirement R5.

M6. Each Transmission Operator shall have documentation such as power flow outputs, that it has verified that its latest restoration plan will accomplish its intended function in accordance with Requirement R6.

M7. If there has been a Disturbance in which Blackstart Resources have been utilized in restoring the shut down area of the BES to service, each Transmission Operator involved shall have evidence such as voice recordings, e-mail, dated computer printouts, or operator logs, that it implemented its restoration plan or restoration plan strategies in accordance with Requirement R7.

M8. If there has been a Disturbance in which Blackstart Resources have been utilized in restoring the shut down area of the BES to service, each Transmission Operator involved in such an event shall have evidence, such as voice recordings, e-mail, dated computer printouts, or operator logs, that it resynchronized shut down areas in accordance with Requirement R8.

M9. Each Transmission Operator shall have documented Blackstart Resource testing requirements in accordance with Requirement R9.

M10. Each Transmission Operator shall have an electronic or hard copy of the training program material provided for its System Operators for System restoration training in accordance with Requirement R10.

M11. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall have an electronic or hard copy of the training program material provided to their field switching personnel for System restoration training and the corresponding training records including training dates and duration in accordance with Requirement R11.

M12. Each Transmission Operator shall have evidence, such as training records, that it participated in the Reliability Coordinator's restoration drills, exercises, or simulations as requested in accordance with Requirement R12.

M13. Each Transmission Operator and Generator Operator with a Blackstart Resource shall have the dated Blackstart Resource Agreements or mutually agreed upon procedures or protocols in accordance with Requirement R13.

M14. Each Generator Operator with a Blackstart Resource shall have dated documented procedures on file for starting each unit and energizing a bus in accordance with Requirement R14.

M15. Each Generator Operator with a Blackstart Resource shall provide evidence, such as e-mails with receipts or registered mail receipts, showing that it notified its Transmission Operator of any known changes to its Blackstart Resource capabilities within twenty-four hours of such changes in accordance with Requirement R15.

M16. Each Generator Operator with a Blackstart Resource shall maintain dated documentation of its Blackstart Resource test results and shall have evidence such as e-mails with receipts or registered mail receipts, that it provided these records to its Reliability Coordinator and Transmission Operator when requested in accordance with Requirement R16.

M17. Each Generator Operator with a Blackstart Resource shall have an electronic or hard copy of the training program material provided to its operating personnel responsible for the startup and synchronization of its Blackstart Resource generation units and a copy of its dated training records including training dates and durations showing that it has provided training in accordance with Requirement R17.

M18. Each Generator Operator shall have evidence, such as dated training records, that it participated in the Reliability Coordinator's restoration drills, exercises, or simulations if requested to do so in accordance with Requirement R18.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity.

1.2. Compliance Monitoring Period and Reset Time Frame

Not applicable.

1.3. Compliance Monitoring and Enforcement Processes:

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

The Transmission Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Approved restoration plan and any restoration plans in force since the last compliance audit for Requirement R1, Measure M1.
- Provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan for the current calendar year and three prior calendar years for Requirement R2, Measure M2.
- Submission of the Transmission Operator's annually reviewed restoration plan to its Reliability Coordinator for the current calendar year and three prior calendar years for Requirement R3, Measure M3.
- Submission of an updated restoration plan to its Reliability Coordinator for all versions for the current calendar year and the prior three years for Requirement R4, Measure M4.
- The current, restoration plan approved by the Reliability Coordinator and any restoration plans for the last three calendar years that was made available in its control rooms for Requirement R5, Measure M5.
- The verification results for the current, approved restoration plan and the previous approved restoration plan for Requirement R6, Measure M6.
- Implementation of its restoration plan or restoration plan strategies on any occasion for three calendar years if there has been a Disturbance in which Blackstart Resources have been utilized in restoring the shut down area of the BES to service for Requirement R7, Measure M7.
- Resynchronization of shut down areas on any occasion over three calendar years if there has been a Disturbance in which Blackstart Resources have been utilized in restoring the shut down area of the BES to service for Requirement R8, Measure M8.
- The verification process and results for the current Blackstart Resource testing requirements and the last previous Blackstart Resource testing requirements for Requirement R9, Measure M9.
- Actual training program materials or descriptions for three calendar years for Requirement R10, Measure M10.
- Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last compliance audit as well as one previous compliance audit period for Requirement R12, Measure M12.

If a Transmission Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Transmission Operator, applicable Transmission Owner, and applicable Distribution provider shall keep data or evidence to show compliance as identified

below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Actual training program materials or descriptions and actual training records for three calendar years for Requirement R11, Measure M11.

If a Transmission Operator, applicable Transmission owner, or applicable Distribution Provider is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Transmission Operator and Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Current Blackstart Resource Agreements and any Blackstart Resource Agreements or mutually agreed upon procedures or protocols in force since its last compliance audit for Requirement R13, Measure M13.

The Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Current documentation and any documentation in force since its last compliance audit on procedures to start each Blackstart Resources and for energizing a bus for Requirement R14, Measure M14.
- Notification to its Transmission Operator of any known changes to its Blackstart Resource capabilities over the last three calendar years for Requirement R15, Measure M15.
- The verification test results for the current set of requirements and one previous set for its Blackstart Resources for Requirement R16, Measure M16.
- Actual training program materials and actual training records for three calendar years for Requirement R17, Measure M17.

If a Generation Operator with a Blackstart Resource is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Generator Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last compliance audit for Requirement R18, Measure M18.

If a Generation Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None.

2. Violation Severity Levels

E. Regional Variances

None.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed "Proposed" from Effective Date	Errata
1	May 2, 2007	Approved by Board of Trustees	Revised
2	TBD	Revisions pursuant to Project 2006-03	Updated testing requirements Incorporated Attachment 1 into the requirements Updated Measures and Compliance to match new Requirements
2	August 5, 2009	Adopted by Board of Trustees	Revised
2	March 17, 2011	Order issued by FERC approving EOP-005-2 (approval effective 5/23/11)	
2	TBD	R3.1 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. Title: Coordination of Plans For New Generation, Transmission, and End-User Facilities

2. Number: FAC-002-1

3. Purpose: To avoid adverse impacts on reliability, Generator Owners and Transmission Owners and electricity end-users must meet facility connection and performance requirements.

4. Applicability:

4.1. Generator Owner

4.2. Transmission Owner

4.3. Distribution Provider

4.4. Load-Serving Entity

4.5. Transmission Planner

4.6. Planning Authority

5. (Proposed) Effective Date: The first day of the first calendar quarter six months after applicable regulatory approval; or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter six months after Board of Trustees' adoption.

B. Requirements

R1. The Generator Owner, Transmission Owner, Distribution Provider, and Load-Serving Entity seeking to integrate generation facilities, transmission facilities, and electricity end-user facilities shall each coordinate and cooperate on its assessments with its Transmission Planner and Planning Authority. The assessment shall include:

1.1. Evaluation of the reliability impact of the new facilities and their connections on the interconnected transmission systems.

1.2. Ensurance of compliance with NERC Reliability Standards and applicable Regional, subregional, Power Pool, and individual system planning criteria and facility connection requirements.

1.3. Evidence that the parties involved in the assessment have coordinated and cooperated on the assessment of the reliability impacts of new facilities on the interconnected transmission systems. While these studies may be performed independently, the results shall be jointly evaluated and coordinated by the entities involved.

1.4. Evidence that the assessment included steady-state, short-circuit, and dynamics studies as necessary to evaluate system performance under both normal and contingency conditions in accordance with Reliability Standards TPL-001-0, TPL-002-0, and TPL-003-0.

1.5. Documentation that the assessment included study assumptions, system performance, alternatives considered, and jointly coordinated recommendations.

R2. The Planning Authority, Transmission Planner, Generator Owner, Transmission Owner, Load-Serving Entity, and Distribution Provider shall each retain its documentation (of its evaluation of the reliability impact of the new facilities and their connections on the interconnected

transmission systems) for three years and shall provide the documentation to the Regional Reliability Organization(s) and NERC on request (within 30 calendar days). (Retired)

C. Measures

M1. The Planning Authority, Transmission Planner, Generator Owner, Transmission Owner, Load-Serving Entity, and Distribution Provider's documentation of its assessment of the reliability impacts of new facilities shall address all items in Reliability Standard FAC-002-0_R1.

M2. The Planning Authority, Transmission Planner, Generator Owner, Transmission Owner, Load-Serving Entity, and Distribution Provider shall each have evidence of its assessment of the reliability impacts of new facilities and their connections on the interconnected transmission systems is retained and provided to other entities in accordance with Reliability Standard FAC-002-0_R2. (Retired)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity.

1.2. Compliance Monitoring Period and Reset Timeframe

Not applicable.

1.3. Compliance Monitoring and Enforcement Processes:

Compliance Audits
Self-Certifications
Spot Checking
Compliance Violation Investigations
Self-Reporting

Complaints

1.4. Data Retention

Evidence of the assessment of the reliability impacts of new facilities and their connections on the interconnected transmission systems: Three years.

1.5. Additional Compliance Information

None

2. Violation Severity Levels (no changes)

E. Regional Differences

1. None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	January 13, 2006	Removed duplication of "Regional Reliability Organizations(s).	Errata
1	TBD	Modified to address Order No. 693 Directives contained in paragraph 693.	Revised.

1	TBD	R2 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. Title: **Facility Ratings Methodology**

2. Number: FAC-008-1

3. Purpose: To ensure that Facility Ratings used in the reliable planning and operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies.

4. Applicability

4.1. Transmission Owner

4.2. Generator Owner

5. Effective Date: August 7, 2006

B. Requirements

R1. The Transmission Owner and Generator Owner shall each document its current methodology used for developing Facility Ratings (Facility Ratings Methodology) of its solely and jointly owned Facilities. The methodology shall include all of the following:

R1.1. A statement that a Facility Rating shall equal the most limiting applicable Equipment Rating of the individual equipment that comprises that Facility.

R1.2. The method by which the Rating (of major BES equipment that comprises a Facility) is determined.

R1.2.1. The scope of equipment addressed shall include, but not be limited to, generators, transmission conductors, transformers, relay protective devices, terminal equipment, and series and shunt compensation devices.

R1.2.2. The scope of Ratings addressed shall include, as a minimum, both Normal and Emergency Ratings.

R1.3. Consideration of the following:

R1.3.1. Ratings provided by equipment manufacturers.

R1.3.2. Design criteria (e.g., including applicable references to industry Rating practices such as manufacturer's warranty, IEEE, ANSI or other standards).

R1.3.3. Ambient conditions.

R1.3.4. Operating limitations.

R1.3.5. Other assumptions.

R2. The Transmission Owner and Generator Owner shall each make its Facility Ratings Methodology available for inspection and technical review by those Reliability Coordinators, Transmission Operators, Transmission Planners, and Planning Authorities that have responsibility for the area in which the associated Facilities are located, within 15 business days of receipt of a request. (Retired)

R3. If a Reliability Coordinator, Transmission Operator, Transmission Planner, or Planning Authority provides written comments on its technical review of a Transmission Owner's or Generator Owner's Facility Ratings Methodology, the Transmission Owner or Generator Owner shall provide a written response to that commenting entity within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the

Facility Ratings Methodology and, if no change will be made to that Facility Ratings Methodology, the reason why. (Retired)

C. Measures

M1. The Transmission Owner and Generator Owner shall each have a documented Facility Ratings Methodology that includes all of the items identified in FAC-008 Requirement 1.1 through FAC-008 Requirement 1.3.5.

M2. The Transmission Owner and Generator Owner shall each have evidence it made its Facility Ratings Methodology available for inspection within 15 business days of a request as follows: (Retired)

M2.1 The Reliability Coordinator shall have access to the Facility Ratings Methodologies used for Rating Facilities in its Reliability Coordinator Area. (Retired)

M2.2 The Transmission Operator shall have access to the Facility Ratings Methodologies used for Rating Facilities in its portion of the Reliability Coordinator Area. (Retired)

M2.3 The Transmission Planner shall have access to the Facility Ratings Methodologies used for Rating Facilities in its Transmission Planning Area. (Retired)

M2.4 The Planning Authority shall have access to the Facility Ratings Methodologies used for Rating Facilities in its Planning Authority Area. (Retired)

M3. If the Reliability Coordinator, Transmission Operator, Transmission Planner, or Planning Authority provides documented comments on its technical review of a Transmission Owner's or Generator Owner's Facility Ratings Methodology, the Transmission Owner or Generator Owner shall have evidence that it provided a written response to that commenting entity within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Facility Ratings Methodology and, if no change will be made to that Facility Ratings Methodology, the reason why. (Retired)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Regional Reliability Organization

1.2. Compliance Monitoring Period and Reset Time Frame

Each Transmission Owner and Generator Owner shall self-certify its compliance to the Compliance Monitor at least once every three years. New Transmission Owners and Generator Owners shall each demonstrate compliance through an on-site audit conducted by the Compliance Monitor within the first year that it commences operation. The Compliance Monitor shall also conduct an on-site audit once every nine years and an investigation upon complaint to assess performance.

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

1.3. Data Retention

The Transmission Owner and Generator Owner shall each keep all superseded portions of its Facility Ratings Methodology for 12 months beyond the date of the change in that methodology and shall keep all documented comments on the Facility Ratings Methodology and associated responses for three years. In addition, entities found non-compliant shall keep information related to the non-compliance until found compliant.

The Compliance Monitor shall keep the last audit and all subsequent compliance records.

1.4. Additional Compliance Information

The Transmission Owner and Generator Owner shall each make the following available for inspection during an on-site audit by the Compliance Monitor or within 15 business days of a request as part of an investigation upon complaint:

1.4.1 Facility Ratings Methodology

1.4.2 Superseded portions of its Facility Ratings Methodology that had been replaced, changed or revised within the past 12 months

1.4.3 Documented comments provided by a Reliability Coordinator, Transmission Operator, Transmission Planner or Planning Authority on its technical review of a Transmission Owner's or Generator Owner's Facility Ratings methodology, and the associated responses

2. Levels of Non-Compliance

2.1. Level 1: There shall be a level one non-compliance if any of the following conditions exists:

2.1.1 The Facility Ratings Methodology does not contain a statement that a Facility Rating shall equal the most limiting applicable Equipment Rating of the individual equipment that comprises that Facility.

2.1.2 The Facility Ratings Methodology does not address one of the required equipment types identified in FAC-008 R1.2.1.

2.1.3 No evidence of responses to a Reliability Coordinator's, Transmission Operator, Transmission Planner, or Planning Authority's comments on the Facility Ratings Methodology. (Retired)

2.2. Level 2: The Facility Ratings Methodology is missing the assumptions used to determine Facility Ratings or does not address two of the required equipment types identified in FAC-008 R1.2.1.

2.3. Level 3: The Facility Ratings Methodology does not address three of the required equipment types identified in FAC-008-1 R1.2.1.

2.4. Level 4: The Facility Ratings Methodology does not address both Normal and Emergency Ratings ~~or the Facility Ratings Methodology was not made available for inspection within 15 business days of receipt of a request~~. (Deleted text retired)

Formatted: Strikethrough

E. **Regional Differences**

None Identified.

Version History

Version	Date	Action	Change Tracking
1	01/01/05	1. Lower cased the word "draft" and "drafting team" where appropriate. 2. Changed incorrect use of certain hyphens (-) to "en dash" (–) and "em dash (—)." 3. Changed "Timeframe" to "Time	01/20/05

		Frame" and "twelve" to "12" in item D, 1.2.	
1	TBD	R2 and R3 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. **Title:** **Facility Ratings**

2. **Number:** FAC-008-3

3. **Purpose:** To ensure that Facility Ratings used in the reliable planning and operation of the Bulk Electric System (BES) are determined based on technically sound principles. A Facility Rating is essential for the determination of System Operating Limits.

4. **Applicability**

   4.1. Transmission Owner.

   4.2. Generator Owner.

5. **Effective Date:** The first day of the first calendar quarter that is twelve months beyond the date approved by applicable regulatory authorities, or in those jurisdictions where regulatory approval is not required, the first day of the first calendar quarter twelve months following BOT adoption.

B. Requirements

R1. Each Generator Owner shall have documentation for determining the Facility Ratings of its solely and jointly owned generator Facility(ies) up to the low side terminals of the main step up transformer if the Generator Owner does not own the main step up transformer and the high side terminals of the main step up transformer if the Generator Owner owns the main step up transformer. *[Violation Risk Factor: Lower] [Time Horizon: Long-term Planning]*

1.1. The documentation shall contain assumptions used to rate the generator and at least one of the following:

- Design or construction information such as design criteria, ratings provided by equipment manufacturers, equipment drawings and/or specifications, engineering analyses, method(s) consistent with industry standards (e.g. ANSI and IEEE), or an established engineering practice that has been verified by testing or engineering analysis.
- Operational information such as commissioning test results, performance testing or historical performance records, any of which may be supplemented by engineering analyses.

1.2. The documentation shall be consistent with the principle that the Facility Ratings do not exceed the most limiting applicable Equipment Rating of the individual equipment that comprises that Facility.

R2. Each Generator Owner shall have a documented methodology for determining Facility Ratings (Facility Ratings methodology) of its solely and jointly owned equipment connected between the location specified in R1 and the point of interconnection with the Transmission Owner that contains all of the following. *[Violation Risk Factor: Medium] [Time Horizon: Long-term Planning]*

2.1. The methodology used to establish the Ratings of the equipment that comprises the Facility(ies) shall be consistent with at least one of the following:

- Ratings provided by equipment manufacturers or obtained from equipment manufacturer specifications such as nameplate rating.

- One or more industry standards developed through an open process such as Institute of Electrical and Electronic Engineers (IEEE) or International Council on Large Electric Systems (CIGRE).
- A practice that has been verified by testing, performance history or engineering analysis.

2.2. The underlying assumptions, design criteria, and methods used to determine the Equipment Ratings identified in Requirement R2, Part 2.1 including identification of how each of the following were considered:

2.2.1. Equipment Rating standard(s) used in development of this methodology.

2.2.2. Ratings provided by equipment manufacturers or obtained from equipment manufacturer specifications.

2.2.3. Ambient conditions (for particular or average conditions or as they vary in real-time).

2.2.4. Operating limitations.[1]

2.3. A statement that a Facility Rating shall respect the most limiting applicable Equipment Rating of the individual equipment that comprises that Facility.

2.4. The process by which the Rating of equipment that comprises a Facility is determined.

2.4.1. The scope of equipment addressed shall include, but not be limited to, conductors, transformers, relay protective devices, terminal equipment, and series and shunt compensation devices.

2.4.2. The scope of Ratings addressed shall include, as a minimum, both Normal and Emergency Ratings.

R3. Each Transmission Owner shall have a documented methodology for determining Facility Ratings (Facility Ratings methodology) of its solely and jointly owned Facilities (except for those generating unit Facilities addressed in R1 and R2) that contains all of the following: *[Violation Risk Factor: Medium] [Time Horizon: Long-term Planning]*

3.1. The methodology used to establish the Ratings of the equipment that comprises the Facility shall be consistent with at least one of the following:

- Ratings provided by equipment manufacturers or obtained from equipment manufacturer specifications such as nameplate rating.
- One or more industry standards developed through an open process such as Institute of Electrical and Electronics Engineers (IEEE) or International Council on Large Electric Systems (CIGRE).
- A practice that has been verified by testing, performance history or engineering analysis.

3.2. The underlying assumptions, design criteria, and methods used to determine the Equipment Ratings identified in Requirement R3, Part 3.1 including identification of how each of the following were considered:

3.2.1. Equipment Rating standard(s) used in development of this methodology.

[1] Such as temporary de-ratings of impaired equipment in accordance with good utility practice.

3.2.2. Ratings provided by equipment manufacturers or obtained from equipment manufacturer specifications.

3.2.3. Ambient conditions (for particular or average conditions or as they vary in real-time).

3.2.4. Operating limitations.[2]

3.3. A statement that a Facility Rating shall respect the most limiting applicable Equipment Rating of the individual equipment that comprises that Facility.

3.4. The process by which the Rating of equipment that comprises a Facility is determined.

3.4.1. The scope of equipment addressed shall include, but not be limited to, transmission conductors, transformers, relay protective devices, terminal equipment, and series and shunt compensation devices.

3.4.2. The scope of Ratings addressed shall include, as a minimum, both Normal and Emergency Ratings.

R4. Each Transmission Owner shall make its Facility Ratings methodology and each Generator Owner shall each make its documentation for determining its Facility Ratings and its Facility Ratings methodology available for inspection and technical review by those Reliability Coordinators, Transmission Operators, Transmission Planners and Planning Coordinators that have responsibility for the area in which the associated Facilities are located, within 21 calendar days of receipt of a request. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]* (Retired)

R5. If a Reliability Coordinator, Transmission Operator, Transmission Planner or Planning Coordinator provides documented comments on its technical review of a Transmission Owner's Facility Ratings methodology or Generator Owner's documentation for determining its Facility Ratings and its Facility Rating methodology, the Transmission Owner or Generator Owner shall provide a response to that commenting entity within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Facility Ratings methodology and, if no change will be made to that Facility Ratings methodology, the reason why. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]* (Retired)

R6. Each Transmission Owner and Generator Owner shall have Facility Ratings for its solely and jointly owned Facilities that are consistent with the associated Facility Ratings methodology or documentation for determining its Facility Ratings. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

R7. Each Generator Owner shall provide Facility Ratings (for its solely and jointly owned Facilities that are existing Facilities, new Facilities, modifications to existing Facilities and re-ratings of existing Facilities) to its associated Reliability Coordinator(s), Planning Coordinator(s), Transmission Planner(s), Transmission Owner(s) and Transmission Operator(s) as scheduled by such requesting entities. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

R8. Each Transmission Owner (and each Generator Owner subject to Requirement R2) shall provide requested information as specified below (for its solely and jointly owned Facilities that are existing Facilities, new Facilities, modifications to existing Facilities and re-ratings of existing Facilities) to its associated Reliability Coordinator(s), Planning Coordinator(s), Transmission Planner(s), Transmission Owner(s) and Transmission Operator(s): *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

[2] Such as temporary de-ratings of impaired equipment in accordance with good utility practice.

8.1. As scheduled by the requesting entities:

8.1.1. Facility Ratings

8.1.2. Identity of the most limiting equipment of the Facilities

8.2. Within 30 calendar days (or a later date if specified by the requester), for any requested Facility with a Thermal Rating that limits the use of Facilities under the requester's authority by causing any of the following: 1) An Interconnection Reliability Operating Limit, 2) A limitation of Total Transfer Capability, 3) An impediment to generator deliverability, or 4) An impediment to service to a major load center:

8.2.1. Identity of the existing next most limiting equipment of the Facility

8.2.2. The Thermal Rating for the next most limiting equipment identified in Requirement R8, Part 8.2.1.

C. Measures

M1. Each Generator Owner shall have documentation that shows how its Facility Ratings were determined as identified in Requirement 1.

M2. Each Generator Owner shall have a documented Facility Ratings methodology that includes all of the items identified in Requirement 2, Parts 2.1 through 2.4.

M3. Each Transmission Owner shall have a documented Facility Ratings methodology that includes all of the items identified in Requirement 3, Parts 3.1 through 3.4.

M4. Each Transmission Owner shall have evidence, such as a copy of a dated electronic note, or other comparable evidence to show that it made its Facility Ratings methodology available for inspection within 21 calendar days of a request in accordance with Requirement 4. The Generator Owner shall have evidence, such as a copy of a dated electronic note, or other comparable evidence to show that it made its documentation for determining its Facility Ratings or its Facility Ratings methodology available for inspection within 21 calendar days of a request in accordance with Requirement R4. (Retired)

M5. If the Reliability Coordinator, Transmission Operator, Transmission Planner or Planning Coordinator provides documented comments on its technical review of a Transmission Owner's or Generator Owner's Facility Ratings methodology or a Generator Owner's documentation for determining its Facility Ratings, the Transmission Owner or Generator Owner shall have evidence, (such as a copy of a dated electronic or hard copy note, or other comparable evidence from the Transmission Owner or Generator Owner addressed to the commenter that includes the response to the comment,) that it provided a response to that commenting entity in accordance with Requirement R5. (Retired)

M6. Each Transmission Owner and Generator Owner shall have evidence to show that its Facility Ratings are consistent with the documentation for determining its Facility Ratings as specified in Requirement R1 or consistent with its Facility Ratings methodology as specified in Requirements R2 and R3 (Requirement R6).

M7. Each Generator Owner shall have evidence, such as a copy of a dated electronic note, or other comparable evidence to show that it provided its Facility Ratings to its associated Reliability Coordinator(s), Planning Coordinator(s), Transmission Planner(s), Transmission Owner(s) and Transmission Operator(s) in accordance with Requirement R7.

M8. Each Transmission Owner (and Generator Owner subject to Requirement R2) shall have evidence, such as a copy of a dated electronic note, or other comparable evidence to show that it provided its Facility Ratings and identity of limiting equipment to its associated Reliability

Coordinator(s), Planning Coordinator(s), Transmission Planner(s), Transmission Owner(s) and Transmission Operator(s) in accordance with Requirement R8.

D. Compliance

1. Compliance Monitoring Process

1.1. **Compliance Enforcement Authority**

Regional Entity

1.2. **Compliance Monitoring and Enforcement Processes:**

- Self-Certifications
- Spot Checking
- Compliance Audits
- Self-Reporting
- Compliance Violation Investigations
- Complaints

1.3. **Data Retention**

The Generator Owner shall keep its current documentation (for R1) and any modifications to the documentation that were in force since last compliance audit period for Measure M1 and Measure M6.

The Generator Owner shall keep its current, in force Facility Ratings methodology (for R2) and any modifications to the methodology that were in force since last compliance audit period for Measure M2 and Measure M6.

The Transmission Owner shall keep its current, in force Facility Ratings methodology (for R3) and any modifications to the methodology that were in force since the last compliance audit for Measure M3 and Measure M6.

The Transmission Owner and Generator Owner shall keep its current, in force Facility Ratings and any changes to those ratings for three calendar years for Measure M6.

The Generator Owner and Transmission Owner shall each keep evidence for Measure M4, and Measure M5, for three calendar years. (Retired)

The Generator Owner shall keep evidence for Measure M7 for three calendar years.

The Transmission Owner (and Generator Owner that is subject to Requirement R2) shall keep evidence for Measure M8 for three calendar years.

If a Generator Owner or Transmission Owner is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit and all subsequent compliance records.

1.4. **Additional Compliance Information**

None

Violation Severity Levels

R #	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	N/A	• The Generator Owner's Facility Rating documentation did not address Requirement R1, Part 1.1.	The Generator Owner's Facility Rating documentation did not address Requirement R1, Part 1.2.	The Generator Owner failed to provide documentation for determining its Facility Ratings.
R2	The Generator Owner failed to include in its Facility Rating methodology one of the following Parts of Requirement R2: • 2.1. • 2.2.1 • 2.2.2 • 2.2.3 • 2.2.4	The Generator Owner failed to include in its Facility Rating methodology two of the following Parts of Requirement R2: • 2.1 • 2.2.1 • 2.2.2 • 2.2.3 • 2.2.4	The Generator Owner's Facility Rating methodology did not address all the components of Requirement R2, Part 2.4. OR The Generator Owner failed to include in its Facility Rating Methodology, three of the following Parts of Requirement R2: • 2.1. • 2.2.1 • 2.2.2 • 2.2.3 • 2.2.4	The Generator Owner's Facility Rating methodology failed to recognize a facility's rating based on the most limiting component rating as required in Requirement R2, Part 2.3 OR The Generator Owner failed to include in its Facility Rating Methodology four or more of the following Parts of Requirement R2: • 2.1 • 2.2.1 • 2.2.2 • 2.2.3 • 2.2.4
R3	The Transmission Owner failed to include in its Facility Rating methodology one of the following Parts of Requirement R3: • 3.1 • 3.2.1	The Transmission Owner failed to include in its Facility Rating methodology two of the following Parts of Requirement R3: • 3.1 • 3.2.1	The Transmission Owner's Facility Rating methodology did not address either of the following Parts of Requirement R3: • 3.4.1 • 3.4.2	The Transmission Owner's Facility Rating methodology failed to recognize a Facility's rating based on the most limiting component rating as required in Requirement R3, Part 3.3 OR

Formatted Table

R #	Lower VSL	Moderate VSL	High VSL	Severe VSL
	• 3.2.2 • 3.2.3 • 3.2.4	• 3.2.2 • 3.2.3 • 3.2.4	OR The Transmission Owner failed to include in its Facility Rating methodology three of the following Parts of Requirement R3: • 3.1 • 3.2.1 • 3.2.2 • 3.2.3 • 3.2.4	The Transmission Owner failed to include in its Facility Rating methodology four or more of the following Parts of Requirement R3: • 3.1 • 3.2.1 • 3.2.2 • 3.2.3 • 3.2.4
R4 (Retired)	The responsible entity made its Facility Ratings methodology or Facility Ratings documentation available within more than 21 calendar days but less than or equal to 31 calendar days after a request.	The responsible entity made its Facility Ratings methodology or Facility Ratings documentation available within more than 31 calendar days but less than or equal to 41 calendar days after a request.	The responsible entity made its Facility Rating methodology or Facility Ratings documentation available within more than 41 calendar days but less than or equal to 51 calendar days after a request.	The responsible entity failed to make its Facility Ratings methodology or Facility Ratings documentation available in more than 51 calendar days after a request. (R3)
R5 (Retired)	The responsible entity provided a response in more than 45 calendar days but less than or equal to 60 calendar days after a request. (R5)	The responsible entity provided a response in more than 60 calendar days but less than or equal to 70 calendar days after a request. OR The responsible entity provided a response within 45 calendar days, and the response indicated that a change will not be made to the Facility Ratings methodology or Facility Ratings documentation but did not indicate why no change will be made. (R5)	The responsible entity provided a response in more than 70 calendar days but less than or equal to 80 calendar days after a request. OR The responsible entity provided a response within 45 calendar days, but the response did not indicate whether a change will be made to the Facility Ratings methodology or Facility Ratings documentation. (R5)	The responsible entity failed to provide a response as required in more than 80 calendar days after the comments were received. (R5)

Formatted Table

R #	Lower VSL	Moderate VSL	High VSL	Severe VSL
R6	The responsible entity failed to establish Facility Ratings consistent with the associated Facility Ratings methodology or documentation for determining the Facility Ratings for 5% or less of its solely owned and jointly owned Facilities. (R6)	The responsible entity failed to establish Facility Ratings consistent with the associated Facility Ratings methodology or documentation for determining the Facility Ratings for more than 5% or more, but less than up to (and including) 10% of its solely owned and jointly owned Facilities. (R6)	The responsible entity failed to establish Facility Ratings consistent with the associated Facility Ratings methodology or documentation for determining the Facility Ratings for more than 10% up to (and including) 15% of its solely owned and jointly owned Facilities. (R6)	The responsible entity failed to establish Facility Ratings consistent with the associated Facility Ratings methodology or documentation for determining the Facility Ratings for more than15% of its solely owned and jointly owned Facilities. (R6)
R7	The Generator Owner provided its Facility Ratings to all of the requesting entities but missed meeting the schedules by up to and including 15 calendar days.	The Generator Owner provided its Facility Ratings to all of the requesting entities but missed meeting the schedules by more than 15 calendar days but less than or equal to 25 calendar days.	The Generator Owner provided its Facility Ratings to all of the requesting entities but missed meeting the schedules by more than 25 calendar days but less than or equal to 35 calendar days.	The Generator Owner provided its Facility Ratings to all of the requesting entities but missed meeting the schedules by more than 35 calendar days. OR The Generator Owner failed to provide its Facility Ratings to the requesting entities.
R8	The responsible entity provided its Facility Ratings to all of the requesting entities but missed meeting the schedules by up to and including 15 calendar days. (R8, Part 8.1) OR The responsible entity provided less than 100%, but not less than or equal to 95% of the required Rating information to all of the requesting entities. (R8, Part 8.1)	The responsible entity provided its Facility Ratings to all of the requesting entities but missed meeting the schedules by more than 15 calendar days but less than or equal to 25 calendar days. (R8, Part 8.1) OR The responsible entity provided less than 95%, but not less than or equal to 90% of the required Rating information to all of the requesting entities. (R8, Part 8.1) OR	The responsible entity provided its Facility Ratings to all of the requesting entities but missed meeting the schedules by more than 25 calendar days but less than or equal to 35 calendar days. (R8, Part 8.1) OR The responsible entity provided less than 90%, but not less than or equal to 85% of the required Rating information to all of the requesting entities. (R8, Part 8.1) OR	The responsible entity provided its Facility Ratings to all of the requesting entities but missed meeting the schedules by more than 35 calendar days. (R8, Part 8.1) OR The responsible entity provided less than 85% of the required Rating information to all of the requesting entities. (R8, Part 8.1) OR The responsible entity provided the required Rating information to the requesting entity, but did so more

Standard FAC-010-2.1 — System Operating Limits Methodology for the Planning Horizon

A. Introduction

1. Title: **System Operating Limits Methodology for the Planning Horizon**

2. Number: FAC-010-2.1

3. Purpose: To ensure that System Operating Limits (SOLs) used in the reliable planning of the Bulk Electric System (BES) are determined based on an established methodology or methodologies.

4. Applicability

4.1. Planning Authority

5. Effective Date: April 19, 2010

B. Requirements

R1. The Planning Authority shall have a documented SOL Methodology for use in developing SOLs within its Planning Authority Area. This SOL Methodology shall:

R1.1. Be applicable for developing SOLs used in the planning horizon.

R1.2. State that SOLs shall not exceed associated Facility Ratings.

R1.3. Include a description of how to identify the subset of SOLs that qualify as IROLs.

R2. The Planning Authority's SOL Methodology shall include a requirement that SOLs provide BES performance consistent with the following:

R2.1. In the pre-contingency state and with all Facilities in service, the BES shall demonstrate transient, dynamic and voltage stability; all Facilities shall be within their Facility Ratings and within their thermal, voltage and stability limits. In the determination of SOLs, the BES condition used shall reflect expected system conditions and shall reflect changes to system topology such as Facility outages.

R2.2. Following the single Contingencies[1] identified in Requirement 2.2.1 through Requirement 2.2.3, the system shall demonstrate transient, dynamic and voltage stability; all Facilities shall be operating within their Facility Ratings and within their thermal, voltage and stability limits; and Cascading or uncontrolled separation shall not occur.

R2.2.1. Single line to ground or three-phase Fault (whichever is more severe), with Normal Clearing, on any Faulted generator, line, transformer, or shunt device.

R2.2.2. Loss of any generator, line, transformer, or shunt device without a Fault.

R2.2.3. Single pole block, with Normal Clearing, in a monopolar or bipolar high voltage direct current system.

R2.3. Starting with all Facilities in service, the system's response to a single Contingency, may include any of the following:

R2.3.1. Planned or controlled interruption of electric supply to radial customers or some local network customers connected to or supplied by the Faulted Facility or by the affected area.

[1] The Contingencies identified in R2.2.1 through R2.2.3 are the minimum contingencies that must be studied but are not necessarily the only Contingencies that should be studied.

R2.3.2. System reconfiguration through manual or automatic control or protection actions.

R2.4. To prepare for the next Contingency, system adjustments may be made, including changes to generation, uses of the transmission system, and the transmission system topology.

R2.5. Starting with all Facilities in service and following any of the multiple Contingencies identified in Reliability Standard TPL-003 the system shall demonstrate transient, dynamic and voltage stability; all Facilities shall be operating within their Facility Ratings and within their thermal, voltage and stability limits; and Cascading or uncontrolled separation shall not occur.

R2.6. In determining the system's response to any of the multiple Contingencies, identified in Reliability Standard TPL-003, in addition to the actions identified in R2.3.1 and R2.3.2, the following shall be acceptable:

R2.6.1. Planned or controlled interruption of electric supply to customers (load shedding), the planned removal from service of certain generators, and/or the curtailment of contracted Firm (non-recallable reserved) electric power Transfers.

R3. The Planning Authority's methodology for determining SOLs, shall include, as a minimum, a description of the following, along with any reliability margins applied for each:

R3.1. Study model (must include at least the entire Planning Authority Area as well as the critical modeling details from other Planning Authority Areas that would impact the Facility or Facilities under study).

R3.2. Selection of applicable Contingencies.

R3.3. Level of detail of system models used to determine SOLs.

R3.4. Allowed uses of Special Protection Systems or Remedial Action Plans.

R3.5. Anticipated transmission system configuration, generation dispatch and Load level.

R3.6. Criteria for determining when violating a SOL qualifies as an Interconnection Reliability Operating Limit (IROL) and criteria for developing any associated IROL T_v.

R4. The Planning Authority shall issue its SOL Methodology, and any change to that methodology, to all of the following prior to the effectiveness of the change:

R4.1. Each adjacent Planning Authority and each Planning Authority that indicated it has a reliability-related need for the methodology.

R4.2. Each Reliability Coordinator and Transmission Operator that operates any portion of the Planning Authority's Planning Authority Area.

R4.3. Each Transmission Planner that works in the Planning Authority's Planning Authority Area.

R5. If a recipient of the SOL Methodology provides documented technical comments on the methodology, the Planning Authority shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the SOL Methodology and, if no change will be made to that SOL Methodology, the reason why. (Retired)

C. Measures

M1. The Planning Authority's SOL Methodology shall address all of the items listed in Requirement 1 through Requirement 3.

M2. The Planning Authority shall have evidence it issued its SOL Methodology and any changes to that methodology, including the date they were issued, in accordance with Requirement 4.

M3. If the recipient of the SOL Methodology provides documented comments on its technical review of that SOL methodology, the Planning Authority that distributed that SOL Methodology shall have evidence that it provided a written response to that commenter within 45 calendar days of receipt of those comments in accordance with Requirement 5. (Retired)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Regional Reliability Organization

1.2. Compliance Monitoring Period and Reset Time Frame

Each Planning Authority shall self-certify its compliance to the Compliance Monitor at least once every three years. New Planning Authorities shall demonstrate compliance through an on-site audit conducted by the Compliance Monitor within the first year that it commences operation. The Compliance Monitor shall also conduct an on-site audit once every nine years and an investigation upon complaint to assess performance.

The Performance-Reset Period shall be twelve months from the last non-compliance.

1.3. Data Retention

The Planning Authority shall keep all superseded portions to its SOL Methodology for 12 months beyond the date of the change in that methodology ~~and shall keep all documented comments on its SOL Methodology and associated responses for three years~~. In addition, entities found non-compliant shall keep information related to the non-compliance until found compliant. (Deleted text retired)

Formatted: Strikethrough

Formatted: Font color: Red

The Compliance Monitor shall keep the last audit and all subsequent compliance records.

1.4. Additional Compliance Information

The Planning Authority shall make the following available for inspection during an on-site audit by the Compliance Monitor or within 15 business days of a request as part of an investigation upon complaint:

1.4.1 SOL Methodology.

1.4.2 Documented comments provided by a recipient of the SOL Methodology on its technical review of a SOL Methodology, and the associated responses. (Retired)

1.4.3 Superseded portions of its SOL Methodology that had been made within the past 12 months.

1.4.4 Evidence that the SOL Methodology and any changes to the methodology that occurred within the past 12 months were issued to all required entities.

2. Levels of Non-Compliance for Western Interconnection: (To be replaced with VSLs once developed and approved by WECC)

2.1. Level 1: There shall be a level one non-compliance if either of the following conditions exists:

2.1.1 The SOL Methodology did not include a statement indicating that Facility Ratings shall not be exceeded.

2.1.2 No evidence of responses to a recipient's comments on the SOL Methodology. (Retired)

2.2. Level 2: The SOL Methodology did not include a requirement to address all of the elements in R2.1 through R2.3 and E1.

2.3. Level 3: There shall be a level three non-compliance if any of the following conditions exists:

2.3.1 The SOL Methodology did not include a statement indicating that Facility Ratings shall not be exceeded and the methodology did not include evaluation of system response to one of the three types of single Contingencies identified in R2.2.

2.3.2 The SOL Methodology did not include a statement indicating that Facility Ratings shall not be exceeded and the methodology did not include evaluation of system response to two of the seven types of multiple Contingencies identified in E1.1.

2.3.3 The System Operating Limits Methodology did not include a statement indicating that Facility Ratings shall not be exceeded and the methodology did not address two of the six required topics in R3.

2.4. Level 4: The SOL Methodology was not issued to all required entities in accordance with R4

3. Violation Severity Levels:

Requirement	Lower	Moderate	High	Severe
R1	Not applicable.	The Planning Authority has a documented SOL Methodology for use in developing SOLs within its Planning Authority Area, but it does not address R1.2	The Planning Authority has a documented SOL Methodology for use in developing SOLs within its Planning Authority Area, but it does not address R1.3.	The Planning Authority has a documented SOL Methodology for use in developing SOLs within its Planning Authority Area, but it does not address R1.1. OR The Planning Authority has no documented SOL Methodology for use in developing SOLs within its Planning Authority Area.
R2	The Planning Authority's SOL Methodology requires that SOLs are set to meet BES performance following single and multiple contingencies, but does not address the pre-contingency state (R2.1)	The Planning Authority's SOL Methodology requires that SOLs are set to meet BES performance in the pre-contingency state and following single contingencies, but does not address multiple contingencies. (R2.5-R2.6)	The Planning Authority's SOL Methodology requires that SOLs are set to meet BES performance in the pre-contingency state and following multiple contingencies, but does not meet the performance for response to single contingencies. (R2.2 –R2.4)	The Planning Authority's SOL Methodology requires that SOLs are set to meet BES performance in the pre-contingency state but does not require that SOLs be set to meet the BES performance specified for response to single contingencies (R2.2-R2.4) and does not require that SOLs be set to meet the BES performance specified for response to multiple contingencies. (R2.5-R2.6)
R3	The Planning Authority has a methodology for determining SOLs that includes a description for all but one of the following: R3.1 through R3.6.	The Planning Authority has a methodology for determining SOLs that includes a description for all but two of the following: R3.1 through R3.6.	The Planning Authority has a methodology for determining SOLs that includes a description for all but three of the following: R3.1 through R3.6.	The Planning Authority has a methodology for determining SOLs that is missing a description of four or more of the following: R3.1 through R3.6.
R4	One or both of the following: The Planning Authority issued its SOL Methodology and changes	One of the following: The Planning Authority issued its SOL Methodology and changes	One of the following: The Planning Authority issued its SOL Methodology and changes	One of the following: The Planning Authority failed to issue its SOL Methodology and

Requirement	Lower	Moderate	High	Severe
	to that methodology to all but one of the required entities. For a change in methodology, the changed methodology was provided up to 30 calendar days after the effectiveness of the change.	to that methodology to all but one of the required entities AND for a change in methodology, the changed methodology was provided 30 calendar days or more, but less than 60 calendar days after the effectiveness of the change. OR The Planning Authority issued its SOL Methodology and changes to that methodology to all but two of the required entities AND for a change in methodology, the changed methodology was provided up to 30 calendar days after the effectiveness of the change.	to that methodology to all but one of the required entities AND for a change in methodology, the changed methodology was provided 60 calendar days or more, but less than 90 calendar days after the effectiveness of the change. OR The Planning Authority issued its SOL Methodology and changes to that methodology to all but two of the required entities AND for a change in methodology, the changed methodology was provided 30 calendar days or more, but less than 60 calendar days after the effectiveness of the change. OR The Planning Authority issued its SOL Methodology and changes to that methodology to all but three of the required entities AND for a change in methodology, the changed methodology was provided up to 30 calendar days after the effectiveness of the change.	changes to that methodology to more than three of the required entities. The Planning Authority issued its SOL Methodology and changes to that methodology to all but one of the required entities AND for a change in methodology, the changed methodology was provided 90 calendar days or more after the effectiveness of the change. OR The Planning Authority issued its SOL Methodology and changes to that methodology to all but two of the required entities AND for a change in methodology, the changed methodology was provided 60 calendar days or more, but less than 90 calendar days after the effectiveness of the change. OR The Planning Authority issued its SOL Methodology and changes to that methodology to all but three of the required entities AND for a change in methodology, the changed methodology was provided 30 calendar days or more, but less than 60 calendar days after the effectiveness of the change. The Planning Authority issued its SOL Methodology and changes to that methodology to all but

Requirement	Lower	Moderate	High	Severe
				four of the required entities AND for a change in methodology, the changed methodology was provided up to 30 calendar days after the effectiveness of the change.
R5 (Retired)	The Planning Authority received documented technical comments on its SOL Methodology and provided a complete response in a time period that was longer than 45 calendar days but less than 60 calendar days.	The Planning Authority received documented technical comments on its SOL Methodology and provided a complete response in a time period that was 60 calendar days or longer but less than 75 calendar days.	The Planning Authority received documented technical comments on its SOL Methodology and provided a complete response in a time period that was 75 calendar days or longer but less than 90 calendar days. OR The Planning Authority's response to documented technical comments on its SOL Methodology indicated that a change will not be made, but did not include an explanation of why the change will not be made.	The Planning Authority received documented technical comments on its SOL Methodology and provided a complete response in a time period that was 90 calendar days or longer. OR The Planning Authority's response to documented technical comments on its SOL Methodology did not indicate whether a change will be made to the SOL Methodology.

E. **Regional Differences**

1. The following Interconnection-wide Regional Difference shall be applicable in the Western Interconnection:

1.1. As governed by the requirements of R2.5 and R2.6, starting with all Facilities in service, shall require the evaluation of the following multiple Facility Contingencies when establishing SOLs:

1.1.1 Simultaneous permanent phase to ground Faults on different phases of each of two adjacent transmission circuits on a multiple circuit tower, with Normal Clearing. If multiple circuit towers are used only for station entrance and exit purposes, and if they do not exceed five towers at each station, then this condition is an acceptable risk and therefore can be excluded.

1.1.2 A permanent phase to ground Fault on any generator, transmission circuit, transformer, or bus section with Delayed Fault Clearing except for bus sectionalizing breakers or bus-tie breakers addressed in E1.1.7

1.1.3 Simultaneous permanent loss of both poles of a direct current bipolar Facility without an alternating current Fault.

1.1.4 The failure of a circuit breaker associated with a Special Protection System to operate when required following: the loss of any element without a Fault; or a permanent phase to ground Fault, with Normal Clearing, on any transmission circuit, transformer or bus section.

1.1.5 A non-three phase Fault with Normal Clearing on common mode Contingency of two adjacent circuits on separate towers unless the event frequency is determined to be less than one in thirty years.

1.1.6 A common mode outage of two generating units connected to the same switchyard, not otherwise addressed by FAC-010.

1.1.7 The loss of multiple bus sections as a result of failure or delayed clearing of a bus tie or bus sectionalizing breaker to clear a permanent Phase to Ground Fault.

1.2. SOLs shall be established such that for multiple Facility Contingencies in E1.1.1 through E1.1.5 operation within the SOL shall provide system performance consistent with the following:

1.2.1 All Facilities are operating within their applicable Post-Contingency thermal, frequency and voltage limits.

1.2.2 Cascading does not occur.

1.2.3 Uncontrolled separation of the system does not occur.

1.2.4 The system demonstrates transient, dynamic and voltage stability.

1.2.5 Depending on system design and expected system impacts, the controlled interruption of electric supply to customers (load shedding), the planned removal from service of certain generators, and/or the curtailment of contracted firm (non-recallable reserved) electric power transfers may be necessary to maintain the overall security of the interconnected transmission systems.

1.2.6 Interruption of firm transfer, Load or system reconfiguration is permitted through manual or automatic control or protection actions.

1.2.7 To prepare for the next Contingency, system adjustments are permitted, including changes to generation, Load and the transmission system topology when determining limits.

1.3. SOLs shall be established such that for multiple Facility Contingencies in E1.1.6 through E1.1.7 operation within the SOL shall provide system performance consistent with the following with respect to impacts on other systems:

1.3.1 Cascading does not occur.

1.4. The Western Interconnection may make changes (performance category adjustments) to the Contingencies required to be studied and/or the required responses to Contingencies for specific facilities based on actual system performance and robust design. Such changes will apply in determining SOLs.

Version History

Version	Date	Action	Change Tracking
1	November 1, 2006	Adopted by Board of Trustees	New
1	November 1, 2006	Fixed typo. Removed the word "each" from the 1st sentence of section D.1.3, Data Retention.	01/11/07
2	June 24, 2008	Adopted by Board of Trustees; FERC Order 705	Revised
2		Changed the effective date to July 1, 2008 Changed "Cascading Outage" to "Cascading" Replaced Levels of Non-compliance with Violation Severity Levels	Revised

A. Introduction

1. Title: **System Operating Limits Methodology for the Operations Horizon**

2. Number: FAC-011-2

3. Purpose: To ensure that System Operating Limits (SOLs) used in the reliable operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies.

4. Applicability

4.1. Reliability Coordinator

5. Effective Date: April 29, 2009

B. Requirements

R1. The Reliability Coordinator shall have a documented methodology for use in developing SOLs (SOL Methodology) within its Reliability Coordinator Area. This SOL Methodology shall:

R1.1. Be applicable for developing SOLs used in the operations horizon.

R1.2. State that SOLs shall not exceed associated Facility Ratings.

R1.3. Include a description of how to identify the subset of SOLs that qualify as IROLs.

R2. The Reliability Coordinator's SOL Methodology shall include a requirement that SOLs provide BES performance consistent with the following:

R2.1. In the pre-contingency state, the BES shall demonstrate transient, dynamic and voltage stability; all Facilities shall be within their Facility Ratings and within their thermal, voltage and stability limits. In the determination of SOLs, the BES condition used shall reflect current or expected system conditions and shall reflect changes to system topology such as Facility outages.

R2.2. Following the single Contingencies[1] identified in Requirement 2.2.1 through Requirement 2.2.3, the system shall demonstrate transient, dynamic and voltage stability; all Facilities shall be operating within their Facility Ratings and within their thermal, voltage and stability limits; and Cascading or uncontrolled separation shall not occur.

R2.2.1. Single line to ground or 3-phase Fault (whichever is more severe), with Normal Clearing, on any Faulted generator, line, transformer, or shunt device.

R2.2.2. Loss of any generator, line, transformer, or shunt device without a Fault.

R2.2.3. Single pole block, with Normal Clearing, in a monopolar or bipolar high voltage direct current system.

R2.3. In determining the system's response to a single Contingency, the following shall be acceptable:

R2.3.1. Planned or controlled interruption of electric supply to radial customers or some local network customers connected to or supplied by the Faulted Facility or by the affected area.

[1] The Contingencies identified in FAC-011 R2.2.1 through R2.2.3 are the minimum contingencies that must be studied but are not necessarily the only Contingencies that should be studied.

R2.3.2. Interruption of other network customers, (a) only if the system has already been adjusted, or is being adjusted, following at least one prior outage, or (b) if the real-time operating conditions are more adverse than anticipated in the corresponding studies

R2.3.3. System reconfiguration through manual or automatic control or protection actions.

R2.4. To prepare for the next Contingency, system adjustments may be made, including changes to generation, uses of the transmission system, and the transmission system topology.

R3. The Reliability Coordinator's methodology for determining SOLs, shall include, as a minimum, a description of the following, along with any reliability margins applied for each:

R3.1. Study model (must include at least the entire Reliability Coordinator Area as well as the critical modeling details from other Reliability Coordinator Areas that would impact the Facility or Facilities under study.)

R3.2. Selection of applicable Contingencies

R3.3. A process for determining which of the stability limits associated with the list of multiple contingencies (provided by the Planning Authority in accordance with FAC-014 Requirement 6) are applicable for use in the operating horizon given the actual or expected system conditions.

R3.3.1. This process shall address the need to modify these limits, to modify the list of limits, and to modify the list of associated multiple contingencies.

R3.4. Level of detail of system models used to determine SOLs.

R3.5. Allowed uses of Special Protection Systems or Remedial Action Plans.

R3.6. Anticipated transmission system configuration, generation dispatch and Load level

R3.7. Criteria for determining when violating a SOL qualifies as an Interconnection Reliability Operating Limit (IROL) and criteria for developing any associated IROL T_V.

R4. The Reliability Coordinator shall issue its SOL Methodology and any changes to that methodology, prior to the effectiveness of the Methodology or of a change to the Methodology, to all of the following:

R4.1. Each adjacent Reliability Coordinator and each Reliability Coordinator that indicated it has a reliability-related need for the methodology.

R4.2. Each Planning Authority and Transmission Planner that models any portion of the Reliability Coordinator's Reliability Coordinator Area.

R4.3. Each Transmission Operator that operates in the Reliability Coordinator Area.

R5. If a recipient of the SOL Methodology provides documented technical comments on the methodology, the Reliability Coordinator shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the SOL Methodology and, if no change will be made to that SOL Methodology, the reason why. (Retired)

C. **Measures**

M1. The Reliability Coordinator's SOL Methodology shall address all of the items listed in Requirement 1 through Requirement 3.

M2. The Reliability Coordinator shall have evidence it issued its SOL Methodology, and any changes to that methodology, including the date they were issued, in accordance with Requirement 4.

M3. If the recipient of the SOL Methodology provides documented comments on its technical review of that SOL methodology, the Reliability Coordinator that distributed that SOL Methodology shall have evidence that it provided a written response to that commenter within 45 calendar days of receipt of those comments in accordance with Requirement 5 (Retired)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Regional Reliability Organization

1.2. Compliance Monitoring Period and Reset Time Frame

Each Reliability Coordinator shall self-certify its compliance to the Compliance Monitor at least once every three years. New Reliability Authorities shall demonstrate compliance through an on-site audit conducted by the Compliance Monitor within the first year that it commences operation. The Compliance Monitor shall also conduct an on-site audit once every nine years and an investigation upon complaint to assess performance.

The Performance-Reset Period shall be twelve months from the last non-compliance.

1.3. Data Retention

The Reliability Coordinator shall keep all superseded portions to its SOL Methodology for 12 months beyond the date of the change in that methodology ~~and shall keep all documented comments on its SOL Methodology and associated responses for three years~~. In addition, entities found non-compliant shall keep information related to the non-compliance until found compliant. (Deleted text retired)

Formatted: Strikethrough

Formatted: Font color: Red

The Compliance Monitor shall keep the last audit and all subsequent compliance records.

1.4. Additional Compliance Information

The Reliability Coordinator shall make the following available for inspection during an on-site audit by the Compliance Monitor or within 15 business days of a request as part of an investigation upon complaint:

1.4.1 SOL Methodology.

1.4.2 Documented comments provided by a recipient of the SOL Methodology on its technical review of a SOL Methodology, and the associated responses. (Retired)

1.4.3 Superseded portions of its SOL Methodology that had been made within the past 12 months.

1.4.4 Evidence that the SOL Methodology and any changes to the methodology that occurred within the past 12 months were issued to all required entities.

2. Levels of Non-Compliance for Western Interconnection: (To be replaced with VSLs once developed and approved by WECC)

2.1. Level 1: There shall be a level one non-compliance if either of the following conditions exists:

2.1.1 The SOL Methodology did not include a statement indicating that Facility Ratings shall not be exceeded.

2.1.2 No evidence of responses to a recipient's comments on the SOL Methodology (Retired)

2.2. Level 2: The SOL Methodology did not include a requirement to address all of the elements in R3.1, R3.2, R3.4 through R3.7 and E1.

2.3. Level 3: There shall be a level three non-compliance if any of the following conditions exists:

2.3.1 The SOL Methodology did not include a statement indicating that Facility Ratings shall not be exceeded and the methodology did not include evaluation of system response to one of the three types of single Contingencies identified in R2.2.

2.3.2 The SOL Methodology did not include a statement indicating that Facility Ratings shall not be exceeded and the methodology did not include evaluation of system response to two of the seven types of multiple Contingencies identified in E1.1.

2.3.3 The System Operating Limits Methodology did not include a statement indicating that Facility Ratings shall not be exceeded and the methodology did not address two of the six required topics in R3.1, R3.2, R3.4 through R3.7.

2.4. Level 4: The SOL Methodology was not issued to all required entities in accordance with R4.

3. Violation Severity Levels:

Requirement	Lower	Moderate	High	Severe
R1	Not applicable.	The Reliability Coordinator has a documented SOL Methodology for use in developing SOLs within its Reliability Coordinator Area, but it does not address R1.2	The Reliability Coordinator has a documented SOL Methodology for use in developing SOLs within its Reliability Coordinator Area, but it does not address R1.3.	The Reliability Coordinator has a documented SOL Methodology for use in developing SOLs within its Reliability Coordinator Area, but it does not address R1.1. OR The Reliability Coordinator has no documented SOL Methodology for use in developing SOLs within its Reliability Coordinator Area.
R2	The Reliability Coordinator's SOL Methodology requires that SOLs are set to meet BES performance following single contingencies, but does not require that SOLs are set to meet BES performance in the pre-contingency state. (R2.1)	Not applicable.	The Reliability Coordinator's SOL Methodology requires that SOLs are set to meet BES performance in the pre-contingency state, but does not require that SOLs are set to meet BES performance following single contingencies. (R2.2 – R2.4)	The Reliability Coordinator's SOL Methodology does not require that SOLs are set to meet BES performance in the pre-contingency state and does not require that SOLs are set to meet BES performance following single contingencies. (R2.1 through R2.4)
R3	The Reliability Coordinator has a methodology for determining SOLs that includes a description for all but one of the following: R3.1 through R3.7.	The Reliability Coordinator has a methodology for determining SOLs that includes a description for all but two of the following: R3.1 through R3.7.	The Reliability Coordinator has a methodology for determining SOLs that includes a description for all but three of the following: R3.1 through R3.7.	The Reliability Coordinator has a methodology for determining SOLs that is missing a description of three or more of the following: R3.1 through R3.7.
R4	One or both of the following: The Reliability Coordinator issued its SOL Methodology and changes to that methodology to all but one of the required entities. For a change in methodology, the changed methodology was	One of the following: The Reliability Coordinator issued its SOL Methodology and changes to that methodology to all but one of the required entities AND for a change in methodology, the changed methodology was provided 30	One of the following: The Reliability Coordinator issued its SOL Methodology and changes to that methodology to all but one of the required entities AND for a change in methodology, the changed methodology was provided 60	One of the following: The Reliability Coordinator failed to issue its SOL Methodology and changes to that methodology to more than three of the required entities. The Reliability Coordinator issued its SOL Methodology and

Requirement	Lower	Moderate	High	Severe
	provided up to 30 calendar days after the effectiveness of the change.	calendar days or more, but less than 60 calendar days after the effectiveness of the change. OR The Reliability Coordinator issued its SOL Methodology and changes to that methodology to all but two of the required entities AND for a change in methodology, the changed methodology was provided up to 30 calendar days after the effectiveness of the change.	calendar days or more, but less than 90 calendar days after the effectiveness of the change. OR The Reliability Coordinator issued its SOL Methodology and changes to that methodology to all but two of the required entities AND for a change in methodology, the changed methodology was provided 30 calendar days or more, but less than 60 calendar days after the effectiveness of the change. OR The Reliability Coordinator issued its SOL Methodology and changes to that methodology to all but three of the required entities AND for a change in methodology, the changed methodology was provided up to 30 calendar days after the effectiveness of the change.	changes to that methodology to all but one of the required entities AND for a change in methodology, the changed methodology was provided 90 calendar days or more after the effectiveness of the change. OR The Reliability Coordinator issued its SOL Methodology and changes to that methodology to all but two of the required entities AND for a change in methodology, the changed methodology was provided 60 calendar days or more, but less than 90 calendar days after the effectiveness of the change. OR The Reliability Coordinator issued its SOL Methodology and changes to that methodology to all but three of the required entities AND for a change in methodology, the changed methodology was provided 30 calendar days or more, but less than 60 calendar days after the effectiveness of the change. OR The Reliability Coordinator issued its SOL Methodology and changes to that methodology to all but four of the required entities AND for a change in methodology, the changed methodology was provided up to

Requirement	Lower	Moderate	High	Severe
				30 calendar days after the effectiveness of the change.
R5 (Retired)	The Reliability Coordinator received documented technical comments on its SOL Methodology and provided a complete response in a time period that was longer than 45 calendar days but less than 60 calendar days.	The Reliability Coordinator received documented technical comments on its SOL Methodology and provided a complete response in a time period that was 60 calendar days or longer but less than 75 calendar days.	The Reliability Coordinator received documented technical comments on its SOL Methodology and provided a complete response in a time period that was 75 calendar days or longer but less than 90 calendar days. OR The Reliability Coordinator's response to documented technical comments on its SOL Methodology indicated that a change will not be made, but did not include an explanation of why the change will not be made.	The Reliability Coordinator received documented technical comments on its SOL Methodology and provided a complete response in a time period that was 90 calendar days or longer. OR The Reliability Coordinator's response to documented technical comments on its SOL Methodology did not indicate whether a change will be made to the SOL Methodology.

Regional Differences

1. The following Interconnection-wide Regional Difference shall be applicable in the Western Interconnection:

1.1. As governed by the requirements of R3.3, starting with all Facilities in service, shall require the evaluation of the following multiple Facility Contingencies when establishing SOLs:

1.1.1 Simultaneous permanent phase to ground Faults on different phases of each of two adjacent transmission circuits on a multiple circuit tower, with Normal Clearing. If multiple circuit towers are used only for station entrance and exit purposes, and if they do not exceed five towers at each station, then this condition is an acceptable risk and therefore can be excluded.

1.1.2 A permanent phase to ground Fault on any generator, transmission circuit, transformer, or bus section with Delayed Fault Clearing except for bus sectionalizing breakers or bus-tie breakers addressed in E1.1.7

1.1.3 Simultaneous permanent loss of both poles of a direct current bipolar Facility without an alternating current Fault.

1.1.4 The failure of a circuit breaker associated with a Special Protection System to operate when required following: the loss of any element without a Fault; or a permanent phase to ground Fault, with Normal Clearing, on any transmission circuit, transformer or bus section.

1.1.5 A non-three phase Fault with Normal Clearing on common mode Contingency of two adjacent circuits on separate towers unless the event frequency is determined to be less than one in thirty years.

1.1.6 A common mode outage of two generating units connected to the same switchyard, not otherwise addressed by FAC-011.

1.1.7 The loss of multiple bus sections as a result of failure or delayed clearing of a bus tie or bus sectionalizing breaker to clear a permanent Phase to Ground Fault.

1.2. SOLs shall be established such that for multiple Facility Contingencies in E1.1.1 through E1.1.5 operation within the SOL shall provide system performance consistent with the following:

1.2.1 All Facilities are operating within their applicable Post-Contingency thermal, frequency and voltage limits.

1.2.2 Cascading does not occur.

1.2.3 Uncontrolled separation of the system does not occur.

1.2.4 The system demonstrates transient, dynamic and voltage stability.

1.2.5 Depending on system design and expected system impacts, the controlled interruption of electric supply to customers (load shedding), the planned removal from service of certain generators, and/or the curtailment of contracted firm (non-recallable reserved) electric power transfers may be necessary to maintain the overall security of the interconnected transmission systems.

1.2.6 Interruption of firm transfer, Load or system reconfiguration is permitted through manual or automatic control or protection actions.

1.2.7 To prepare for the next Contingency, system adjustments are permitted, including changes to generation, Load and the transmission system topology when determining limits.

1.3. SOLs shall be established such that for multiple Facility Contingencies in E1.1.6 through E1.1.7 operation within the SOL shall provide system performance consistent with the following with respect to impacts on other systems:

1.3.1 Cascading does not occur.

1.4. The Western Interconnection may make changes (performance category adjustments) to the Contingencies required to be studied and/or the required responses to Contingencies for specific facilities based on actual system performance and robust design. Such changes will apply in determining SOLs.

Version History

Version	Date	Action	Change Tracking
1	November 1, 2006	Adopted by Board of Trustees	New
2		Changed the effective date to October 1, 2008 Changed "Cascading Outage" to "Cascading" Replaced Levels of Non-compliance with Violation Severity Levels Corrected footnote 1 to reference FAC-011 rather than FAC-010	Revised
2	June 24, 2008	Adopted by Board of Trustees: FERC Order 705	Revised
2	January 22, 2010	Updated effective date and footer to April 29, 2009 based on the March 20, 2009 FERC Order	Update
2	TBD	R5 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. Title: Assessment of Transfer Capability for the Near-Term Transmission Planning Horizon

2. Number: FAC-013-2

3. Purpose: To ensure that Planning Coordinators have a methodology for, and perform an annual assessment to identify potential future Transmission System weaknesses and limiting Facilities that could impact the Bulk Electric System's (BES) ability to reliably transfer energy in the Near-Term Transmission Planning Horizon.

4. Applicability:

4.1. Planning Coordinators

5. Effective Date:

In those jurisdictions where regulatory approval is required, the latter of either the first day of the first calendar quarter twelve months after applicable regulatory approval or the first day of the first calendar quarter six months after MOD-001-1, MOD-028-1, MOD-029-1, and MOD-030-2 are effective.

In those jurisdictions where no regulatory approval is required, the latter of either the first day of the first calendar quarter twelve months after Board of Trustees adoption or the first day of the first calendar quarter six months after MOD-001-1, MOD-028-1, MOD-029-1 and MOD-030-2 are effective.

B. Requirements

R1. Each Planning Coordinator shall have a documented methodology it uses to perform an annual assessment of Transfer Capability in the Near-Term Transmission Planning Horizon (Transfer Capability methodology). The Transfer Capability methodology shall include, at a minimum, the following information: *[Violation Risk Factor: Medium] [Time Horizon: Long-term Planning]*

1.1. Criteria for the selection of the transfers to be assessed.

1.2. A statement that the assessment shall respect known System Operating Limits (SOLs).

1.3. A statement that the assumptions and criteria used to perform the assessment are consistent with the Planning Coordinator's planning practices.

1.4. A description of how each of the following assumptions and criteria used in performing the assessment are addressed:

1.4.1. Generation dispatch, including but not limited to long term planned outages, additions and retirements.

1.4.2. Transmission system topology, including but not limited to long term planned Transmission outages, additions, and retirements.

1.4.3. System demand.

1.4.4. Current approved and projected Transmission uses.

1.4.5. Parallel path (loop flow) adjustments.

1.4.6. Contingencies

1.4.7. Monitored Facilities.

1.5. A description of how simulations of transfers are performed through the adjustment of generation, Load or both.

R2. Each Planning Coordinator shall issue its Transfer Capability methodology, and any revisions to the Transfer Capability methodology, to the following entities subject to the following: *[Violation Risk Factor: Lower] [Time Horizon: Long-term Planning]*

2.1. Distribute to the following prior to the effectiveness of such revisions:

2.1.1. Each Planning Coordinator adjacent to the Planning Coordinator's Planning Coordinator area or overlapping the Planning Coordinator's area.

2.1.2. Each Transmission Planner within the Planning Coordinator's Planning Coordinator area.

2.2. Distribute to each functional entity that has a reliability-related need for the Transfer Capability methodology and submits a request for that methodology within 30 calendar days of receiving that written request.

R3. If a recipient of the Transfer Capability methodology provides documented concerns with the methodology, the Planning Coordinator shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Transfer Capability methodology and, if no change will be made to that Transfer Capability methodology, the reason why. *[Violation Risk Factor: Lower][Time Horizon: Long-term Planning]* (Retired)

R4. During each calendar year, each Planning Coordinator shall conduct simulations and document an assessment based on those simulations in accordance with its Transfer Capability methodology for at least one year in the Near-Term Transmission Planning Horizon. *[Violation Risk Factor: Medium] [Time Horizon: Long-term Planning]*

R5. Each Planning Coordinator shall make the documented Transfer Capability assessment results available within 45 calendar days of the completion of the assessment to the recipients of its Transfer Capability methodology pursuant to Requirement R2, Parts 2.1 and Part 2.2. However, if a functional entity that has a reliability related need for the results of the annual assessment of the Transfer Capabilities makes a written request for such an assessment after the completion of the assessment, the Planning Coordinator shall make the documented Transfer Capability assessment results available to that entity within 45 calendar days of receipt of the request *[Violation Risk Factor: Lower] [Time Horizon: Long-term Planning]*

R6. If a recipient of a documented Transfer Capability assessment requests data to support the assessment results, the Planning Coordinator shall provide such data to that entity within 45 calendar days of receipt of the request. The provision of such data shall be subject to the legal and regulatory obligations of the Planning Coordinator's area regarding the disclosure of confidential and/or sensitive information. *[Violation Risk Factor: Lower] [Time Horizon: Long-term Planning]*

C. Measures

M1. Each Planning Coordinator shall have a Transfer Capability methodology that includes the information specified in Requirement R1.

M2. Each Planning Coordinator shall have evidence such as dated e-mail or dated transmittal letters that it provided the new or revised Transfer Capability methodology in accordance with Requirement R2

M3. Each Planning Coordinator shall have evidence, such as dated e-mail or dated transmittal letters, that the Planning Coordinator provided a written response to that commenter in accordance with Requirement R3. (Retired)

M4. Each Planning Coordinator shall have evidence such as dated assessment results, that it conducted and documented a Transfer Capability assessment in accordance with Requirement R4.

M5. Each Planning Coordinator shall have evidence, such as dated copies of e-mails or transmittal letters, that it made its documented Transfer Capability assessment available to the entities in accordance with Requirement R5.

M6. Each Planning Coordinator shall have evidence, such as dated copies of e-mails or transmittal letters, that it made its documented Transfer Capability assessment data available in accordance with Requirement R6.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity

1.2. Data Retention

The Planning Coordinator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Planning Coordinator shall have its current Transfer Capability methodology and any prior versions of the Transfer Capability methodology that were in force since the last compliance audit to show compliance with Requirement R1.
- The Planning Coordinator shall retain evidence since its last compliance audit to show compliance with Requirement R2.
- The Planning Coordinator shall retain evidence to show compliance with Requirements R3, R4, R5 and R6 for the most recent assessment. (R3 retired)
- If a Planning Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant or for the time periods specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Assessment Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Additional Compliance Information

None

2. Violation Severity Levels

R #	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	The Planning Coordinator has a Transfer Capability methodology but failed to address one or two of the items listed in Requirement R1, Part 1.4.	The Planning Coordinator has a Transfer Capability methodology, but failed to incorporate one of the following Parts of Requirement R1 into that methodology: • Part 1.1 • Part 1.2 • Part 1.3 • Part 1.5 OR The Planning Coordinator has a Transfer Capability methodology but failed to address three of the items listed in Requirement R1, Part 1.4.	The Planning Coordinator has a Transfer Capability methodology, but failed to incorporate two of the following Parts of Requirement R1 into that methodology: • Part 1.1 • Part 1.2 • Part 1.3 • Part 1.5 OR The Planning Coordinator has a Transfer Capability methodology but failed to address four of the items listed in Requirement R1, Part 1.4.	The Planning Coordinator did not have a Transfer Capability methodology. OR The Planning Coordinator has a Transfer Capability methodology, but failed to incorporate three or more of the following Parts of Requirement R1 into that methodology: • Part 1.1 • Part 1.2 • Part 1.3 • Part 1.5 OR The Planning Coordinator has a Transfer Capability methodology but failed to address more than four of the items listed in Requirement R1, Part 1.4.

Formatted Table

Formatted Table

R2	The Planning Coordinator notified one or more of the parties specified in Requirement R2 of a new or revised Transfer Capability methodology after its implementation, but not more than 30 calendar days after its implementation. OR The Planning Coordinator provided the transfer Capability methodology more than 30 calendar days but not more than 60 calendar days after the receipt of a request.	The Planning Coordinator notified one or more of the parties specified in Requirement R2 of a new or revised Transfer Capability methodology more than 30 calendar days after its implementation, but not more than 60 calendar days after its implementation. OR The Planning Coordinator provided the Transfer Capability methodology more than 60 calendar days but not more than 90 calendar days after receipt of a request	The Planning Coordinator notified one or more of the parties specified in Requirement R2 of a new or revised Transfer Capability methodology more than 60 calendar days, but not more than 90 calendar days after its implementation. OR The Planning Coordinator provided the Transfer Capability methodology more than 90 calendar days but not more than 120 calendar days after receipt of a request.	The Planning Coordinator failed to notify one or more of the parties specified in Requirement R2 of a new or revised Transfer Capability methodology more than 90 calendar days after its implementation. OR The Planning Coordinator provided the Transfer Capability methodology more than 120 calendar days after receipt of a request.
R3 **(Retired)**	The Planning Coordinator provided a documented response to a documented concern with its Transfer Capability methodology as required in Requirement R3 more than 45 calendar days, but not more than 60 calendar days after receipt of the concern.	The Planning Coordinator provided a documented response to a documented concern with its Transfer Capability methodology as required in Requirement R3 more than 60 calendar days, but not more than 75 calendar days after receipt of the concern.	The Planning Coordinator provided a documented response to a documented concern with its Transfer Capability methodology as required in Requirement R3 more than 75 calendar days, but not more than 90 calendar days after receipt of the concern.	The Planning Coordinator failed to provide a documented response to a documented concern with its Transfer Capability methodology as required in Requirement R3 by more than 90 calendar days after receipt of the concern. OR The Planning Coordinator failed to respond to a documented concern with its Transfer Capability methodology.

R4.	The Planning Coordinator conducted a Transfer Capability assessment outside the calendar year, but not by more than 30 calendar days.	The Planning Coordinator conducted a Transfer Capability assessment outside the calendar year, by more than 30 calendar days, but not by more than 60 calendar days.	The Planning Coordinator conducted a Transfer Capability assessment outside the calendar year, by more than 60 calendar days, but not by more than 90 calendar days.	The Planning Coordinator failed to conduct a Transfer Capability assessment outside the calendar year by more than 90 calendar days. OR The Planning Coordinator failed to conduct a Transfer Capability assessment.

Formatted Table

R5	The Planning Coordinator made its documented Transfer Capability assessment available to one or more of the recipients of its Transfer Capability methodology more than 45 calendar days after the requirements of R5,, but not more than 60 calendar days after completion of the assessment.	The Planning Coordinator made its Transfer Capability assessment available to one or more of the recipients of its Transfer Capability methodology more than 60 calendar days after the requirements of R5, but not more than 75 calendar days after completion of the assessment.	The Planning Coordinator made its Transfer Capability assessment available to one or more of the recipients of its Transfer Capability methodology more than 75 calendar days after the requirements of R5, but not more than 90 days after completion of the assessment.	The Planning Coordinator failed to make its documented Transfer Capability assessment available to one or more of the recipients of its Transfer Capability methodology more than 90 days after the requirements of R5. OR The Planning Coordinator failed to make its documented Transfer Capability assessment available to any of the recipients of its Transfer Capability methodology under the requirements of R5.
R6	The Planning Coordinator provided the requested data as required in Requirement R6 more than 45 calendar days after receipt of the request for data, but not more than 60 calendar days after the receipt of the request for data.	The Planning Coordinator provided the requested data as required in Requirement R6 more than 60 calendar days after receipt of the request for data, but not more than 75 calendar days after the receipt of the request for data.	The Planning Coordinator provided the requested data as required in Requirement R6 more than 75 calendar days after receipt of the request for data, but not more than 90 calendar days after the receipt of the request for data.	The Planning Coordinator provided the requested data as required in Requirement R6 more than 90 after the receipt of the request for data. OR The Planning Coordinator failed to provide the requested data as required in Requirement R6.

A. Introduction

1. Title: **Interchange Confirmation**

2. Number: **INT-007-1**

3. Purpose: To ensure that each Arranged Interchange is checked for reliability before it is implemented.

4. Applicability

4.1. Interchange Authority.

5. Effective Date: January 1, 2007

B. Requirements

R1. The Interchange Authority shall verify that Arranged Interchange is balanced and valid prior to transitioning Arranged Interchange to Confirmed Interchange by verifying the following:

R1.1. Source Balancing Authority megawatts equal sink Balancing Authority megawatts (adjusted for losses, if appropriate).

R1.2. All reliability entities involved in the Arranged Interchange are currently in the NERC registry. (Retired)

R1.3. The following are defined:

R1.3.1. Generation source and load sink.

R1.3.2. Megawatt profile.

R1.3.3. Ramp start and stop times.

R1.3.4. Interchange duration.

R1.4. Each Balancing Authority and Transmission Service Provider that received the Arranged Interchange information from the Interchange Authority for reliability assessment has provided approval.

C. Measures

M1. For each Arranged Interchange, the Interchange Authority shall show evidence that it has verified the Arranged Interchange information prior to the dissemination of the Confirmed Interchange.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Regional Reliability Organization.

1.2. Compliance Monitoring Period and Reset Time Frame

The Performance-Reset Period shall be twelve months from the last noncompliance to Requirement 1.

1.3. Data Retention

The Interchange Authority shall keep 90 days of historical data. The Compliance Monitor shall keep audit records for a minimum of three calendar years.

1.4. Additional Compliance Information

Each Interchange Authority shall demonstrate compliance to the Compliance Monitor within the first year that this standard becomes effective or the first year the entity commences operation by self-certification to the Compliance Monitor.

Subsequent to the initial compliance review, compliance may be:

1.4.1 Verified by audit at least once every three years.

1.4.2 Verified by spot checks in years between audits.

1.4.3 Verified by annual audits of noncompliant Interchange Authorities, until compliance is demonstrated.

1.4.4 Verified at any time as the result of a complaint. Complaints must be lodged within 60 days of the incident. Complaints will be evaluated by the Compliance Monitor.

Each Interchange Authority shall make the following available for inspection by the Compliance Monitor upon request:

1.4.5 For compliance audits and spot checks, relevant data and system log records for the audit period which indicate an Interchange Authority's verification that all Arranged Interchange was balanced and valid as defined in R1. The Compliance Monitor may request up to a three-month period of historical data ending with the date the request is received by the Interchange Authority.

1.4.6 For specific complaints, only those data and system log records associated with the specific Interchange event contained in the complaint which indicate an Interchange Authority's verification that an Arranged Interchange was balanced and valid as defined in R1 for that specific Interchange

2. Levels of Non-Compliance

2.1. Level 1: One occurrence[1] where Interchange-related data was not verified as defined in R1.

2.2. Level 2: Two occurrences where Interchange-related data was not verified as defined in R1.

2.3. Level 3: Three occurrences where Interchange-related data was not verified as defined in R1.

2.4. Level 4: Four or more occurrences where Interchange-related data was not verified as defined in R1.

E. Regional Differences

None

[1] This does not include instances of not verifying due to extenuating circumstances approved by the Compliance Monitor.

Version History

Version	Date	Action	Change Tracking
1	TBD	R1.2 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. Title: **Coordination of Real-time Activities Between Reliability Coordinators**

2. Number: **IRO-016-1**

3. Purpose: To ensure that each Reliability Coordinator's operations are coordinated such that they will not have an Adverse Reliability Impact on other Reliability Coordinator Areas and to preserve the reliability benefits of interconnected operations.

4. Applicability

4.1. Reliability Coordinator

5. Effective Date: November 1, 2006

B. Requirements

R1. The Reliability Coordinator that identifies a potential, expected, or actual problem that requires the actions of one or more other Reliability Coordinators shall contact the other Reliability Coordinator(s) to confirm that there is a problem and then discuss options and decide upon a solution to prevent or resolve the identified problem.

R1.1. If the involved Reliability Coordinators agree on the problem and the actions to take to prevent or mitigate the system condition, each involved Reliability Coordinator shall implement the agreed-upon solution, and notify the involved Reliability Coordinators of the action(s) taken.

R1.2. If the involved Reliability Coordinators cannot agree on the problem(s) each Reliability Coordinator shall re-evaluate the causes of the disagreement (bad data, status, study results, tools, etc.).

R1.2.1. If time permits, this re-evaluation shall be done before taking corrective actions.

R1.2.2. If time does not permit, then each Reliability Coordinator shall operate as though the problem(s) exist(s) until the conflicting system status is resolved.

R1.3. If the involved Reliability Coordinators cannot agree on the solution, the more conservative solution shall be implemented.

R2. The Reliability Coordinator shall document (via operator logs or other data sources) its actions taken for either the event or for the disagreement on the problem(s) or for both. (Retired)

C. Measures

M1. For each event that requires Reliability Coordinator-to-Reliability Coordinator coordination, each involved Reliability Coordinator shall have evidence (operator logs or other data sources) of the actions taken for either the event or for the disagreement on the problem or for both.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Regional Reliability Organization

1.2. Compliance Monitoring Period and Reset Time Frame

The performance reset period shall be one calendar year.

1.3. Data Retention

The Reliability Coordinator shall keep auditable evidence for a rolling 12 months. In addition, entities found non-compliant shall keep information related to the non-compliance until it has been found compliant. The Compliance Monitor shall keep compliance data for a minimum of three years or until the Reliability Coordinator has achieved full compliance, whichever is longer.

1.4. Additional Compliance Information

The Reliability Coordinator shall demonstrate compliance through self-certification submitted to its Compliance Monitor annually. The Compliance Monitor shall use a scheduled on-site review at least once every three years. The Compliance Monitor shall conduct an investigation upon a complaint that is received within 30 days of an alleged infraction's discovery date. The Compliance Monitor shall complete the investigation and report back to all involved Reliability Coordinators (the Reliability Coordinator that complained as well as the Reliability Coordinator that was investigated) within 45 days after the start of the investigation. As part of an audit or investigation, the Compliance Monitor shall interview other Reliability Coordinators within the Interconnection and verify that the Reliability Coordinator being audited or investigated has been coordinating actions to prevent or resolve potential, expected, or actual problems that adversely impact the Interconnection.

The Reliability Coordinator shall have the following available for its Compliance Monitor to inspect during a scheduled, on-site review or within five working days of a request as part of an investigation upon complaint:

1.4.1 Evidence (operator log or other data source) to show coordination with other Reliability Coordinators.

2. Levels of Non-Compliance

2.1. Level 1: For potential, actual or expected events which required Reliability Coordinator-to-Reliability Coordinator coordination, the Reliability Coordinator did coordinate, but did not have evidence that it coordinated with other Reliability Coordinators.

2.2. Level 2: Not applicable.

2.3. Level 3: Not applicable.

2.4. Level 4: For potential, actual or expected events which required Reliability Coordinator-to-Reliability Coordinator coordination, the Reliability Coordinator did not coordinate with other Reliability Coordinators.

E. Regional Differences

None identified.

Version History

Version	Date	Action	Change Tracking
Version 1	August 10, 2005	1. Changed incorrect use of certain hyphens (-) to "en dash (–)." 2. Hyphenated "30-day" and "Reliability Coordinator-to-Reliability Coordinator" when used as adjective.	01/20/06

		3. Changed standard header to be consistent with standard "Title." 4. Added "periods" to items where appropriate. 5. Initial capped heading "Definitions of Terms Used in Standard." 6. Changed "Timeframe" to "Time Frame" in item D, 1.2. 7. Lower cased all words that are not "defined" terms — drafting team, and self-certification. 8. Changed apostrophes to "smart" symbols. 9. Removed comma after word "condition" in item R.1.1. 10. Added comma after word "expected" in item 1.4, last sentence. 11. Removed extra spaces between words where appropriate.	
1	TBD	R2 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. Title: **Nuclear Plant Interface Coordination**

2. Number: NUC-001-2

3. Purpose: This standard requires coordination between Nuclear Plant Generator Operators and Transmission Entities for the purpose of ensuring nuclear plant safe operation and shutdown.

4. Applicability:

4.1. Nuclear Plant Generator Operator.

4.2. Transmission Entities shall mean all entities that are responsible for providing services related to Nuclear Plant Interface Requirements (NPIRs). Such entities may include one or more of the following:

4.2.1 Transmission Operators.

4.2.2 Transmission Owners.

4.2.3 Transmission Planners.

4.2.4 Transmission Service Providers.

4.2.5 Balancing Authorities.

4.2.6 Reliability Coordinators.

4.2.7 Planning Coordinators.

4.2.8 Distribution Providers.

4.2.9 Load-serving Entities.

4.2.10 Generator Owners.

4.2.11 Generator Operators.

5. Effective Date: April 1, 2010

B. Requirements

R1. The Nuclear Plant Generator Operator shall provide the proposed NPIRs in writing to the applicable Transmission Entities and shall verify receipt [*Risk Factor: Lower*]

R2. The Nuclear Plant Generator Operator and the applicable Transmission Entities shall have in effect one or more Agreements[1] that include mutually agreed to NPIRs and document how the Nuclear Plant Generator Operator and the applicable Transmission Entities shall address and implement these NPIRs. [*Risk Factor: Medium*]

R3. Per the Agreements developed in accordance with this standard, the applicable Transmission Entities shall incorporate the NPIRs into their planning analyses of the electric system and shall communicate the results of these analyses to the Nuclear Plant Generator Operator. [*Risk Factor: Medium*]

R4. Per the Agreements developed in accordance with this standard, the applicable Transmission Entities shall: [*Risk Factor: High*]

1. Agreements may include mutually agreed upon procedures or protocols in effect between entities or between departments of a vertically integrated system.

R4.1. Incorporate the NPIRs into their operating analyses of the electric system.

R4.2. Operate the electric system to meet the NPIRs.

R4.3. Inform the Nuclear Plant Generator Operator when the ability to assess the operation of the electric system affecting NPIRs is lost.

R5. The Nuclear Plant Generator Operator shall operate per the Agreements developed in accordance with this standard. [*Risk Factor: High*]

R6. Per the Agreements developed in accordance with this standard, the applicable Transmission Entities and the Nuclear Plant Generator Operator shall coordinate outages and maintenance activities which affect the NPIRs. [*Risk Factor: Medium*]

R7. Per the Agreements developed in accordance with this standard, the Nuclear Plant Generator Operator shall inform the applicable Transmission Entities of actual or proposed changes to nuclear plant design, configuration, operations, limits, protection systems, or capabilities that may impact the ability of the electric system to meet the NPIRs. [*Risk Factor: High*]

R8. Per the Agreements developed in accordance with this standard, the applicable Transmission Entities shall inform the Nuclear Plant Generator Operator of actual or proposed changes to electric system design, configuration, operations, limits, protection systems, or capabilities that may impact the ability of the electric system to meet the NPIRs. [*Risk Factor: High*]

R9. The Nuclear Plant Generator Operator and the applicable Transmission Entities shall include, as a minimum, the following elements within the agreement(s) identified in R2: [*Risk Factor: Medium*]

R9.1. Administrative elements: (Retired)

R9.1.1. Definitions of key terms used in the agreement. (Retired)

R9.1.2. Names of the responsible entities, organizational relationships, and responsibilities related to the NPIRs. (Retired)

R9.1.3. A requirement to review the agreement(s) at least every three years. (Retired)

R9.1.4. A dispute resolution mechanism. (Retired)

R9.2. Technical requirements and analysis:

R9.2.1. Identification of parameters, limits, configurations, and operating scenarios included in the NPIRs and, as applicable, procedures for providing any specific data not provided within the agreement.

R9.2.2. Identification of facilities, components, and configuration restrictions that are essential for meeting the NPIRs.

R9.2.3. Types of planning and operational analyses performed specifically to support the NPIRs, including the frequency of studies and types of Contingencies and scenarios required.

R9.3. Operations and maintenance coordination:

R9.3.1. Designation of ownership of electrical facilities at the interface between the electric system and the nuclear plant and responsibilities for operational control coordination and maintenance of these facilities.

R9.3.2. Identification of any maintenance requirements for equipment not owned or controlled by the Nuclear Plant Generator Operator that are necessary to meet the NPIRs.

R9.3.3. Coordination of testing, calibration and maintenance of on-site and off-site power supply systems and related components.

R9.3.4. Provisions to address mitigating actions needed to avoid violating NPIRs and to address periods when responsible Transmission Entity loses the ability to assess the capability of the electric system to meet the NPIRs. These provisions shall include responsibility to notify the Nuclear Plant Generator Operator within a specified time frame.

R9.3.5. Provision for considering, within the restoration process, the requirements and urgency of a nuclear plant that has lost all off-site and on-site AC power. .

R9.3.6. Coordination of physical and cyber security protection of the Bulk Electric System at the nuclear plant interface to ensure each asset is covered under at least one entity's plan.

R9.3.7. Coordination of the NPIRs with transmission system Special Protection Systems and underfrequency and undervoltage load shedding programs.

R9.4. Communications and training:

R9.4.1. Provisions for communications between the Nuclear Plant Generator Operator and Transmission Entities, including communications protocols, notification time requirements, and definitions of terms.

R9.4.2. Provisions for coordination during an off-normal or emergency event affecting the NPIRs, including the need to provide timely information explaining the event, an estimate of when the system will be returned to a normal state, and the actual time the system is returned to normal.

R9.4.3. Provisions for coordinating investigations of causes of unplanned events affecting the NPIRs and developing solutions to minimize future risk of such events.

R9.4.4. Provisions for supplying information necessary to report to government agencies, as related to NPIRs.

R9.4.5. Provisions for personnel training, as related to NPIRs.

C. Measures

M1. The Nuclear Plant Generator Operator shall, upon request of the Compliance Enforcement Authority, provide a copy of the transmittal and receipt of transmittal of the proposed NPIRs to the responsible Transmission Entities. (Requirement 1)

M2. The Nuclear Plant Generator Operator and each Transmission Entity shall each have a copy of the Agreement(s) addressing the elements in Requirement 9 available for inspection upon request of the Compliance Enforcement Authority. (Requirement 2 and 9)

M3. Each Transmission Entity responsible for planning analyses in accordance with the Agreement shall, upon request of the Compliance Enforcement Authority, provide a copy of the planning analyses results transmitted to the Nuclear Plant Generator Operator, showing incorporation of the NPIRs. The Compliance Enforcement Authority shall refer to the Agreements developed in accordance with this standard for specific requirements. (Requirement 3)

M4. Each Transmission Entity responsible for operating the electric system in accordance with the Agreement shall demonstrate or provide evidence of the following, upon request of the Compliance Enforcement Authority:

M4.1 The NPIRs have been incorporated into the current operating analysis of the electric system. (Requirement 4.1)

M4.2 The electric system was operated to meet the NPIRs. (Requirement 4.2)

M4.3 The Transmission Entity informed the Nuclear Plant Generator Operator when it became aware it lost the capability to assess the operation of the electric system affecting the NPIRs. (Requirement 4.3)

M5. The Nuclear Plant Generator Operator shall, upon request of the Compliance Enforcement Authority, demonstrate or provide evidence that the Nuclear Power Plant is being operated consistent with the Agreements developed in accordance with this standard. (Requirement 5)

M6. The Transmission Entities and Nuclear Plant Generator Operator shall, upon request of the Compliance Enforcement Authority, provide evidence of the coordination between the Transmission Entities and the Nuclear Plant Generator Operator regarding outages and maintenance activities which affect the NPIRs. (Requirement 6)

M7. The Nuclear Plant Generator Operator shall provide evidence that it informed the applicable Transmission Entities of changes to nuclear plant design, configuration, operations, limits, protection systems, or capabilities that would impact the ability of the Transmission Entities to meet the NPIRs. (Requirement 7)

M8. The Transmission Entities shall each provide evidence that it informed the Nuclear Plant Generator Operator of changes to electric system design, configuration, operations, limits, protection systems, or capabilities that would impact the ability of the Nuclear Plant Generator Operator to meet the NPIRs. (Requirement 8)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity.

1.2. Compliance Monitoring Period and Reset Time Frame

Not applicable.

1.3. Compliance Monitoring and Enforcement Processes:

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

The Responsible Entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- For Measure 1, the Nuclear Plant Generator Operator shall keep its latest transmittals and receipts.
- For Measure 2, the Nuclear Plant Generator Operator and each Transmission Entity shall have its current, in-force agreement.
- For Measure 3, the Transmission Entity shall have the latest planning analysis results.
- For Measures 4.3, 6 and 8, the Transmission Entity shall keep evidence for two years plus current.
- For Measures 5, 6 and 7, the Nuclear Plant Generator Operator shall keep evidence for two years plus current.

If a Responsible Entity is found non-compliant it shall keep information related to the noncompliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None.

2. Violation Severity Levels

2.1. Lower: Agreement(s) exist per this standard and NPIRs were identified and implemented, but documentation described in M1-M8 was not provided.

2.2. Moderate: Agreement(s) exist per R2 and NPIRs were identified and implemented, but one or more elements of the Agreement in R9 were not met.

2.3. High: One or more requirements of R3 through R8 were not met.

2.4. Severe: No proposed NPIRs were submitted per R1, no Agreement exists per this standard, or the Agreements were not implemented.

E. Regional Differences

The design basis for Canadian (CANDU) NPPs does not result in the same licensing requirements as U.S. NPPs. NRC design criteria specifies that in addition to emergency on-site electrical power, electrical power from the electric network also be provided to permit safe shutdown. This requirement is specified in such NRC Regulations as 10 CFR 50 Appendix A — General Design Criterion 17 and 10 CFR 50.63 Loss of all alternating current power. There are no equivalent Canadian Regulatory requirements for Station Blackout (SBO) or coping times as they do not form part of the licensing basis for CANDU NPPs.
Therefore the definition of NPLR for Canadian CANDU units will be as follows:

Nuclear Plant Licensing Requirements (NPLR) are requirements included in the design basis of the nuclear plant and are statutorily mandated for the operation of the plant; when used in this standard, NPLR shall mean nuclear power plant licensing requirements for avoiding preventable challenges to nuclear safety as a result of an electric system disturbance, transient, or condition.

F. Associated Documents

Version History

Version	Date	Action	Change Tracking
1	May 2, 2007	Approved by Board of Trustees	New

2	January 22, 2010	Approved by FERC on January 21, 2010 Added Effective Date	Update
2	TBD	R9.1, R9.1.1, R9.1.2, R9.1.3, and R9.1.4 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. Title: **Technical Assessment of the Design and Effectiveness of Undervoltage Load Shedding Program.**

2. Number: PRC-010-0

3. Purpose: Provide System preservation measures in an attempt to prevent system voltage collapse or voltage instability by implementing an Undervoltage Load Shedding (UVLS) program.

4. Applicability:

4.1. Load-Serving Entity that operates a UVLS program

4.2. Transmission Owner that owns a UVLS program

4.3. Transmission Operator that operates a UVLS program

4.4. Distribution Provider that owns or operates a UVLS program

5. Effective Date: April 1, 2005

B. Requirements

R1. The Load-Serving Entity, Transmission Owner, Transmission Operator, and Distribution Provider that owns or operates a UVLS program shall periodically (at least every five years or as required by changes in system conditions) conduct and document an assessment of the effectiveness of the UVLS program. This assessment shall be conducted with the associated Transmission Planner(s) and Planning Authority(ies).

R1.1. This assessment shall include, but is not limited to:

R1.1.1. Coordination of the UVLS programs with other protection and control systems in the Region and with other Regional Reliability Organizations, as appropriate.

R1.1.2. Simulations that demonstrate that the UVLS programs performance is consistent with Reliability Standards TPL-001-0, TPL-002-0, TPL-003-0 and TPL-004-0.

R1.1.3. A review of the voltage set points and timing.

R2. The Load-Serving Entity, Transmission Owner, Transmission Operator, and Distribution Provider that owns or operates a UVLS program shall provide documentation of its current UVLS program assessment to its Regional Reliability Organization and NERC on request (30 calendar days). (Retired)

C. Measures

M1. Each Transmission Owner's and Distribution Provider's UVLS program shall include the elements identified in Reliability Standard PRC-010-0_R1.

M2. Each Load-Serving Entity, Transmission Owner, Transmission Operator, and Distribution Provider that owns or operates a UVLS program shall have evidence it provided documentation of its current UVLS program assessment to its Regional Reliability Organization and NERC as specified in Reliability Standard PRC-010-0_R2. (Retired)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Compliance Monitor: Regional Reliability Organizations. Each Regional Reliability Organization shall report compliance and violations to NERC via the NERC Compliance Reporting process.

1.2. Compliance Monitoring Period and Reset Timeframe

Assessments every five years or as required by System changes.

Current assessment on request (30 calendar days.)

1.3. Data Retention

None specified.

1.4. Additional Compliance Information

None.

2. Levels of Non-Compliance

2.1. Level 1: Not applicable.

2.2. Level 2: Not applicable.

2.3. Level 3: Not applicable.

2.4. Level 4: An assessment of the UVLS program did not address one of the three requirements listed in Reliability Standard PRC-010-0_R1.1 or an assessment of the UVLS program was not provided.

E. Regional Differences

1. None identified.

Version History

Standard PRC-022-1 — Under-Voltage Load Shedding Program Performance

A. Introduction

1. **Title:** **Under-Voltage Load Shedding Program Performance**

2. **Number:** **PRC-022-1**

3. **Purpose:** Ensure that Under Voltage Load Shedding (UVLS) programs perform as intended to mitigate the risk of voltage collapse or voltage instability in the Bulk Electric System (BES).

4. **Applicability**

   4.1. Transmission Operator that operates a UVLS program.

   4.2. Distribution Provider that operates a UVLS program.

   4.3. Load-Serving Entity that operates a UVLS program.

5. **Effective Date:** May 1, 2006

B. Requirements

R1. Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program to mitigate the risk of voltage collapse or voltage instability in the BES shall analyze and document all UVLS operations and Misoperations. The analysis shall include:

R1.1. A description of the event including initiating conditions.

R1.2. A review of the UVLS set points and tripping times.

R1.3. A simulation of the event, if deemed appropriate by the Regional Reliability Organization. For most events, analysis of sequence of events may be sufficient and dynamic simulations may not be needed.

R1.4. A summary of the findings.

R1.5. For any Misoperation, a Corrective Action Plan to avoid future Misoperations of a similar nature.

R2. Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program shall provide documentation of its analysis of UVLS program performance to its Regional Reliability Organization within 90 calendar days of a request. (Retired)

C. Measures

M1. Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program shall have documentation of its analysis of UVLS operations and Misoperations in accordance with Requirement 1.1 through 1.5.

M2. Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program shall have evidence that it provided documentation of its analysis of UVLS program performance within 90 calendar days of a request by the Regional Reliability Organization. (Retired)

D. Compliance

1. Compliance Monitoring Process

   1.1. Compliance Monitoring Responsibility

   Regional Reliability Organization.

   1.2. Compliance Monitoring Period and Reset Time Frame

One calendar year.

1.3. Data Retention

Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program shall retain documentation of its analyses of UVLS operations and Misoperations for two years. The Compliance Monitor shall retain any audit data for three years.

1.4. Additional Compliance Information

Transmission Operator, Load-Serving Entity, and Distribution Provider shall demonstrate compliance through self-certification or audit (periodic, as part of targeted monitoring or initiated by complaint or event), as determined by the Compliance Monitor.

2. Levels of Non-Compliance

2.1. Level 1: Not applicable.

2.2. Level 2: Documentation of the analysis of UVLS performance was provided but did not include one of the five requirements in R1.

2.3. Level 3: Documentation of the analysis of UVLS performance was provided but did not include two or more of the five requirements in R1.

2.4. Level 4: Documentation of the analysis of UVLS performance was not provided.

E. Regional Differences

None identified.

Version	Date	Action	Change Tracking
1	December 1, 2005	1. Removed comma after 2004 in "Development Steps Completed," #1. 2. Changed incorrect use of certain hyphens (-) to "en dash" (–) and "em dash (—)." 3. Lower cased the word "region," "board," and "regional" throughout document where appropriate. 4. Added or removed "periods" where appropriate. 5. Changed "Timeframe" to "Time Frame" in item D, 1.2.	January 20, 2006
1	TBD	R2 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. **Title:** **Voltage and Reactive Control**

2. **Number:** VAR-001-2

3. **Purpose:** To ensure that voltage levels, reactive flows, and reactive resources are monitored, controlled, and maintained within limits in real time to protect equipment and the reliable operation of the Interconnection.

4. **Applicability:**

   4.1. Transmission Operators.

   4.2. Purchasing-Selling Entities.

   4.3. Load Serving Entities.

5. **(Proposed) Effective Date:** The first day of the first calendar quarter six months after applicable regulatory approval; or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter six months after Board of Trustees' adoption.

B. Requirements

R1. Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators.

R2. Each Transmission Operator shall acquire sufficient reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching;, and controllable load – within its area to protect the voltage levels under normal and Contingency conditions. This includes the Transmission Operator's share of the reactive requirements of interconnecting transmission circuits.

R3. The Transmission Operator shall specify criteria that exempts generators from compliance with the requirements defined in Requirement 4, and Requirement 6.1.

R3.1. Each Transmission Operator shall maintain a list of generators in its area that are exempt from following a voltage or Reactive Power schedule.

R3.2. For each generator that is on this exemption list, the Transmission Operator shall notify the associated Generator Owner.

R4. Each Transmission Operator shall specify a voltage or Reactive Power schedule [1] at the interconnection between the generator facility and the Transmission Owner's facilities to be maintained by each generator. The Transmission Operator shall provide the voltage or Reactive Power schedule to the associated Generator Operator and direct the Generator Operator to comply with the schedule in automatic voltage control mode (AVR in service and controlling voltage).

R5. Each Purchasing-Selling Entity and Load Serving Entity shall arrange for (self-provide or purchase) reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching;, and controllable load– to satisfy its reactive requirements identified by its Transmission Service Provider. (Retired)

[1] The voltage schedule is a target voltage to be maintained within a tolerance band during a specified period.

R6. The Transmission Operator shall know the status of all transmission Reactive Power resources, including the status of voltage regulators and power system stabilizers.

R6.1. When notified of the loss of an automatic voltage regulator control, the Transmission Operator shall direct the Generator Operator to maintain or change either its voltage schedule or its Reactive Power schedule.

R7. The Transmission Operator shall be able to operate or direct the operation of devices necessary to regulate transmission voltage and reactive flow.

R8. Each Transmission Operator shall operate or direct the operation of capacitive and inductive reactive resources within its area – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching; controllable load; and, if necessary, load shedding – to maintain system and Interconnection voltages within established limits.

R9. Each Transmission Operator shall maintain reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching;, and controllable load– to support its voltage under first Contingency conditions.

R9.1. Each Transmission Operator shall disperse and locate the reactive resources so that the resources can be applied effectively and quickly when Contingencies occur.

R10. Each Transmission Operator shall correct IROL or SOL violations resulting from reactive resource deficiencies (IROL violations must be corrected within 30 minutes) and complete the required IROL or SOL violation reporting.

R11. After consultation with the Generator Owner regarding necessary step-up transformer tap changes, the Transmission Operator shall provide documentation to the Generator Owner specifying the required tap changes, a timeframe for making the changes, and technical justification for these changes.

R12. The Transmission Operator shall direct corrective action, including load reduction, necessary to prevent voltage collapse when reactive resources are insufficient.

C. Measures

M1. The Transmission Operator shall have evidence it provided a voltage or Reactive Power schedule as specified in Requirement 4 to each Generator Operator it requires to follow such a schedule.

M2. The Transmission Operator shall have evidence to show that, for each generating unit in its area that is exempt from following a voltage or Reactive Power schedule, the associated Generator Owner was notified of this exemption in accordance with Requirement 3.2.

M3. The Transmission Operator shall have evidence to show that it issued directives as specified in Requirement 6.1 when notified by a Generator Operator of the loss of an automatic voltage regulator control.

M4. The Transmission Operator shall have evidence that it provided documentation to the Generator Owner when a change was needed to a generating unit's step-up transformer tap in accordance with Requirement 11.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity.

1.2. Compliance Monitoring Period and Reset Time Frame

One calendar year.

1.3. Compliance Monitoring and Enforcement Processes:

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

The Transmission Operator shall retain evidence for Measures 1 through 4 for 12 months.

The Compliance Monitor shall retain any audit data for three years.

1.5. Additional Compliance Information

The Transmission Operator shall demonstrate compliance through self-certification or audit (periodic, as part of targeted monitoring or initiated by complaint or event), as determined by the Compliance Monitor.

2. Violation Severity Levels (no changes)

E. Regional Differences

None identified.

Note that when these Requirements are retired, the version numbers of the standards will NOT be incremented, but the retired Requirements and associated elements will be clearly marked as retired. After evaluating the options and consulting with the Standards Committee and Standards Committee Process Subcommittee, the P81 drafting team determined that this was the most practical approach. Incrementing the version numbers of each standard is impractical because, in some cases, a subsequent version has already been developed. In addition, incrementing the version would require renumbering Requirements where a retired Requirement created a gap in numbering, and this creates an undesirable administrative burden for entities using certain systems to manage their compliance programs.

Background

On September 30, 2011, the North American Electric Reliability Corporation (NERC) filed a petition with the Federal Energy Regulatory Commission (FERC) requesting approval of its proposal to make informational filings in a "Find, Fix, Track and Report" (FFT) spreadsheet of lesser-risk, remediated possible violations of Reliability Standards. On March 15, 2012, the FERC issued an order conditionally accepting NERC's FFT proposal. In paragraph 81 (P81) of that order, the FERC stated:

> The Commission notes that NERC's FFT initiative is predicated on the view that many violations of requirements currently included in Reliability Standards pose lesser risk to the Bulk-Power System. If so, some current requirements likely provide little protection for Bulk-Power System reliability or may be redundant. The Commission is interested in obtaining views on whether such requirements could be removed from the Reliability Standards with little effect on reliability and an increase in efficiency of the ERO compliance program. If NERC believes that specific Reliability Standards or specific requirements within certain Standards should be revised or removed, we invite NERC to make specific proposals to the Commission identifying the Standards or requirements and setting forth in detail the technical basis for its belief. In addition, or in the alternative, we invite NERC, the Regional Entities and other interested entities to propose appropriate mechanisms to identify and remove from the Commission-approved Reliability Standards unnecessary or redundant requirements. We will not impose a deadline on when these comments should be submitted, but ask that to the extent such comments are submitted NERC, the Regional Entities, and interested entities coordinate to submit their respective comments concurrently. North American Electric Reliability Corporation, 138 FERC ¶ 61,193 at p 81 (March 15, 2012) ("P81").

Consistent with P81, a draft Standards Authorization Request (SAR) was drafted to set forth criteria and a process to identify Reliability Standard requirements that either: (a) provide little protection to the Bulk Electric System; (b) are unnecessary or (c) are redundant; and, thereafter, to have NERC file to retire the identified Reliability Standard requirements with appropriate governmental authorities.

Standards Process Input Group (SPIG)

In addition to addressing P81, the SAR was drafted consistent with what the SPIG developed as Recommendation No. 4, as set forth in NERC's Recommendations to Improve The Standards Development Process on page 12 (April 2012), which states:

> Recommendation 4: Standards Product Issues — The NERC board is encouraged to require that the standards development process address: . . . The retirement of standards no longer needed to meet an adequate level of reliability.

Collaborative Process

The draft SAR and a suggested list of Reliability Standard requirements embedded in the SAR for consideration in the Initial Phase was the product of collaborative discussions among the following entities and their members: Edison Electric Institute, American Public Power Association, National Rural Electric Cooperative Association, Large Public Power Council, Electricity Consumers Resource Council, The Electric Power Supply Association, Transmission Access Policy Study Group, the North American Electric Reliability Corporation, and the Regional Entity Management Group. The draft SAR was posted for comment, which were due September 4, 2012. The P81 Standards Drafting Team reviewed the comments and finalized the SAR and the proposed list of Reliability Standard requirements for retirement.

Applicable Entities

- Balancing Authority
- Distribution Provider
- Generator Operator
- Generator Owner
- Interchange Authority
- Load Serving Entity
- NERC
- Planning Authority
- Planning Coordinator
- Purchasing-Selling Entity
- Regional Entity
- Regional Reliability Organization
- Reliability Coordinator
- Transmission Service Provider
- Transmission Operator
- Transmission Owner
- Transmission Planner

Effective Date of Retirements

All of the Requirements will be retired on the day of approval by applicable regulatory authorities, or in those jurisdictions where regulatory approval is not required, the first day of the first calendar quarter after approval by the NERC Board of Trustees, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

Note that no complete standard is being proposed for retirement and all of the other Requirements in each of the affected standards will remain in continuous effect.

Background

On September 30, 2011, the North American Electric Reliability Corporation (NERC) filed a petition with the Federal Energy Regulatory Commission (FERC) requesting approval of its proposal to make informational filings in a "Find, Fix, Track and Report" (FFT) spreadsheet of lesser-risk, remediated possible violations of Reliability Standards. On March 15, 2012, the FERC issued an order conditionally accepting NERC's FFT proposal. In paragraph 81 (P81) of that order, the FERC stated:

> The Commission notes that NERC's FFT initiative is predicated on the view that many violations of requirements currently included in Reliability Standards pose lesser risk to the Bulk-Power System. If so, some current requirements likely provide little protection for Bulk-Power System reliability or may be redundant. The Commission is interested in obtaining views on whether such requirements could be removed from the Reliability Standards with little effect on reliability and an increase in efficiency of the ERO compliance program. If NERC believes that specific Reliability Standards or specific requirements within certain Standards should be revised or removed, we invite NERC to make specific proposals to the Commission identifying the Standards or requirements and setting forth in detail the technical basis for its belief. In addition, or in the alternative, we invite NERC, the Regional Entities and other interested entities to propose appropriate mechanisms to identify and remove from the Commission-approved Reliability Standards unnecessary or redundant requirements. We will not impose a deadline on when these comments should be submitted, but ask that to the extent such comments are submitted NERC, the Regional Entities, and interested entities coordinate to submit their respective comments concurrently. North American Electric Reliability Corporation, 138 FERC ¶ 61,193 at p 81 (March 15, 2012) ("P81").

Consistent with P81, a draft Standards Authorization Request (SAR) was drafted to set forth criteria and a process to identify Reliability Standard requirements that either: (a) provide little protection to the Bulk Electric System; (b) are unnecessary or (c) are redundant; and, thereafter, to have NERC file to retire the identified Reliability Standard requirements with ~~FERC to have them removed from the FERC-approved list of Reliability Standards~~appropriate governmental authorities.

Standards Process Input Group (SPIG)

In addition to addressing P81, the ~~draft~~ SAR was drafted consistent with what the SPIG developed as Recommendation No. 4, as set forth in NERC's Recommendations to Improve The Standards Development Process on page 12 (April 2012), which states:

> Recommendation 4: Standards Product Issues — The NERC board is encouraged to require that the standards development process address: . . . The retirement of standards no longer needed to meet an adequate level of reliability.

Collaborative Process

The draft SAR and a suggested list of Reliability Standard requirements embedded in the SAR for consideration in the Initial Phase was the product of collaborative discussions among the following entities and their members: Edison Electric Institute, American Public Power Association, National Rural Electric Cooperative Association, Large Public Power Council, Electricity Consumers Resource Council, The Electric Power Supply Association, Transmission Access Policy Study Group, the North American Electric Reliability Corporation, and the Regional Entity Management Group. The draft SAR was posted for comment, which were due September 4, 2012. The P81 Standards Drafting Team reviewed the comments and finalized the SAR and the proposed list of Reliability Standard requirements for retirement.

Paragraph 81 Project Technical White Paper

December 20, 2012

Table of Contents

P81 Project Technical White Paper

December 20, 2012

I. Introduction

On March 15, 2012, the Federal Energy Regulatory Commission ("FERC" or Commission") issued an order[1] on the North American Electric Reliability Corporation's ("NERC") Find, Fix and Track ("FFT") process that stated in paragraph 81 ("P81"):

> The Commission notes that NERC's FFT initiative is predicated on the view that many violations of requirements currently included in Reliability Standards pose lesser risk to the Bulk-Power System. If so, some current requirements likely provide little protection for Bulk-Power System reliability or may be redundant. The Commission is interested in obtaining views on whether such requirements could be removed from the Reliability Standards with little effect on reliability and an increase in efficiency of the [Electric Reliability Organization] ERO compliance program. If NERC believes that specific Reliability Standards or specific requirements within certain Standards should be revised or removed, we invite NERC to make specific proposals to the Commission identifying the Standards or requirements and setting forth in detail the technical basis for its belief. In addition, or in the alternative, we invite NERC, the Regional Entities and other interested entities to propose appropriate mechanisms to identify and remove from the Commission-approved Reliability Standards unnecessary or redundant requirements. We will not impose a deadline on when these comments should be submitted, but ask that to the extent such comments are submitted NERC, the Regional Entities, and interested entities coordinate to submit their respective comments concurrently.

A. Consensus Process

In response to P81 and the Commission's request for comments to be coordinated,[2] during June and July 2012, various industry stakeholders, Trade Associations,[3] staff from NERC and staff from the NERC Regions jointly discussed consensus criteria and an initial list of Reliability Standard requirements that appeared to easily satisfy the criteria,

---

[1] *North American Electric Reliability Corporation,* 138 FERC ¶ 61,193 at P 81 (2012).

[2] In addition to addressing P81, the consensus effort was also consistent with recommendation #4 set forth in *NERC's Recommendations to Improve The Standards Development Process* at page 12 (April 2012), which states:

Recommendation 4: Standards Product Issues — The NERC board is encouraged to require that the standards development process address: . . . The retirement of standards no longer needed to meet an adequate level of reliability.

[3] Edison Electric Institute, American Public Power Association, National Rural Electric Cooperative Association, Large Public Power Council, Electricity Consumers Resource Council, The Electric Power Supply Association, and Transmission Access Policy Study Group.

and, thus, could be retired. Specifically, the three parties (industry stakeholders/Trade Associations, staff from NERC, and staff from the NERC Regions) used the following conservative discipline to arrive at the proposed list of requirements to be retired: (i) the development of criteria to determine whether a Reliability Standard requirement should be retired and (ii) the application of this criteria with consultation from Subject Matter Experts ("SME"), with the understanding that if any of the three parties objected to including a requirement it would not be included in the initial phase of the P81 Project. As a result of this process, a draft Standards Authorization Request ("SAR"), including an initial suggested list of requirements for retirement, was drafted and presented to the NERC Standards Committee. Also, the SMEs consulted in this process provided the technical justifications that appear in this technical white paper.

B. Standards Committee

On July 11, 2012, the Standards Committee authorized the draft SAR to be posted for industry comment and formed an interim P81 Standards Drafting Team ("SDT") to review and respond to comments as well as finalize the SAR. The draft SAR was posted on August 3, 2012 with stakeholder comments due on or before September 4, 2012. Based on the stakeholder comments received, the SDT finalized the SAR, including the criteria and the initial list of Reliability Standard requirements proposed for retirement. On September 28, 2012, the Standards Committee Executive Committee authorized: (a) waiving the 30 day initial comment period and (b) posting the SAR and list of requirements proposed for retirement in the initial phase for a 45-day formal comment period with the formation of a ballot pool during the first 30 days and an initial ballot during the last 10 days of that 45-day comment period.[4]

The purpose of this technical white paper is to set forth the background and technical justification for each of the Reliability Standard requirements proposed for retirement. Stakeholders are requested to review this technical white paper and provide the SDT any: (1) supplemental, additional technical justifications for a requirement(s) and/or (2) concerns with the technical justifications for a requirement(s).

[4] The following requirements that were presented in the draft SAR were already scheduled to be retired or subsumed via another Standards Development Project that has been approved by stakeholders and the NERC Board of Trustees (or due to be before the Board in November), and, thus, are presented in this technical white paper in Section V for informational purposes only: CIP-001-2a R4; COM-001-1.1 R6; EOP-004-1 R1; EOP-009-0 R2; FAC-008-1 R1.3.5; PRC-008-0 R1; PRC-008-0 R2; PRC-009-0 R1; PRC-009-0 R1.1; PRC-009-0 R1.2; PRC-009-0 R1.3; PRC-009-0 R1.4; PRC-009-0 R2; TOP-001-1a R3; and TOP-005-2a R1. For regulatory efficiency, these requirements will not be presented for comment and vote, and, therefore, will not be presented to the Board of Trustees for retirement or filed with the Commission or Canadian governmental authorities as part of the P81 Project. Those requirements that were not part of the draft SAR, but were added based on stakeholder comments are denoted by a "**" throughout this technical white paper. More detail on each of these requirements is provided below.

II. Executive Summary

The SDT developed a set of three criteria and used them to identify requirements that could be eligible for retirement. A summary of the criteria are as follows:

A. Criterion A (Overarching Criterion): little, if any, benefit or protection to the reliable operation of the BES

B. Criteria B (Identifying Criteria)
   - B1. Administrative
   - B2. Data Collection/Data Retention
   - B3. Documentation
   - B4. Reporting
   - B5. Periodic Updates
   - B6. Commercial or Business Practice
   - B7. Redundant

C. Criteria C (Additional data and reference points)
   - C1. Part of a FFT filing
   - C2. Being reviewed in an ongoing Standards Development Project
   - C3. Violation Risk Factor ("VRF") of the requirement
   - C4. Tier in the 2013 Actively Monitored List ("AML")
   - C5. Negative impact on NERC's reliability principles
   - C6. Negative impact on the defense in depth protection of the BES
   - C7. Promotion of results or performance based Reliability Standards

Specifically, for a requirement to be proposed for retirement, it must satisfy both, Criterion A and at least one of the Criteria B. Criteria C were considered as additional information to make a more informed decision.

Based on the criteria above, the SDT proposes to retire the following 36 requirements in 23 Reliability Standard versions:

- BAL-005-0.2b R2
- CIP-003-3 R1.2
- CIP-003-3 R3
- CIP-003-3 R3.1
- CIP-003-3 R3.2
- CIP-003-3 R3.3
- CIP-003-3 R4.2

- CIP-003-4 R1.2
- CIP-003-4 R3
- CIP-003-4 R3.1
- CIP-003-4 R3.2
- CIP-003-4 R3.3
- CIP-003-4 R4.2
- CIP-005-3a R2.6
- CIP-005-4a R2.6
- CIP-007-3 R7.3
- CIP-007-4 R7.3
- EOP-005-2 R3.1
- FAC-002-1 R2
- FAC-008-1 R2
- FAC-008-1 R3
- FAC-008-3 R4
- FAC-008-3 R5
- FAC-010-2.1 R5**
- FAC-011-2 R5**
- FAC-013-2 R3
- INT-007-1 R1.2
- IRO-016-1 R2
- NUC-001-2 R9.1
- NUC-001-2 R9.1.1
- NUC-001-2 R9.1.2
- NUC-001-2 R9.1.3
- NUC-001-2 R9.1.4
- PRC-010-0 R2
- PRC-022-1 R2
- VAR-001-2 R5**

A table is included in Appendix A with the Reliability Standard requirements proposed for retirement and a cross-reference to the associated criteria.

III. Criteria

The P81 Project focuses on identifying FERC-approved Reliability Standard requirements that satisfy the criteria set forth below.[5] Specifically, for a Reliability Standard requirement to be proposed for retirement it must satisfy **both**: (i) Criterion A

[5] The scope of future phases of the P81 Project has not yet been determined. When the scope is considered, the criteria set forth herein may be a useful guide to appropriate criteria for those phases.

(the overarching criterion) and (ii) at least one of the Criteria B listed below (identifying criteria). The purpose of having these two levels of criteria was to confine the review and consideration of requirements to only those requirements that clearly need not be included in the mandatory Reliability Standards. Also, Criteria A and B were designed so there would be no rewriting or consolidation of requirements, and the technical merits of retiring the requirements did not require significant research and vetting. In addition, for each Reliability Standard requirement proposed for retirement, the data and reference points set forth below in Criteria C were considered to make a more informed decision on whether to proceed with retirement. Lastly, for each requirement proposed for retirement, any increase to the efficiency of the ERO compliance program is addressed.

Criterion A (Overarching Criterion)

The Reliability Standard requirement requires responsible entities ("entities") to conduct an activity or task that does little, if anything, to benefit or protect the reliable operation of the BES.

Section 215(a) (4) of the United States Federal Power Act defines "reliable operation" as: "… operating the elements of the bulk-power system within equipment and electric system thermal, voltage, and stability limits so that instability, uncontrolled separation, or cascading failures of such system will not occur as a result of a sudden disturbance, including a cybersecurity incident, or unanticipated failure of system elements."

Criteria B (Identifying Criteria)

B1. Administrative

The Reliability Standard requirement requires responsible entities to perform a function that is administrative in nature, does not support reliability and is needlessly burdensome.

This criterion is designed to identify requirements that can be removed with little effect on reliability and whose removal will result in an increase in the efficiency of the ERO compliance program. Administrative functions may include a task that is or is not related to developing procedures or plans, such as establishing communication contacts. Thus, for certain requirements, Criterion B1 is closely related to Criteria B2, B3 and B4. Strictly administrative functions do not inherently negatively impact reliability directly and, where possible, should be eliminated for purposes of efficiency and to allow the ERO and entities to appropriately allocate resources.

B2. Data Collection/Data Retention

These are requirements that obligate responsible entities to produce and retain data which document prior events or activities, and should be collected via some other method under NERC's rules and processes.

This criterion is designed to identify requirements that can be removed with little effect on reliability. The collection and/or retention of data do not necessarily have a reliability benefit and yet are often required to demonstrate compliance. Where data collection and/or data retention is unnecessary for reliability purposes, such requirements should be eliminated in order to increase the efficiency of the ERO compliance program.

B3. Documentation

The Reliability Standard requirement requires responsible entities to develop a document (*e.g.*, plan, policy or procedure) which is not necessary to protect BES reliability.

This criterion is designed to identify requirements that require the development of a document that is unrelated to reliability or has no performance or results-based function. In other words, the document is required, but no execution of a reliability activity or task is associated with or required by the document.

B4. Reporting

The Reliability Standard requirement obligates responsible entities to report to a Regional Entity, NERC or another party or entity. These are requirements that obligate responsible entities to report to a Regional Entity on activities which have no discernible impact on promoting the reliable operation of the BES and if the entity failed to meet this requirement there would be little reliability impact.

B5. Periodic Updates

The Reliability Standard requirement requires responsible entities to periodically update (*e.g.*, annually) documentation, such as a plan, procedure or policy without an operational benefit to reliability.

This criterion is designed to identify requirements that impose an updating requirement that is out of sync with the actual operations of the BES, unnecessary or duplicative.

B6. Commercial or Business Practice

The Reliability Standard requirement is a commercial or business practice, or implicates commercial rather than reliability issues.

This criterion is designed to identify those requirements that require: (i) implementing a best or outdated business practice or (ii) implicating the exchange of or debate on commercially sensitive information while doing little, if anything, to promote the reliable operation of the BES.

B7. Redundant

The Reliability Standard requirement is redundant with: (i) another FERC-approved Reliability Standard requirement(s); (ii) the ERO compliance and monitoring program or

(iii) a governmental regulation (*e.g.*, Open Access Transmission Tariff, North American Energy Standards Board ("NAESB"), etc.).

This criterion is designed to identify requirements that are redundant with other requirements and are, therefore, unnecessary. Unlike the other criteria listed in Criterion B, in the case of redundancy, the task or activity itself may contribute to a reliable BES, but it is not necessary to have two duplicative requirements on the same or similar task or activity. Such requirements can be removed with little or no effect on reliability and removal will result in an increase in efficiency of the ERO compliance program.

Criteria C (Additional data and reference points)

To assist in the determination of whether to proceed with the requirement of a Reliability Standard requirement that satisfies both Criteria A and B, the following data and reference points shall be considered to make a more informed decision:

C1. Was the Reliability Standard requirement part of a FFT filing?

The application of this criterion involves determining whether the requirement was included in a FFT filing.

C2. Is the Reliability Standard requirement being reviewed in an on-going Standards Development Project?

The application of this criterion involves determining whether the requirement proposed for retirement is part of an active on-going Standards Development Project, with a consideration of the point in the process that Project is at. If the requirement has been passed by the stakeholders and is scheduled to be presented to the NERC Board of Trustees, in most cases it will not be included in the P81 project to promote regulatory efficiency. The exception would be a requirement, such as the Critical Information Protection ("CIP") requirements for Version 3 and 4, that is not due to be retired for an extended period of time; or, other requirements that based on the specific facts and circumstances of that requirement indicate it should be retired via the P81 Project first rather than waiting for another Standards Development Project to retire it, particularly as a way to increase the efficiencies of the ERO compliance program. Also, for informational purposes, whether the requirement is included in a future or pending Standards Development Project will be identified and discussed.

C3. What is the VRF of the Reliability Standard requirement?

The application of this criterion involves identifying the VRF of the requirement proposed for retirement, with particular consideration of any requirement that has been assigned as having a Medium or High VRF. Also, the fact that a requirement has a

Lower VRF is not dispositive that it qualifies for retirement. In this regard, Criterion C3 is considered in light of Criterion C5 (Reliability Principles) and C6 (Defense in Depth) to ensure that no reliability gap would be created by the retirement of the Lower VRF requirement. For example, no requirement, including a Lower VRF requirement, should be retired if its retirement harms the effectiveness of a larger scheme of requirements that are purposely designed to protect the reliable operation of the BES.

C4. In which tier of the 2013 AML does the Reliability Standard requirement fall?

The application of this criterion involves identifying whether the requirement proposed for retirement is on the 2013 AML, with particular consideration for any requirement in the first tier of the 2013 AML.

C5. Is there a possible negative impact on NERC's published and posted reliability principles?

The application of this criterion involves consideration of the eight following reliability principles published on the NERC webpage.

> **Reliability Principles**
> NERC Reliability Standards are based on certain reliability principles that define the foundation of reliability for North American bulk power systems. Each reliability standard shall enable or support one or more of the reliability principles, thereby ensuring that each standard serves a purpose in support of reliability of the North American bulk power systems. Each reliability standard shall also be consistent with all of the reliability principles, thereby ensuring that no standard undermines reliability through an unintended consequence.
>
> Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.
>
> Principle 2. The frequency and voltage of interconnected bulk power systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.

Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

Principle 4. Plans for emergency operation and system restoration of interconnected bulk power systems shall be developed, coordinated, maintained, and implemented.

Principle 5. Facilities for communication, monitoring, and control shall be provided, used, and maintained for the reliability of interconnected bulk power systems.

Principle 6. Personnel responsible for planning and operating interconnected bulk power systems shall be trained, qualified, and have the responsibility and authority to implement actions.

Principle 7. The reliability of the interconnected bulk power systems shall be assessed, monitored, and maintained on a wide-area basis.

Principle 8. Bulk power systems shall be protected from malicious physical or cyber attacks. (footnote omitted).

C6. Is there any negative impact on the defense in depth protection of the BES?

The application of this criterion considers whether the requirement proposed for retirement is part of a defense in depth protection strategy. In order words, the assessment is to verify whether other requirements rely on the requirement proposed for retirement to protect the BES.

C7. Does the retirement promote results or performance based Reliability Standards?

The application of this criterion considers whether the requirement, if retired, will promote the initiative to implement results- and/or performance-based Reliability Standards.

IV. The Initial Phase Reliability Standards Requirements Proposed for Retirement

The following lists the requirements proposed for retirement with details of the assessment resulting from the applicability of the criteria above.

BAL-005-0.2b R2 – Automatic Generation Control

R2. Each Balancing Authority shall maintain Regulating Reserve that can be controlled by AGC to meet the Control Performance Standard.

Background/Commission Directives

BAL-005-0 was filed for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[6] Also, the Commission accepted an errata filing to BAL-005-0.1b, which replaced Appendix 1 with a corrected version of a Commission-approved interpretation, and made an internal reference correction in the interpretation, thus resulting in BAL-005-0.2b.[7]

In Order No. 693 at paragraph 387, the Commission stated that:

> The goal of this Reliability Standard is to maintain Interconnection frequency by requiring that all generation, transmission, and customer load be within the metered boundaries of a balancing authority area, and establishing the functional requirements for the balancing authority's regulation service, including its calculation of ACE.

At paragraph 396, the Commission stated:

> On this issue, the Commission directs the ERO to modify BAL-005-0 through the Reliability Standards development process to develop a process to calculate the minimum regulating reserve for a balancing authority, taking into account expected load and generation variation and transactions being ramped into or out of the balancing authority.

This Commission directive is unaffected by the proposed retirement of BAL-005-0.2b R2.

[6] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

[7] Letter Order, Petition of the North American Electric Reliability Corporation for Approval of Errata Changes to Seven Reliability Standards, Docket No. RD12-4-000 (September 13, 2012).

Additionally, when adjusting the VRF for the previous version, BAL-005-0.1b R2, from Lower to High, the Commission stated that:[8]

> While theoretically, CPS can be met without the use of AGC, for example, when the AGC system is malfunctioning, the Commission believes, in practice, that AGC is the most dependable and effective means for multiple balancing authorities in an Interconnection to collectively meet CPS requirements in tandem while minimizing assistance from each other in this regard. Human reaction is neither fast enough nor dependable enough in this repetitive task to provide the immediate and continuous support to correct for Interconnection frequency drift. Further, the failure to use AGC presents a higher risk that immediate load shedding will need to be implemented after the sudden loss of generation or an unforeseen significant load increase and, thus, the failure to use AGC subjects the Bulk-Power System to a higher risk of instability.

However, the fact that the VRF for BAL-005-0.2b R2 is High is not indicative of its actual impact on the BES as explained in further detail below. Also, no Commission directive is impacted by BAL-005-0.2b R2.

Technical Justification

The stated reliability purpose of BAL-005-0.2b is to establish requirements for Balancing Authority Automatic Generation Control ("AGC") necessary to calculate Area Control Error ("ACE") and to routinely deploy the Regulating Reserve. The standard also ensures that all facilities and load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. The reliability purpose and objectives of BAL-005-0.2b are unaffected by the proposed retirement of R2.

A Balancing Authority must use AGC to control its Regulating Reserves to meet the Control Performance Standards ("CPS") as set forth in BAL-001-0.1a R1 and R2. Although for a short period of time (as the Commission stated during an AGC malfunction) a Balancing Authority may be able to meet its CPS obligations without AGC, it cannot do so for any extended period of time, and, therefore, Balancing Authorities must use AGC to control its Regulating Reserves to satisfy its obligations under BAL-001-0.1a R1 and R2. Given this fact, it is redundant to also have BAL-005-0.2b R2 set forth the following statement: "Each Balancing Authority shall maintain Regulating Reserve that can be controlled by AGC to meet the Control Performance Standard." (Criterion B7). It is the duplicative nature of having two requirements requiring the same activity that does little, if anything, to benefit or protect reliable operation of the BES. (Criterion A). In other words, without the existence of BAL-005-0.2b R2, Balancing Authorities must still have Regulating Reserves that can be controlled by AGC to satisfy the CPS in BAL-001-0.1a R1 and R2.

[8] *North American Electric Reliability Corporation*, 121 FERC ¶ 61,179 at P 50 (2007).

Also, the retirement of BAL-005-0.2b R2 would increase the efficiency of the ERO compliance program because NERC and the Regional Entities would be able to focus their time and resources on monitoring compliance on BAL-001-0.1a R1 and R2, which are results-based requirements, versus monitoring compliance with both BAL-001-0.1a R1 and R2 as well as the static statement in BAL-005-0.2b R2. Therefore, retiring BAL-005-0.2b R2 will provide for increased efficiencies in the ERO compliance program.

Criterion A

Without the existence of BAL-005-0.2b R2, Balancing Authorities must still have Regulating Reserves that can be controlled by AGC to satisfy the CPS in BAL-001-0.1a R1 and R2. Having two requirements requiring a Balancing Authority to conduct the same activity or task does little, if anything, to benefit or protect the reliable operation of the BES because it is duplicative.

Criteria B

- Criterion B7 (Redundant)

Criteria C

1. BAL-005-0.2b R2 has not been part of a FFT filing.

2. BAL-005-0.2b R2 is currently scheduled to be included in Standards Development Project 2010-14.2, which is Phase II of Balancing Authority Reliability-based Controls: Time Error, AGC, and Inadvertent. Given that Project 2010-14.2 is currently not an active Standards Development Project, it remains appropriate to retire BAL-005-0.2b R2 via the P81 Project.

3. The VRF for BAL-005-0.2b R2 is High. Given the redundant nature of BAL-005-0.2b R2, the High VRF is not dispositive of whether or not it should be retired since BAL-001-0.1a R1 and R2 accomplishes the important reliability requirement of Balancing Authorities maintaining Regulating Reserves that can be controlled by AGC to satisfy CPS.

4. BAL-005-0.2b R2 is not part of the 2013 AML.

5. The redundant nature of BAL-005-0.2b R2 with BAL-001-0.1a R1 and R2 also indicates that the retirement of BAL-005-0.2b R2 does not pose a negative impact to NERC's published and posted reliability principles. The two reliability principles applicable to BAL-005-0.2b R2 are the following:

    Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

Principle 2. The frequency and voltage of interconnected bulk power systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.

6. Retirement of BAL-005-0.2b R2 does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability. As discussed above, given that BAL-001-0.1a R1 and R2 already require that AGC be used to control Regulating Reserves, there is no risk or gap to reliability resulting from the retirement of BAL-005-0.2b R2.

7. Retirement of BAL-005-0.2b R2 promotes a results-based approach, because it is retiring a static requirement while BAL-001.1a R1 and R2, which are more dynamic and results-based requirements, will remain in effect.

Accordingly, for the above reasons, it is appropriate to retire BAL-005-0.2b R2.

CIP-003-3, -4 R1.2 – Cyber Security – Security Management Controls

R1.2. The cyber security policy is readily available to all personnel who have access to, or are responsible for, Critical Cyber Assets.

Background/Commission Directives

CIP-003-1 was filed for Commission approval on August 28, 2006 in Docket No. RM06-16-000 and was approved on January 18, 2008 in Order No. 706.[9] CIP-003-2 was filed for Commission approval on May 22, 2009 in Docket Nos. RM06-22-000 and RD09-7-000 and was approved on September 30, 2009.[10] CIP-003-3 was filed for Commission approval on December 29, 2009 in Docket No. RD09-7-002 and was approved on March 31, 2010.[11] CIP-003-4 was submitted for Commission approval on February 10, 2011 in Docket No. RM11-11-000 and was approved on April 19, 2012.[12]

In Order No. 706 at paragraph 342 the Commission stated that:

[9] *Mandatory Reliability Standards for Critical Infrastructure Protection*, 122 FERC ¶ 61,040 (2008) ("Order No. 706"), *order on reh'g*, Order No. 706-A, 123 FERC ¶ 61,174 (2008), *order on clarification*, Order No. 706-B, 126 FERC ¶ 61,229, order on clarification, Order No. 706-C, 127 FERC ¶ 61,273 (2009).
[10] *Order Approving Revised Reliability Standard for Critical Infrastructure Protection and Requiring Compliance Filing*, 128 FERC ¶ 61,291 (2009), *order denying reh'g and granting clarification*, 129 FERC ¶ 61,236 (2009) (approving Version 2 of the CIP Reliability Standards)).
[11] *Order on Compliance* 130 FERC ¶ 61,271 (2010).
[12] *Version 4 Critical Infrastructure Protection Reliability Standards*, 139 FERC ¶ 61,058 (2012).

> Reliability Standard CIP-003-1 seeks to ensure that each responsible entity has minimum security management controls in place to protect the critical cyber assets identified pursuant to CIP-002-1. To achieve this goal, a responsible entity must develop a cyber security policy that represents management's commitment and ability to secure its critical cyber assets. It also must designate a senior manager to direct the cyber security program and to approve any exception to the policy.

All outstanding directives in Order No. 706 will be addressed in Version 5 of the CIP Standards and the retirement of CIP-003-3, -4 R1.2 does not impact a Commission directive.

Technical Justification

The importance of the cyber security policy as representing management's commitment and ability to secure critical cyber assets is overshadowed by the rigorous and specific training, procedural and process related requirements of the CIP Standards. These trainings, procedures and processes render having the cyber security policy readily available an unnecessary requirement. In other words, whether CIP personnel are completing a typical CIP requirement cyber security task or responding to an immediate situation, they will act via their specific training, processes and procedures and not the overarching cyber security policy. Stated another way, CIP personnel will act via their specific training, processes and procedures which reflect the overarching cyber security policy. Consequently, the cyber security policy's generalized guidance on compliance with the CIP requirements is not a document that adds value to personnel protecting the BES from a cyber attack on a day-to-day basis.

Furthermore, to implement CIP-003-3, -4 R1.2 entities have undertaken a variety of administrative solutions including kiosks dedicated to computers with the cyber security policy, posting the policy on the company intranet, having copies available in work stations, at common area desks in generating stations and substations, etc. Therefore, although the cyber security policy is readily available for all personnel who have access to, or are responsible for, Critical Cyber Assets, these personnel are specifically and appropriately focused on implementing the procedures and processes required by CIP Reliability Standards such as CIP-007-3 R1, which states as follows:

> Test Procedures — The Responsible Entity shall ensure that new Cyber Assets and significant changes to existing Cyber Assets within the Electronic Security Perimeter do not adversely affect existing cyber security controls. For purposes of Standard CIP-007-3, a significant change shall, at a minimum, include implementation of security patches, cumulative service packs, vendor releases, and version upgrades of operating systems, applications, database platforms, or other third-party software or firmware.

Generally the cyber security policy will cite CIP-007-3 R1 as a requirement, and may refer to procedures related to CIP-007-3 R1, but will not have, nor is it required to have, the detail necessary to implement CIP-007-3 R1. In some larger companies, it is also common to have specific procedures on how to accomplish requirements such as CIP-007-3 R1 in a control center versus a generating plant or substation, and it may be different CIP personnel implementing these procedures in locations many hundreds of miles, states or Interconnections away from each other. The value of a more general cyber security policy to these individuals is minimal, at best, and, therefore, does not support reliability. Also, making it readily available at all office locations is an unnecessarily burdensome administrative task.

Moreover, to place every procedure and process to comply with CIP in the cyber security policy is also not practical or effective, because such a large policy will only distract from CIP personnel being able to specifically focus on the task before them. As already stated, there are likely some differences between implementing a requirement like CIP-007-1 R1 in a control center that may be located in one state and for generators located several states and hundreds of miles away. Thus, making the cyber security policy readily available is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES (Criteria A and B1).

In this context, also consider the inefficiencies CIP-003-3, -4 R1.2 may be causing the ERO compliance program. In companies with hundreds of personnel who have access to, or are responsible for, Critical Cyber Assets in multiple states and Interconnections, the ERO may expend a significant amount of time and resources to monitor compliance with CIP-003-3, -4 R1.2 via a review of kiosks, intranet sites, office cubicles, desks, etc in multiple locations. Accordingly, considerable efficiency gains will be obtained for the ERO's compliance program if CIP-003-3, -4 R1.2 is retired.

Criterion A
Making the cyber security policy readily available is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B

- Criterion B1 (Administrative)

Criteria C

1. CIP-003-3, -4 R1.2 has been part of a FFT filing.[13]

2. As is the case with all the CIP requirements (other than CIP-001-2a R4) proposed for retirement in this technical paper, CIP-003-3, -4 R1.2 is part of an on-going Standards Development Project 2008-06 (Cyber Security) ("CIP V5"). The P81 SDT has coordinated its efforts with the chair of Project 2008-06. There is no conflict between CIP requirements proposed in this technical white paper for

[13] NERC FFT Informational Filing, Docket No. RC12-1-000 (October 31, 2011).

retirement and the direction of Project 2008-06. The CIP V5 requirements are not Board of Trustee or Commission approved, and, even if they were, the effective date of CIP V5 is unknown and likely at least a year, maybe more, into the future. Thus, unlike the other requirements presented here for informational purposes, it is appropriate to maintain all the CIP requirements discussed in this technical paper within the scope of the P81 Project to secure the efficiency gains resulting to the ERO compliance program from their retirement.

3. CIP-003-3, -4 R1.2 has a Lower VRF. As explained above, CIP-003-3, -4 R1.2 is not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

4. CIP-003-3,-4 R1.2 is in the second tier of the AML. As explained above, CIP-003-3, -4 R1.2 is not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

5. Given its administrative nature, CIP-003-3, -4 R1.2 does not negatively impact NERC's published and posted reliability principles. The two reliability principles that appear applicable to CIP-003-3, -4 R1.2 are the following:

   Principle 6. Personnel responsible for planning and operating interconnected bulk power systems shall be trained, qualified, and have the responsibility and authority to implement actions.

   Principle 8. Bulk power systems shall be protected from malicious physical or cyber attacks.

   As stated above, other CIP requirements are replete with the requirements that CIP personnel implement to protect the BES from cyber attacks.

6. Retiring CIP-003-3, -4 R1.2 does not negatively impact defense in depth because no other requirement depends on the cyber security policy being readily available. Therefore, the removal of CIP-003,-3,-4 R1.2 cannot have a negative impact on defense in depth.

7. Retirement of CIP-003-3, -4 R1.2 promotes a results-based approach because the requirement is mechanistic and administrative, and does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire CIP-003-3, -4 R1.2.

CIP-003-3, -4 R3, R3.1, R3.2, R3.3 – Cyber Security – Security Management Controls

R3. Exceptions – Instances where the Responsible Entity cannot conform to its cyber security policy must be documented as exceptions and authorized by the senior manager or delegate(s).

R3.1. Exceptions to the Responsible Entity's cyber security policy must be documented within thirty days of being approved by the senior manager or delegate(s).

R3.2. Documented exceptions to the cyber security policy must include an explanation as to why the exception is necessary and any compensating measures.

R3.3. Authorized exceptions to the cyber security policy must be reviewed and approved annually by the senior manager or delegate(s) to ensure the exceptions are still required and valid. Such review and approval shall be documented.

Background/Commission Directives

CIP-003-1 was filed for Commission approval on August 28, 2006 in Docket No. RM06-16-000 and was approved on January 18, 2008 in Order No. 706.[14] CIP-003-2 was filed for Commission approval on May 22, 2009 in Docket Nos. RM06-22-000 and RD09-7-000 and was approved on September 30, 2009.[15] CIP-003-3 was filed for Commission approval on December 29, 2009 in Docket No. RD09-7-002 and was approved on March 31, 2010.[16] CIP-003-4 was submitted for Commission approval on February 10, 2011 in Docket No. RM11-11-000 and was approved on April 19, 2012.[17]

In Order No. 706 at paragraphs 373 and 376 the Commission stated that:

> Requirement R3 provides that a responsible entity must document exceptions to its policy with documentation and senior management approval. The Commission is concerned that, if exceptions mount, there would come a point where the exceptions rather than the rule prevail. In such a situation, it is questionable whether the responsible entity is

[14] *Mandatory Reliability Standards for Critical Infrastructure Protection*, 122 FERC ¶ 61,040 (2008) ("Order No. 706"), *order on reh'g*, Order No. 706-A, 123 FERC ¶ 61,174 (2008), *order on clarification*, Order No. 706-B, 126 FERC ¶ 61,229, order on clarification, Order No. 706-C, 127 FERC ¶ 61,273 (2009).
[15] *Order Approving Revised Reliability Standard for Critical Infrastructure Protection and Requiring Compliance Filing*, 128 FERC ¶ 61,291 (2009), *order denying reh'g and granting clarification*, 129 FERC ¶ 61,236 (2009) (approving Version 2 of the CIP Reliability Standards)).
[16] *Order on Compliance* 130 FERC ¶ 61,271 (2010).
[17] *Version 4 Critical Infrastructure Protection Reliability Standards*, 139 FERC ¶ 61,058 (2012).

> actually implementing a security policy. We therefore believe that the Regional Entities should perform an oversight role in providing accountability of a responsible entity that excepts itself from compliance with the provisions of its cyber security policy. Further, we believe that such oversight would impose a limited additional burden on a responsible entity because Requirement R3 currently requires documentation of exceptions.
>
> Further, the Commission adopts its CIP NOPR proposal and directs the ERO to clarify that the exceptions mentioned in Requirements R2.3 and R3 of CIP-003-1 do not except responsible entities from the Requirements of the CIP Reliability Standards. In response to EEI, we believe that this clarification is needed because, for example, it is important that a responsible entity understand that exceptions that individually may be acceptable must not lead cumulatively to results that undermine compliance with the Requirements themselves.

All outstanding directives in Order No. 706 will be addressed in Version 5 of the CIP Standards and the retirement of CIP-003-3, -4 R3, R3.1, R3.2, and R3.3 do not impact a Commission directive.

Technical Justification

CIP-003-3, -4 R3, R3.1, R3.2, and R3.3 (CIP exception requirements) have proven not to be useful and have been subject to misinterpretation. For instance, although the CIP exception requirements have not been available for use to exempt an entity from compliance with any requirement of any Reliability Standard, based on questions received by NERC CIP Staff, entities may be interpreting the CIP exception requirements to allow for such an exemption. The CIP exception requirements only apply to exceptions to internal corporate policy, and only in cases where the policy exceeds a Reliability Standard requirement or addresses an issue that is not covered in a Reliability Standard. For example, if an internal corporate policy statement requires that all passwords be a minimum of eight characters in length, and be changed every 30 days, which is over and above what is required in CIP-007-3 R5.3, the CIP exception requirements could be invoked for internal governance purposes to lessen the corporate requirement back to the password requirements in CIP-007-3 R5.3, but under no circumstances do the CIP exception requirements authorize the implementation of security measures less than what is required in CIP-007-3 R5.3.

The retirement of the CIP exception requirements would not impact an entity's ability to maintain such an exception process within their corporate policy governance procedures, if it so desired. Consequently, the CIP exception requirements were always an internal administrative and documentation requirement that is outside the scope of the other CIP requirements (Criteria B1 and B3). In this context, the CIP exception requirements do not support the level of reliability set forth in the Reliability Standards, and are unnecessarily burdensome because they have resulted in entities implementing practices

due to a misinterpretation of the requirement that has caused them to allocate time and resources to tasks that are misaligned with the requirements themselves. Unfortunately, this misunderstanding has also impacted the efficiency of the ERO compliance program because of the amount of time and resources needed to clear up the misunderstanding and coach entities on the meaning of the CIP exception requirements. These inefficiencies would be eliminated with the retirement of the CIP exception requirements. Accordingly, as explained, the CIP exception requirements are an administrative tool for internal corporate governance procedures, and, therefore, are not requirements that are necessary or directly protect the BES from a cyber attack, the tasks associated with these requirements do little, if anything, to benefit or protect the reliable operation of the BES. (Criterion A).

Criterion A
The CIP exception requirements are a tool for internal corporate governance procedures and is not a requirement directly protecting the BES from a cyber attack, and, therefore, the tasks associated with these requirements do little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B

- Criterion B1 (Administrative)
- Criterion B3 (Documentation)

Criteria C

1. The CIP exception requirements have been part of a FFT filing.[18]

2. The CIP exception requirements are part of an on-going Standards Development Project 2008-06 (Cyber Security). As detailed in the discussion of CIP-003-3, -4 R1.2, the P81 SDT has coordinated its efforts with the chair of Project 2008-06 and there is no conflict between the CIP exception requirements proposed in this technical white paper for retirement and the direction of Project 2008-06.

3. The CIP exception requirements each have a Lower VRF. As explained above, they are not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

4. The CIP exception requirements are on the third tier of the AML. As explained above, they are not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

5. Given the administrative and unnecessary nature of the CIP exception requirements in relation to protecting the BES from cyber attacks, retirement does not pose any negative impact to NERC's published and posted reliability

[18] NERC FFT Informational Filing, Docket No. RC12-7-000 (January 31, 2012); NERC FFT Informational Filing, Docket No. RC12-6-000 (December 30, 2011).

principles, of which only Principle 8 appears to apply: "Bulk power systems shall be protected from malicious physical or cyber attacks."

6. Retiring the CIP exception requirements does not negatively impact any defense in depth strategy because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. Retirement of the CIP exception requirements promotes a results-based approach because the CIP exception requirements are approaches that entities may voluntarily take to handle internal corporate governance procedures, and, therefore, do not provide the foundation for performing a required reliability task.

Accordingly, for the above reasons, it is appropriate to retire the following CIP exception requirements: CIP-003-3, -4 R3, R3.1, R3.2, and R3.3.

CIP-003-3, -4 R4.2 - Cyber Security – Security Management Controls

R4.2. The Responsible Entity shall classify information to be protected under this program based on the sensitivity of the Critical Cyber Asset information.

Background/Commission Directives
CIP-003-1 was filed for Commission approval on August 28, 2006 in Docket No. RM06-16-000 and was approved on January 18, 2008 in Order No. 706.[19] CIP-003-2 was filed for Commission approval on May 22, 2009 in Docket Nos. RM06-22-000 and RD09-7-000 and was approved on September 30, 2009.[20] CIP-003-3 was filed for Commission approval on December 29, 2009 in Docket No. RD09-7-002 and was approved on March 31, 2010.[21] CIP-003-4 was submitted for Commission approval on February 10, 2011 in Docket No. RM11-11-000 and was approved on April 19, 2012.[22] In Order No. 706, the Commission did not specifically address CIP-003-3, -4 R4.2.

All outstanding directives in Order No. 706 will be addressed in Version 5 of the CIP Standards and the retirement of CIP-003-3, -4 R4.2 does not impact a Commission directive.

Technical Justification
The task of classifying Critical Cyber Information "based on the sensitivity" does little, if anything, to benefit or protect the reliable operation of the BES, and is an unnecessarily

[19] *Mandatory Reliability Standards for Critical Infrastructure Protection*, 122 FERC ¶ 61,040 (2008) ("Order No. 706").
[20] *Order Approving Revised Reliability Standard for Critical Infrastructure Protection and Requiring Compliance Filing*, 128 FERC ¶ 61,291 (2009), *order denying reh'g and granting clarification*, 129 FERC ¶ 61,236 (2009) (approving Version 2 of the CIP Reliability Standards)).
[21] *Order on Compliance* 130 FERC ¶ 61,271 (2010).
[22] *Version 4 Critical Infrastructure Protection Reliability Standards*, 139 FERC ¶ 61,058, (2012).

administrative and a documentation task that is redundant with CIP-003-3, -4 R4 (Criteria A, B1, B3 and B7). Specifically, CIP-003-3, -4 R4[23] already requires the classification of information associated with Critical Cyber Assets. The only difference between R4 and R4.2 is that the subjective term "based on the sensitivity" has been added, thus, making it essentially redundant. Further, CIP-003-3, -4 R4 requires the entity to develop classifications based on a subjective understanding of sensitivity (*i.e.*, no clear connection to serving reliability), the requirement does not support reliability. In this context, classifying based on sensitivity becomes an administrative task that becomes necessarily burdensome, because of all the possible ramifications "based on sensitivity" can produce, and, therefore, require SMEs to decide on and reduce to writing in a documented program. This is time and effort that could be better spent on other CIP activities that provide value to cyber security and actively protect the BES. For similar reasons, retiring CIP-003-3, -4 R4.2 and the term "based on sensitivity" would increase the efficiencies of the ERO compliance program on several levels. The ERO would not spend time and resources on reviewing whether an entity's documentation contained classifications "based on sensitivity," and, instead would be able to focus its time and resources monitoring compliance with the entity's program to identify, classify, and protect information associated with Critical Cyber Assets (R4), without any distraction on monitoring the subjective implementation of classifications based on sensitivity (R4.2).

Criterion A
The task of classifying Critical Cyber Information "based on the sensitivity" does little, if anything, to benefit or protect the reliable operation of the BES, and is an administrative and a documentation task that is redundant with CIP-003-3, -4 R4.

Criteria B

- Criterion B1 (Administrative)
- Criterion B3 (Documentation)
- Criterion B7 (Redundant)

Criteria C

1. CIP-003-3, -4 R4.2 has been part of a FFT filing.[24]

2. CIP-003-3, -4 R4.2 is part of an on-going Standards Development Project 2008-06 (Cyber Security). As detailed in the discussion of CIP-003-3, -4 R1.2, the P81 SDT has coordinated its efforts with the chair of Project 2008-06 and there is no conflict between retirement of CIP-003-3, -4 R4.2 and the direction of Project 2008-06.

[23] "**R4**. Information Protection — The Responsible Entity shall implement and document a program to identify, classify, and protect information associated with Critical Cyber Assets."
[24] NERC FFT Informational Filing, Docket No. RC12-7-000 (January 31, 2012); NERC FFT Informational Filing, Docket No. RC12-1-000 (October 31, 2011).

3. CIP-003-3, -4 R4.2 has a Lower VRF. As explained above, CIP-003-3, -4 R4.2 is not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

4. CIP-003-3, -4 R4.2 is on the third tier of the AML. As explained above, CIP-003-3, -4 R4.2 is not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

5. Given the unnecessary and redundant nature of this requirement, retirement does not pose any negative impact to NERC's published and posted reliability principle No. 8 which appears to apply: "Bulk power systems shall be protected from malicious physical or cyber attacks."

6. Retirement of CIP-003-3, -4 R4.2 does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. Retirement of CIP-003-3, -4 R4.2 promotes a results-based approach because retiring CIP-003-3, -4 R4.2 moves away from prescriptive, checklist of documentation approach to Reliability Standard requirements.

Accordingly, for the above reasons, it is appropriate to retire CIP-003-3, -4 R4.2.

CIP-005-3a, -4a R2.6 – Cyber Security – Electronic Security Perimeter(s)

R2.6. Appropriate Use Banner -- Where technically feasible, electronic access control devices shall display an appropriate use banner on the user screen upon all interactive access attempts. The Responsible Entity shall maintain a document identifying the content of the banner.

Background/Commission Directives

CIP-005-1 was filed for Commission approval on August 28, 2006 in Docket No. RM06-16-000 and was approved on January 18, 2008 in Order No. 706.[25] CIP-005-2 was filed for Commission approval on May 22, 2009 in Docket Nos. RD09-7-000 and RM06-22-000 and was approved on September 30, 2009.[26] CIP-005-2a was filed for Commission approval on April 21, 2010 in Docket No. RD10-12-000 and was approved by

[25] *Mandatory Reliability Standards for Critical Infrastructure Protection*, 122 FERC ¶ 61,040 (2008) ("Order No. 706").

[26] *Order Approving Revised Reliability Standard for Critical Infrastructure Protection and Requiring Compliance Filing*, 128 FERC ¶ 61,291 (2009), *order denying reh'g and granting clarification*, 129 FERC ¶ 61,236 (2009) (approving Version 2 of the CIP Reliability Standards)).

unpublished letter order on February 2, 2011.[27] CIP-005-3 was filed for Commission approval on December 29, 2009 in Docket No. RD09-7-002 and was approved on March 31, 2010.[28] CIP-005-3a was filed for Commission approval on April 21, 2010 in Docket No. RD10-12-000 and was approved by an unpublished letter order on February 2, 2011.[29] CIP-005-4 was filed for Commission approval on February 10, 2011 in Docket No. RM11-11-000 and was approved on April 19, 2012 in Order No. 761.[30] CIP-005-4a was filed for Commission approval as errata to the CIP Version 4 Petition on April 12, 2011 in Docket No. RM11-11-000 and was approved on April 19, 2012 in Order No 761, the Final Rule on the CIP Version 4 standards.[31]

In Order 706 at paragraph 505 the Commission noted that:

> Requirement R2 of CIP-005-1 requires a responsible entity to implement organizational processes and technical and procedural mechanisms for control of electronic access at all electronic access points to the electronic security perimeter.

All outstanding directives in Order No. 706 will be addressed in Version 5 of the CIP Standards and the retirement of CIP-005-3, -4 R2.6 does not impact a Commission directive.

Technical Justification

The implementation of an appropriate use banner ("banner") on a user's screen for all interactive access attempts into the Electronic Security Perimeter ("ESP") is an activity or task that does little, if anything, to benefit or protect the reliable operation of the BES. Specifically, the banner does not support reliability because people who intend to inappropriately use sites will simply ignore the banner. (Criterion A). The banner is also an administrative task since it simply requires a message be displayed on an access screen. Furthermore, the implementation and administration of a non-beneficial tool, such as the banner, therefore creates a needlessly burdensome task. As mentioned, above, the ineffectiveness of the banner also indicates that it does not support reliability. (Criteria B1 and B3). In addition, banners of this type are generally considered to be a form of legal protection or mitigation of liability, rather than security protection. Furthermore, the banner does not ensure a proper or secure access point configuration

[27] Letter Order, Petition of the North American Electric Reliability Corporation for Approval of Interpretation to Reliability Standard CIP-005-1, Cyber Security, Electronic Security Perimeter(s), Section 4.2.2 and Requirement R1.3., Docket RD10-12-000, (February 2, 2011).
[28] *Order on Compliance* 130 FERC ¶ 61,271 (2010).
[29] Letter Order, Petition of the North American Electric Reliability Corporation for Approval of Interpretation to Reliability Standard CIP-005-1, Cyber Security, Electronic Security Perimeter(s), Section 4.2.2 and Requirement R1.3., Docket RD10-12-000, (February 2, 2011).
[30] *Version 4 Critical Infrastructure Protection Reliability Standards*, 139 FERC ¶ 61,058 (2012).
[31] *Id.*

which is generally the purpose of CIP-005-3a, -4a. Further, this requirement has also been the subject of numerous TFEs for devices that cannot support such a banner, and hence has diverted resources from more productive efforts. Thus, the ERO's compliance program would become more efficient if CIP-005-3a, -4a R2.6 was retired, because ERO time and resources could be reallocated to monitor compliance with the remainder of CIP-005-3a, -4a, which provides for more effective controls of electronic access at all electronic access points into the ESP.

Criterion A

The implementation of an appropriate use banner on a user's screen for all interactive access attempts into the ESP is an activity or task that does little, if anything, to benefit or protect reliable operation of the BES, because it is administrative and a static electronic message that is not an effective deterrent or control against unauthorized access.

Criteria B

- Criterion B1 (Administrative)
- Criterion B3 (Documentation)

Criteria C

1. CIP-005-3a, -4a R2.6 has been part of a FFT filing.[32]

2. CIP-005-3a, -4a R2.6 is part of an on-going Standards Development Project 2008-06 (Cyber Security). As detailed in the discussion of CIP-003-3, -4 R1.2, the P81 SDT has coordinated its efforts with the chair of Project 2008-06 and there is no conflict between retirement of CIP-005-3a, -4a R2.6 and the direction of Project 2008-06.

3. The VRF for CIP-005-3a, -4a R2.6 is Lower. As explained above, CIP-005-3a, -4a R2.6 is not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

4. CIP-005-3a, -4a R2.6 is on the first tier of the AML; however, given its clear ineffective nature the placement on the first tier is not dispositive of whether it should be retired.

5. Reliability principle No. 8 – "Bulk power systems shall be protected from malicious physical or cyber attacks" – is not implicated or negatively impacted by the retirement of CIP-005-3a, -4a R2.6, because it is not an effective deterrent or control to unauthorized access into an ESP.

6. The retirement of this requirement does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk

[32] NERC FFT Informational Filing, Docket No. RC12-13-000 (June 29, 2012); NERC FFT Informational Filing, Docket No. RC12-7-000 (January 31, 2012).

to reliability. Furthermore, the remainder of CIP-005-3a, -4a provides for actual controls of electronic access at all electronic access points which addresses the reliability risk associated with unauthorized access into an ESP.

7. Its retirement also promotes a results-based approach because CIP-005-3a, -4a R2.6 is an ineffective administrative task, and, therefore, does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire CIP-005-3a, -4a R2.6.

CIP-007-3, -4 R7.3 – Cyber Security – Systems Security Management

R7.3. The Responsible Entity shall maintain records that such assets were disposed of or redeployed in accordance with documented procedures.

Background/Commission Directives

CIP-007-1 was filed for Commission approval on August 28, 2006 in Docket No. RM06-16-000 and was approved on January 18, 2008 in Order No. 706.[33] CIP-007-2 was filed for Commission approval on May 22, 2009 in Docket Nos. RM06-22-000 and RD09-7-000 and was approved on September 30, 2009.[34] CIP-007-2a was filed for Commission approval on November 17, 2009 in Docket No. RD10-3-000 and was approved on March 18, 2010.[35] CIP-007-3 was filed for Commission approval on December 29, 2009 in Docket No. RD09-7-002 and was approved on March 31, 2010.[36] CIP-007-4 was filed for Commission approval on February 10, 2011 in Docket No. RM11-11-000 and was approved on April 19, 2012.[37]

In Order No. 706 at paragraph 631 the Commission stated that:

> Requirement R7 of CIP-007-1 requires the responsible entity to establish formal methods, processes and procedures for disposal or redeployment of cyber assets. In the CIP NOPR, the Commission addressed the concern that solely to "erase the data," as stated several times in Requirement R7, may not be adequate because technology exists that allows retrieval of "erased" data from storage devices, and that effective protection requires discarded or redeployed assets to undergo high quality degaussing. We noted that erasure is as much a method as it is a goal, and that the

[33] *Mandatory Reliability Standards for Critical Infrastructure Protection*, 122 FERC ¶ 61,040 (2008) ("Order No. 706").
[34] *Order Approving Revised Reliability Standard for Critical Infrastructure Protection and Requiring Compliance Filing*, 128 FERC ¶ 61,291 (2009), *order denying reh'g and granting clarification*, 129 FERC ¶ 61,236 (2009) (approving Version 2 of the CIP Reliability Standards)).
[35] Order Approving Reliability Standard Interpretation, 130 FERC ¶ 61,184 (2010).
[36] *Order on Compliance* 130 FERC ¶ 61,271 (2010).
[37] *Version 4 Critical Infrastructure Protection Reliability Standards*, 139 FERC ¶ 61,058 (2012).

> requirement ultimately needs to assure that there is no opportunity for unauthorized retrieval of data from a cyber asset prior to discarding it or redeploying it. Degaussing is not the sole means for achieving this goal. The Commission therefore proposed to direct the ERO to modify Requirement R7 to clarify this point. (Footnote omitted)

This Commission directive is unaffected by the retirement of CIP-007-3,-4 R7.3 as explained below.

Technical Justification

Outside the context of a Reliability Standard, under Section 400 of the NERC Rules of Procedure, NERC and the Regional Entities have the authority to require an entity to submit data and information for purposes of monitoring compliance. [38] CIP-007-3, -4 R7.3 requires the maintaining of records for the purpose of demonstrating compliance with disposing of or redeploying of Cyber Assets in accordance with documented procedures. NERC and the Regions Entities, however, under Section 400 already have the ability to require the production of records to demonstrate compliance, thus it is unnecessary to also state the same in CIP-007-3, -4 R7.3. The maintaining of records is an administrative task, not a task directly related to the protection of the BES from a cyber attack. The maintaining of records is not a task that by itself, or in conjunction with other requirements, supports reliability. Also, the maintaining of the records becomes unnecessarily burdensome in that it requires all records be maintained, which may or may not be necessary to demonstrate compliance via the production of information under Section 400. (Criteria B1 and B2). As mentioned, CIP-007-3, -4 R7.3 does not promote reliability because it does not protect the BES from a cyber attack, instead it is a record retention activity. Therefore, CIP-007-3, -4 R7.3 requires an activity or task that in and of itself, does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A).

In contrast, the remaining substantive requirements in R7 read as follows:

> R7. Disposal or Redeployment — The Responsible Entity shall establish and implement formal methods, processes, and procedures for disposal or redeployment of Cyber Assets within the Electronic Security Perimeter(s) as identified and documented in Standard CIP-005-3.

[38] Section 401 of NERC's Rules of Procedure provide for collection of data and information necessary to monitor compliance outside the context of Reliability Standards:

> **Data Access** — All Bulk Power System owners, operators, and users shall provide to NERC and the applicable Regional Entity such information as is necessary to monitor compliance with the Reliability Standards. NERC and the applicable Regional Entity will define the data retention and reporting requirements in the Reliability Standards *and compliance reporting procedures.* (emphasis added).

R7.1. Prior to the disposal of such assets, the Responsible Entity shall destroy or erase the data storage media to prevent unauthorized retrieval of sensitive cyber security or reliability data.

R7.2. Prior to redeployment of such assets, the Responsible Entity shall, at a minimum, erase the data storage media to prevent unauthorized retrieval of sensitive cyber security or reliability data.

An entity's following of these requirements may help to protect BES reliability, but the retention of evidence associated with these requirements does not. Hypothetically, an entity could perform R7, R7.1 and R7.2 flawlessly and protect the BES, but not have any record of it. While this situation may impact a demonstration of compliance, the lack of records does not necessarily directly impact the reliability of the BES or protect it from a cyber attack.

Also, there are some inherent inefficiencies resulting from a small number of Reliability Standard requirements explicitly mandating the collection of data, evidence and records, while most data and information is collected for ERO compliance monitoring purposes without specific data collection language in the Reliability Standards. In this regard, for the ERO, Regional Entities and the entities, Reliability Standards are arguably more difficult to understand because of this inconsistent approach (typically only implicitly requiring documentation as a part of an obligation to prove compliance, but occasionally explicitly requiring it with no discernible pattern or rationale).

Criterion A

CIP-007-3, -4 R7.3 does not promote reliability because it does not protect the BES from a cyber attack, instead it is a record retention activity. Therefore, CIP-007-3, -4 R7.3 requires an activity or task that in and of itself, does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B

- Criterion B1 (Administrative)
- Criterion B2 (Data Collection/Data Retention)

Criteria C

1. CIP-007-3, -4 R7.3 has not been part of a FFT filing.

2. CIP-007-3, -4 R7.3 is part of an on-going Standards Development Project 2008-06 (Cyber Security). As detailed in the discussion of CIP-003-3, -4 R1.2, the P81 SDT has coordinated its efforts with the chair of Project 2008-06 and there is no conflict between retirement of CIP-007-3, -4 R7.3 and the direction of Project 2008-06.

3. The VRF for CIP-007-3, -4 R7.3 is Lower. As explained above, CIP-007-3, -4 R7.3 is not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

4. CIP-007-3, -4 R7.3 is on the first tier of the AML; however, given that it is simply requiring the retention of records the fact that is on the first tier is not dispositive of whether it should be retired.

5. Given the administrative, data collection nature of this requirement, retirement does not pose any negative impact to NERC's published and posted reliability principle No. 8: "Bulk power systems shall be protected from malicious physical or cyber attacks."

6. The retirement does not negatively impact defense in depth because data retention in-and-of-itself is not an activity that other requirements depend on to help cover a reliability gap or risk to reliability.

7. Its retirement promotes a results-based approach because the data collection/retention does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire CIP-007-3, -4 R7.3.

EOP-005-2 R3.1– System Restoration from Blackstart Resources

R3.1. If there are no changes to the previously submitted restoration plan, the Transmission Operator shall confirm annually on a predetermined schedule to its Reliability Coordinator that it has reviewed its restoration plan and no changes were necessary.

Background/Commission Directives

EOP-005-1 was submitted for Commission approval on August 28, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[39] EOP-005-2 was submitted for Commission approval on December 31, 2009 in Docket No. RM10-16-000 and was approved on March 17, 2011 in Order No. 749.[40] Although the Commission did not address EOP-005-2 R3 directly in Order No. 749, it stated at paragraph 17 the following:

[39] *Mandatory Reliability Standards for the Bulk-Power System*, Order No. 693, FERC Stats. & Regs. ¶ 31,242 (2007).

[40] *System Restoration Reliability Standards*, 134 FERC ¶ 61,215, (March 17, 2011) ("Order No. 749"), *order on clarification*, 136 FERC ¶ 61,030 ("Order No. 749-A") (2011).

> EOP-005-2 and EOP-006-2 clarify the responsibilities of the reliability coordinator and transmission operator in the restoration process and restoration planning and address the Commission's directives in Order No. 693 related to the EOP Standards. By enhancing the rigor of the restoration planning process, the Reliability Standards represent an improvement from the current Standards and will improve the reliability of the Bulk-Power System. The Commission is not directing any modifications to the three new Reliability Standards. Nevertheless, as discussed below, commenters raised several issues for consideration, at the time these standards are next revisited, which we believe could improve these new Reliability Standards

There are no outstanding Commission directives that are affected by the proposed retirement of EOP-005-2 R3.1.

Technical Justification

The reliability purpose of EOP-005-2 is to ensure that plans, Facilities, and personnel are prepared to enable System restoration from Blackstart Resources to assure that reliability is maintained during restoration and priority is placed on restoring the Interconnection. This reliability purpose is unaffected by the proposed retirement of R3.1.

A review of EOP-005-2 R3.1 indicates that this requirement is redundant with EOP-005-2 R3 and a duplicative administrative update that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1, B5 and B7). The primary reason EOP-005-2 R3.1 is unnecessary is that EOP-005-2 R3 already requires the Transmission Operator to submit its restoration plan to its Reliability Coordinator whether or not the plan includes changes. EOP-005-2 R3 reads:

> Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually agreed predetermined schedule.

Consequently, since R3 requires the Transmission Operator to submit its restoration plan to the Reliability Coordinator whether or not there has been a change, R3.1 only adds a separate, duplicative administrative burden for the entity to also confirm that there were no changes based upon another pre-determined schedule. While R3.1 may have attempted to capture the likelihood that unless there have been significant changes to the entity's BES, there would be no change to the restoration plan, this is an insufficient reason to impose a needlessly burdensome, duplicative administrative requirement relative to the language in R3. EOP-005-2 R3.1 is also clearly needlessly burdensome if one considers that the time and resources of Transmission Operators is better spent reliably operating the BES, rather than submitting paperwork to a Reliability Coordinator on possibly two different pre-determined schedules – one for changes and one for no

changes. For these reasons, there is no reliability gap resulting from the retirement of EOP-005-2 R3.1 because Transmission Operators already have an obligation to review and provide its restoration plan annually on a mutually agreed predetermined schedule to its Reliability Coordinator. It could also be argued that a reason for both R3 and R3.1 is for the Reliability Coordinator to organize the Transmission Operator submittals into changes versus no changes. However, with the requirement to annually review restoration plans comes the need to demonstrate and track annual reviews via the revision history index, for example, which quickly shows the Reliability Coordinator when changes have and have not occurred.

The retirement of EOP-005-2 R3.1 would also increase the efficiencies of the ERO compliance program because the ERO would be able to focus its time and resources on R3 which already captures R3.1 and not be concerned with tracking the submission of restoration plans on multiple pre-determined schedules, some with changes and some without changes. Instead, the focus of the ERO compliance program would be on whether the Transmission Operators annually submitted its restoration plan to its Reliability Coordinator on one pre-determined schedule. Thus, the retirement of EOP-005-2 R3.1 appears to benefit the ERO compliance program.

Criterion A
EOP-005-2 R3.1 is redundant and a duplicative administrative update that does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B

- Criterion B1 (Administrative)
- Criterion B5 (Periodic Updates)
- Criterion B7 (Redundant)

Criteria C

1. EOP-005-2 R3.1 has not been part of a FFT filing.

2. EOP-005-2 R3.1 is not part of an on-going Standards Development Project.

3. EOP-005-2 R3.1 does not yet have a FERC-approved VRF.

4. EOP-005-2 R3.1 is on the second tier of the AML; however, the duplicative nature of R3 and R3.1 discounts any indication that R3.1 being in the second tier is a reason not to proceed with its retirement.

5. Since EOP-005-2 R3 already requires the Transmission Operator to submit its restoration plan to its Reliability Coordinator whether or not the plan includes changes, retirement of EOP-005-2 R3.1 does not pose any negative impact to the following of NERC's published and posted reliability principles that appear to apply:

Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

Principle 4. Plans for emergency operation and system restoration of interconnected bulk power systems shall be developed, coordinated, maintained, and implemented.

6. Retirement of EOP-005-2 R3.1 does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of EOP-005-2 R3.1 promotes a results-based approach because the requirement is administrative and unnecessary, and, therefore, does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire EOP-005-2 R3.1.

FAC-002-1 R2 – Coordination of Plans for New Facilities

R2. The Planning Authority, Transmission Planner, Generator Owner, Transmission Owner, Load-Serving Entity, and Distribution Provider shall each retain its documentation (of its evaluation of the reliability impact of the new facilities and their connections on the interconnected transmission systems) for three years and shall provide the documentation to the Regional Reliability Organization(s) and NERC on request (within 30 calendar days).

Background/Commission Directives

FAC-002-0 was submitted to the Commission for approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[41] FAC-002-1 was submitted for Commission approval on September 9, 2010 in Docket No. RD10-15-000 and was approved on January 10, 2011.[42] When approving FAC-002-0 in Order No.

[41] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[42] NERC Petition for Approval of Proposed Modifications to Reliability Standards BAL-002-1; EOP-002-3; FAC-002-1; MOD-021-2; PRC-004-2; and VAR-001-2 RD10-15-000 (January 10, 2011).

693 at paragraphs 692 and 693, and FAC-002-1 in a subsequent order,[43] the Commission did not directly address R2.

There are no outstanding Commission directives that are affected by the proposed retirement of FAC-002-1 R2.

Technical Justification

Outside the context of a Reliability Standard, under Section 400 of the NERC Rules of Procedure, NERC and the Regional Entities have the authority to require an entity to submit data and information for purposes of monitoring compliance. Thus, without the existence of FAC-002-1 R2, a Regional Entity or NERC has the ability to request and receive "documentation (of its evaluation of the reliability impact of the new facilities and their connections on the interconnected transmission systems)." This generally would occur during a spot check or compliance audit where entities have the obligation to provide documentation sufficient to demonstrate compliance. In this regard, entities already have the obligation to produce the same information required in R2 to demonstrate compliance to R1 and its sub-requirements, thus making R2 unnecessary. To have a Reliability Standard requirement that is setting forth a data retention requirement and a requirement for the entity to deliver, upon request, that data to NERC or a Regional Entity is unnecessary and also repetitive with the NERC Rules of Procedure. Accordingly, retiring FAC-002-1 R2 presents no gap to reliability or to the information NERC and the Regional Entity need to monitor compliance. Thus, FAC-002-1 R2 is not necessary to support reliability. Consequently, a review of R2 indicates that it is an administrative and data collection requirement that that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1 and B2). The compilation of three years of data is a burdensome task, particularly when one considers the resources and time spent on stockpiling this information is better spent coordinating the studies, executing an interconnection agreement and ensuring that interconnections are safely and reliably energized, maintained and operated. Also, there are some inherent inefficiencies that result from a small number of requirements, such as CIP-007-3, -4 R7.3 and FAC-002-1 R2 being data, evidence and record retention requirements, while there are other and more appropriate established methods to collect and review the data than a Reliability Standard via Rules of Procedure Section 401. In this regard, for the ERO, Regional Entities and the entities, arguably Reliability Standards are more difficult to understand because of this inconsistent approach (typically only implicitly requiring documentation as a part of an obligation to prove compliance, but occasionally explicitly requiring it with no discernible pattern or rationale).

Criterion A

A review of FAC-002-1 R2 indicates that it is an administrative and data collection requirement that does little, if anything, to benefit or protect reliable operation of the BES.

[43] *North American Electric Reliability Corporation*, 134 FERC ¶ 61,015 (2011).

Criteria B

- Criterion B1 (Administrative)
- Criterion B2 (Data Collection/Data Retention)

Criteria C

1. FAC-002-1 R2 has not been part of a FFT filing.

2. FAC-002-1 R2 is subject to a future Project 2010-02 Connecting New Facilities to the Grid (a review of FAC-001 and FAC-002) that is scheduled to begin in the second quarter of 2015. It seems appropriate to retire FAC-002-1 R2 at this time as it may also make the review of FAC-001 and FAC-002 more effective and efficient.

3. FAC-002-1 R2 has a Lower VRF.

4. FAC-002-1 R2 is in the third tier of the AML.

5. The retirement of FAC-002-1 R2 does not pose any negative impact to NERC's published and posted reliability principles, since there are no directly applicable reliability principles.

6. The retirement does not negatively impact defense in depth because the compilation of studies for three years has no operational or planning relationship with any other requirement.

7. The retirement of FAC-002-1 R2 promotes a results-based approach since the requirement is administrative and data collection, and, therefore, does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire FAC-002-1 R2.

FAC-008-1 R2; FAC-008-1 R3;[44] - Facility Ratings Methodology

R2. The Transmission Owner and Generator Owner shall each make its Facility Ratings Methodology available for inspection and technical review by those Reliability Coordinators, Transmission Operators, Transmission Planners, and Planning Authorities that have responsibility for the area in which the

[44] Unlike the other requirements presented for informational purposes only, FAC-008-1 R2 and FAC-008-1 R3 have been maintained within the scope of P81 given that they are essentially identical to FAC-008-3 R4 and FAC-008-3 R5. Inclusion would also appear to be consistent with increasing ERO compliance program efficiencies. FAC-008-1 R2 and FAC-008-1 R3 became inactive on December 31, 2012, due to FAC-008-3 becoming enforceable on January 1, 2013.

associated Facilities are located, within 15 business days of receipt of a request.

R3. If a Reliability Coordinator, Transmission Operator, Transmission Planner, or Planning Authority provides written comments on its technical review of a Transmission Owner's or Generator Owner's Facility Ratings Methodology, the Transmission Owner or Generator Owner shall provide a written response to that commenting entity within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Facility Ratings Methodology and, if no change will be made to that Facility Ratings Methodology, the reason why.

Background/Commission Directives

FAC-008-1 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[45]

There are no outstanding Commission directives that are affected by the proposed retirement of FAC-008-1 R2 and R3.

Technical Justification

FAC-008-1 R2 and R3 require that a Transmission Owner and Generator Owner must make its facilities ratings methodology available for inspection and technical review by Reliability Coordinators, Transmission Operators, Transmission Planners, and Planning Authorities that have responsibility for the area in which the associated facilities are located and also require them to respond to any comments received including whether a change will be made to the facility ratings methodology. The retirement of FAC-008-1 R2 and R3 does not create a reliability gap, because Transmission Owners and Generator Owners must comply with the substantive requirements of FAC-008-1 regarding their facility rating methodologies whether or not the exchange envisioned by FAC-008-1 R2 and R3 occurs. Furthermore, neither FAC-008-1 R2 and R3 require that the Transmission Owner and Generator Owner change its methodology, rather FAC-008-1 R2 and R3 are designed as an exchange of comments that may be an avenue to advance commercial interests.

For example, if a Generator Owner's methodology provides for derating its generator step up ("GSU") transformers below the nameplate in an effort to extend the life of its GSUs, that is a commercial decision it has made, and should not be subject to review by a Reliability Coordinator, Transmission Operator, Transmission Planner, and Planning Authority, some of which may have affiliated parts of their company that could benefit from the Generator Owner changing its methodology and operating its GSUs at

[45] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

nameplate. In contrast, the reliability objective that facility ratings produced by the methodologies of the Transmission Owner or Generator Owner shall equal the most limiting applicable equipment rating, and consider, for example, emergency and normal conditions, operating conditions, nameplate ratings, etc. is not significantly or substantively advanced by FAC-008-1 R2 (available for inspection) and R3 (comment and responsive comments). Furthermore, the reliability objective that facility ratings produced by the methodologies of the Transmission Owner or Generator Owner are provided to the reliability entities for the establishment of System Operating Limits ("SOLs"), Interconnection Reliability Operating Limits ("IROLs"), calculations for MOD requirements and compliance with the TPL Standards is accomplished without FAC-008-1 R2 (available for inspection) and R3 (comment and responsive comments).[46] Accordingly, the requirements in FAC-008-1 R2 and FAC-008-1 R3 to make the facility ratings methodology available for comment (and if comments are received to respond to those comments) is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues. (Criteria A, B1, B4 and B6). In this context, it would seem unnecessarily burdensome to engage in the exchange of comments, given there is no nexus between the exchange of comments and compliance with the substantive requirements of FAC-008-1. Instead of spending time and resources on FAC-008-1 R2 and R3, Generator Owners' and Transmission Owners' time and resources would be better spent complying with the substantive requirements of FAC-008-1. For these same reasons, the ERO compliance program would gain efficiencies by no longer having to track whether requests for technical review had occurred, comments provided and reallocate time and resources to monitoring the Transmission Owner's or Generator Owner's adherence to substantive requirements of FAC-008-1.

Criterion A

The requirements in FAC-008-1 R2 and R3 to make the facility ratings methodology available for comment (and if comments are received to respond to those comments) is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues.

Criteria B

- Criterion B1 (Administrative)
- Criterion B4 (Reporting)
- Criterion B6 (Commercial or Business Practice)

Criteria C

1. FAC-008-1 R2 and R3 have not been part of a FFT filing.

[46] See MOD-001-1a R9, MOD-028-1 R2.3; MOD-029-1a R2.1; MOD-030-02 R3.1, PRC-023-2, Attachment A 2.7; TPL-001-0.1 Footnote a; TPL-002-1b, footnotes a and b; TPL-003-0a, footnote a and TPL-004-0, footnote a. Also, via FAC-011-2 the System Operating Limits methodology of Reliability Coordinator may also use facility ratings as a key element.

2. FAC-008-1 R2 and R3 are not subject to an on-going Standards Development Project.

3. FAC-008-1 R2 and R3 have a Lower VRF.

4. FAC-008-1 R2 and R3 are in the third tier of the AML.

5. The retirement of FAC-008-1 R2 and R3 does not pose any negative impact to the following applicable NERC's published and posted reliability principles:

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

   Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

   It is the adherence to the substantive requirements of FAC-008-1 that promotes these posted reliability principles, and not receiving comments on the facility ratings methodology from outside entities and then responding to those comments.

6. Retirement of FAC-008-1 R2 and R3, does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability. These requirements may invite entities to engage in an exchange or debate over commercially sensitive information.

7. The retirement of FAC-008-1 R2 and R3 promotes a results-based approach because the requirements do not require the performance of a reliability task.

Accordingly, for the above reasons, it is appropriate to retire FAC-008-1 R2 and R3.

FAC-008-3 R4; FAC-008-3 R5 – Facility Ratings

R4. Each Transmission Owner shall make its Facility Ratings methodology and each Generator Owner shall each make its documentation for determining its Facility Ratings and its Facility Ratings methodology available for inspection and technical review by those Reliability Coordinators, Transmission Operators, Transmission Planners and Planning Coordinators that have

responsibility for the area in which the associated Facilities are located, within 21 calendar days of receipt of a request.

R5. If a Reliability Coordinator, Transmission Operator, Transmission Planner or Planning Coordinator provides documented comments on its technical review of a Transmission Owner's Facility Ratings methodology or Generator Owner's documentation for determining its Facility Ratings and its Facility Rating methodology, the Transmission Owner or Generator Owner shall provide a response to that commenting entity within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Facility Ratings methodology and, if no change will be made to that Facility Ratings methodology, the reason why.

Background/Commission Directives

FAC-008-1 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[47] "On May 12, 2010, the NERC Board of Trustees approved the proposed FAC-008-2 Reliability Standard that addressed the first two of the FERC directives in Order No. 693. NERC's proposed FAC-008-2 Reliability Standard was not filed with FERC for approval, but instead was revisited by the standard drafting team so that the third Order No. 693 directive could be addressed in response to FERC's March 18, 2010 Order…"[48] FAC-008-3 was submitted for Commission approval on June 15, 2011 in Docket No. RD11-10-000 and was approved on November 17, 2011.[49]

There are no outstanding Commission directives that are affected by the proposed retirement of FAC-008-3 R4 and R5.

Technical Justification

FAC-008-3 R4 and R5 require that a Transmission Owner and Generator Owner must make its facilities ratings methodology available for inspection and technical review by Reliability Coordinators, Transmission Operators, Transmission Planners, and Planning Authorities that have responsibility for the area in which the associated facilities are located and also require them to respond to any comments received including whether a change will be made to the facility ratings methodology. The retirement of FAC-008-3 R4 and R5 does not create a reliability gap, because Transmission Owners and Generator Owners must comply with the substantive requirements of FAC-008-3 regarding their facility rating methodologies whether or not the exchange envisioned by FAC-008-3 R4 and R5 occurs. Further, neither FAC-008-3 R4 nor R5 require that the Transmission Owner and Generator Owner change its methodology, rather FAC-008-3 R4 and R5 are

[47] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[48] Petition of the North American Electric Reliability Corporation for Approval of Proposed Reliability Standard FAC-008-3 — Facility Ratings, Docket No. RD11-10-000, (June 15, 2011).
[49] *Order Approving Reliability Standard*, 137 FERC ¶ 61,123 (2011).

designed as an exchange of comments that may be an avenue to advance commercial interests.

For example, if a Generator Owner's methodology provides for derating its GSU transformers below the nameplate in an effort to extend the life of its GSUs, that is a commercial decision it has made, and should not be subject to review by a Reliability Coordinator, Transmission Operator, Transmission Planner, and Planning Authority, some of which may have affiliated parts of their company that could benefit from the Generator Owner changing its methodology and operating its GSUs at nameplate. In contrast, the reliability objective that facility ratings produced by the methodologies of the Transmission Owner or Generator Owner shall equal the most limiting applicable equipment rating, and consider, for example, emergency and normal conditions, historical performance, nameplate ratings, etc. is not significantly or substantively advanced by FAC-008-3 R4 (available for inspection) and R5 (comment and responsive comments). Furthermore, the reliability objective that facility ratings produced by the methodologies of the Transmission Owner or Generator Owner are provided to the reliability entities for the establishment of SOLs, IROLs, calculations for MOD requirements and compliance with the TPL Standards is accomplished without FAC-008-3 R4 (available for inspection) and R5 (comment and responsive comments).[50] Accordingly, the requirements in FAC-008-3 R4 and R5 to make the facility ratings methodology available for comment (and if comments are received to respond to those comments) is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues. (Criteria A, B1, B4 and B6). In this context, it would seem unnecessarily burdensome to engage in the exchange of comments, given there is no nexus between the exchange and compliance with the substantive requirements of FAC-008-3. Instead of spending time and resources on FAC-008-3 R4 and R5, Generator Owners' and Transmission Owners' time and resources would be better spent complying with the substantive requirements of FAC-008-3. For these same reasons, the ERO compliance program would gain efficiencies by no longer having to track whether requests for technical review had occurred, comments provided and reallocate time and resources to monitoring the Transmission Owner's or Generator Owner's adherence to substantive requirements of FAC-008-3.

Criterion A

The requirements in FAC-008-3 R4 and R5 to make the facility ratings methodology available for comment (and if comments are received to respond to those comments) is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues.

[50] See MOD-001-1a R9, MOD-028-1 R2.3; MOD-029-1a R2.1; MOD-030-2 R3.1, PRC-023-2, Attachment A 2.7; TPL-001-0.1 Footnote a; TPL-002-1b, footnotes a and b; TPL-003-0a, footnote a and TPL-004-0, footnote a. Also, via FAC-011-2 the System Operating Limits methodology of Reliability Coordinator may also use facility ratings as a key element. Also, FAC-008-3 R7 and R8 require the transmission of facility ratings to reliability entities.

Criteria B

- Criterion B1 (Administrative)
- Criterion B4 (Reporting)
- Criterion B6 (Commercial or Business Practice)

Criteria C

1. FAC-008-3 R4 and R5 have not been part of a FFT filing.

2. FAC-008-3 R4 and R5 are not subject to an on-going Standards Development Project.

3. FAC-008-3 R4 and R5 have a Lower VRF.

4. FAC-008-3 R4 and R5 are in the third tier of the AML.

5. The retirement of FAC-008-3 R4 and R5 does not pose any negative impact to the following applicable NERC's published and posted reliability principles:

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

   Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

   It is the adherence to the substantive requirements of FAC-008-3 that promotes these posted reliability principles, and not receiving comments on the facility ratings methodology from outside entities and then responding to those comments.

6. Retirement of FAC-008-3 R4 and R5, does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability. These may invite entities to engage in an exchange or debate over commercially sensitive information.

7. The retirement of FAC-008-3 R4 and R5 promotes a results-based approach because the requirements do not require the performance of a reliability task.

Accordingly, for the above reasons, it is appropriate to retire FAC-008-3 R4 and R5.

***FAC-010-2.1 R5 – System Operating Limits Methodology for the Planning Horizon*

R5. If a recipient of the SOL Methodology provides documented technical comments on the methodology, the Planning Authority shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the SOL Methodology and, if no change will be made to that SOL Methodology, the reason why.

Background/Commission Directives
FAC-010-1 was filed for Commission approval on November 15, 2006 in Docket Nos. RM06-16-000 and RM07-3-000 and was approved on December 27, 2007 in Order No. 705.[51] FAC-010-2 was filed for Commission approval on June 30, 2008 in Docket No. RM08-11-000 and was approved on March 20, 2009 in Order No. 722.[52] FAC-010-2.1 was filed for Commission approval on November 20, 2009 in Docket No. RD10-9-000 and was approved on April 19, 2010.[53] In Order No. 722,[54] the Commission approved FAC-010-2.1 R5 without specifically addressing R5.

There are no outstanding Commission directives with respect to this R5.

Technical Justification
The reliability purpose of FAC-010-2.1, to ensure that System Operating Limits used in the reliable planning of the BES are determined based on an established methodology, is unaffected by the proposed retirement of R5. FAC-010-2.1 R5 requires that when a Planning Authority receives comments on its SOL methodology, it must respond and indicate whether it has changed its methodology. The retirement of FAC-010-2.1 R5 does not create a reliability gap, because the Planning Authority must comply with the substantive requirements of FAC-010-2.1 whether or not the exchange envisioned by FAC-010-2.1 R5 occurs. FAC-010-2.1 R5 may support an avenue to advance commercial interests.

For example, if a Transmission Operator or Transmission Planner is also a Transmission Owner it may have a commercial interest in lowering SOLs on its transmission lines in an effort to extend the life of its equipment and, therefore, challenge the Planning Authority's methodology to reduce its SOLs. The Transmission Owner's interests are better considered in the context of its development of a facility ratings methodology

[51] *Facilities Design, Connections and Maintenance Reliability Standards*, 121 FERC ¶ 61,296 (December 27, 2007) (Order No. 705).
[52] *Version Two Facilities Design, Connections and Maintenance Reliability Standards*, 126 FERC ¶ 61,255 (March 20, 2009) (Order No. 722).
[53] Letter Order, Electric Reliability Organization Errata Petition Updating Accepted Transmission Operations Reliability Standards, Docket No. RD10-9-000 (April 19, 2010).
[54] *Version Two Facilities Design, Connections and Maintenance Reliability Standards* 125 FERC ¶ 61,040 (2009).

under FAC-008-1, -3 than the Planning Authority's methodology. FAC-010-2.1 R5, however, is an invitation to advance commercial interests not through established means, but by challenging the Planning Authority's SOL methodology. Accordingly, FAC-010-2.1 R5 sets forth an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues. (Criteria A, B1, B4 and B6). In this context, it would seem unnecessarily burdensome to engage in the exchange of comments, given there is no nexus between the exchange and compliance with the substantive requirements of FAC-010-2.1. Instead of spending time and resources on FAC-010-2.1, a Planning Authority's time and resources would be better spent complying with the substantive requirements of FAC-010-2.1. For these same reasons, the ERO compliance program would gain efficiencies by no longer having to track whether requests for technical review had occurred, comments provided and reallocate time and resources to monitoring the Planning Authority's adherence to substantive requirements of FAC-010-2.1.

Criterion A
The requirement in FAC-010-2.1 R5 to respond to comments on the SOL methodology is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B
- Criterion B1 (Administrative)
- Criterion B4 (Reporting)
- Criterion B6 (Commercial or Business Practice)

Criteria C
1. FAC-010-2.1 R5 has not been part of a FFT filing.

2. FAC-010-2.1 R5 is subject to future Standards Development Project 2012-11 FAC Review, which is a placeholder for the five year review of FAC-010 and FAC-011. Thus, it is appropriate to process the retirement of this requirement as part of the P81 Project.

3. FAC-010-2.1 R5 has a Lower VRF.

4. FAC-010-2.1 R5 is not on the AML.

5. The retirement of this requirement does not pose any negative impact to NERC's published and posted reliability principles No. 1 or No. 3.

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

It is the adherence to the substantive requirements of FAC-010-2.1 that promotes these posted reliability principles, and not receiving comments on the facility ratings methodology from outside entities and then responding to those comments.

6. The retirement of this requirement does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of FAC-010-2.1 R5 also promotes a results-based approach because the requirements have no direct nexus to the performance of a reliability task.

Accordingly, for the above reasons, it is appropriate to retire FAC-010-2.1 R5.

***FAC-011-2 R5– System Operating Limits Methodology for the Operations Horizon*

R5. If a recipient of the SOL Methodology provides documented technical comments on the methodology, the Reliability Coordinator shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the SOL Methodology and, if no change will be made to that SOL Methodology, the reason why.

Background/Commission Directives

FAC-011-1 was filed for Commission approval on November 15, 2006 in Docket Nos. RM06-16-000 and RM07-3-000 and was approved on December 27, 2007 in Order No. 705.[55] FAC-011-2 was filed for Commission approval on June 30, 2008 in Docket No. RM08-11-000 and was approved on March 20, 2009 in Order No. 722.[56] In Order No. 722, the Commission approved FAC-011-2 R5 without specifically addressing R5.

There are no outstanding Commission directives with respect to this R5.

[55] *Facilities Design, Connections and Maintenance Reliability Standards,* 121 FERC ¶ 61,296 (December 27, 2007) (Order No. 705).

[56] *Version Two Facilities Design, Connections and Maintenance Reliability Standards,* 126 FERC ¶ 61,255 (March 20, 2009) (Order No. 722).

Technical Justification
FAC-011-2 R5 requires that when a Reliability Coordinator receives comments on its SOL methodology that it must respond and indicate whether it has changed its methodology. The retirement of FAC-011-2 R5 does not create a reliability gap, because the Reliability Coordinator must comply with the substantive requirements of FAC-011-2 R5 whether or not the exchange envisioned by FAC-011-2 R5 occurs. FAC-011-2 R5 may support an avenue to advance commercial interests.

For example, similar to FAC-010-2.1 R5, if a Transmission Operator or Transmission Planner also is a Transmission Owner it may have a commercial interest in lowering SOLs on its transmission lines in an effort to extend the life of its equipment and, therefore, challenge the Reliability Coordinator's methodology to reduce its SOLs. The Transmission Owner's interests are better considered in the context of the development of its facility ratings methodology under FAC-008-1, -3 than the Reliability Coordinator's methodology. FAC-011-2 R5, however, is an invitation to advance commercial interests not through established means, but by challenging the Reliability Coordinator's SOL methodology. Accordingly, FAC-011-2 R5 sets forth an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues. (Criteria A, B1, B4 and B6). In this context, it would seem unnecessarily burdensome to engage in the exchange of comments, given there is no nexus between the exchange and compliance with the substantive requirements of FAC-011-2. Instead of spending time and resources on FAC-011-2 R5 a Reliability Coordinator's time and resources would be better spent complying with the substantive requirements of FAC-011-2 R5. For these same reasons, the ERO compliance program would gain efficiencies by no longer having to track whether requests for technical review had occurred, comments provided and reallocate time and resources to monitoring the Reliability Coordinator's adherence to substantive requirements of FAC-011-2 R5.

Criterion A
The requirement in FAC-011-2 R5 to respond to comments on the SOL methodology is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues.

Criteria B
- Criterion B1 (Administrative)
- Criterion B4 (Reporting)
- Criterion B6 (Commercial or Business Practice)

Criteria C
1. FAC-011-2 R5 has not been part of a FFT filing.

2. FAC-011-2 R5 is subject to future Standards Development Project 2012-11 FAC Review, which is a placeholder for the five year review of FAC-010 and FAC-011which is not currently scheduled and thus it is appropriate to process the retirement of this requirement as part of the P81 Project.

3. FAC-011-2 R5 has a Lower VRF.

4. FAC-011-2 R5 is not on the AML.

5. The retirement of this requirement does not pose any negative impact to NERC's published and posted reliability principles No. 1 or No. 3.

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

   Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

   It is the adherence to the substantive requirements of FAC-011-2 that promotes these posted reliability principles, and not receiving comments on the facility ratings methodology from outside entities and then responding to those comments.

6. The retirement of this requirement does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of FAC-011-2 R5 also promotes a results-based approach because the requirements have no direct nexus to the performance of a reliability task.

Accordingly, for the above reasons, it is appropriate to retire FAC-011-2 R5.

FAC-013-2 R3 – Assessment of Transfer Capability for the Near-term Transmission Planning Horizon

R3. If a recipient of the Transfer Capability methodology provides documented concerns with the methodology, the Planning Coordinator shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made

> to the Transfer Capability methodology and, if no change will be made to that Transfer Capability methodology, the reason why.

Background/Commission Directives
FAC-013-1 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[57] FAC-013-2 was submitted for Commission approval on January 28, 2011 in Docket No. RD11-3-000 and was approved on November 17, 2011.[58]

In Order No. 729, the Commission denied NERC's request to withdraw FAC-012-1 and retire FAC-013-1, and directed as follows at paragraph 291:

> 291. The Commission hereby adopts its NOPR proposal to deny NERC's request to withdraw FAC-012-1 and retire FAC-013-1. Instead, pursuant to section 215(d)(5) of the FPA and section 39.5(f) of our regulations, the Commission directs the ERO to develop modifications to FAC-012-1 and FAC-013-1 to comply with the relevant directives of Order No. 693 and, as otherwise necessary, to make the requirements of those Reliability Standards consistent with those of the MOD Reliability Standards approved herein as well as this Final Rule. These modifications should also remove redundant provisions for the calculation of transfer capability addressed elsewhere in the MOD Reliability Standards. In making these revisions, the ERO should consider the development of a methodology for calculation of inter-regional and intra-regional transfer capabilities. The Commission accepts the ERO's request for additional time to prepare the modifications and so directs the ERO to submit the modifications to FAC-012-1 and FAC-013-1 no later than 60 days before the MOD Reliability Standards become effective.

Although the Commission did not directly address the merits of FAC-013-2 R3 when approving FAC-013-2,[59] similar to FAC-008-3, the developer of the Transfer Capability methodology and data must follow specific technical requirements and provide the data to reliability entities for use in their models. There are no outstanding Commission directives with respect to this R3.

Technical Justification
A review of FAC-013-2 R3 indicates that it is a needlessly burdensome administrative task that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1 and B4). Specifically, FAC-013-2 R1 and its sub-requirements set forth the information that each Planning Authority must include when developing its Transfer Capability methodology. FAC-013-2 R3 sets forth a requirement that if an entity

[57] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[58] *Order Approving Reliability Standard*, 137 FERC ¶ 61,131 (2011).
[59] *Id.* (approval of FAC-013-2).

comments on this methodology, the Planning Authority must respond and indicate whether or not it will make a change to its Transfer Capability methodology. Thus, while R1 sets forth substantive requirements, R3 sets forth more of an administrative task of the Planning Authority responding to comments on its methodology.

The following NERC glossary definition of Transfer Capability states:

> The measure of the ability of interconnected electric systems to move or transfer power *in a reliable manner* from one area to another over all transmission lines (or paths) between those areas under specified system conditions. The units of transfer capability are in terms of electric power, generally expressed in megawatts (MW). The transfer capability from "Area A" to "Area B" is *not g*enerally equal to the transfer capability from "Area B" to "Area A."

In the context of a Planning Authority engaging in an exchange with an entity over the Transfer Capability there is a possibility of a scenario that a group of generators[60] try to get the Planning Authority to revise its Transfer Capability methodology to advance commercial interests via changes to the methodology that would increase or decrease transfer capability from Area A to Area B. (Criterion B6). Such issues should be raised in the context of receipt of transmission services, not the Reliability Standards. Moreover, even without the possible commercial motivation of certain entities to get the Planning Authority to revise its Transfer Capability methodology, implementing an exchange between entities and the Planning Authority seems much better suited via regional planning committees, than mandatory Reliability Standards.

In this context, it would seem unnecessarily burdensome to engage in the exchange of comments, given there is no nexus between the exchange and compliance with the substantive requirements of FAC-013-2. Instead of spending time and resources on FAC-013-2 R3, time and resources would be better spent complying with the substantive requirements of FAC-013-2. For these same reasons, the ERO compliance program would gain efficiencies by no longer having to track whether requests for technical review had occurred, comments provided and reallocate time and resources to monitoring the Reliability Coordinator's adherence to substantive requirements of FAC-013-2.

Criterion A

The requirement in FAC-013-2 R3 to respond to comments on the Transfer Capability methodology is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues.

Criteria B

[60] Generators that receive the Transfer Capability methodology via an association with one of the entities in the R2 sub-requirements.

- Criterion B1 (Administrative)
- Criterion B4 (Reporting)
- Criterion B6 (Commercial or Business Practice)

Criteria C

1. FAC-013-2 R3 has not been part of a FFT filing.

2. FAC-013-2 R3 is not subject to an on-going Standards Development Project.

3. FAC-013-2 R3 has a Lower VRF.

4. FAC-013-2 R3 is not on the AML.

5. The retirement of FAC-013-2 R3 does not pose any negative impact to NERC's published and posted reliability principles No. 1 or No. 3.

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

   Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

   It is the adherence to the substantive requirements of FAC-013-2 that promotes these posted reliability principles, and not receiving comments on the facility ratings methodology from outside entities and then responding to those comments.

6. The retirement of FAC-013-2 R3 does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of FAC-013-2 R3 promotes a results-based approach because the requirements do not require the performance of a reliability task.

Accordingly, for the above reasons, it is appropriate to retire FAC-013-2 R3.

INT-007-1 R1.2 – Interchange Confirmation

R1.2. All reliability entities involved in the Arranged Interchange are currently in the NERC registry.

Background/Commission Directives
INT-007-1 was submitted for Commission approval on August 28, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[61] The Commission did not directly address INT-007-1 R1.2 when it approved the Reliability Standard in Order No. 693 at paragraph 867.

There are no outstanding Commission directives with respect to R1.2.

Technical Justification
The reliability purpose of INT-007-1 is to ensure that each Arranged Interchange is checked for reliability before it is implemented. The reliability purpose of INT-007-1 is unaffected by the proposed retirement of R1.2.

INT-007-1 R1.2 is a needlessly burdensome administrative task that does not support reliability because it is now outdated. (Criterion B1). At one time the identification number came from the NERC TSIN system, by now it is handled via NAESB Electric Industry Registry.[62] Also, under the E-Tag protocols, no entity may engage in an Interchange transaction without first registering with the E-Tag system and receiving an identification number. Further, the entity desiring the transaction enters this identification number in the E-Tag system to pre-qualify and engage in an Arranged Interchange. Accordingly, the task set forth in INT-007-1 R1.2 is an outdated activity that is no longer necessary, and thus, does little, if anything, to benefit or protect the reliable operation of the BES. (Criterion A). The ERO compliance program would benefit and be more efficient if it was not monitoring an outdated requirement.

Criterion A
The task set forth in INT-007-1 R1.2 is an outdated activity that is no longer necessary, and thus, does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B
- Criterion B1 (Administrative)

Criteria C
1. INT-007-1 R1.2 has not been part of a FFT filing.

2. INT-007-1 R1.2 is part of a pending Standards Development Project – Project 2008-12 Coordinate Interchange Standards, which is estimated to start in the

[61] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[62] *See, North American Energy Standards Board Webregistry Technical Guide v1.4* (Proprietary) (July 2012). The new NAESB system has updated and implemented more automation to the process.

second quarter of 2013. Given this timeline, it is appropriate to move forward with the retirement of INT-007-1 R1.2. Such a retirement may also help to streamline Project 2008-12 once it is active and progressing.

3. INT-007-1 R1.2 has a Lower VRF.

4. INT-007-1 R1.2 is not on the AML.

5. The retirement of INT-007-1 R1.2 does not pose any negative impact to NERC's published and posted reliability principles No. 1 or No. 3.

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

   Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

   It is the adherence to the substantive requirements of INT-007-1 that promotes these posted reliability principles, not R1.2.

6. The retirement of INT-007-1 R1.2 does not impact any defense in depth strategies because the task is no longer necessary.

7. The retirement of INT-007-1 R1.2 promotes a results-based approach because the requirement does not require the performance of a reliability task.

Accordingly, for the above reasons, it is appropriate to retire INT-007-1 R1.2.

IRO-016-1 R2 – Coordination of Real-time Activities Between Reliability Coordinators

R2. The Reliability Coordinator shall document (via operator logs or other data sources) its actions taken for either the event or for the disagreement on the problem(s) or for both.

Background/Commission Directives

IRO-016-1 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693. The Commission

did not directly address R2 when approving IRO-016-1 in Order No. 693 at paragraphs 1004 and 1005. There are no outstanding Commission directives with respect to R2.

Technical Justification

The reliability purpose of IRO-016-1 is to ensure that each Reliability Coordinator's operations are coordinated such that they will not have an adverse reliability impact on other Reliability Coordinator Areas and to preserve the reliability benefits of interconnected operations. To implement the purpose, IRO-016-1 R1 and its sub-requirements state:

> **R1.** The Reliability Coordinator that identifies a potential, expected, or actual problem that requires the actions of one or more other Reliability Coordinators shall contact the other Reliability Coordinator(s) to confirm that there is a problem and then discuss options and decide upon a solution to prevent or resolve the identified problem.
>
> **R1.1.** If the involved Reliability Coordinators agree on the problem and the actions to take to prevent or mitigate the system condition, each involved Reliability Coordinator shall implement the agreed-upon solution, and notify the involved Reliability Coordinators of the action(s) taken.
>
> **R1.2.** If the involved Reliability Coordinators cannot agree on the problem(s) each Reliability Coordinator shall re-evaluate the causes of the disagreement (bad data, status, study results, tools, etc.).
>
> **R1.2.1.** If time permits, this re-evaluation shall be done before taking corrective actions.
>
> **R1.2.2.** If time does not permit, then each Reliability Coordinator shall operate as though the problem(s) exist(s) until the conflicting system status is resolved.

These requirements are specific actions and decision points among Reliability Coordinators that promote the reliable operation of the BES. In contrast, a review of R2 indicates that it is a needlessly burdensome administrative and data collection requirement that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1 and B2). Therefore, the reliability purpose of IRO-016-1 is unaffected by the proposed retirement of R2.

Furthermore, outside the context of a Reliability Standard, under Section 400 of the NERC Rules of Procedure, NERC and the Regional Entities have the authority to require an entity to submit data and information for purposes of monitoring compliance. Thus, the retirement of IRO-016-1 R2 does not affect the ability for NERC and the Regional Entities to require Reliability Coordinators to produce documentation to demonstrate

compliance with IRO-016-1 R1 and its sub-requirements. Accordingly, retiring IRO-016-1 R2 presents no gap to reliability or to the information NERC and the Regional Entities need to monitor compliance. Thus, IRO-016-1 R2 does not support reliability. Consequently, R2 is an administrative and data collection requirement that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1 and B2). Also, there are some inherent inefficiencies that result by a small number of requirements, such as IRO-016-1 R2 being a data, evidence and record retention requirement, while there are other and more appropriate established methods to collect and review the data than a Reliability Standard via Rules of Procedure Section 401. In this regard, for the ERO, Regional Entities and the entities, arguably Reliability Standards are more difficult to understand because of this inconsistent approach (typically only implicitly requiring documentation as a part of an obligation to prove compliance, but occasionally explicitly requiring it with no discernible pattern or rationale).

Criterion A
A review of R2 indicates that it is a needlessly burdensome administrative and data collection requirement that does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B
- Criterion B1 (Administrative)
- Criterion B2 (Data Collection/Data Retention)

Criteria C
1. IRO-016-1 R2 has not been part of a FFT filing

2. IRO-016-1 R2 is not subject to an on-going Standards Development project.

3. IRO-016-1 R2 has a Lower VRF.

4. IRO-016-1 R2 is not on the AML.

5. The retirement of IRO-016-1 R2 does not pose any negative impact to NERC's published and posted reliability principles, since none of the principles appear to apply to a data retention requirement.

6. IRO-016-1 R2 does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of IRO-016-1 R2 promotes a results-based approach because the requirement is administrative and data collection, and, therefore, does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire IRO-016-1 R2.

NUC-001-2 R9.1; NUC-001-2 R9.1.1; NUC-001-2 R9.1.2; NUC-001-2 R9.1.3; NUC-001-2 R9.1.4 – Nuclear Plant Interface Coordination

R9.1. Administrative elements:

R9.1.1. Definitions of key terms used in the agreement.

R9.1.2. Names of the responsible entities, organizational relationships, and responsibilities related to the NPIRs.

R9.1.3. A requirement to review the agreement(s) at least every three years.

R9.1.4. A dispute resolution mechanism.

Background/Commission Directives

NUC-001-1 was submitted for Commission approval on November 19, 2007 in Docket No. RM08-3-000 and was approved on October 16, 2008.[63] NUC-001-2 was submitted for Commission approval on August 14, 2009 in Docket No. RD09-10-000 and was approved on January 21, 2010.[64]

Although in Order No. 716 the merits of R9.1 and its sub-requirements were not directly addressed, the Commission did state the following in the context of the VRFs for all of R9:[65]

> Consistent with the NOPR, the Commission directs the ERO to revise the violation risk factor assignment for Requirement R9 from lower to medium. The Commission disagrees with commenters that a lower violation risk factor is appropriate because Requirement R9 is an administrative requirement to include the specified provisions. While the Commission recognized in the NOPR that many of the requirements of the proposed Reliability Standard are administrative in nature, these same requirements provide for the development of procedures to ensure the safe and reliable operation of the grid, and responses to potential emergency conditions.

There are no outstanding Commission directives with respect to these requirements.

---

[63] *Mandatory Reliability Standard for Nuclear Plant Interface Coordination*, 125 FERC ¶ 61,065 (2008) ("Order No. 716"), *order on reh'g*, Order No. 716-A, 126 FERC ¶ 61,122 (2009).

[64] *Order Approving Reliability Standard*, 130 FERC ¶ 61,051 (2010).

[65] NUC-001-1 was approved in Order No. 716, while NUC-001-2 was approved without discussion of R9.1 and its sub-requirements in a subsequent order. *Mandatory Reliability Standard for Nuclear Plant Interface Coordination*, 125 FERC ¶ 61,065 (2008); 130 FERC ¶ 61,051 (2010).

Technical Justification

The reliability purpose of NUC-001-2 is to ensure the coordination between Nuclear Plant Generator Operators and Transmission Entities for nuclear plant safe operation and shutdown. The reliability purpose of NUC-001-2 is unaffected by the proposed retirement of requirements 9.1, 9.1.1, 9.1.2, 9.1.3 and 9.1.4. Requirement 9.1 and its sub-requirements specify certain administrative elements that must be included in the agreement (required by R2) between the Nuclear Plant Generator Operator and the applicable Transmission Entities. These are a mix of technical, communication, training and administrative requirements. Of those that may be classified as administrative, R9.1 and its sub-requirements clearly stand out as unnecessarily burdensome administrative tasks that do little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A and B1). R9.1 and its sub-requirements are a check list of certain non-technical boilerplate provisions generally included in modern agreements. These provisions do not directly relate to protecting BES reliability. Further, requiring via a mandatory Reliability Standard the inclusion of boilerplate provisions is unnecessarily burdensome relative to the other significant requirements in NUC-001-2 that pertain to performance based reliability coordination and protocols between Transmission Entities and Nuclear Plant Generator Operators. Therefore, the retirement of NUC-001-2 R9.1 and all its sub-requirements creates no reliability gap and are the type of provisions that would likely be in a modern agreement anyway.

For these same reasons, the ERO compliance program efficiency will increase with the retirement of NUC-001-2 R9.1 and its sub-requirements because compliance monitoring time and resources will not be spent conducting a checklist of whether an agreement includes boilerplate provisions, and instead, the time and resources may be spent reviewing adherence with the technical, substantive coordination and protocol provisions of NUC-001-2.

Criterion A

R9.1 and its sub-requirements are unnecessarily burdensome administrative tasks that do little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B

- Criterion B1 (Administrative)

Criteria C

1. NUC-001-2 R9.1 and its sub-requirements have not been part of a FFT filing.

2. NUC-001-2 R9.1 and its sub-requirements are not part of an on-going Standards Development Project, but NUC-001-2 is part of Project 2012-13, which is a placeholder for a five year review. Given the as yet undetermined start date for Project 2012-13, it is appropriate to move forward with the retirement of NUC-001-2 R9.1 and its sub-requirements.

3. Individual VRFs are not assigned to the sub-requirements of NUC-001-2 R9.

4. NUC-001-2 R9.1 and its sub-requirements are in the third tier of the AML.

5. The retirement of NUC-001-2 R9.1 and its sub-requirements do not pose any negative impact to NERC's published and posted reliability principles, since none of them seem to apply to the inclusion of boilerplate contractual provisions.

6. There is no impact on a defense in depth strategy because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of NUC-001-2 R9.1 and its sub-requirements promote a results-based approach by eliminating administrative check-list requirements.

Accordingly, for the above reasons, it is appropriate to retire NUC-001-2 R9.1 and its sub-requirements.

PRC-010-0 R2 – Assessment of the Design and Effectiveness of UVLS Program;

R2. The Load-Serving Entity, Transmission Owner, Transmission Operator, and Distribution Provider that owns or operates a UVLS program shall provide documentation of its current UVLS program assessment to its Regional Reliability Organization and NERC on request (30 calendar days).

Background/Commission Directives

PRC-010-0 was filed for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[66] Although not specifically addressing PRC-010-0 R2, in Order No. 693 at paragraph 1506 and 1507 the Commission stated that:

> With regard to ISO-NE's disagreement on integration of various system protections "because such integration cannot be technologically accomplished", we note that the evidence collected in the Blackout Report indicates that "the relay protection settings for the transmission lines, generators and underfrequency load shedding in the northeast may not be entirely appropriate and are certainly not coordinated and integrated to reduce the likelihood and consequence of a cascade – nor were they intended to do so." In addition, the Blackout Report stated that one of the common causes of major outages in North America is a lack of coordination on system protection. The Commission agrees with the

[66] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

> protection experts who participated in the investigation, formulated Blackout Recommendation No. 21 and recommended that UVLS programs have an integrated approach.
>
> Regarding FirstEnergy's question of whether universal coordination among UVLS programs that address local system problems makes sense, we believe that PRC-010-0's objective in requiring an integrated and coordinated approach is to address the possible adverse interactions of these protection systems among themselves and to determine whether they could aggravate or accelerate cascading events. We do not believe this Reliability Standard is aimed at universal coordination among UVLS programs that address local system problems. (Footnote omitted).

The retirement of PRC-010-0 R2 does not affect a Commission directive.

Technical Justification

Outside the context of a Reliability Standard, under Section 400 of the NERC Rules of Procedure, NERC and the Regional Entities have the authority to require an entity to submit documentation of its current UVLS program assessment for purposes of monitoring compliance. Thus, the retirement of PRC-010-0 R2 does not affect the ability of NERC and the Regional Entities to require Reliability Coordinators to produce documentation to monitor compliance with PRC-010-0 R1 and its sub-requirements. Furthermore, PRC-010-0 R1 requires that the entity document an assessment of the effectiveness of its UVLS program:

> The Load-Serving Entity, Transmission Owner, Transmission Operator, and Distribution Provider that owns or operates a UVLS program shall periodically (at least every five years or as required by changes in system conditions) conduct and document an assessment of the effectiveness of the UVLS program.

Accordingly, retiring PRC-010-0 R2 presents no gap to reliability or to the information NERC and the Regional Entity need to monitor compliance. A review of R2 indicates that it is a needlessly burdensome administrative and data collection/retention requirement that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1 and B2). Also, there are some inherent inefficiencies that result by a small number of requirements, such as PRC-010-0 R2 being a data production requirement, while there are other and more appropriate established methods to collect and review the data than a Reliability Standard via Rules of Procedure Section 401.

Criterion A

R2 is an administrative and data collection requirement that does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B

- Criterion B1(Administrative)
- Criterion B2 (Data Collection/Data Retention)

Criteria C

1. PRC-010-0 R2 has not been part of a FFT filing.

2. PRC-010-0 R2 is subject to Standards Development Project 2008-02 Undervoltage Load Shedding, which is not currently active and is only estimated to be completed until the second quarter of 2014. Since the purpose of Project 2008-02 does not necessarily include a review of R2 and its 2014 completion date is well into the future, it is appropriate to include PRC-010-0 R2 in the P81 Project.

3. This requirement has a Lower VRF.

4. This requirement is not part of the AML.

5. The retirement of PRC-010-0 R2 does not pose any negative impact to NERC's published and posted reliability principles, particularly since submission of a program assessment or documentation of its analysis of UVLS program performance to a Regional Entity does not seem to implicate any of the principles.

6. For similar reasons, there is no negative impact on a defense in depth strategy because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of PRC-010-0 R2 promotes a results-based approach because it is a data collection requirement, and, therefore, does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire PRC-010-0 R2.

PRC-022-1 R2 – Under-Voltage Load Shedding Program Performance

R2. Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program shall provide documentation of its analysis of UVLS program performance to its Regional Reliability Organization within 90 calendar days of a request.

Background/Commission Directives

PRC-022-1 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[67] In Order No. 693 at paragraph 1565 the Commission approved PRC-022-1 without a discussion of R2. There are no outstanding Commission directives with respect to R2.

Technical Justification

Outside the context of a Reliability Standard, under Section 400 of the NERC Rules of Procedure, NERC and the Regional Entities have the authority to require an entity to submit documentation of its analysis of UVLS program performance for purposes of monitoring compliance. Thus, the retirement of PRC-022-1 R2 does not affect the ability for NERC and the Regional Entities to require Reliability Coordinators to produce documentation to monitor compliance with PRC-022-1 R1 and its sub-requirements. Furthermore, PRC-022-1 R1 already requires that the entity document UVLS performance:

> Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program to mitigate the risk of voltage collapse or voltage instability in the BES shall analyze and document all UVLS operations and Misoperations.

Accordingly, retiring PRC-022-1 R2 presents no gap to reliability or to the information NERC and the Regional Entities need to monitor compliance. In this context, a review of R2 indicates that it is a needlessly burdensome administrative and data collection requirement that that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1 and B2). Also, similar to the retention of records requirements in CIP-007-3, -4 R7.3, FAC-002-1 R2 and PRC-010-0 R2, the ERO compliance program efficiency will increase since it will no longer need to track a static requirement of whether a UVLS program assessment was submitted within 30 days of a request by NERC or the Regional Entity, and instead, compliance monitoring may focus on the more substantive requirements of PRC-022-1.

Criterion A

R2 is an administrative and data collection requirement that does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B

- Criterion B1(Administrative)
- Criterion B2 (Data Collection/Data Retention)

Criteria C

1. PRC-022-1 R2 has not been part of a FFT filing.

[67] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

2. PRC-022-1 R2 is subject to Standards Development Project 2008-02 Undervoltage Load Shedding, which is not currently active and is only estimated to be completed until the second quarter of 2014. Since the purpose of Project 2008-02 does not necessarily include a review of R2 and its 2014 completion date is well into the future, it is appropriate to include PRC-022-1 R2 in the P81 Project.

3. PRC-022-1 R2 has a Lower VRF.

4. This requirement is not part of the AML.

5. The retirement of PRC-022-1 R2 does not pose any negative impact to NERC's published and posted reliability principles, particularly since submission of a program assessment or documentation of its analysis of UVLS program performance to a Regional Entity does not seem to implicate any of the principles.

6. For similar reasons, there is no negative impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of PRC-022-1 R2 promotes a results-based approach because it is a data collection requirement, and, therefore, does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire PRC-022-1 R2.

***VAR-001-2 R5 – Voltage and Reactive Control*

R5. Each Purchasing-Selling Entity and Load Serving Entity shall arrange for (self-provide or purchase) reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching;, and controllable load– to satisfy its reactive requirements identified by its Transmission Service Provider.

Background/Commission Directives
VAR-001-1 was submitted for Commission approval on April 4, 2006, in Docket No. RM06-16-000. When approving VAR-001-1, in Order No. 693 at paragraph 1858,[68] the Commission recognized:

> . . . that all transmission customers of public utilities are required to purchase Ancillary Service No. 2 under the OATT or self-supply, but the OATT does not require them to provide information to transmission

[68] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

> operators needed to accurately study reactive power needs. The Commission directs the ERO to address the reactive power requirements for LSEs on a comparable basis with purchasing-selling entities.

On September 9, 2010, NERC submitted VAR-001-2, which included revisions to Requirement R5 to satisfy Commission directives in Order No. 693, including the directive in paragraph 1858. This directive was addressed by adding "Load Serving Entities" to the standard as applicable entities and making them subject to the same requirements as Purchasing Selling Entities. These modifications to VAR-001-2 were accepted by the Commission on January 10, 2011.[69]

Technical Justification

VAR-001-2 R5 does little, if anything, to benefit or protect the reliable operation of the BES because it is redundant with FERC's *pro forma* open access transmission tariff ("OATT"). (Criteria A and B7). To elaborate, VAR-001-2 R5 provides for the PSE and LSE (transmission customers) to arrange for or self provide reactive resources the same as required under Schedule 2 of the OATT. Specifically, as a general matter Schedule 2 of the OATT states:

> **Schedule 2 Reactive Supply and Voltage Control from Generation or Other**
>
> In order to maintain transmission voltages on the Transmission Provider's transmission facilities within acceptable limits, generation facilities and non-generation resources capable of providing this service that are under the control of the control area operator) are operated to produce (or absorb) reactive power. Thus, Reactive Supply and Voltage Control from Generation or Other Sources Service must be provided for each transaction on the Transmission Provider's transmission facilities. The amount of Reactive Supply and Voltage Control from Generation or Other Sources Service that must be supplied with respect to the Transmission Customer's transaction will be determined based on the reactive power support necessary to maintain transmission voltages within limits that are generally accepted in the region and consistently adhered to by the Transmission Provider.
>
> Reactive Supply and Voltage Control from Generation or Other Sources Service is to be provided directly by the Transmission Provider (if the Transmission Provider is the Control Area operator) or indirectly by the Transmission Provider making arrangements with the Control Area operator that performs this service for the Transmission Provider's Transmission System. The Transmission Customer must purchase this service from the Transmission Provider or the Control Area operator. A

[69] *North American Electric Reliability Corp.*, 134 FERC ¶ 61,015 (2011).

> Transmission Customer may satisfy all or part of its obligation through self provision or purchases provided that the self-provided or purchased reactive power reduces the Transmission Provider's reactive power requirements and is from generating facilities under the control of the Transmission Provider or Control Area operator. The Transmission Customer's Service Agreement shall specify any such reactive supply arrangements. To the extent the Control Area operator performs this service for the Transmission Provider, charges to the Transmission Customer are to reflect only a pass-through of the costs charged to the Transmission Provider by the Control Area operator. The Transmission Provider's rates for Reactive Supply and Voltage Control from Generation Sources Services shall be set out in Appendix A to this Schedule.

Given the importance of the procurement or self providing of reactive power, even in a market setting a form of Schedule 2 is found in the tariffs of MISO and PJM, for example. Also, other contractual mechanism, such as Interchange agreements, also are used to ensure transmission customers (suc as PSEs and LSEs) provide reactive power, While NERC complied with the Commission's directive to add LSEs to VAR-001-2 R5, a review of this requirement in light of Schedule 2 indicates that the reliability objective of ensuring that PSEs as well as LSEs either acquire or self provide reactive power resources associated with its transmission service requests is accomplished via Schedule 2, and, therefore, there is no need to reiterate it in VAR-001-2 R5. The repetitive nature of VAR-001-2 R5 is also apparent in the context of how a PSE or LSE generally demonstrates compliance – via screenshots from Open Access Same-Time Information System ("OASIS") reservations that show the mandatory acquiring or self providing of reactive power resources per Schedule 2.

The reliability objective of VAR-001-2 is also accomplished in VAR-001-2 R2 (that is not proposed for retirement) which reads:

> Each Transmission Operator shall acquire sufficient reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching;, [sic] and controllable load – within its area to protect the voltage levels under normal and Contingency conditions. This includes the Transmission Operator's share of the reactive requirements of interconnecting transmission circuits.

The Transmission Operator's adherence to R2 is a double check for the obligations under Schedule 2 to ensure there are sufficient reactive power resources to protect the voltage levels under normal and Contingency conditions. This double check, however, does not relieve PESs and LESs from their obligations under Schedule 2 of the OATT or Interchange agreements.

In addition, in the Electric Reliability Council of Texas (ERCOT) region, where there is no FERC approved OATT, reactive power is handled via Section 3.15 of the ERCOT

Nodal Protocols that describes how ERCOT establishes a Voltage Profile for the grid, and then in detail explains the responsibilities of the Generators, Distribution Providers and Texas Transmission Service Providers (not to be confused with a NERC TSP), to meet the Voltage Profile and ensure that those entities have sufficient reactive support to do so. There is further Operating Guide detail on the responsibilities for entities to deploy reactive resources approximately, within performance criteria in the Operating Guide Section 3. Thus, as in non-ERCOT regions, ERCOT has protocols that are duplicative of VAR-001-2 R5.

Given the redundant nature of VAR-001-2 R5 it would also assist the ERO compliance program to retire it, so that time and resources can be reallocated to focus on adherence to other Reliability Standard requirements.

Criterion A
VAR-001-2 R5 does little, if anything, to benefit or protect the reliable operation of the BES because it is redundant with FERC's *pro forma* OATT.

Criteria B

- Criterion B7 (Redundant)

Criteria C

1. VAR-001-2 R5 has not been part of a FFT filing.

2. VAR-001-2 R5 is subject to Standards Development Project 2008-01 Voltage and Reactive Planning Control. Given that Project 2008-01 is not currently active and is only estimated to be completed until the second quarter of 2014 and the purpose of this project does not necessarily include a review of R5, it is appropriate to include VAR-001-2 R5 in the P81 Project. Also, retiring this requirement via P81 Project may facilitate the efficiency of Project 2008-01.

3. This requirement has a High VRF. However, the reliability objective of VAR-001-2 R5 will be accomplished via Schedule 2 of the OATT, ERCOT protocols and R2 of VAR-001-2. Thus, the High VRF is not dispositive, and VAR-001-2 R5 remains appropriate for retirement.

4. VAR-001-2 R5 is in the third tier of the AML.

5. Because VAR-001-2 R5 is redundant with the *pro forma* OATT and ERCOT protocols, (as well as the reliability objective of VAR-001-2 R5 is accomplished via Schedule 2 of the OATT, ERCOT protocols and R2 of VAR-001-2), the retirement of VAR-001-2 R5 does not pose any negative impact to the following NERC published and posted reliability principles:

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under

normal and abnormal conditions as defined in the NERC Standards.

Principle 2. The frequency and voltage of interconnected bulk power systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.

6. Retirement does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of VAR-001-2 R5 is neutral regarding whether it promotes a results-based approach because the requirement is results-based, but already covered in the *pro forma* OATT, Schedule 2 and ERCOT protocols.

Accordingly, for the above reasons, it is appropriate to retire VAR-001-2 R5.

V. The Initial Phase Reliability Standards Provided for Informational Purposes

The following requirements are already scheduled to be retired or subsumed via another Standards Development Project that has been approved by stakeholders and the NERC Board of Trustees (or due to be before the NERC Board of Trustees in November), and, thus, are presented here for informational purposes only. For regulatory efficiency, these requirements will not be presented for comment and vote, and, therefore, will not be presented to the NERC Board of Trustees for approval or filed with the Commission or Canadian governmental authorities as part of the P81 Project.

CIP-001-2a R4 Sabotage Reporting

R4. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, and Load-Serving Entity shall establish communications contacts, as applicable, with local Federal Bureau of Investigation (FBI) or Royal Canadian Mounted Police (RCMP) officials and develop reporting procedures as appropriate to their circumstances.

Background

CIP-001-1 was filed for Commission approval on November 15, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[70] CIP-001-1a was filed for Commission approval on April 21, 2010 in Docket No. RD10-11-000, and was approved by an unpublished letter order on February 2, 2011.[71]

CIP-001-2a was filed for Commission approval as a Regional Variance for the ERCOT Region, containing an interpretation of CIP-001-1, on June 21, 2011 in Docket No. RD11-6-000 and was approved by unpublished letter order on August 2, 2011.[72]

As part of EOP-004-2, on November 5, 2012, stakeholders approved the retirement of CIP-001-2a R4. EOP-004-2 was approved by the NERC Board of Trustees on November 7, 2012. Thus, CIP-001-2a R4 is presented here for informational purposes only.

COM-001-1.1 R6- Telecommunications

Each NERCNet User Organization shall adhere to the requirements in Attachment 1-COM-001-0, "NERCNet Security Policy."

Background

COM-001-1 was submitted for Commission approval on November 15, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[73] COM-001-1.1 was submitted for Commission approval on February 6, 2009 in Docket No. RD09-2-000 as errata and was approved by unpublished letter order on May 13, 2009.[74]

As part of COM-001-2, on September 17, 2012, stakeholders approved the retirement of COM-001-1.1 R6 in Project 2006-06 (Reliability Coordination). This project is due to be presented to the NERC Board of Trustees in November. Thus, COM-001-1 R6 is presented here for informational purposes only.

EOP-004-1 R1 – Disturbance Reporting

[70] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[71] Letter Order, Petition of the North American Electric Reliability Corporation for Approval of Interpretation to Reliability Standard CIP-001-1 —Cyber Security— Sabotage Reporting, Requirement R2, Docket No. RD10-11-000 (February 2, 2011).
[72] Letter Order, Petition of the North American Electric Reliability Corporation for Approval of the Reliability Standard CIP-001-2a – Sabotage Reporting with a Regional Variance for Texas Reliability Entity, Docket No. RD11-6-000 (August 2, 2011).
[73] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[74] Letter Order, Electric Reliability Organization Errata Petition Updating Accepted Reliability Coordination and Transmission Operations Reliability Standards, Docket No. RD09-2-000 (May 13, 2009).

R1. Each Regional Reliability Organization shall establish and maintain a Regional reporting procedure to facilitate preparation of preliminary and final disturbance reports.

Background
EOP-004-1 was submitted to the Commission for approval on November 15, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[75]

As part of EOP-004-2, on November 5, 2012, stakeholders approved the retirement of EOP-001-1 R1. EOP-004-2 was approved by the NERC Board of Trustees on November 7, 2012. Thus, EOP-001-1 R1 is presented here for informational purposes only.

EOP-009-0 R2 – Documentation of Blackstart Generating Unit Test Results

R2. The Generator Owner or Generator Operator shall provide documentation of the test results of the startup and operation of each blackstart generating unit to the Regional Reliability Organizations and upon request to NERC.

Background
EOP-009-0 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[76] In Order No. 749, the Commission approved the retirement of EOP-009-0 as of July 1, 2013, based on the approval of EOP-005-2, which did not carry forward R2 of EOP-009-0. Thus, EOP-009-0 R2 is presented here for informational purposes only.

FAC-008-1 R1.3.5 – Facility Ratings Methodology

R1.3.5. Other assumptions.

Background
FAC-008-1 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[77]

"On May 12, 2010, the NERC Board of Trustees approved the proposed FAC-008-2 Reliability Standard that addressed the first two of the FERC directives in Order No.

[75] *Mandatory Reliability Standards for the Bulk-Power System*, Order No. 693, FERC Stats. & Regs. ¶ 31,242, *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[76] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[77] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

693. NERC's proposed FAC-008-2 Reliability Standard was not filed with FERC for approval, but instead was revisited by the standard drafting team so that the third Order No. 693 directive could be addressed in response to FERC's March 18, 2010 Order…"[78]

FAC-008-3 was submitted for Commission approval on June 15, 2011 in Docket No. RD11-10-000 and was approved on November 17, 2011.[79]

FAC-008-3 (which combined FAC-008 and FAC-009) has been approved by the Commission without the "other assumptions" language.[80] Since FAC-008-3 will become effective on January 1, 2013, FAC-008-1 R1.3.5 is presented here for informational purposes only.

PRC-008-0 R1; PRC-008-0 R2 – Underfrequency Load Shedding Equipment Maintenance Programs

R1. The Transmission Owner and Distribution Provider with a UFLS program (as required by its Regional Reliability Organization) shall have a UFLS equipment maintenance and testing program in place. This UFLS equipment maintenance and testing program shall include UFLS equipment identification, the schedule for UFLS equipment testing, and the schedule for UFLS equipment maintenance.

R2. The Transmission Owner and Distribution Provider with a UFLS program (as required by its Regional Reliability Organization) shall implement its UFLS equipment maintenance and testing program and shall provide UFLS maintenance and testing program results to its Regional Reliability Organization and NERC on request (within 30 calendar days).

Background

PRC-008-0 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[81]

Under Standards Development Project 2007-17 Protection System Maintenance, which recently passed on August 27, 2012, PRC-008-0 is scheduled to be retired, subsumed and replaced with PRC-005-2. PRC-005-2 will likely be presented to the NERC Board of

[78] Petition of the North American Electric Reliability Corporation for Approval of Proposed Reliability Standard FAC-008-3 — Facility Ratings, Docket No. RD11-10-000, (June 15, 2011).
[79] *Order Approving Reliability Standard*, 137 FERC ¶ 61,123 (2011).
[80] *Id.*

[81] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

Trustees in November for approval, and, thus, PRC-008-0 is only presented here for informational purposes.

PRC-009-0 R1; PRC-009-0 R1.1; PRC-009-0 R1.2; PRC-009-0 R1.3; PRC-009-0 R1.4; PRC-009-0 R2 – UFLS Performance Following an Underfrequency Event

R1. The Transmission Owner, Transmission Operator, Load-Serving Entity and Distribution Provider that owns or operates a UFLS program (as required by its Regional Reliability Organization) shall analyze and document its UFLS program performance in accordance with its Regional Reliability Organization's UFLS program. The analysis shall address the performance of UFLS equipment and program effectiveness following system events resulting in system frequency excursions below the initializing set points of the UFLS program. The analysis shall include, but not be limited to:

R1.1. A description of the event including initiating conditions.

R1.2. A review of the UFLS set points and tripping times.

R1.3. A simulation of the event.

R1.4. A summary of the findings.

R2. The Transmission Owner, Transmission Operator, Load-Serving Entity, and Distribution Provider that owns or operates a UFLS program (as required by its Regional Reliability Organization) shall provide documentation of the analysis of the UFLS program to its Regional Reliability Organization and NERC on request 90 calendar days after the system event.

Background

PRC-009-0 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[82] In Order No. 763 at paragraph 103[83] the Commission accepted the retirement of PRC-009-0 as appropriately replaced with PRC-006-1. Consistent with Order No. 763, PRC-009-0 will become inactive on September 30, 2013 and will be replaced by PRC-006-1. Thus, PRC-009-0 is presented here for informational purposes only.

[82] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[83] *Automatic Underfrequency Load Shedding and Load Shedding Plans Re-liability Standards*, 139 FERC ¶ 61,098 (2012).

TOP-001-1a R3 – Reliability Responsibilities and Authorities

R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall comply with reliability directives issued by the Reliability Coordinator, and each Balancing Authority and Generator Operator shall comply with reliability directives issued by the Transmission Operator, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances the Transmission Operator, Balancing Authority, or Generator Operator shall immediately inform the Reliability Coordinator or Transmission Operator of the inability to perform the directive so that the Reliability Coordinator or Transmission Operator can implement alternate remedial actions.

Background

TOP-001-1 was submitted for Commission approval on November 15, 2006 in Docket No. RM06-16-000 and was approved by the Commission on March 16, 2007 in Order No. 693.[84] TOP-001-1a was submitted for approval on July 16, 2010 in Docket No. RM10-29-000 and was approved on September 15, 2011 in Order No. 753.[85]

IRO-001-1a R8 reads:

> Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall immediately inform the Reliability Coordinator of the inability to perform the directive so that the Reliability Coordinator may implement alternate remedial actions.

Although there is redundancy between TOP-001-1a R3 and IRO-001-1a R8 as related to Reliability Coordinators, this redundancy was addressed in Standards Development Project 2007-03 (Real-time Operations). Specifically, Project 2007-03 eliminated the redundancy in the current version of TOP-001-2 R1 that replaces TOP-001-1a R3 and reads:

> Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Reliability Directive issued

[84] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[85] *Electric Reliability Organization Interpretation of Transmission Operations Reliability Standard*, 136 FERC ¶ 61,176, (September 15, 2011) (Order No. 753).

> and identified as such by its Transmission Operator(s), unless such action would violate safety, equipment, regulatory, or statutory requirements.

TOP-001-2 has been approved by the NERC Board of Trustees and will be filed with the Commission for approval; therefore, TOP-001-1a R3 is presented for informational purposes only.

TOP-005-2a R1 – Operational Reliability Information

R1. As a condition of receiving data from the Interregional Security Network (ISN), each ISN data recipient shall sign the NERC Confidentiality Agreement for "Electric System Reliability Data."

Background
Without directly addressing R1 of TOP-005-1 or TOP-005-2a the Commission approved both versions of TOP-005. [86] A review of the Standards Development Project 2007-03 Real-time Transmission Operations indicates it proposes R1 of TOP-005-1 to be retired. The reasoning provided by the SDT was the following:

> Confidentiality is not a reliability issue, but a market or business issue. Since this is not a reliability issue, it does not belong in the Reliability Standards and can be deleted.[87]

As stated above, in the context of Project 2007-03, TOP-001-1a was approved by the NERC Board of Trustees and will be filed with the Commission for approval; therefore, TOP-005-2a R1 is presented for informational purposes only.

[86] Order No. 693 at paragraphs 1648 through 1652 (approval of TOP-005-1); *Mandatory Reliability Standards for Interconnection Reliability Operating Limits,* 134 F.E.R.C. ¶ 61,213 (2011) (approval of TOP-005-2a).

Paragraph 81 Project Technical White Paper

December 20, 2012

Table of Contents

I. Introduction

On March 15, 2012, the Federal Energy Regulatory Commission ("FERC" or Commission") issued an order[1] on the North American Electric Reliability Corporation's ("NERC") Find, Fix and Track ("FFT") process that stated in paragraph 81 ("P81"):

> The Commission notes that NERC's FFT initiative is predicated on the view that many violations of requirements currently included in Reliability Standards pose lesser risk to the Bulk-Power System. If so, some current requirements likely provide little protection for Bulk-Power System reliability or may be redundant. The Commission is interested in obtaining views on whether such requirements could be removed from the Reliability Standards with little effect on reliability and an increase in efficiency of the [Electric Reliability Organization] ERO compliance program. If NERC believes that specific Reliability Standards or specific requirements within certain Standards should be revised or removed, we invite NERC to make specific proposals to the Commission identifying the Standards or requirements and setting forth in detail the technical basis for its belief. In addition, or in the alternative, we invite NERC, the Regional Entities and other interested entities to propose appropriate mechanisms to identify and remove from the Commission-approved Reliability Standards unnecessary or redundant requirements. We will not impose a deadline on when these comments should be submitted, but ask that to the extent such comments are submitted NERC, the Regional Entities, and interested entities coordinate to submit their respective comments concurrently.

A. Consensus Process

In response to P81 and the Commission's request for comments to be coordinated,[2] during June and July 2012, various industry stakeholders, Trade Associations,[3] staff from NERC and staff from the NERC Regions jointly discussed consensus criteria and an initial list of Reliability Standard requirements that appeared to easily satisfy the criteria,

---

[1] *North American Electric Reliability Corporation,* 138 FERC ¶ 61,193 at P 81 (2012).

[2] In addition to addressing P81, the consensus effort was also consistent with recommendation #4 set forth in *NERC's Recommendations to Improve The Standards Development Process* at page 12 (April 2012), which states:

Recommendation 4: Standards Product Issues — The NERC board is encouraged to require that the standards development process address: . . . The retirement of standards no longer needed to meet an adequate level of reliability.

[3] Edison Electric Institute, American Public Power Association, National Rural Electric Cooperative Association, Large Public Power Council, Electricity Consumers Resource Council, The Electric Power Supply Association, and Transmission Access Policy Study Group.

and, thus, could be retired. Specifically, the three parties (industry stakeholders/Trade Associations, staff from NERC, and staff from the NERC Regions) used the following conservative discipline to arrive at the proposed list of requirements to be retired: (i) the development of criteria to determine whether a Reliability Standard requirement should be retired and (ii) the application of this criteria with consultation from Subject Matter Experts ("SME"), with the understanding that if any of the three parties objected to including a requirement it would not be included in the initial phase of the P81 Project. As a result of this process, a draft Standards Authorization Request ("SAR"), including an initial suggested list of requirements for retirement, was drafted and presented to the NERC Standards Committee. Also, the SMEs consulted in this process provided the technical justifications that appear in this technical white paper.

B. Standards Committee

On July 11, 2012, the Standards Committee authorized the draft SAR to be posted for industry comment and formed an interim P81 Standards Drafting Team ("SDT") to review and respond to comments as well as finalize the SAR. The draft SAR was posted on August 3, 2012 with stakeholder comments due on or before September 4, 2012. Based on the stakeholder comments received, the SDT finalized the SAR, including the criteria and the initial list of Reliability Standard requirements proposed for retirement. On September 28, 2012, the Standards Committee Executive Committee authorized: (a) waiving the 30 day initial comment period and (b) posting the SAR and list of requirements proposed for retirement in the initial phase for a 45-day formal comment period with the formation of a ballot pool during the first 30 days and an initial ballot during the last 10 days of that 45-day comment period.[4]

The purpose of this technical white paper is to set forth the background and technical justification for each of the Reliability Standard requirements proposed for retirement. Stakeholders are requested to review this technical white paper and provide the SDT any: (1) supplemental, additional technical justifications for a requirement(s) and/or (2) concerns with the technical justifications for a requirement(s).

[4] The following requirements that were presented in the draft SAR were already scheduled to be retired or subsumed via another Standards Development Project that has been approved by stakeholders and the NERC Board of Trustees (or due to be before the Board in November), and, thus, are presented in this technical white paper in Section V for informational purposes only: CIP-001-2a R4; COM-001-1.1 R6; EOP-004-1 R1; EOP-009-0 R2; FAC-008-1 R1.3.5; PRC-008-0 R1; PRC-008-0 R2; PRC-009-0 R1; PRC-009-0 R1.1; PRC-009-0 R1.2; PRC-009-0 R1.3; PRC-009-0 R1.4; PRC-009-0 R2; TOP-001-1a R3; and TOP-005-2a R1. For regulatory efficiency, these requirements will not be presented for comment and vote, and, therefore, will not be presented to the Board of Trustees for retirement or filed with the Commission or Canadian governmental authorities as part of the P81 Project. Those requirements that were not part of the draft SAR, but were added based on stakeholder comments are denoted by a "**" throughout this technical white paper. More detail on each of these requirements is provided below.

II. Executive Summary

The SDT developed a set of three criteria and used them to identify requirements that could be eligible for retirement. A summary of the criteria are as follows:

A. Criterion A (Overarching Criterion): little, if any, benefit or protection to the reliable operation of the BES

B. Criteria B (Identifying Criteria)
   - B1. Administrative
   - B2. Data Collection/Data Retention
   - B3. Documentation
   - B4. Reporting
   - B5. Periodic Updates
   - B6. Commercial or Business Practice
   - B7. Redundant

C. Criteria C (Additional data and reference points)
   - C1. Part of a FFT filing
   - C2. Being reviewed in an ongoing Standards Development Project
   - C3. Violation Risk Factor ("VRF") of the requirement
   - C4. Tier in the 2013 Actively Monitored List ("AML")
   - C5. Negative impact on NERC's reliability principles
   - C6. Negative impact on the defense in depth protection of the BES
   - C7. Promotion of results or performance based Reliability Standards

Specifically, for a requirement to be proposed for retirement, it must satisfy both, Criterion A and at least one of the Criteria B. Criteria C were considered as additional information to make a more informed decision.

Based on the criteria above, the SDT proposes to retire the following 3~~6~~8 requirements in 23 Reliability Standard versions:

- BAL-005-0.2b R2
- ~~CIP-001-2a R4~~
- CIP-003-3 R1.2
- CIP-003-3 R3
- CIP-003-3 R3.1
- CIP-003-3 R3.2
- CIP-003-3 R3.3

- CIP-003-3 R4.2
- CIP-003-4 R1.2
- CIP-003-4 R3
- CIP-003-4 R3.1
- CIP-003-4 R3.2
- CIP-003-4 R3.3
- CIP-003-4 R4.2
- CIP-005-3a R2.6
- CIP-005-4a R2.6
- CIP-007-3 R7.3
- CIP-007-4 R7.3
- ~~EOP-004-1 R1~~
- EOP-005-2 R3.1
- FAC-002-1 R2
- FAC-008-1 R2
- FAC-008-1 R3

A table is included in Appendix A with the Reliability Standard requirements proposed for retirement and a cross-reference to the associated criteria.

III. Criteria

The P81 Project focuses on identifying FERC-approved Reliability Standard requirements that satisfy the criteria set forth below.[5] Specifically, for a Reliability

[5] The scope of future phases of the P81 Project has not yet been determined. When the scope is considered, the criteria set forth herein may be a useful guide to appropriate criteria for those phases.

Standard requirement to be proposed for retirement it must satisfy **both**: (i) Criterion A (the overarching criterion) and (ii) at least one of the Criteria B listed below (identifying criteria). The purpose of having these two levels of criteria was to confine the review and consideration of requirements to only those requirements that clearly need not be included in the mandatory Reliability Standards. Also, Criteria A and B were designed so there would be no rewriting or consolidation of requirements, and the technical merits of retiring the requirements did not require significant research and vetting. In addition, for each Reliability Standard requirement proposed for retirement, the data and reference points set forth below in Criteria C were considered to make a more informed decision on whether to proceed with retirement. Lastly, for each requirement proposed for retirement, any increase to the efficiency of the ERO compliance program is addressed.

Criterion A (Overarching Criterion)

The Reliability Standard requirement requires responsible entities ("entities") to conduct an activity or task that does little, if anything, to benefit or protect the reliable operation of the BES.

Section 215(a) (4) of the United States Federal Power Act defines "reliable operation" as: "… operating the elements of the bulk-power system within equipment and electric system thermal, voltage, and stability limits so that instability, uncontrolled separation, or cascading failures of such system will not occur as a result of a sudden disturbance, including a cybersecurity incident, or unanticipated failure of system elements."

Criteria B (Identifying Criteria)

B1. Administrative

The Reliability Standard requirement requires responsible entities ~~("entities")~~ to perform a function that is administrative in nature, does not support reliability and is needlessly burdensome.

This criterion is designed to identify requirements that can be removed with little effect on reliability and whose removal will result in an increase in the efficiency of the ERO compliance program. Administrative functions may include a task that is or is not related to developing procedures or plans, such as establishing communication contacts. Thus, for certain requirements, Criterion B1 is closely related to Criteria B2, B3 and B4. Strictly administrative functions do not inherently negatively impact reliability directly and, where possible, should be eliminated for purposes of efficiency and to allow the ERO and entities to appropriately allocate resources.

B2. Data Collection/Data Retention

These are requirements that obligate responsible entities to produce and retain data which document prior events or activities, and should be collected via some other method under NERC's rules and processes.

This criterion is designed to identify requirements that can be removed with little effect on reliability. The collection and/or retention of data do not necessarily have a reliability benefit and yet are often required to demonstrate compliance. Where data collection and/or data retention is unnecessary for reliability purposes, such requirements should be eliminated in order to increase the efficiency of the ERO compliance program.

B3. Documentation

The Reliability Standard requirement requires responsible entities to develop a document (*e.g.*, plan, policy or procedure) which is not necessary to protect BES reliability.

This criterion is designed to identify requirements that require the development of a document that is unrelated to reliability or has no performance or results-based function. In other words, the document is required, but no execution of a reliability activity or task is associated with or required by the document.

B4. Reporting

The Reliability Standard requirement obligates responsible entities to report to a Regional Entity, NERC or another party or entity. These are requirements that obligate responsible entities to report to a Regional Entity on activities which have no discernible impact on promoting the reliable operation of the BES and if the entity failed to meet this requirement there would be little reliability impact.

B5. Periodic Updates

The Reliability Standard requirement requires responsible entities to periodically update (*e.g.*, annually) documentation, such as a plan, procedure or policy without an operational benefit to reliability.

This criterion is designed to identify requirements that impose an updating requirement that is out of sync with the actual operations of the BES, unnecessary or duplicative.

B6. Commercial or Business Practice

The Reliability Standard requirement is a commercial or business practice, or implicates commercial rather than reliability issues.

This criterion is designed to identify those requirements that require: (i) implementing a best or outdated business practice or (ii) implicating the exchange of or debate on commercially sensitive information while doing little, if anything, to promote the reliable operation of the BES.

B7. Redundant

The Reliability Standard requirement is redundant with: (i) another FERC-approved Reliability Standard requirement(s); (ii) the ERO compliance and monitoring program or (iii) a governmental regulation (*e.g.*, Open Access Transmission Tariff, North American Energy Standards Board ("NAESB"), etc.).

This criterion is designed to identify requirements that are redundant with other requirements and are, therefore, unnecessary. Unlike the other criteria listed in Criterion B, in the case of redundancy, the task or activity itself may contribute to a reliable BES, but it is not necessary to have two duplicative requirements on the same or similar task or activity. Such requirements can be removed with little or no effect on reliability and removal will result in an increase in efficiency of the ERO compliance program.

Criteria C (Additional data and reference points)

~~In those instances where there is a need for additional information t~~To assist in the determination of whether to proceed with the ~~a Reliability Standard~~ requirement of a Reliability Standard requirement that satisfies both Criteria A and B, the following data and reference points shall be considered to make a more informed decision:

C1. Was the Reliability Standard requirement part of a FFT filing?

The application of this criterion involves determining whether the requirement was included in a FFT filing.

C2. Is the Reliability Standard requirement being reviewed in an on-going Standards Development Project?

The application of this criterion involves determining whether the requirement proposed for retirement is part of an active on-going Standards Development Project, with a consideration of the point in the process that Project is at. If the requirement has been passed by the stakeholders and is scheduled to be presented to the NERC Board of Trustees, in most cases it will not be included in the P81 project to promote regulatory efficiency. The exception would be a requirement, such as the Critical Information Protection ("CIP") requirements for Version 3 and 4, that is not due to be retired for an extended period of time; or, other requirements that based on the specific facts and circumstances of that requirement indicate it should be retired via the P81 Project first rather than waiting for another Standards Development Project to retire it, particularly as a way to increase the efficiencies of the ERO compliance program. Also, for informational purposes, whether the requirement is included in a future or pending Standards Development Project will be identified and discussed.

C3. What is the VRF of the Reliability Standard requirement?

The application of this criterion involves identifying the VRF of the requirement proposed for retirement, with particular consideration of any requirement that has been assigned as having a Medium or High VRF. Also, the fact that a requirement has a Lower VRF is not dispositive that it qualifies for retirement. In this regard, Criterion C3 is considered in light of Criterion C5 (Reliability Principles) and C6 (Defense in Depth) to ensure that no reliability gap would be created by the retirement of the Lower VRF requirement. For example, no requirement, including a Lower VRF requirement, should be retired if its retirement harms the effectiveness of a larger scheme of requirements that are purposely designed to protect the reliable operation of the BES.

C4. In which tier of the 2013 AML does the Reliability Standard requirement fall?

The application of this criterion involves identifying whether the requirement proposed for retirement is on the 2013 AML, with particular consideration for any requirement in the first tier of the 2013 AML.

C5. Is there a possible negative impact on NERC's published and posted reliability principles?

The application of this criterion involves consideration of the eight following reliability principles published on the NERC webpage.

> **Reliability Principles**
> NERC Reliability Standards are based on certain reliability principles that define the foundation of reliability for North American bulk power systems. Each reliability standard shall enable or support one or more of the reliability principles, thereby ensuring that each standard serves a purpose in support of reliability of the North American bulk power systems. Each reliability standard shall also be consistent with all of the reliability principles, thereby ensuring that no standard undermines reliability through an unintended consequence.
>
> Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

Principle 2. The frequency and voltage of interconnected bulk power systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.

Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

Principle 4. Plans for emergency operation and system restoration of interconnected bulk power systems shall be developed, coordinated, maintained, and implemented.

Principle 5. Facilities for communication, monitoring, and control shall be provided, used, and maintained for the reliability of interconnected bulk power systems.

Principle 6. Personnel responsible for planning and operating interconnected bulk power systems shall be trained, qualified, and have the responsibility and authority to implement actions.

Principle 7. The reliability of the interconnected bulk power systems shall be assessed, monitored, and maintained on a wide-area basis.

Principle 8. Bulk power systems shall be protected from malicious physical or cyber attacks. (footnote omitted).

C6. Is there any negative impact on the defense in depth protection of the BES?

The application of this criterion considers whether the requirement proposed for retirement is part of a defense in depth protection strategy. In order words, the assessment is to verify whether other requirements rely on the requirement proposed for retirement to protect the BES.

C7. Does the retirement promote results or performance based Reliability Standards?

The application of this criterion considers whether the requirement, if retired, will promote the initiative to implement results- and/or performance-based Reliability Standards.

IV. The Initial Phase Reliability Standards Requirements Proposed for Retirement

The following lists the requirements proposed for retirement with details of the assessment resulting from the applicability of the criteria above.

BAL-005-0.2b R2 – Automatic Generation Control

R2. Each Balancing Authority shall maintain Regulating Reserve that can be controlled by AGC to meet the Control Performance Standard.

Background/Commission Directives

BAL-005-0 was filed for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[6] Also, the Commission accepted an errata filing to BAL-005-0.1b, which replaced Appendix 1 with a corrected version of a Commission-approved interpretation, and made an internal reference correction in the interpretation, thus resulting in BAL-005-0.2b.[7]

In Order No. 693 at paragraph 387, the Commission stated that:

> The goal of this Reliability Standard is to maintain Interconnection frequency by requiring that all generation, transmission, and customer load be within the metered boundaries of a balancing authority area, and establishing the functional requirements for the balancing authority's regulation service, including its calculation of ACE.

At paragraph 396, the Commission stated:

> On this issue, the Commission directs the ERO to modify BAL-005-0 through the Reliability Standards development process to develop a process to calculate the minimum regulating reserve for a balancing authority, taking into account expected load and generation variation and transactions being ramped into or out of the balancing authority.

[6] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

[7] Letter Order, Petition of the North American Electric Reliability Corporation for Approval of Errata Changes to Seven Reliability Standards, Docket No. RD12-4-000 (September 13, 2012).

This Commission directive is unaffected by the proposed retirement of BAL-005-0.2b R2.

Additionally, when adjusting the VRF for the previous version, BAL-005-0.1b R2, from Lower to High, the Commission stated that:[8]

> While theoretically, CPS can be met without the use of AGC, for example, when the AGC system is malfunctioning, the Commission believes, in practice, that AGC is the most dependable and effective means for multiple balancing authorities in an Interconnection to collectively meet CPS requirements in tandem while minimizing assistance from each other in this regard. Human reaction is neither fast enough nor dependable enough in this repetitive task to provide the immediate and continuous support to correct for Interconnection frequency drift. Further, the failure to use AGC presents a higher risk that immediate load shedding will need to be implemented after the sudden loss of generation or an unforeseen significant load increase and, thus, the failure to use AGC subjects the Bulk-Power System to a higher risk of instability.

However, the fact that the VRF for BAL-005-0.2b R2 is High is not indicative of its actual impact on the BES as explained in further detail below. Also, no Commission directive is impacted by BAL-005-0.2b R2.

Technical Justification

The stated reliability purpose of BAL-005-0.2b is to establish requirements for Balancing Authority Automatic Generation Control ("AGC") necessary to calculate Area Control Error ("ACE") and to routinely deploy the Regulating Reserve. The standard also ensures that all facilities and load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. The reliability purpose and objectives of BAL-005-0.2b are unaffected by the proposed retirement of R2.

A Balancing Authority must use AGC to control its Regulating Reserves to meet the Control Performance Standards ("CPS") as set forth in BAL-001-0.1a R1 and R2. Although for a short period of time (as the Commission stated during an AGC malfunction) a Balancing Authority may be able to meet its CPS obligations without AGC, it cannot do so for any extended period of time, and, therefore, Balancing Authorities must use AGC to control its Regulating Reserves to satisfy its obligations under BAL-001-0.1a R1 and R2. Given this fact, it is redundant to also have BAL-005-0.2b R2 set forth the following statement: "Each Balancing Authority shall maintain Regulating Reserve that can be controlled by AGC to meet the Control Performance Standard." (Criterion B7). It is the duplicative nature of having two requirements requiring the same activity that does little, if anything, to benefit or protect reliable

[8] *North American Electric Reliability Corporation*, 121 FERC ¶ 61,179 at P 50 (2007).

operation of the BES. (Criterion A). In other words, without the existence of BAL-005-0.2b R2, Balancing Authorities must still have Regulating Reserves that can be controlled by AGC to satisfy the CPS in BAL-001-0.1a R1 and R2.

Also, the retirement of BAL-005-0.2b R2 would increase the efficiency of the ERO compliance program because NERC and the Regional Entities would be able to focus their time and resources on monitoring compliance on BAL-001-0.1a R1 and R2, which are results-based requirements, versus monitoring compliance with both BAL-001-0.1a R1 and R2 as well as the static statement in BAL-005-0.2b R2. Therefore, retiring BAL-005-0.2b R2 will provide for increased efficiencies in the ERO compliance program.

Criterion A
Without the existence of BAL-005-0.2b R2, Balancing Authorities must still have Regulating Reserves that can be controlled by AGC to satisfy the CPS in BAL-001-0.1a R1 and R2. Having two requirements requiring a Balancing Authority to conduct the same activity or task does little, if anything, to benefit or protect the reliable operation of the BES because it is duplicative.

Criteria B

- Criterion B7 (Redundant)

Criteria C

1. BAL-005-0.2b R2 has not been part of a FFT filing.

2. BAL-005-0.2b R2 is currently scheduled to be included in Standards Development Project 2010-14.2, which is Phase II of Balancing Authority Reliability-based Controls: Time Error, AGC, and Inadvertent. Given that Project 2010-14.2 is currently not an active Standards Development Project, it remains appropriate to retire BAL-005-0.2b R2 via the P81 Project.

3. The VRF for BAL-005-0.2b R2 is High. Given the redundant nature of BAL-005-0.2b R2, the High VRF is not dispositive of whether or not it should be retired since BAL-001-0.1a R1 and R2 accomplishes the important reliability requirement of Balancing Authorities maintaining Regulating Reserves that can be controlled by AGC to satisfy CPS.

4. BAL-005-0.2b R2 is not part of the 2013 AML.

5. The redundant nature of BAL-005-0.2b R2 with BAL-001-0.1a R1 and R2 also indicates that the retirement of BAL-005-0.2b R2 does not pose a negative impact to NERC's published and posted reliability principles. The two reliability principles applicable to BAL-005-0.2b R2 are the following:

Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

Principle 2. The frequency and voltage of interconnected bulk power systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.

6. Retirement of BAL-005-0.2b R2 does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability. As discussed above, given that BAL-001-0.1a R1 and R2 already require that AGC be used to control Regulating Reserves, there is no risk or gap to reliability resulting from the retirement of BAL-005-0.2b R2.

7. Retirement of BAL-005-0.2b R2 promotes a results-based approach, because it is retiring a static requirement while BAL-001.1a R1 and R2, which are more dynamic and results-based requirements, will remain in effect.

Accordingly, for the above reasons, it is appropriate to retire BAL-005-0.2b R2.

~~**CIP-001-2a R4 Sabotage Reporting**~~

~~**R4.** Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, and Load-Serving Entity shall establish communications contacts, as applicable, with local Federal Bureau of Investigation (FBI) or Royal Canadian Mounted Police (RCMP) officials and develop reporting procedures as appropriate to their circumstances.~~

~~**Background/Commission Directives**~~

~~CIP-001-1 was filed for Commission approval on November 15, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[9] CIP-001-1a was filed for Commission approval on April 21, 2010 in Docket No. RD10-11-000, and was approved by an unpublished letter order on February 2, 2011.[10]~~

~~CIP-001-2a was filed for Commission approval as a Regional Variance for the ERCOT Region, containing an interpretation of CIP-001-1, on June 21, 2011 in Docket No. RD11-6-000 and was approved by unpublished letter order on August 2, 2011.[11]~~

~~[9] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).~~
~~[10] Letter Order, Petition of the North American Electric Reliability Corporation for Approval of Interpretation to Reliability Standard CIP-001-1 – Cyber Security – Sabotage Reporting, Requirement R2, Docket No. RD10-11-000 (February 2, 2011).~~
~~[11] Letter Order, Petition of the North American Electric Reliability Corporation for Approval of the Reliability Standard CIP-001-2a – Sabotage Reporting with a Regional Variance for Texas Reliability Entity, Docket No. RD11-6-000 (August 2, 2011).~~

In Order No. 693 at paragraph 460, the Commission stated:

> For these reasons, the Commission remains concerned that a wider application of CIP-001-1 may be appropriate for Bulk-Power System reliability. Balancing these concerns with our earlier discussion of the applicability of Reliability Standards to smaller entities, we will not direct the ERO to make any specific modification to CIP-001-1 to address applicability. However, we direct the ERO, as part of its Work Plan, to consider in the Reliability Standards development process, possible revisions to CIP-001-1 that address our concerns regarding the need for wider application of the Reliability Standard. Further, when addressing such applicability issues, the ERO should consider whether separate, less burdensome requirements for smaller entities may be appropriate to address these concerns.

In Order No. 693 at paragraphs 445 and 467 through 470, the Commission stated that:

> The goal of CIP-001-1 is to ensure that operating entities recognize sabotage events and inform appropriate authorities and each other to properly respond to the sabotage to minimize the impact on the Bulk-Power System. The Reliability Standard requires that each reliability coordinator, balancing authority, transmission operator, generation operator and LSE have procedures for recognizing and for making operating personnel aware of sabotage events, and communicating information concerning sabotage events to appropriate "parties" in the Interconnection.
>
> * * *
>
> CIP-001-1, Requirement R4, requires that each applicable entity establish communications contacts, as applicable, with the local FBI or Royal Canadian Mounted Police officials and develop reporting procedures as appropriate to its circumstances. The Commission in the NOPR expressed concern that the Reliability Standard does not require an applicable entity to actually contact the appropriate governmental or regulatory body in the event of sabotage. Therefore, the Commission proposed that NERC modify the Reliability Standard to require an applicable entity to "contact appropriate federal authorities, such as the Department of Homeland Security, in the event of sabotage within a specified period of time."
>
> As mentioned above, NERC and others object to the wording of the proposed directive as overly prescriptive and note that the reference to "appropriate federal authorities" fails to recognize the international application of the Reliability Standard. The example of the Department of

> Homeland Security as an "appropriate federal authority" was not intended to be an exclusive designation. Nonetheless, the Commission agrees that a reference to "federal authorities" could create confusion. Accordingly, we modify the direction in the NOPR and now direct the ERO to address our underlying concern regarding mandatory reporting of a sabotage event. The ERO's Reliability Standards development process should develop the language to implement this directive.
>
> * * *
>
> Thus, the Commission directs the ERO to modify CIP-001-1 to require an applicable entity to contact appropriate governmental authorities in the event of sabotage within a specified period of time, even if it is a preliminary report. The ERO, through its Reliability Standards development process, is directed to determine the proper reporting period. In doing so, the ERO should consider suggestions raised by commenters such as FirstEnergy and Xcel to define the specified period for reporting an incident beginning from when an event is discovered or suspected to be sabotage, and APPA's concerns regarding events at unstaffed or remote facilities, and triggering events occurring outside staffed hours at small entities. (Footnotes omitted).

The Commission's suggestion to modify CIP-001-1 to require an applicable entity to contact appropriate federal authorities, such as the Department of Homeland Security, is being considered in Standards Development Project 2009-01 (EOP-004-2). CIP-001-2a R4 is proposed for retirement because it does not require an action when sabotage is suspected or actually occurs, rather that action is addressed via CIP-001-2a R2.

Technical Justification

The practices and procedures set forth in CIP-001-2a R2 provides the results-based foundation for contacting communication of information concerning sabotage events to appropriate parties in the Interconnection, including when necessary, the FBI or RCMP, when there is an event of suspected or actual sabotage, while the task in R4 does little, if anything, to benefit or protect the reliable operation of the BES. (Criterion A). Consistent with CIP-001-2a R1 (identification of sabotage), R2 (communication of sabotage) and R3 (reporting of sabotage),[12] a responsible entity generally contacts local law enforcement authorities when there is any suspicion that sabotage has occurred at a BES facility. The entity's corporate security and site personnel will consult with local law enforcement to assess the situation and facts to determine whether a suspected or actual act of sabotage has occurred. If they find a suspected or actual act of sabotage has

[12] "**R2.** Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, and Load Serving Entity shall have procedures for the communication of information concerning sabotage events to appropriate parties in the Interconnection."

occurred, the FBI or RCMP, as appropriate, will be contacted in accordance with R2.[13] Thus, pursuant to the different steps and actions in R1 through R3, when there is an instance of sabotage that warrants contacting the FBI or RCMP or any other federal/national governmental authority, the responsible entities will contact them. Conversely, CIP-001-2a R4 does not require that the FBI or RCMP be contacted when an act of suspected or actual sabotage has occurred; instead, R4 only requires that the entity establish communication contacts with these agencies, as appropriate, and "develop reporting procedures. . . ." While the development of reporting procedures in R4 is generic, the procedures and processes associated with R1, R2, and R3 are specific to the steps of identifying, communicating and reporting issues related to sabotage. This view was confirmed in the interpretation of R2 that states:

> . . . the phrase "appropriate parties in the Interconnection" to refer collectively to entities with whom the reporting party has responsibilities and/or obligations for the communication of physical or cyber security event information.

Consequently, the R4 requirement to establish communication contacts and develop reporting procedures does not support reliability, and, instead, is an administrative, documentation and data collection task requirement (Criteria B1, B2 and B3). Also, in the overall context of CIP-001-2a R1 through R3, which already require sabotage related procedures and guidelines, the tasks in R4 are unnecessary and needlessly burdensome. Furthermore, corporate security departments that are involved in the investigation of sabotage related events are well aware of how to contact the FBI and RCMP, as applicable, and, in fact, some corporate security employees to have a law enforcement background, including past positions in federal agencies such as the Secret Service. To have these security professionals establish contacts with agencies they are readily familiar with and to generic develop reporting procedures that do not require action is unnecessarily burdensome. The administrative aspect of R4 is further illuminated when compared to the more results-based activities in CIP-001-2a R1 through R3, which are the requirements that serve reliability by requiring action when suspected or actual sabotage occurs. Accordingly, CIP-001-2a R1 through R3 serve the results-based reliability function, while R4 is a static, administrative requirement that has no direct or clear nexus to protecting BES reliability.

Also, the retirement of CIP-001-2a R4 should increase the efficiencies of the ERO compliance program, because ERO and Regional Entity time and resources would be able to focus more attention, if needed, on monitoring compliance with CIP-001-2a R1 through R3.

[13] In addition, the requirement, as written, does not reflect current reporting and investigation procedures in some of the Canadian Provinces as protocol for sabotage reporting and investigation varies in each Canadian Province. For example, in the Provinces of Ontario and Quebec, the reports are given to local police (municipal/provincial) and not to the RCMP as the standard specifies. The fact is that the RCMP does not perform Provincial level law enforcement in the Provinces of Ontario and Quebec.

~~**Criterion A**~~

~~CIP-001-2a R2 provides the results-based foundation for contacting communication of information concerning sabotage events to appropriate parties in the Interconnection, including when necessary, the FBI or RCMP, when there is an event of suspected or actual sabotage, while the task in R4 does little, if anything, to benefit or protect the reliable operation of the BES.~~

~~**Criteria B**~~

- ~~Criterion B1 (Administrative)~~
- ~~Criterion B2 (Data Collection/Data Retention)~~
- ~~Criterion B3 (Documentation)~~

~~**Criteria C**~~

1. ~~CIP-001-2a R4 has been part of a FFT filing.~~[14]

2. ~~CIP-001-2a R4 is part of an on-going Standards Development Project 2009-01 (EOP 004-2). At this time, EOP-004-2 has not been approved by stakeholders and the NERC Board of Trustees, and, therefore, it is appropriate to retain CIP-001-2a R4 within the scope of P81. However, if EOP-004-2 does receive stakeholder approval and is adopted by the NERC Board of Trustees, the SDT will reconsider retirement via the P81 Project and may include CIP-001-2a R4 for informational purposes only.~~

3. ~~CIP-001-2a R4 has a Medium VRF. All of CIP-001-2a has a Medium VRF, thus the fact that R4 is a Medium VRF is not dispositive of whether it should be retired.~~

4. ~~CIP-001-2a R4 is in the second tier of the AML. Similar to the VRF, having CIP-001-2a R4 in the second tier of the AML is not dispositive of whether it should be retired, particularly when considered with the fact that R2 and R3, the more results-based requirements, are in the first tier.~~

5. ~~Given its lack of requiring a reliability based action, the retirement of CIP-001-2a R4 does not negatively impact NERC's published and posted reliability principles. The only principles applicable to CIP-001-2a R4 appear to be the following:~~

> ~~Principle 6. Personnel responsible for planning and operating interconnected bulk power systems shall be trained, qualified, and have the responsibility and authority to implement actions.~~

~~[14] NERC FFT Informational Filing, Docket No. RC12-15-000 (August 31, 2012); NERC FFT Informational Filing, Docket No. RC12-13-000 (June 29, 2012); NERC FFT Informational Filing, Docket No. RC12-11-000 (April 30, 2012); NERC FFT Informational Filing, Docket No. RC12-6-000 (December 30, 2011); NERC FFT Informational Filing, Docket No. RC12-2-000 (November 30, 2011); NERC FFT Informational Filing, Docket No. RC12-1-000 (October 31, 2011); NERC FFT Informational Filing, Docket No. RC11-6-000 (September 30, 2011).~~

~~Principle 8. Bulk power systems shall be protected from malicious physical or cyber attacks.~~

~~6. The retirement of CIP-001-2a R4 does not impact a defense in depth strategy between multiple requirements. CIP-001-2a R1 through R3 provide the foundation for the identification, communication and reporting of suspected and actual sabotage, while R4 is an administrative task of establishing contacts and developing generic reporting procedures. Therefore, there is no reliability risk or gap that will result from the retirement of CIP-001-2a R4.~~

~~7. As mentioned above, CIP-001-2a R4 is not a results-based requirement.~~

~~Accordingly, for the above reasons, it is appropriate to retire CIP-001-2a R4.~~

CIP-003-3, -4 R1.2 – Cyber Security – Security Management Controls

R1.2. The cyber security policy is readily available to all personnel who have access to, or are responsible for, Critical Cyber Assets.

Background/Commission Directives

CIP-003-1 was filed for Commission approval on August 28, 2006 in Docket No. RM06-16-000 and was approved on January 18, 2008 in Order No. 706.[15] CIP-003-2 was filed for Commission approval on May 22, 2009 in Docket Nos. RM06-22-000 and RD09-7-000 and was approved on September 30, 2009.[16] CIP-003-3 was filed for Commission approval on December 29, 2009 in Docket No. RD09-7-002 and was approved on March 31, 2010.[17] CIP-003-4 was submitted for Commission approval on February 10, 2011 in Docket No. RM11-11-000 and was approved on April 19, 2012.[18]

In Order No. 706 at paragraph 342 the Commission stated that:

> Reliability Standard CIP-003-1 seeks to ensure that each responsible entity has minimum security management controls in place to protect the critical

[15] *Mandatory Reliability Standards for Critical Infrastructure Protection*, 122 FERC ¶ 61,040 (2008) ("Order No. 706"), *order on reh'g*, Order No. 706-A, 123 FERC ¶ 61,174 (2008), *order on clarification*, Order No. 706-B, 126 FERC ¶ 61,229, order on clarification, Order No. 706-C, 127 FERC ¶ 61,273 (2009).
[16] *Order Approving Revised Reliability Standard for Critical Infrastructure Protection and Requiring Compliance Filing*, 128 FERC ¶ 61,291 (2009), *order denying reh'g and granting clarification*, 129 FERC ¶ 61,236 (2009) (approving Version 2 of the CIP Reliability Standards)).
[17] *Order on Compliance* 130 FERC ¶ 61,271 (2010).
[18] *Version 4 Critical Infrastructure Protection Reliability Standards*, 139 FERC ¶ 61,058 (2012).

> cyber assets identified pursuant to CIP-002-1. To achieve this goal, a responsible entity must develop a cyber security policy that represents management's commitment and ability to secure its critical cyber assets. It also must designate a senior manager to direct the cyber security program and to approve any exception to the policy.

All outstanding directives in Order No. 706 will be addressed in Version 5 of the CIP Standards and the retirement of CIP-003-3, -4 R1.2 does not impact a Commission directive.

Technical Justification

The importance of the cyber security policy as representing management's commitment and ability to secure critical cyber assets is overshadowed by the rigorous and specific training, procedural and process related requirements of the CIP Standards. These trainings, procedures and processes render having the cyber security policy readily available an unnecessary requirement. In other words, whether CIP personnel are completing a typical CIP requirement cyber security task or responding to an immediate situation, they will act via their specific training, processes and procedures and not the overarching cyber security policy. Stated another way, CIP personnel will act via their specific training, processes and procedures which reflect the overarching cyber security policy. Consequently, the cyber security policy's generalized guidance on compliance with the CIP requirements is not a document that adds value to personnel protecting the BES from a cyber attack on a day-to-day basis.

Furthermore, to implement CIP-003-3, -4 R1.2 entities have undertaken a variety of administrative solutions including kiosks dedicated to computers with the cyber security policy, posting the policy on the company intranet, having copies available in work stations, at common area desks in generating stations and substations, etc. Therefore, although the cyber security policy is readily available for all personnel who have access to, or are responsible for, Critical Cyber Assets, these personnel are specifically and appropriately focused on implementing the procedures and processes required by CIP Reliability Standards such as CIP-007-3 R1, which states as follows:

> Test Procedures — The Responsible Entity shall ensure that new Cyber Assets and significant changes to existing Cyber Assets within the Electronic Security Perimeter do not adversely affect existing cyber security controls. For purposes of Standard CIP-007-3, a significant change shall, at a minimum, include implementation of security patches, cumulative service packs, vendor releases, and version upgrades of operating systems, applications, database platforms, or other third-party software or firmware.

Generally the cyber security policy will cite CIP-007-3 R1 as a requirement, and may refer to procedures related to CIP-007-3 R1, but will not have, nor is it required to have, the detail necessary to implement CIP-007-3 R1. In some larger companies, it is also

common to have specific procedures on how to accomplish requirements such as CIP-007-3 R1 in a control center versus a generating plant or substation, and it may be different CIP personnel implementing these procedures in locations many hundreds of miles, states or Interconnections away from each other. The value of a more general cyber security policy to these individuals is minimal, at best, and, therefore, does not support reliability. Also, making it readily available at all office locations is an unnecessarily burdensome administrative task.

Moreover, to place every procedure and process to comply with CIP in the cyber security policy is also not practical or effective, because such a large policy will only distract from CIP personnel being able to specifically focus on the task before them. As already stated, there are likely some differences between implementing a requirement like CIP-007-1 R1 in a control center that may be located in one state and for generators located several states and hundreds of miles away. Thus, making the cyber security policy readily available is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES (Criteria A and B1).

In this context, also consider the inefficiencies CIP-003-3, -4 R1.2 may be causing the ERO compliance program. In companies with hundreds of personnel who have access to, or are responsible for, Critical Cyber Assets in multiple states and Interconnections, the ERO may expend a significant amount of time and resources to monitor compliance with CIP-003-3, -4 R1.2 via a review of kiosks, intranet sites, office cubicles, desks, etc in multiple locations. Accordingly, considerable efficiency gains will be obtained for the ERO's compliance program if CIP-003-3, -4 R1.2 is retired.

Criterion A
Making the cyber security policy readily available is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B

- Criterion B1 (Administrative)

Criteria C

1. CIP-003-3, -4 R1.2 has been part of a FFT filing.[19]

2. As is the case with all the CIP requirements (other than CIP-001-2a R4) proposed for retirement in this technical paper, CIP-003-3, -4 R1.2 is part of an on-going Standards Development Project 2008-06 (Cyber Security) ("CIP V5"). The P81 SDT has coordinated its efforts with the chair of Project 2008-06. There is no conflict between CIP requirements proposed in this technical white paper for retirement and the direction of Project 2008-06. The CIP V5 requirements are not Board of Trustee or Commission approved, and, even if they were, the effective date of CIP V5 is unknown and likely at least a year, maybe more, into the future.

[19] NERC FFT Informational Filing, Docket No. RC12-1-000 (October 31, 2011).

Thus, unlike the other requirements presented here for informational purposes, it is appropriate to maintain all the CIP requirements discussed in this technical paper within the scope of the P81 Project to secure the efficiency gains resulting to the ERO compliance program from their retirement.

3. CIP-003-3, -4 R1~~4~~.2 has a Lower VRF. As explained above, CIP-003-3, -4 R1~~4~~.2 is not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

4. CIP-003-3,-4 R1.2 is in the second tier of the AML. As explained above, CIP-003-3, -4 R1~~4~~.2 is not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

5. Given its administrative nature, CIP-003-3, -4 R1.2 does not negatively impact NERC's published and posted reliability principles. The two reliability principles that appear applicable to CIP-003-3, -4 R1.2 are the following:

   Principle 6. Personnel responsible for planning and operating interconnected bulk power systems shall be trained, qualified, and have the responsibility and authority to implement actions.

   Principle 8. Bulk power systems shall be protected from malicious physical or cyber attacks.

   As stated above, other CIP requirements are replete with the requirements that CIP personnel implement to protect the BES from cyber attacks.

6. Retiring CIP-003-3, -4 R1.2 does not negatively impact defense in depth because no other requirement depends on the cyber security policy being readily available. Therefore, the removal of CIP-003,-3,-4 R1.2 cannot have a negative impact on defense in depth.

7. Retirement of CIP-003-3, -4 R1.2 promotes a results-based approach because the requirement is mechanistic and administrative, and does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire CIP-003-3, -4 R1.2.

CIP-003-3, -4 R3, R3.1, R3.2, R3.3 – Cyber Security – Security Management Controls

R3. Exceptions – Instances where the Responsible Entity cannot conform to its cyber security policy must be documented as exceptions and authorized by the senior manager or delegate(s).

R3.1. Exceptions to the Responsible Entity's cyber security policy must be documented within thirty days of being approved by the senior manager or delegate(s).

R3.2. Documented exceptions to the cyber security policy must include an explanation as to why the exception is necessary and any compensating measures.

R3.3. Authorized exceptions to the cyber security policy must be reviewed and approved annually by the senior manager or delegate(s) to ensure the exceptions are still required and valid. Such review and approval shall be documented.

Background/Commission Directives

CIP-003-1 was filed for Commission approval on August 28, 2006 in Docket No. RM06-16-000 and was approved on January 18, 2008 in Order No. 706.[20] CIP-003-2 was filed for Commission approval on May 22, 2009 in Docket Nos. RM06-22-000 and RD09-7-000 and was approved on September 30, 2009.[21] CIP-003-3 was filed for Commission approval on December 29, 2009 in Docket No. RD09-7-002 and was approved on March 31, 2010.[22] CIP-003-4 was submitted for Commission approval on February 10, 2011 in Docket No. RM11-11-000 and was approved on April 19, 2012.[23]

In Order No. 706 at paragraphs 373 and 376 the Commission stated that:

> Requirement R3 provides that a responsible entity must document exceptions to its policy with documentation and senior management approval. The Commission is concerned that, if exceptions mount, there would come a point where the exceptions rather than the rule prevail. In such a situation, it is questionable whether the responsible entity is actually implementing a security policy. We therefore believe that the Regional Entities should perform an oversight role in providing accountability of a responsible entity that excepts itself from compliance with the provisions of its cyber security policy. Further, we believe that

[20] *Mandatory Reliability Standards for Critical Infrastructure Protection*, 122 FERC ¶ 61,040 (2008) ("Order No. 706"), *order on reh'g*, Order No. 706-A, 123 FERC ¶ 61,174 (2008), *order on clarification*, Order No. 706-B, 126 FERC ¶ 61,229, order on clarification, Order No. 706-C, 127 FERC ¶ 61,273 (2009).
[21] *Order Approving Revised Reliability Standard for Critical Infrastructure Protection and Requiring Compliance Filing*, 128 FERC ¶ 61,291 (2009), *order denying reh'g and granting clarification*, 129 FERC ¶ 61,236 (2009) (approving Version 2 of the CIP Reliability Standards)).
[22] *Order on Compliance* 130 FERC ¶ 61,271 (2010).
[23] *Version 4 Critical Infrastructure Protection Reliability Standards*, 139 FERC ¶ 61,058 (2012).

> such oversight would impose a limited additional burden on a responsible entity because Requirement R3 currently requires documentation of exceptions.
>
> Further, the Commission adopts its CIP NOPR proposal and directs the ERO to clarify that the exceptions mentioned in Requirements R2.3 and R3 of CIP-003-1 do not except responsible entities from the Requirements of the CIP Reliability Standards. In response to EEI, we believe that this clarification is needed because, for example, it is important that a responsible entity understand that exceptions that individually may be acceptable must not lead cumulatively to results that undermine compliance with the Requirements themselves.

All outstanding directives in Order No. 706 will be addressed in Version 5 of the CIP Standards and the retirement of CIP-003-3, -4 R3, R3.1, R3.2, and R3.3 do not impact a Commission directive.

Technical Justification

CIP-003-3, -4 R3, R3.1, R3.2, and R3.3 (CIP exception requirements) have proven not to be useful and have been subject to misinterpretation. For instance, although the CIP exception requirements have not been available for use to exempt an entity from compliance with any requirement of any Reliability Standard, based on questions received by NERC CIP Staff, entities may be interpreting the CIP exception requirements to allow for such an exemption. The CIP exception requirements only apply to exceptions to internal corporate policy, and only in cases where the policy exceeds a Reliability Standard requirement or addresses an issue that is not covered in a Reliability Standard. For example, if an internal corporate policy statement requires that all passwords be a minimum of eight characters in length, and be changed every 30 days, which is over and above what is required in CIP-007-3 R5.3, the CIP exception requirements could be invoked for internal governance purposes to lessen the corporate requirement back to the password requirements in CIP-007-3 R5.3, but under no circumstances do the CIP exception requirements authorize the implementation of security measures less than what is required in CIP-007-3 R5.3.

The retirement of the CIP exception requirements would not impact an entity's ability to maintain such an exception process within their corporate policy governance procedures, if it so desired. Consequently, the CIP exception requirements were always an internal administrative and documentation requirement that is outside the scope of the other CIP requirements (Criteria B1 and B3). In this context, the CIP exception requirements do not support the level of reliability set forth in the Reliability Standards, and are unnecessarily burdensome because they have resulted in entities implementing practices due to a misinterpretation of the requirement that has caused them to allocate time and resources to tasks that are misaligned with the requirements themselves. Unfortunately, this misunderstanding has also impacted the efficiency of the ERO compliance program because of the amount of time and resources needed to clear up the misunderstanding and

coach entities on the meaning of the CIP exception requirements. These inefficiencies would be eliminated with the retirement of the CIP exception requirements. Accordingly, as explained, the CIP exception requirements are an administrative tool for internal corporate governance procedures, and, therefore, are not requirements that are necessary or directly protect the BES from a cyber attack, the tasks associated with these requirements do little, if anything, to benefit or protect the reliable operation of the BES. (Criterion A).

Criterion A
The CIP exception requirements are a tool for internal corporate governance procedures and is not a requirement directly protecting the BES from a cyber attack, and, therefore, the tasks associated with these requirements do little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B

- Criterion B1 (Administrative)
- Criterion B3 (Documentation)

Criteria C

1. The CIP exception requirements have been part of a FFT filing.[24]

2. The CIP exception requirements are part of an on-going Standards Development Project 2008-06 (Cyber Security). As detailed in the discussion of CIP-003-3, -4 R1.2, the P81 SDT has coordinated its efforts with the chair of Project 2008-06 and there is no conflict between the CIP exception requirements proposed in this technical white paper for retirement and the direction of Project 2008-06.

3. The CIP exception requirements each have a Lower VRF. As explained above, they are not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

4. The CIP exception requirements are on the third tier of the AML. As explained above, they are not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

5. Given the administrative and unnecessary nature of the CIP exception requirements in relation to protecting the BES from cyber attacks, retirement does not pose any negative impact to NERC's published and posted reliability principles, of which only Principle 8 appears to apply: "Bulk power systems shall be protected from malicious physical or cyber attacks."

[24] NERC FFT Informational Filing, Docket No. RC12-7-000 (January 31, 2012); NERC FFT Informational Filing, Docket No. RC12-6-000 (December 30, 2011).

6. Retiring the CIP exception requirements does not negatively impact any defense in depth strategy because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. Retirement of the CIP exception requirements promotes a results-based approach because the CIP exception requirements are approaches that entities may voluntarily take to handle internal corporate governance procedures, and, therefore, do not provide the foundation for performing a required reliability task.

Accordingly, for the above reasons, it is appropriate to retire the following CIP exception requirements: CIP-003-3, -4 R3, R3.1, R3.2, and R3.3.

CIP-003-3, -4 R4.2 - Cyber Security – Security Management Controls

R4.2. The Responsible Entity shall classify information to be protected under this program based on the sensitivity of the Critical Cyber Asset information.

Background/Commission Directives
CIP-003-1 was filed for Commission approval on August 28, 2006 in Docket No. RM06-16-000 and was approved on January 18, 2008 in Order No. 706.[25] CIP-003-2 was filed for Commission approval on May 22, 2009 in Docket Nos. RM06-22-000 and RD09-7-000 and was approved on September 30, 2009.[26] CIP-003-3 was filed for Commission approval on December 29, 2009 in Docket No. RD09-7-002 and was approved on March 31, 2010.[27] CIP-003-4 was submitted for Commission approval on February 10, 2011 in Docket No. RM11-11-000 and was approved on April 19, 2012.[28] In Order No. 706, the Commission did not specifically address CIP-003-3, -4 R4.2.

All outstanding directives in Order No. 706 will be addressed in Version 5 of the CIP Standards and the retirement of CIP-003-3, -4 R4.2 does not impact a Commission directive.

Technical Justification
The task of classifying Critical Cyber Information "based on the sensitivity" does little, if anything, to benefit or protect the reliable operation of the BES, and is an unnecessarily administrative and a documentation task that is redundant with CIP-003-3, -4 R4 (Criteria A, B1, B3 and B7). Specifically, CIP-003-3, -4 R4[29] already requires the classification of

[25] *Mandatory Reliability Standards for Critical Infrastructure Protection*, 122 FERC ¶ 61,040 (2008) ("Order No. 706").
[26] *Order Approving Revised Reliability Standard for Critical Infrastructure Protection and Requiring Compliance Filing*, 128 FERC ¶ 61,291 (2009), *order denying reh'g and granting clarification*, 129 FERC ¶ 61,236 (2009) (approving Version 2 of the CIP Reliability Standards)).
[27] *Order on Compliance* 130 FERC ¶ 61,271 (2010).
[28] *Version 4 Critical Infrastructure Protection Reliability Standards*, 139 FERC ¶ 61,058, (2012).
[29] "**R4**. Information Protection — The Responsible Entity shall implement and document a program to

information associated with Critical Cyber Assets. The only difference between R4 and R4.2 is that the subjective term "based on the sensitivity" has been added, thus, making it essentially redundant. Further, CIP-003-3, -4 R4 ~~since~~ requires the entity to develop classifications based on a subjective understanding of sensitivity (*i.e.*, no clear connection to serving reliability), the requirement does not support reliability. In this context, classifying based on sensitivity becomes an administrative task that becomes necessarily burdensome, because of all the possible ramifications "based on sensitivity" can produce, and, therefore, require SMEs to decide on and reduce to writing in a documented program. This is time and effort that could be better spent on other CIP activities that provide value to cyber security and actively protect the BES. For similar reasons, retiring CIP-003-3, -4 R4.2 and the term "based on sensitivity" would increase the efficiencies of the ERO compliance program on several levels. The ERO would not spend time and resources on reviewing whether an entity's documentation contained classifications "based on sensitivity," and, instead would be able to focus its time and resources monitoring compliance with the entity's program to identify, classify, and protect information associated with Critical Cyber Assets (R4), without any distraction on monitoring the subjective implementation of classifications based on sensitivity (R4.2).

Criterion A

The task of classifying Critical Cyber Information "based on the sensitivity" does little, if anything, to benefit or protect the reliable operation of the BES, and is an administrative and a documentation task that is redundant with CIP-003-3, -4 R4.

Criteria B

- Criterion B1 (Administrative)
- Criterion B3 (Documentation)
- Criterion B7 (Redundant)

Criteria C

1. CIP-003-3, -4 R4.2 has been part of a FFT filing.[30]

2. CIP-003-3, -4 R4.2 is part of an on-going Standards Development Project 2008-06 (Cyber Security). As detailed in the discussion of CIP-003-3, -4 R1.2, the P81 SDT has coordinated its efforts with the chair of Project 2008-06 and there is no conflict between retirement of CIP-003-3, -4 R4.2 and the direction of Project 2008-06.

3. CIP-003-3, -4 R4.2 has a Lower VRF. As explained above, CIP-003-3, -4 R4.2 is not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

---

identify, classify, and protect information associated with Critical Cyber Assets."

[30] NERC FFT Informational Filing, Docket No. RC12-7-000 (January 31, 2012); NERC FFT Informational Filing, Docket No. RC12-1-000 (October 31, 2011).

4. CIP-003-3, -4 R4.2 is on the third tier of the AML. As explained above, CIP-003-3, -4 R4.2 is not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

5. Given the unnecessary and redundant nature of this requirement, retirement does not pose any negative impact to NERC's published and posted reliability principle No. 8 which appears to apply: "Bulk power systems shall be protected from malicious physical or cyber attacks."

6. Retirement of CIP-003-3, -4 R4.2 does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. Retirement of CIP-003-3, -4 R4.2 promotes a results-based approach because retiring CIP-003-3, -4 R4.2 moves away from prescriptive, checklist of documentation approach to Reliability Standard requirements.

Accordingly, for the above reasons, it is appropriate to retire CIP-003-3, -4 R4.2.

CIP-005-3a, -4a R2.6 – Cyber Security – Electronic Security Perimeter(s)

R2.6. Appropriate Use Banner -- Where technically feasible, electronic access control devices shall display an appropriate use banner on the user screen upon all interactive access attempts. The Responsible Entity shall maintain a document identifying the content of the banner.

Background/Commission Directives

CIP-005-1 was filed for Commission approval on August 28, 2006 in Docket No. RM06-16-000 and was approved on January 18, 2008 in Order No. 706.[31] CIP-005-2 was filed for Commission approval on May 22, 2009 in Docket Nos. RD09-7-000 and RM06-22-000 and was approved on September 30, 2009.[32] CIP-005-2a was filed for Commission approval on April 21, 2010 in Docket No. RD10-12-000 and was approved by unpublished letter order on February 2, 2011.[33] CIP-005-3 was filed for Commission approval on December 29, 2009 in Docket No. RD09-7-002 and was approved on March 31, 2010.[34] CIP-005-3a was filed for Commission approval on April 21, 2010 in Docket

[31] *Mandatory Reliability Standards for Critical Infrastructure Protection*, 122 FERC ¶ 61,040 (2008) ("Order No. 706").
[32] *Order Approving Revised Reliability Standard for Critical Infrastructure Protection and Requiring Compliance Filing*, 128 FERC ¶ 61,291 (2009), *order denying reh'g and granting clarification*, 129 FERC ¶ 61,236 (2009) (approving Version 2 of the CIP Reliability Standards)).
[33] Letter Order, Petition of the North American Electric Reliability Corporation for Approval of Interpretation to Reliability Standard CIP-005-1, Cyber Security, Electronic Security Perimeter(s), Section 4.2.2 and Requirement R1.3., Docket RD10-12-000, (February 2, 2011).
[34] *Order on Compliance* 130 FERC ¶ 61,271 (2010).

No. RD10-12-000 and was approved by an unpublished letter order on February 2, 2011.[35] CIP-005-4 was filed for Commission approval on February 10, 2011 in Docket No. RM11-11-000 and was approved on April 19, 2012 in Order No. 761.[36] CIP-005-4a was filed for Commission approval as errata to the CIP Version 4 Petition on April 12, 2011 in Docket No. RM11-11-000 and was approved on April 19, 2012 in Order No 761, the Final Rule on the CIP Version 4 standards.[37]

In Order 706 at paragraph 505 the Commission noted that:

> Requirement R2 of CIP-005-1 requires a responsible entity to implement organizational processes and technical and procedural mechanisms for control of electronic access at all electronic access points to the electronic security perimeter.

All outstanding directives in Order No. 706 will be addressed in Version 5 of the CIP Standards and the retirement of CIP-005-3, -4 R2.6 does not impact a Commission directive.

Technical Justification

The implementation of an appropriate use banner ("banner") on a user's screen for all interactive access attempts into the Electronic Security Perimeter ("ESP") is an activity or task that does little, if anything, to benefit or protect the reliable operation of the BES. Specifically, the banner does not support reliability because people who intend to inappropriately use sites will simply ignore the banner. (Criterion A). The banner is also ~~is~~ an administrative task since it simply requires a message be displayed on an access screen. Furthermore, the implementation and administration of a non-beneficial tool, such as the banner, therefore creates a needlessly burdensome task. As mentioned, above, the ineffectiveness of the banner also indicates that it does not support reliability. (Criteria B1 and B3). In addition, banners of this type are generally considered to be a form of legal protection or mitigation of liability, rather than security protection. Furthermore, the banner does not ensure a proper or secure access point configuration which is generally the purpose of CIP-005-3a, -4a. Further, this requirement has also been the subject of numerous TFEs for devices that cannot support such a banner, and hence has diverted resources from more productive efforts. Thus, the ERO's compliance program would become more efficient if CIP-005-3a, -4a R2.6 was retired, because ERO time and resources could be reallocated to monitor compliance with the remainder of CIP-005-3a, -4a, which provides for more effective controls of electronic access at all electronic access points into the ESP.

---

[35] Letter Order, Petition of the North American Electric Reliability Corporation for Approval of Interpretation to Reliability Standard CIP-005-1, Cyber Security, Electronic Security Perimeter(s), Section 4.2.2 and Requirement R1.3., Docket RD10-12-000, (February 2, 2011).

[36] *Version 4 Critical Infrastructure Protection Reliability Standards*, 139 FERC ¶ 61,058 (2012).

[37] *Id.*

Criterion A
The implementation of an appropriate use banner on a user's screen for all interactive access attempts into the ESP is an activity or task that does little, if anything, to benefit or protect reliable operation of the BES, because it is administrative and a static electronic message that is not an effective deterrent or control against unauthorized access.

Criteria B
- Criterion B1 (Administrative)
- Criterion B3 (Documentation)

Criteria C
1. CIP-005-3a, -4a R2.6 has been part of a FFT filing.[38]

2. CIP-005-3a, -4a R2.6 is part of an on-going Standards Development Project 2008-06 (Cyber Security). As detailed in the discussion of CIP-003-3, -4 R1.2, the P81 SDT has coordinated its efforts with the chair of Project 2008-06 and there is no conflict between retirement of CIP-005-3a, -4a R2.6 and the direction of Project 2008-06.

3. The VRF for CIP-005-3a, -4a R2.6 is Lower. As explained above, CIP-005-3a, -4a R2.6 is not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

4. CIP-005-3a, -4a R2.6 is on the first tier of the AML; however, given its clear ineffective nature the placement on the first tier is not dispositive of whether it should be retired.

5. Reliability principle No. 8 – "Bulk power systems shall be protected from malicious physical or cyber attacks" – is not implicated or negatively impacted by the retirement of CIP-005-3a, -4a R2.6, because it is not an effective deterrent or control to unauthorized access into an ESP.

6. The retirement of this requirement does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability. Furthermore, the remainder of CIP-005-3a, -4a provides for actual controls of electronic access at all electronic access points which addresses the reliability risk associated with unauthorized access into an ESP.

7. Its retirement also promotes a results-based approach because CIP-005-3a, -4a R2.6 is an ineffective administrative task, and, therefore, does not provide the foundation for performing a reliability task.

[38] NERC FFT Informational Filing, Docket No. RC12-13-000 (June 29, 2012); NERC FFT Informational Filing, Docket No. RC12-7-000 (January 31, 2012).

Accordingly, for the above reasons, it is appropriate to retire CIP-005-3a, -4a R2.6.

CIP-007-3, -4 R7.3 – Cyber Security – Systems Security Management

R7.3. The Responsible Entity shall maintain records that such assets were disposed of or redeployed in accordance with documented procedures.

Background/Commission Directives

CIP-007-1 was filed for Commission approval on August 28, 2006 in Docket No. RM06-16-000 and was approved on January 18, 2008 in Order No. 706.[39] CIP-007-2 was filed for Commission approval on May 22, 2009 in Docket Nos. RM06-22-000 and RD09-7-000 and was approved on September 30, 2009.[40] CIP-007-2a was filed for Commission approval on November 17, 2009 in Docket No. RD10-3-000 and was approved on March 18, 2010.[41] CIP-007-3 was filed for Commission approval on December 29, 2009 in Docket No. RD09-7-002 and was approved on March 31, 2010.[42] CIP-007-4 was filed for Commission approval on February 10, 2011 in Docket No. RM11-11-000 and was approved on April 19, 2012.[43]

In Order No. 706 at paragraph 631 the Commission stated that:

> Requirement R7 of CIP-007-1 requires the responsible entity to establish formal methods, processes and procedures for disposal or redeployment of cyber assets. In the CIP NOPR, the Commission addressed the concern that solely to "erase the data," as stated several times in Requirement R7, may not be adequate because technology exists that allows retrieval of "erased" data from storage devices, and that effective protection requires discarded or redeployed assets to undergo high quality degaussing. We noted that erasure is as much a method as it is a goal, and that the requirement ultimately needs to assure that there is no opportunity for unauthorized retrieval of data from a cyber asset prior to discarding it or redeploying it. Degaussing is not the sole means for achieving this goal. The Commission therefore proposed to direct the ERO to modify Requirement R7 to clarify this point. (Footnote omitted)

[39] *Mandatory Reliability Standards for Critical Infrastructure Protection*, 122 FERC ¶ 61,040 (2008) ("Order No. 706").
[40] *Order Approving Revised Reliability Standard for Critical Infrastructure Protection and Requiring Compliance Filing*, 128 FERC ¶ 61,291 (2009), *order denying reh'g and granting clarification*, 129 FERC ¶ 61,236 (2009) (approving Version 2 of the CIP Reliability Standards)).
[41] Order Approving Reliability Standard Interpretation, 130 FERC ¶ 61,184 (2010).
[42] *Order on Compliance* 130 FERC ¶ 61,271 (2010).
[43] *Version 4 Critical Infrastructure Protection Reliability Standards*, 139 FERC ¶ 61,058 (2012).

This Commission directive is unaffected by the retirement of CIP-007-3,-4 R7.3 as explained below.

Technical Justification

Outside the context of a Reliability Standard, under Section 400 of the NERC Rules of Procedure, NERC and the Regional Entities have the authority to require an entity to submit data and information for purposes of monitoring compliance. [44] CIP-007-3, -4 R7.3 requires the maintaining of records for the purpose of demonstrating compliance with disposing of or redeploying of Cyber Assets in accordance with documented procedures. NERC and the Regions Entities, however, under Section 400 already have the ability to require the production of records to demonstrate compliance, thus it is unnecessary to also state the same in CIP-007-3, -4 R7.3. The maintaining of records is an administrative task, not a task directly related to the protection of the BES from a cyber attack. The maintaining of records is not a task that by itself, or in conjunction with other requirements, supports reliability. Also, the maintaining of the records becomes unnecessarily burdensome in that it requires all records be maintained, which may or may not be necessary to demonstrate compliance via the production of information under Section 400. (Criteria B1 and B2). As mentioned, CIP-007-3, -4 R7.3 does not promote reliability because it does not protect the BES from a cyber attack, instead it is a record retention activity. Therefore, CIP-007-3, -4 R7.3 requires an activity or task that in and of itself, does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A).

In contrast, the remaining substantive requirements in R7 read as follows:

> R7. Disposal or Redeployment — The Responsible Entity shall establish and implement formal methods, processes, and procedures for disposal or redeployment of Cyber Assets within the Electronic Security Perimeter(s) as identified and documented in Standard CIP-005-3.
>
> R7.1. Prior to the disposal of such assets, the Responsible Entity shall destroy or erase the data storage media to prevent unauthorized retrieval of sensitive cyber security or reliability data.

[44] Section 401 of NERC's Rules of Procedure provide for collection of data and information necessary to monitor compliance outside the context of Reliability Standards:

> **Data Access** — All Bulk Power System owners, operators, and users shall provide to NERC and the applicable Regional Entity such information as is necessary to monitor compliance with the Reliability Standards. NERC and the applicable Regional Entity will define the data retention and reporting requirements in the Reliability Standards *and compliance reporting procedures.* (emphasis added).

R7.2. Prior to redeployment of such assets, the Responsible Entity shall, at a minimum, erase the data storage media to prevent unauthorized retrieval of sensitive cyber security or reliability data.

An entity's following of these requirements may help to protect BES reliability, but the retention of evidence associated with these requirements does not. Hypothetically, an entity could perform R7, R7.1 and R7.2 flawlessly and protect the BES, but not have any record of it. While this situation may impact a demonstration of compliance, the lack of records does not necessarily directly impact the reliability of the BES or protect it from a cyber attack.

Also, there are some inherent inefficiencies resulting from a small number of Reliability Standard requirements explicitly mandating the collection of data, evidence and records, while most data and information is collected for ERO compliance monitoring purposes without specific data collection language ~~outside the context of~~ in the Reliability Standards. In this regard, for the ERO, Regional Entities and the entities, ~~arguably~~ Reliability Standards are arguably more difficult to understand because of this inconsistent approach (typically only implicitly requiring documentation as a part of an obligation to prove compliance, but occasionally explicitly requiring it with no discernible pattern or rationale).

Criterion A

CIP-007-3, -4 R7.3 does not promote reliability because it does not protect the BES from a cyber attack, instead it is a record retention activity. Therefore, CIP-007-3, -4 R7.3 requires an activity or task that in and of itself, does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B

- Criterion B1 (Administrative)
- Criterion B2 (Data Collection/Data Retention)

Criteria C

1. CIP-007-3, -4 R7.3 has not been part of a FFT filing.

2. CIP-007-3, -4 R7.3 is part of an on-going Standards Development Project 2008-06 (Cyber Security). As detailed in the discussion of CIP-003-3, -4 R1.2, the P81 SDT has coordinated its efforts with the chair of Project 2008-06 and there is no conflict between retirement of CIP-007-3, -4 R7.3 and the direction of Project 2008-06.

3. The VRF for CIP-007-3, -4 R7.3 is Lower. As explained above, CIP-007-3, -4 R7.3 is not an important part of a scheme of CIP requirements, and, therefore, it is appropriate to propose it for retirement.

4. CIP-007-3, -4 R7.3 is on the first tier of the AML; however, given that it is simply requiring the retention of records the fact that is on the first tier is not dispositive of whether it should be retired.

5. Given the administrative, data collection nature of this requirement, retirement does not pose any negative impact to NERC's published and posted reliability principle No. 8: "Bulk power systems shall be protected from malicious physical or cyber attacks."

6. The retirement does not negatively impact defense in depth because data retention in-and-of-itself is not an activity that other requirements depend on to help cover a reliability gap or risk to reliability.

7. Its retirement promotes a results-based approach because the data collection/retention does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire CIP-007-3, -4 R7.3.

~~**EOP-004-1 R1 – Disturbance Reporting**~~

~~**R1.** Each Regional Reliability Organization shall establish and maintain a Regional reporting procedure to facilitate preparation of preliminary and final disturbance reports.~~

~~**Background/Commission Directives**~~

~~EOP-004-1 was submitted to the Commission for approval on November 15, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[45] Although the Commission did not address EOP-004-1 R1 directly, in Order No. 693 at paragraph 617 it stated that EOP-004-1:~~

> ~~. . . serves an important purpose in establishing requirements for reporting and analysis of system disturbances. Accordingly, the Commission approves Reliability Standard EOP-004-1 as mandatory and enforceable. In addition, pursuant to section 215(d)(5) of the FPA and § 39.5(f) of our regulations, the Commission directs the ERO to develop a modification to EOP-004-1 through the Reliability Standards development process that includes any Requirements necessary for users, owners and operators of the Bulk-Power System to provide data that will assist NERC in the investigation of a blackout or disturbance.~~

~~[45] *Mandatory Reliability Standards for the Bulk-Power System*, Order No. 693, FERC Stats. & Regs. ¶ 31,242, *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).~~

~~The directive to provide data that will assist NERC in the investigation of a blackout or disturbance is not affected by the EOP-004-1 R1, because that is accomplished via other requirements in EOP-004-1 and is also under consideration for enhancement in the development of EOP-004-2.~~

~~**Technical Justification**~~

~~The reliability purpose of EOP-004-1 is to ensure that disturbances or unusual occurrences that jeopardize the operation of the BES, or result in system equipment damage or customer interruptions, are studied and understood in order to minimize the likelihood of similar events in the future. The reliability purpose of EOP-004-1 is unaffected by the proposed retirement of R1.~~

~~EOP-004-1 R1 is an anomaly in the Reliability Standards, given that it requires the Regional Reliability Organization to develop a reporting procedure. Although the development of such a reporting procedure may be helpful guidance to responsible entities on reporting of disturbances to Regional Entities, in and of itself is an administrative and documentation task that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1 and B3). It is worth noting that EOP-004-1 R1, like CIP-001-2a R4, is administrative in that it only requires the development of procedures, it does not require that they be followed. More importantly, the mandatory processes for reporting preliminary and final disturbance reports are set forth in EOP-004-1 R3 and its sub-requirements which read as follows:~~

> ~~R3. A Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator or Load Serving Entity experiencing a reportable incident shall provide a preliminary written report to its Regional Reliability Organization and NERC.~~
>
> ~~R3.1. The affected Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator or Load Serving Entity shall submit within 24 hours of the disturbance or unusual occurrence either a copy of the report submitted to DOE, or, if no DOE report is required, a copy of the NERC Interconnection Reliability Operating Limit and Preliminary Disturbance Report form. Events that are not identified until some time after they occur shall be reported within 24 hours of being recognized.~~
>
> ~~R3.2. Applicable reporting forms are provided in Attachments 1-EOP-004 and 2- EOP-004.~~
>
> ~~R3.3. Under certain adverse conditions, e.g., severe weather, it may not be possible to assess the damage caused by a disturbance and issue a written Interconnection Reliability Operating Limit and Preliminary Disturbance Report within 24 hours. In such cases, the affected Reliability Coordinator, Balancing Authority, Transmission Operator, Generator~~

Operator, or Load Serving Entity shall promptly notify its Regional Reliability Organization(s) and NERC, and verbally provide as much information as is available at that time. The affected Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, or Load Serving Entity shall then provide timely, periodic verbal updates until adequate information is available to issue a written Preliminary Disturbance Report.

R3.4. If, in the judgment of the Regional Reliability Organization, after consultation with the Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, or Load Serving Entity in which a disturbance occurred, a final report is required, the affected Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, or Load Serving Entity shall prepare this report within 60 days. As a minimum, the final report shall have a discussion of the events and its cause, the conclusions reached, and recommendations to prevent recurrence of this type of event. The report shall be subject to Regional Reliability Organization approval.

There is no reliability gap created by the passive retirement of EOP-004-1 R1, because EOP-004-1 R3 and its sub-requirements require considerable action to report on disturbances.[46] Also, consider that the EOP-004-1 R1 regional procedures may take the lead from NERC, and, therefore, the regional procedures become a reiteration or a hybrid of mandatory (EOP-004-1 R3 and its sub-requirements) and voluntary rules (NERC Event Analysis Process).[47] It is an unnecessarily burdensome task to require such reiterations of NERC reporting requirements on a regional level. Also, if there was a need for particular regional procedures such procedures could exist as guidance even without the existence of EOP-004-1 R1. Thus, the value of EOP-004-1 R1 as a Reliability Standard requirement to support reliability is diminutive.

Furthermore, the retirement of EOP-004-1 R1 will increase the efficiency of the ERO compliance program in that the time and resources spent monitoring EOP-004-1 and checking off whether or not a Regional Entity has the specified procedure, and can be utilized to focus attention on an entity's compliance with EOP-004-1 R3 and its sub-requirements, which produce the information related to disturbances.

Criterion A

A requirement that Regional Entities develop a reporting procedure in and of itself is an administrative and documentation task that does little, if anything, to benefit or protect the reliable operation of the BES.

[46] While not dispositive, the NERC voluntary event analysis process is also being used to report and analyze events. A link to NERC's event analysis process is http://www.nerc.com/page.php?cid=5|365.

[47] *See, e.g.*, FRCC Disturbance Reporting Procedure, FRCC – RE – OP – 001-0 Effective Date – February 10, 2012.

~~**Criteria B**~~

- ~~Criterion B1 (Administrative)~~
- ~~Criterion B3 (Documentation)~~

~~**Criteria C**~~

~~1. EOP-004-1 R1 has not been part of a FFT filing.~~

~~2. EOP-004-1 R1 is part of an on-going Standards Development Project 2009-01 (EOP-004-2) and is being proposed for retirement as unnecessary. At this time, EOP-004-2 has not been approved by stakeholders and the NERC Board of Trustees, and, therefore, it is appropriate to retain EOP-004-1 R1 within the scope of the P81 Project. However, if EOP-004-2 does receive stakeholder approval and is adopted by the NERC Board of Trustees, the SDT will reconsider retirement via the P81 Project and may include EOP-004-1 R1 for informational purposes only.~~

~~3. The VRF for EOP-004-1 R1 is Lower.~~

~~4. EOP-004-1 R1 is in the third tier of the AML.~~

~~5. The retirement of EOP-004-1 R1 does not pose any negative impact to NERC's published and posted reliability principles, as none of the principles are directly implicated.~~

~~6. The retirement does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.~~

~~7. The retirement of EOP-004-1 R1 promotes a results-based approach because the requirement is an administrative task of developing a procedure with no associated actionable performance of a task that impacts reliability.~~

~~Accordingly, for the above reasons, it is appropriate to retire EOP-004-1 R1.~~

EOP-005-2 R3.1– System Restoration from Blackstart Resources

R3.1. If there are no changes to the previously submitted restoration plan, the Transmission Operator shall confirm annually on a predetermined schedule to its Reliability Coordinator that it has reviewed its restoration plan and no changes were necessary.

Background/Commission Directives

EOP-005-1 was submitted for Commission approval on August 28, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[48] EOP-005-2 was submitted for Commission approval on December 31, 2009 in Docket No. RM10-16-000 and was approved on March 17, 2011 in Order No. 749.[49] Although the Commission did not address EOP-005-2 R3 directly in Order No. 749, it stated at paragraph 17 the following:

> EOP-005-2 and EOP-006-2 clarify the responsibilities of the reliability coordinator and transmission operator in the restoration process and restoration planning and address the Commission's directives in Order No. 693 related to the EOP Standards. By enhancing the rigor of the restoration planning process, the Reliability Standards represent an improvement from the current Standards and will improve the reliability of the Bulk-Power System. The Commission is not directing any modifications to the three new Reliability Standards. Nevertheless, as discussed below, commenters raised several issues for consideration, at the time these standards are next revisited, which we believe could improve these new Reliability Standards

There are no outstanding Commission directives that are affected by the proposed retirement of EOP-005-2 R3.1.

Technical Justification

The reliability purpose of EOP-005-2 is to ensure that plans, Facilities, and personnel are prepared to enable System restoration from Blackstart Resources to assure that reliability is maintained during restoration and priority is placed on restoring the Interconnection. This reliability purpose is unaffected by the proposed retirement of R3.1.

A review of EOP-005-2 R3.1 indicates that this requirement is redundant with EOP-005-2 R3 and a duplicative administrative update that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1, B5 and B7). The primary reason EOP-005-2 R3.1 is unnecessary is that EOP-005-2 R3 already requires the Transmission Operator to submit its restoration plan to its Reliability Coordinator whether or not the plan includes changes. EOP-005-2 R3 reads:

> Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually agreed predetermined schedule.

---

[48] *Mandatory Reliability Standards for the Bulk-Power System*, Order No. 693, FERC Stats. & Regs. ¶ 31,242 (2007).

[49] *System Restoration Reliability Standards*, 134 FERC ¶ 61,215, (March 17, 2011) ("Order No. 749"), *order on clarification*, 136 FERC ¶ 61,030 ("Order No. 749-A") (2011).

Consequently, since R3 requires the Transmission Operator to submit its restoration plan to the Reliability Coordinator whether or not there has been a change, R3.1 only adds a separate, duplicative administrative burden for the entity to also confirm that there were no changes based upon another pre-determined schedule. While R3.1 may have attempted to capture the likelihood that unless there have been significant changes to the entity's BES, there would be no change to the restoration plan, this is an insufficient reason to impose a needlessly burdensome, duplicative administrative requirement relative to the language in R3. EOP-005-2 R3.1 is also clearly needlessly burdensome if one considers that the time and resources of Transmission Operators is better spent reliably operating the BES, rather than submitting paperwork to a Reliability Coordinator on possibly two different pre-determined schedules – one for changes and one for no changes. For these reasons, there is no reliability gap resulting from the retirement of EOP-005-2 R3.1 because Transmission Operators already have an obligation to review and provide its restoration plan annually on a mutually agreed predetermined schedule to its Reliability Coordinator. It could also be argued that a reason for both R3 and R3.1 is for the Reliability Coordinator to organize the Transmission Operator submittals into changes versus no changes. However, with the requirement to annually review restoration plans comes the need to demonstrate and track annual reviews via the revision history index, for example, which quickly shows the Reliability Coordinator when changes have and have not occurred.

The retirement of EOP-005-2 R3.1 would also increase the efficiencies of the ERO compliance program because the ERO would be able to focus its time and resources on R3 which already captures R3.1 and not be concerned with tracking the submission of restoration plans on multiple pre-determined schedules, some with changes and some without changes. Instead, the focus of the ERO compliance program would be on whether the Transmission Operators annually submitted its restoration plan to its Reliability Coordinator on one pre-determined schedule. Thus, the retirement of EOP-005-2 R3.1 appears to benefit the ERO compliance program.

Criterion A
EOP-005-2 R3.1 is redundant and a duplicative administrative update that does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B

- Criterion B1 (Administrative)
- Criterion B5 (Periodic Updates)
- Criterion B7 (Redundant)

Criteria C

1. EOP-005-2 R3.1 has not been part of a FFT filing.

2. EOP-005-2 R3.1 is not part of an on-going Standards Development Project.

3. EOP-005-2 R3.1 does not yet have a FERC-approved VRF.

4. EOP-005-2 R3.1 is on the second tier of the AML; however, the duplicative nature of R3 and R3.1 discounts any indication that R3.1 being in the second tier is a reason not to proceed with its retirement.

5. Since EOP-005-2 R3 already requires the Transmission Operator to submit its restoration plan to its Reliability Coordinator whether or not the plan includes changes, retirement of EOP-005-2 R3.1 does not pose any negative impact to the following of NERC's published and posted reliability principles that appear to apply:

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

   Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

   Principle 4. Plans for emergency operation and system restoration of interconnected bulk power systems shall be developed, coordinated, maintained, and implemented.

6. Retirement of EOP-005-2 R3.1 does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of EOP-005-2 R3.1 promotes a results-based approach because the requirement is administrative and unnecessary, and, therefore, does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire EOP-005-2 R3.1.

FAC-002-1 R2 – Coordination of Plans for New Facilities

R2. The Planning Authority, Transmission Planner, Generator Owner, Transmission Owner, Load-Serving Entity, and Distribution Provider shall each retain its documentation (of its evaluation of the reliability impact of the new facilities and their connections on the interconnected transmission systems) for three years and shall provide the documentation to the Regional Reliability Organization(s) and NERC on request (within 30 calendar days).

Background/Commission Directives
FAC-002-0 was submitted to the Commission for approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[50] FAC-002-1 was submitted for Commission approval on September 9, 2010 in Docket No. RD10-15-000 and was approved on January 10, 2011.[51] When approving FAC-002-0 in Order No. 693 at paragraphs 692 and 693, and FAC-002-1 in a subsequent order,[52] the Commission did not directly address R2.

There are no outstanding Commission directives that are affected by the proposed retirement of FAC-002-1 R2.

Technical Justification
Outside the context of a Reliability Standard, under Section 400 of the NERC Rules of Procedure, NERC and the Regional Entities have the authority to require an entity to submit data and information for purposes of monitoring compliance. Thus, without the existence of FAC-002-1 R2, a Regional Entity or NERC has the ability to request and receive "documentation (of its evaluation of the reliability impact of the new facilities and their connections on the interconnected transmission systems)." This generally would occur during a spot check or compliance audit where entities have the obligation to provide documentation sufficient to demonstrate compliance. In this regard, entities already have the obligation to produce the same information required in R2 to demonstrate compliance to R1 and its sub-requirements, thus making R2 unnecessary. To have a Reliability Standard requirement that is setting forth a data retention requirement and a requirement for the entity to deliver, upon request, that data to NERC or a Regional Entity is unnecessary and also repetitive with the NERC Rules of Procedure. Accordingly, retiring FAC-002-1 R2 presents no gap to reliability or to the information NERC and the Regional Entity need to monitor compliance. Thus, FAC-002-1 R2 is not necessary to support reliability. Consequently, a review of R2 indicates that it is an administrative and data collection requirement that that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1 and B2). The compilation of three years of data is a burdensome task, particularly when one considers the resources and time spent on stockpiling this information is better spent coordinating the studies, executing an interconnection agreement and ensuring that interconnections are safely and reliably energized, maintained and operated. Also, there are some inherent inefficiencies that result from a small number of requirements, such as CIP-007-3, -4 R7.3 and FAC-002-1 R2 being data, evidence and record retention requirements, while there are other and more appropriate established methods to collect and review the data than a Reliability Standard via Rules of Procedure Section 401. In this regard, for the ERO, Regional Entities and the entities, arguably Reliability Standards are more difficult to understand because of this inconsistent approach

[50] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[51] NERC Petition for Approval of Proposed Modifications to Reliability Standards BAL-002-1; EOP-002-3; FAC-002-1; MOD-021-2; PRC-004-2; and VAR-001-2 RD10-15-000 (January 10, 2011).
[52] *North American Electric Reliability Corporation*, 134 FERC ¶ 61,015 (2011).

(typically only implicitly requiring documentation as a part of an obligation to prove compliance, but occasionally explicitly requiring it with no discernible pattern or rationale).

Criterion A

A review of FAC-002-1 R2 indicates that it is an administrative and data collection requirement that does little, if anything, to benefit or protect reliable operation of the BES.

Criteria B

- Criterion B1 (Administrative)
- Criterion B2 (Data Collection/Data Retention)

Criteria C

1. FAC-002-1 R2 has not been part of a FFT filing.

2. FAC-002-1 R2 is subject to a future Project 2010-02 Connecting New Facilities to the Grid (a review of FAC-001 and FAC-002) that is scheduled to begin in the second quarter of 2015. It seems appropriate to retire FAC-002-1 R2 at this time as it may also make the review of FAC-001 and FAC-002 more effective and efficient.

3. FAC-002-1 R2 has a Lower VRF.

4. FAC-002-1 R2 is in the third tier of the AML.

5. The retirement of FAC-002-1 R2 does not pose any negative impact to NERC's published and posted reliability principles, since there are no directly applicable reliability principles.

6. The retirement does not negatively impact defense in depth because the compilation of studies for three years has no operational or planning relationship with any other requirement.

7. The retirement of FAC-002-1 R2 promotes a results-based approach since the requirement is administrative and data collection, and, therefore, does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire FAC-002-1 R2.

FAC-008-1 R2; FAC-008-1 R3;[53] - Facility Ratings Methodology

R2. The Transmission Owner and Generator Owner shall each make its Facility Ratings Methodology available for inspection and technical review by those Reliability Coordinators, Transmission Operators, Transmission Planners, and Planning Authorities that have responsibility for the area in which the associated Facilities are located, within 15 business days of receipt of a request.

R3. If a Reliability Coordinator, Transmission Operator, Transmission Planner, or Planning Authority provides written comments on its technical review of a Transmission Owner's or Generator Owner's Facility Ratings Methodology, the Transmission Owner or Generator Owner shall provide a written response to that commenting entity within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Facility Ratings Methodology and, if no change will be made to that Facility Ratings Methodology, the reason why.

Background/Commission Directives

FAC-008-1 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[54]

There are no outstanding Commission directives that are affected by the proposed retirement of FAC-008-1 R2 and R3.

Technical Justification

FAC-008-1 R2 and R3 require that a Transmission Owner and Generator Owner must make its facilities ratings methodology available for inspection and technical review by Reliability Coordinators, Transmission Operators, Transmission Planners, and Planning Authorities that have responsibility for the area in which the associated facilities are located and also require them to respond to any comments received including whether a change will be made to the facility ratings methodology. The retirement of FAC-008-1 R2 and R3 does not create a reliability gap, because Transmission Owners and Generator Owners must comply with the substantive requirements of FAC-008-1 regarding their

[53] Unlike the other requirements presented for informational purposes only, FAC-008-1 R2 and FAC-008-1 R3 have been maintained within the scope of P81 given that they are essentially identical to FAC-008-3 R4~~;~~ and FAC-008-3 R5 ~~which are due be effective on January 1, 2013~~. Inclusion would also appear to be consistent with increasing ERO compliance program efficiencies~~, given that retirement would exempt these requirements from being included in spot checks or compliance audits that are backward looking via FAC-008-1 R2 and R3~~. FAC-008-1 R2 and FAC-008-1 R3 became inactive on December 31, 2012, due to FAC-008-3 becoming enforceable on January 1, 2013.

[54] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

facility rating methodologies whether or not the exchange envisioned by FAC-008-1 R2 and R3 occurs. Furthermore, neither FAC-008-1 R2 and R3 require that the Transmission Owner and Generator Owner change its methodology, rather FAC-008-1 R2 and R3 are designed as an exchange of comments that may be an avenue to advance commercial interests.

For example, if a Generator Owner's methodology provides for derating its generator step up ("GSU") transformers below the nameplate in an effort to extend the life of its GSUs, that is a commercial decision it has made, and should not be subject to review by a Reliability Coordinator, Transmission Operator, Transmission Planner, and Planning Authority, some of which may have affiliated parts of their company that could benefit from the Generator Owner changing its methodology and operating its GSUs at nameplate. In contrast, the reliability objective that facility ratings produced by the methodologies of the Transmission Owner or Generator Owner shall equal the most limiting applicable equipment rating, and consider, for example, emergency and normal conditions, operating conditions, nameplate ratings, etc. is not significantly or substantively advanced by FAC-008-1 R2 (available for inspection) and R3 (comment and responsive comments). Furthermore, the reliability objective that facility ratings produced by the methodologies of the Transmission Owner or Generator Owner are provided to the reliability entities for the establishment of System Operating Limits ("SOLs"), Interconnection Reliability Operating Limits ("IROLs"), calculations for MOD requirements and compliance with the TPL Standards is accomplished without FAC-008-1 R2 (available for inspection) and R3 (comment and responsive comments).[55] Accordingly, the requirements in FAC-008-1 R2 and FAC-008-1 R3 to make the facility ratings methodology available for comment (and if comments are received to respond to those comments) is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues. (Criteria A, B1, B4 and B6). In this context, it would seem unnecessarily burdensome to engage in the exchange of comments, given there is no nexus between the exchange of comments and compliance with the substantive requirements of FAC-008-1. Instead of spending time and resources on FAC-008-1 R2 and R3, Generator Owners' and Transmission Owners' time and resources would be better spent complying with the substantive requirements of FAC-008-1. For these same reasons, the ERO compliance program would gain efficiencies by no longer having to track whether requests for technical review had occurred, comments provided and reallocate time and resources to monitoring the Transmission Owner's or Generator Owner's adherence to substantive requirements of FAC-008-1.

Criterion A

[55] See MOD-001-1a R9, MOD-028-1 R2.3; MOD-029-1a R2.1; MOD-030-02 R3.1, PRC-023-2, Attachment A 2.7; TPL-001-0.1 Footnote a; TPL-002-1b, footnotes a and b; TPL-003-0a, footnote a and TPL-004-0, footnote a. Also, via FAC-011-2 the System Operating Limits methodology of Reliability Coordinator may also use facility ratings as a key element.

The requirements in FAC-008-1 R2 and R3 to make the facility ratings methodology available for comment (and if comments are received to respond to those comments) is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues.

Criteria B

- Criterion B1 (Administrative)
- Criterion B4 (Reporting)
- Criterion B6 (Commercial or Business Practice)

Criteria C

1. FAC-008-1 R2 and R3 have not been part of a FFT filing.

2. FAC-008-1 R2 and R3 are not subject to an on-going Standards Development Project.

3. FAC-008-1 R2 and R3 have a Lower VRF.

4. FAC-008-1 R2 and R3 are in the third tier of the AML.

5. The retirement of FAC-008-1 R2 and R3 does not pose any negative impact to the following applicable NERC's published and posted reliability principles:

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

   Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

   It is the adherence to the substantive requirements of FAC-008-1 that promotes these posted reliability principles, and not receiving comments on the facility ratings methodology from outside entities and then responding to those comments.

6. Retirement of FAC-008-1 R2 and R3, does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability. These requirements may invite entities to engage in an exchange or debate over commercially sensitive information.

7. The retirement of FAC-008-1 R2 and R3 promotes a results-based approach because the requirements do not require the performance of a reliability task.

Accordingly, for the above reasons, it is appropriate to retire FAC-008-1 R2 and R3.

FAC-008-3 R4; FAC-008-3 R5 – Facility Ratings

R4. Each Transmission Owner shall make its Facility Ratings methodology and each Generator Owner shall each make its documentation for determining its Facility Ratings and its Facility Ratings methodology available for inspection and technical review by those Reliability Coordinators, Transmission Operators, Transmission Planners and Planning Coordinators that have responsibility for the area in which the associated Facilities are located, within 21 calendar days of receipt of a request.

R5. If a Reliability Coordinator, Transmission Operator, Transmission Planner or Planning Coordinator provides documented comments on its technical review of a Transmission Owner's Facility Ratings methodology or Generator Owner's documentation for determining its Facility Ratings and its Facility Rating methodology, the Transmission Owner or Generator Owner shall provide a response to that commenting entity within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Facility Ratings methodology and, if no change will be made to that Facility Ratings methodology, the reason why.

Background/Commission Directives

FAC-008-1 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[56] "On May 12, 2010, the NERC Board of Trustees approved the proposed FAC-008-2 Reliability Standard that addressed the first two of the FERC directives in Order No. 693. NERC's proposed FAC-008-2 Reliability Standard was not filed with FERC for approval, but instead was revisited by the standard drafting team so that the third Order No. 693 directive could be addressed in response to FERC's March 18, 2010 Order…"[57] FAC-008-3 was submitted for Commission approval on June 15, 2011 in Docket No. RD11-10-000 and was approved on November 17, 2011.[58]

There are no outstanding Commission directives that are affected by the proposed retirement of FAC-008-3 R4 and R5.

Technical Justification

[56] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[57] Petition of the North American Electric Reliability Corporation for Approval of Proposed Reliability Standard FAC-008-3 — Facility Ratings, Docket No. RD11-10-000, (June 15, 2011).
[58] *Order Approving Reliability Standard*, 137 FERC ¶ 61,123 (2011).

FAC-008-3 R4 and R5 require that a Transmission Owner and Generator Owner must make its facilities ratings methodology available for inspection and technical review by Reliability Coordinators, Transmission Operators, Transmission Planners, and Planning Authorities that have responsibility for the area in which the associated facilities are located and also require them to respond to any comments received including whether a change will be made to the facility ratings methodology. The retirement of FAC-008-3 R4 and R5 does not create a reliability gap, because Transmission Owners and Generator Owners must comply with the substantive requirements of FAC-008-3 regarding their facility rating methodologies whether or not the exchange envisioned by FAC-008-3 R4 and R5 occurs. Further, neither FAC-008-3 R4 nor R5 require that the Transmission Owner and Generator Owner change its methodology, rather FAC-008-3 R4 and R5 are designed as an exchange of comments that may be an avenue to advance commercial interests.

For example, if a Generator Owner's methodology provides for derating its GSU transformers below the nameplate in an effort to extend the life of its GSUs, that is a commercial decision it has made, and should not be subject to review by a Reliability Coordinator, Transmission Operator, Transmission Planner, and Planning Authority, some of which may have affiliated parts of their company that could benefit from the Generator Owner changing its methodology and operating its GSUs at nameplate. In contrast, the reliability objective that facility ratings produced by the methodologies of the Transmission Owner or Generator Owner shall equal the most limiting applicable equipment rating, and consider, for example, emergency and normal conditions, historical performance, nameplate ratings, etc. is not significantly or substantively advanced by FAC-008-3 R4 (available for inspection) and R5 (comment and responsive comments). Furthermore, the reliability objective that facility ratings produced by the methodologies of the Transmission Owner or Generator Owner are provided to the reliability entities for the establishment of SOLs, IROLs, calculations for MOD requirements and compliance with the TPL Standards is accomplished without FAC-008-3 R4 (available for inspection) and R5 (comment and responsive comments).[59] Accordingly, the requirements in FAC-008-3 R4 and R5 to make the facility ratings methodology available for comment (and if comments are received to respond to those comments) is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues. (Criteria A, B1, B4 and B6). In this context, it would seem unnecessarily burdensome to engage in the exchange of comments, given there is no nexus between the exchange and compliance with the substantive requirements of FAC-008-3. Instead of spending time and resources on FAC-008-3 R4 and R5, Generator Owners' and Transmission Owners' time and resources would be better spent complying with the substantive requirements of FAC-008-3. For these same reasons, the ERO compliance program would gain

[59] See MOD-001-1a R9, MOD-028-1 R2.3; MOD-029-1a R2.1; MOD-030-2 R3.1, PRC-023-2, Attachment A 2.7; TPL-001-0.1 Footnote a; TPL-002-1b, footnotes a and b; TPL-003-0a, footnote a and TPL-004-0, footnote a. Also, via FAC-011-2 the System Operating Limits methodology of Reliability Coordinator may also use facility ratings as a key element. Also, FAC-008-3 R7 and R8 require the transmission of facility ratings to reliability entities.

efficiencies by no longer having to track whether requests for technical review had occurred, comments provided and reallocate time and resources to monitoring the Transmission Owner's or Generator Owner's adherence to substantive requirements of FAC-008-3.

Criterion A

The requirements in FAC-008-3 R4 and R5 to make the facility ratings methodology available for comment (and if comments are received to respond to those comments) is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues.

Criteria B

- Criterion B1 (Administrative)
- Criterion B4 (Reporting)
- Criterion B6 (Commercial or Business Practice)

Criteria C

1. FAC-008-3 R4 and R5 have not been part of a FFT filing.

2. FAC-008-3 R4 and R5 are not subject to an on-going Standards Development Project.

3. FAC-008-3 R4 and R5 have a Lower VRF.

4. FAC-008-3 R4 and R5 are in the third tier of the AML.

5. The retirement of FAC-008-3 R4 and R5 does not pose any negative impact to the following applicable NERC's published and posted reliability principles:

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

   Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

   It is the adherence to the substantive requirements of FAC-008-3 that promotes these posted reliability principles, and not receiving comments on the facility ratings methodology from outside entities and then responding to those comments.

6. Retirement of FAC-008-3 R4 and R5, does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability. These may invite entities to engage in an exchange or debate over commercially sensitive information.

7. The retirement of FAC-008-3 R4 and R5 promotes a results-based approach because the requirements do not require the performance of a reliability task.

Accordingly, for the above reasons, it is appropriate to retire FAC-008-3 R4 and R5.

***FAC-010-2.1 R5 – System Operating Limits Methodology for the Planning Horizon*

R5. If a recipient of the SOL Methodology provides documented technical comments on the methodology, the Planning Authority shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the SOL Methodology and, if no change will be made to that SOL Methodology, the reason why.

Background/Commission Directives

FAC-010-1 was filed for Commission approval on November 15, 2006 in Docket Nos. RM06-16-000 and RM07-3-000 and was approved on December 27, 2007 in Order No. 705.[60] FAC-010-2 was filed for Commission approval on June 30, 2008 in Docket No. RM08-11-000 and was approved on March 20, 2009 in Order No. 722.[61] FAC-010-2.1 was filed for Commission approval on November 20, 2009 in Docket No. RD10-9-000 and was approved on April 19, 2010.[62] In Order No. 722,[63] the Commission approved FAC-010-2.1 R5 without specifically addressing R5.

There are no outstanding Commission directives with respect to this R5.

Technical Justification

The reliability purpose of FAC-010-2.1, to ensure that System Operating Limits used in the reliable planning of the BES are determined based on an established methodology, is unaffected by the proposed retirement of R5. FAC-010-2.1 R5 requires that when a Planning Authority receives comments on its SOL methodology, it must respond and

[60] *Facilities Design, Connections and Maintenance Reliability Standards*, 121 FERC ¶ 61,296 (December 27, 2007) (Order No. 705).
[61] *Version Two Facilities Design, Connections and Maintenance Reliability Standards*, 126 FERC ¶ 61,255 (March 20, 2009) (Order No. 722).
[62] Letter Order, Electric Reliability Organization Errata Petition Updating Accepted Transmission Operations Reliability Standards, Docket No. RD10-9-000 (April 19, 2010).
[63] *Version Two Facilities Design, Connections and Maintenance Reliability Standards* 125 FERC ¶ 61,040 (2009).

indicate whether it has changed its methodology. The retirement of FAC-010-2.1 R5 does not create a reliability gap, because the Planning Authority must comply with the substantive requirements of FAC-010-2.1 whether or not the exchange envisioned by FAC-010-2.1 R5 occurs. FAC-010-2.1 R5 may support an avenue to advance commercial interests.

For example, if a Transmission Operator or Transmission Planner is also a Transmission Owner it may have a commercial interest in lowering SOLs on its transmission lines in an effort to extend the life of its equipment and, therefore, challenge the Planning Authority's methodology to reduce its SOLs. The Transmission Owner's interests are better considered in the context of its development of a facility ratings methodology under FAC-008-1, -3 than the Planning Authority's methodology. FAC-010-2.1 R5, however, is an invitation to advance commercial interests not through established means, but by challenging the Planning Authority's SOL methodology. Accordingly, FAC-010-2.1 R5 sets forth an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues. (Criteria A, B1, B4 and B6). In this context, it would seem unnecessarily burdensome to engage in the exchange of comments, given there is no nexus between the exchange and compliance with the substantive requirements of FAC-010-2.1. Instead of spending time and resources on FAC-010-2.1, a Planning Authority's time and resources would be better spent complying with the substantive requirements of FAC-010-2.1. For these same reasons, the ERO compliance program would gain efficiencies by no longer having to track whether requests for technical review had occurred, comments provided and reallocate time and resources to monitoring the Planning Authority's adherence to substantive requirements of FAC-010-2.1.

Criterion A
The requirement in FAC-010-2.1 R5 to respond to comments on the SOL methodology is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B
- Criterion B1 (Administrative)
- Criterion B4 (Reporting)
- Criterion B6 (Commercial or Business Practice)

Criteria C
1. FAC-010-2.1 R5 has not been part of a FFT filing.

2. FAC-010-2.1 R5 is subject to future Standards Development Project 2012-11 FAC Review, which is a placeholder for the five year review of FAC-010 and FAC-011. Thus, it is appropriate to process the retirement of this requirement as part of the P81 Project.

3. FAC-010-2.1 R5 has a Lower VRF.

4. FAC-010-2.1 R5 is not on the AML.

5. The retirement of this requirement does not pose any negative impact to NERC's published and posted reliability principles No. 1 or No. 3.

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

   Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

   It is the adherence to the substantive requirements of FAC-010-2.1 that promotes these posted reliability principles, and not receiving comments on the facility ratings methodology from outside entities and then responding to those comments.

6. The retirement of this requirement does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of FAC-010-2.1 R5 also promotes a results-based approach because the requirements have no direct nexus to the performance of a reliability task.

Accordingly, for the above reasons, it is appropriate to retire FAC-010-2.1 R5.

***FAC-011-2 R5– System Operating Limits Methodology for the Operations Horizon*

R5. If a recipient of the SOL Methodology provides documented technical comments on the methodology, the Reliability Coordinator shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the SOL Methodology and, if no change will be made to that SOL Methodology, the reason why.

Background/Commission Directives

FAC-011-1 was filed for Commission approval on November 15, 2006 in Docket Nos. RM06-16-000 and RM07-3-000 and was approved on December 27, 2007 in Order No. 705.[64] FAC-011-2 was filed for Commission approval on June 30, 2008 in Docket No. RM08-11-000 and was approved on March 20, 2009 in Order No. 722.[65] In Order No. 722, the Commission approved FAC-011-2 R5 without specifically addressing R5.

There are no outstanding Commission directives with respect to this R5.

Technical Justification

FAC-011-2 R5 requires that when a Reliability Coordinator receives comments on its SOL methodology that it must respond and indicate whether it has changed its methodology. The retirement of FAC-011-2 R5 does not create a reliability gap, because the Reliability Coordinator must comply with the substantive requirements of FAC-011-2 R5 whether or not the exchange envisioned by FAC-011-2 R5 occurs. FAC-011-2 R5 may support an avenue to advance commercial interests.

For example, similar to FAC-010-2.1 R5, if a Transmission Operator or Transmission Planner also is a Transmission Owner it may have a commercial interest in lowering SOLs on its transmission lines in an effort to extend the life of its equipment and, therefore, challenge the Reliability Coordinator's methodology to reduce its SOLs. The Transmission Owner's interests are better considered in the context of the development of its facility ratings methodology under FAC-008-1, -3 than the Reliability Coordinator's methodology. FAC-011-2 R5, however, is an invitation to advance commercial interests not through established means, but by challenging the Reliability Coordinator's SOL methodology. Accordingly, FAC-011-2 R5 sets forth an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues. (Criteria A, B1, B4 and B6). In this context, it would seem unnecessarily burdensome to engage in the exchange of comments, given there is no nexus between the exchange and compliance with the substantive requirements of FAC-011-2. Instead of spending time and resources on FAC-011-2 R5 a Reliability Coordinator's time and resources would be better spent complying with the substantive requirements of FAC-011-2 R5. For these same reasons, the ERO compliance program would gain efficiencies by no longer having to track whether requests for technical review had occurred, comments provided and reallocate time and resources to monitoring the Reliability Coordinator's adherence to substantive requirements of FAC-011-2 R5.

Criterion A

[64] *Facilities Design, Connections and Maintenance Reliability Standards*, 121 FERC ¶ 61,296 (December 27, 2007) (Order No. 705).

[65] *Version Two Facilities Design, Connections and Maintenance Reliability Standards*, 126 FERC ¶ 61,255 (March 20, 2009) (Order No. 722).

The requirement in FAC-011-2 R5 to respond to comments on the SOL methodology is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues.

Criteria B

- Criterion B1 (Administrative)
- Criterion B4 (Reporting)
- Criterion B6 (Commercial or Business Practice)

Criteria C

1. FAC-011-2 R5 has not been part of a FFT filing.

2. FAC-011-2 R5 is subject to future Standards Development Project 2012-11 FAC Review, which is a placeholder for the five year review of FAC-010 and FAC-011which is not currently scheduled and thus it is appropriate to process the retirement of this requirement as part of the P81 Project.

3. FAC-011-2 R5 has a Lower VRF.

4. FAC-011-2 R5 is not on the AML.

5. The retirement of this requirement does not pose any negative impact to NERC's published and posted reliability principles No. 1 or No. 3.

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

   Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

   It is the adherence to the substantive requirements of FAC-011-2 that promotes these posted reliability principles, and not receiving comments on the facility ratings methodology from outside entities and then responding to those comments.

6. The retirement of this requirement does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of FAC-011-2 R5 also promotes a results-based approach because the requirements have no direct nexus to the performance of a reliability task.

Accordingly, for the above reasons, it is appropriate to retire FAC-011-2 R5.

FAC-013-2 R3 – Assessment of Transfer Capability for the Near-term Transmission Planning Horizon

R3. If a recipient of the Transfer Capability methodology provides documented concerns with the methodology, the Planning Coordinator shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Transfer Capability methodology and, if no change will be made to that Transfer Capability methodology, the reason why.

Background/Commission Directives

FAC-013-1 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[66] FAC-013-2 was submitted for Commission approval on January 28, 2011 in Docket No. RD11-3-000 and was approved on November 17, 2011.[67]

In Order No. 729, the Commission denied NERC's request to withdraw FAC-012-1 and retire FAC-013-1, and directed as follows at paragraph 291:

> 291. The Commission hereby adopts its NOPR proposal to deny NERC's request to withdraw FAC-012-1 and retire FAC-013-1. Instead, pursuant to section 215(d)(5) of the FPA and section 39.5(f) of our regulations, the Commission directs the ERO to develop modifications to FAC-012-1 and FAC-013-1 to comply with the relevant directives of Order No. 693 and, as otherwise necessary, to make the requirements of those Reliability Standards consistent with those of the MOD Reliability Standards approved herein as well as this Final Rule. These modifications should also remove redundant provisions for the calculation of transfer capability addressed elsewhere in the MOD Reliability Standards. In making these revisions, the ERO should consider the development of a methodology for calculation of inter-regional and intra-regional transfer capabilities. The Commission accepts the ERO's request for additional time to prepare the modifications and so directs the ERO to submit the modifications to FAC-012-1 and FAC-013-1 no later than 60 days before the MOD Reliability Standards become effective.

[66] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[67] *Order Approving Reliability Standard*, 137 FERC ¶ 61,131 (2011).

Although the Commission did not directly address the merits of FAC-013-2 R3 when approving FAC-013-2,[68] similar to FAC-008-3, the developer of the Transfer Capability methodology and data must follow specific technical requirements and provide the data to reliability entities for use in their models. There are no outstanding Commission directives with respect to this R3.

Technical Justification

A review of FAC-013-2 R3 indicates that it is a needlessly burdensome administrative task that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1 and B4). Specifically, FAC-013-2 R1 and its sub-requirements set forth the information that each Planning Authority must include when developing its Transfer Capability methodology. FAC-013-2 R3 sets forth a requirement that if an entity comments on this methodology, the Planning Authority must respond and indicate whether or not it will make a change to its Transfer Capability methodology. Thus, while R1 sets forth substantive requirements, R3 sets forth more of an administrative task of the Planning Authority responding to comments on its methodology.

The following NERC glossary definition of Transfer Capability states:

> The measure of the ability of interconnected electric systems to move or transfer power *in a reliable manner* from one area to another over all transmission lines (or paths) between those areas under specified system conditions. The units of transfer capability are in terms of electric power, generally expressed in megawatts (MW). The transfer capability from "Area A" to "Area B" is *not g*enerally equal to the transfer capability from "Area B" to "Area A."

In the context of a Planning Authority engaging in an exchange with an entity over the Transfer Capability there is a possibility of a scenario that a group of generators[69] try to get the Planning Authority to revise its Transfer Capability methodology to advance commercial interests via changes to the methodology that would increase or decrease transfer capability from Area A to Area B. (Criterion B6). Such issues should be raised in the context of receipt of transmission services, not the Reliability Standards. Moreover, even without the possible commercial motivation of certain entities to get the Planning Authority to revise its Transfer Capability methodology, implementing an exchange between entities and the Planning Authority seems much better suited via regional planning committees, than mandatory Reliability Standards.

In this context, it would seem unnecessarily burdensome to engage in the exchange of comments, given there is no nexus between the exchange and compliance with the substantive requirements of FAC-013-2. Instead of spending time and resources on

[68] *Id.* (approval of FAC-013-2).

[69] Generators that receive the Transfer Capability methodology via an association with one of the entities in the R2 sub-requirements.

FAC-013-2 R3, time and resources would be better spent complying with the substantive requirements of FAC-013-2. For these same reasons, the ERO compliance program would gain efficiencies by no longer having to track whether requests for technical review had occurred, comments provided and reallocate time and resources to monitoring the Reliability Coordinator's adherence to substantive requirements of FAC-013-2.

Criterion A
The requirement in FAC-013-2 R3 to respond to comments on the Transfer Capability methodology is an administrative task that does little, if anything, to benefit or protect the reliable operation of the BES, and has the potential to implicate commercially sensitive issues.

Criteria B

- Criterion B1 (Administrative)
- Criterion B4 (Reporting)
- Criterion B6 (Commercial or Business Practice)

Criteria C

1. FAC-013-2 R3 has not been part of a FFT filing.

2. FAC-013-2 R3 is not subject to an on-going Standards Development Project.

3. FAC-013-2 R3 has a Lower VRF.

4. FAC-013-2 R3 is not on the AML.

5. The retirement of FAC-013-2 R3 does not pose any negative impact to NERC's published and posted reliability principles No. 1 or No. 3.

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

   Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

   It is the adherence to the substantive requirements of FAC-013-2 that promotes these posted reliability principles, and not receiving comments on the facility ratings methodology from outside entities and then responding to those comments.

6. The retirement of FAC-013-2 R3 does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of FAC-013-2 R3 promotes a results-based approach because the requirements do not require the performance of a reliability task.

Accordingly, for the above reasons, it is appropriate to retire FAC-013-2 R3.

INT-007-1 R1.2 – Interchange Confirmation

R1.2. All reliability entities involved in the Arranged Interchange are currently in the NERC registry.

Background/Commission Directives
INT-007-1 was submitted for Commission approval on August 28, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[70] The Commission did not directly address INT-007-1 R1.2 when it approved the Reliability Standard in Order No. 693 at paragraph 867.

There are no outstanding Commission directives with respect to R1.2.

Technical Justification
The reliability purpose of INT-007-1 is to ensure that each Arranged Interchange is checked for reliability before it is implemented. The reliability purpose of INT-007-1 is unaffected by the proposed retirement of R1.2.

INT-007-1 R1.2 is a needlessly burdensome administrative task that does not support reliability because it is now outdated. (Criterion B1). At one time the identification number came from the NERC TSIN system, by now it is handled via NAESB Electric Industry Registry.[71] Also, under the E-Tag protocols, no entity may engage in an Interchange transaction without first registering with the E-Tag system and receiving an identification number. Further, the entity desiring the transaction enters this identification number in the E-Tag system to pre-qualify and engage in an Arranged Interchange. Accordingly, the task set forth in INT-007-1 R1.2 is an outdated activity that is no longer necessary, and thus, does little, if anything, to benefit or protect the reliable operation of the BES. (Criterion A). The ERO compliance program would benefit and be more efficient if it was not monitoring an outdated requirement.

[70] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[71] *See, North American Energy Standards Board Webregistry Technical Guide v1.4* (Proprietary) (July 2012). The new NAESB system has updated and implemented more automation to the process.

Criterion A
The task set forth in INT-007-1 R1.2 is an outdated activity that is no longer necessary, and thus, does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B
- Criterion B1 (Administrative)

Criteria C
1. INT-007-1 R1.2 has not been part of a FFT filing.

2. INT-007-1 R1.2 is part of a pending Standards Development Project – Project 2008-12 Coordinate Interchange Standards, which is estimated to start in the second quarter of 2013. Given this timeline, it is appropriate to move forward with the retirement of INT-007-1 R1.2. Such a retirement may also help to streamline Project 2008-12 once it is active and progressing.

3. INT-007-1 R1.2 has a Lower VRF.

4. INT-007-1 R1.2 is not on the AML.

5. The retirement of INT-007-1 R1.2 does not pose any negative impact to NERC's published and posted reliability principles No. 1 or No. 3.

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

   Principle 3. Information necessary for the planning and operation of interconnected bulk power systems shall be made available to those entities responsible for planning and operating the systems reliably.

   It is the adherence to the substantive requirements of INT-007-1 that promotes these posted reliability principles, not R1.2.

6. The retirement of INT-007-1 R1.2 does not impact any defense in depth strategies because the task is no longer necessary.

7. The retirement of INT-007-1 R1.2 promotes a results-based approach because the requirement does not require the performance of a reliability task.

Accordingly, for the above reasons, it is appropriate to retire INT-007-1 R1.2.

IRO-016-1 R2 – Coordination of Real-time Activities Between Reliability Coordinators

R2. The Reliability Coordinator shall document (via operator logs or other data sources) its actions taken for either the event or for the disagreement on the problem(s) or for both.

Background/Commission Directives
IRO-016-1 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693. The Commission did not directly address R2 when approving IRO-016-1 in Order No. 693 at paragraphs 1004 and 1005. There are no outstanding Commission directives with respect to R2.

Technical Justification
The reliability purpose of IRO-016-1 is to ensure that each Reliability Coordinator's operations are coordinated such that they will not have an adverse reliability impact on other Reliability Coordinator Areas and to preserve the reliability benefits of interconnected operations. To implement the purpose, IRO-016-1 R1 and its sub-requirements state:

> **R1.** The Reliability Coordinator that identifies a potential, expected, or actual problem that requires the actions of one or more other Reliability Coordinators shall contact the other Reliability Coordinator(s) to confirm that there is a problem and then discuss options and decide upon a solution to prevent or resolve the identified problem.
>
> **R1.1.** If the involved Reliability Coordinators agree on the problem and the actions to take to prevent or mitigate the system condition, each involved Reliability Coordinator shall implement the agreed-upon solution, and notify the involved Reliability Coordinators of the action(s) taken.
>
> **R1.2.** If the involved Reliability Coordinators cannot agree on the problem(s) each Reliability Coordinator shall re-evaluate the causes of the disagreement (bad data, status, study results, tools, etc.).
>
> **R1.2.1.** If time permits, this re-evaluation shall be done before taking corrective actions.
>
> **R1.2.2.** If time does not permit, then each Reliability Coordinator shall operate as though the problem(s) exist(s) until the conflicting system status is resolved.

These requirements are specific actions and decision points among Reliability Coordinators that promote the reliable operation of the BES. In contrast, a review of R2 indicates that it is a needlessly burdensome administrative and data collection requirement that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1 and B2). Therefore, the reliability purpose of IRO-016-1 is unaffected by the proposed retirement of R2.

Furthermore, outside the context of a Reliability Standard, under Section 400 of the NERC Rules of Procedure, NERC and the Regional Entities have the authority to require an entity to submit data and information for purposes of monitoring compliance. Thus, the retirement of IRO-016-1 R2 does not affect the ability for NERC and the Regional Entities to require Reliability Coordinators to produce documentation to demonstrate compliance with IRO-016-1 R1 and its sub-requirements. Accordingly, retiring IRO-016-1 R2 presents no gap to reliability or to the information NERC and the Regional Entities need to monitor compliance. Thus, IRO-016-1 R~~1~~2 does not support reliability. Consequently, R2 is an administrative and data collection requirement ~~that~~ that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1 and B2). Also, there are some inherent inefficiencies that result by a small number of requirements, such as IRO-016-1 R2 being a data, evidence and record retention requirement, while there are other and more appropriate established methods to collect and review the data than a Reliability Standard via Rules of Procedure Section 401. In this regard, for the ERO, Regional Entities and the entities, arguably Reliability Standards are more difficult to understand because of this inconsistent approach (typically only implicitly requiring documentation as a part of an obligation to prove compliance, but occasionally explicitly requiring it with no discernible pattern or rationale).

Criterion A
A review of R2 indicates that it is a needlessly burdensome administrative and data collection requirement that does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B

- Criterion B1 (Administrative)
- Criterion B2 (Data Collection/Data Retention)

Criteria C

1. IRO-016-1 R2 has not been part of a FFT filing

2. IRO-016-1 R2 is not subject to an on-going Standards Development project.

3. IRO-016-1 R2 has a Lower VRF.

4. IRO-016-1 R2 is not on the AML.

5. The retirement of IRO-016-1 R2 does not pose any negative impact to NERC's published and posted reliability principles, since none of the principles appear to apply to a data retention requirement.

6. IRO-016-1 R2 does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of IRO-016-1 R2 promotes a results-based approach because the requirement is administrative and data collection, and, therefore, does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire IRO-016-1 R2.

NUC-001-2 R9.1; NUC-001-2 R9.1.1; NUC-001-2 R9.1.2; NUC-001-2 R9.1.3; NUC-001-2 R9.1.4 – Nuclear Plant Interface Coordination

R9.1. Administrative elements:

R9.1.1. Definitions of key terms used in the agreement.

R9.1.2. Names of the responsible entities, organizational relationships, and responsibilities related to the NPIRs.

R9.1.3. A requirement to review the agreement(s) at least every three years.

R9.1.4. A dispute resolution mechanism.

Background/Commission Directives

NUC-001-1 was submitted for Commission approval on November 19, 2007 in Docket No. RM08-3-000 and was approved on October 16, 2008.[72] NUC-001-2 was submitted for Commission approval on August 14, 2009 in Docket No. RD09-10-000 and was approved on January 21, 2010.[73]

Although in Order No. 716 the merits of R9.1 and its sub-requirements were not directly addressed, the Commission did state the following in the context of the VRFs for all of R9:[74]

[72] *Mandatory Reliability Standard for Nuclear Plant Interface Coordination*, 125 FERC ¶ 61,065 (2008) ("Order No. 716"), *order on reh'g*, Order No. 716-A, 126 FERC ¶ 61,122 (2009).

[73] *Order Approving Reliability Standard*, 130 FERC ¶ 61,051 (2010).

[74] NUC-001-1 was approved in Order No. 716, while NUC-001-2 was approved without discussion of R9.1 and its sub-requirements in a subsequent order. *Mandatory Reliability Standard for Nuclear Plant Interface Coordination*, 125 FERC ¶ 61,065 (2008); 130 FERC ¶ 61,051 (2010).

> Consistent with the NOPR, the Commission directs the ERO to revise the violation risk factor assignment for Requirement R9 from lower to medium. The Commission disagrees with commenters that a lower violation risk factor is appropriate because Requirement R9 is an administrative requirement to include the specified provisions. While the Commission recognized in the NOPR that many of the requirements of the proposed Reliability Standard are administrative in nature, these same requirements provide for the development of procedures to ensure the safe and reliable operation of the grid, and responses to potential emergency conditions.

There are no outstanding Commission directives with respect to these requirements.

Technical Justification

The reliability purpose of NUC-001-2 is to ensure the coordination between Nuclear Plant Generator Operators and Transmission Entities for nuclear plant safe operation and shutdown. The reliability purpose of NUC-001-2 is unaffected by the proposed retirement of requirements 9.1, 9.1.1, 9.1.2, 9.1.3 and 9.1.4. Requirement 9.1 and its sub-requirements specify certain administrative elements that must be included in the agreement (required by R2) between the Nuclear Plant Generator Operator and the applicable Transmission Entities. These are a mix of technical, communication, training and administrative requirements. Of those that may be classified as administrative, R9.1 and its sub-requirements clearly stand out as unnecessarily burdensome administrative tasks that do little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A and B1). R9.1 and its sub-requirements are a check list of certain non-technical boilerplate provisions generally included in modern agreements. These provisions do not directly relate to protecting BES reliability. Further, requiring via a mandatory Reliability Standard the inclusion of boilerplate provisions is ~~an~~ unnecessarily burdensome relative to the other significant requirements in NUC-001-2 that pertain to performance based reliability coordination and protocols between Transmission Entities and Nuclear Plant Generator Operators. Therefore, the retirement of NUC-001-2 R9.1 and all its sub-requirements creates no reliability gap and are the type of provisions that would likely be in a modern agreement anyway.

For these same reasons, the ERO compliance program efficiency will increase with the retirement of NUC-001-2 R9.1 and its sub-requirements because compliance monitoring time and resources will not be spent conducting a checklist of whether an agreement includes boilerplate provisions, and instead, the time and resources may be spent reviewing adherence with the technical, substantive coordination and protocol provisions of NUC-001-2.

Criterion A

R9.1 and its sub-requirements are unnecessarily burdensome administrative tasks that do little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B

- Criterion B1 (Administrative)

Criteria C

1. NUC-001-2 R9.1 and its sub-requirements have not been part of a FFT filing.

2. NUC-001-2 R9.1 and its sub-requirements are not part of an on-going Standards Development Project, but NUC-001-2 is part of Project 2012-13, which is a placeholder for a five year review. Given the as yet undetermined start date for Project 2012-13, it is appropriate to move forward with the retirement of NUC-001-2 R9.1 and its sub-requirements.

3. Individual VRFs are not assigned to the sub-requirements of NUC-001-2 R9.

4. NUC-001-2 R9.1 and its sub-requirements are in the third tier of the AML.

5. The retirement of NUC-001-2 R9.1 and its sub-requirements do not pose any negative impact to NERC's published and posted reliability principles, since none of them seem to apply to the inclusion of boilerplate contractual provisions.

6. There is no impact on a defense in depth strategy because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of NUC-001-2 R9.1 and its sub-requirements promote a results-based approach by eliminating administrative check-list requirements.

Accordingly, for the above reasons, it is appropriate to retire NUC-001-2 R9.1 and its sub-requirements.

PRC-010-0 R2 – Assessment of the Design and Effectiveness of UVLS Program;

R2. The Load-Serving Entity, Transmission Owner, Transmission Operator, and Distribution Provider that owns or operates a UVLS program shall provide documentation of its current UVLS program assessment to its Regional Reliability Organization and NERC on request (30 calendar days).

Background/Commission Directives

PRC-010-0 was filed for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[75] Although not

[75] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

specifically addressing PRC-010-0 R2, in Order No. 693 at paragraph 1506 and 1507 the Commission stated that:

> With regard to ISO-NE's disagreement on integration of various system protections "because such integration cannot be technologically accomplished", we note that the evidence collected in the Blackout Report indicates that "the relay protection settings for the transmission lines, generators and underfrequency load shedding in the northeast may not be entirely appropriate and are certainly not coordinated and integrated to reduce the likelihood and consequence of a cascade – nor were they intended to do so." In addition, the Blackout Report stated that one of the common causes of major outages in North America is a lack of coordination on system protection. The Commission agrees with the protection experts who participated in the investigation, formulated Blackout Recommendation No. 21 and recommended that UVLS programs have an integrated approach.
>
> Regarding FirstEnergy's question of whether universal coordination among UVLS programs that address local system problems makes sense, we believe that PRC-010-0's objective in requiring an integrated and coordinated approach is to address the possible adverse interactions of these protection systems among themselves and to determine whether they could aggravate or accelerate cascading events. We do not believe this Reliability Standard is aimed at universal coordination among UVLS programs that address local system problems. (Footnote omitted).

The retirement of PRC-010-0 R2 does not affect a Commission directive.

Technical Justification

Outside the context of a Reliability Standard, under Section 400 of the NERC Rules of Procedure, NERC and the Regional Entities have the authority to require an entity to submit documentation of its current UVLS program assessment for purposes of monitoring compliance. Thus, the retirement of PRC-010-0 R2 does not affect the ability of NERC and the Regional Entities to require Reliability Coordinators to produce documentation to monitor compliance with PRC-010-0 R1 and its sub-requirements. Furthermore, PRC-010-0 R1 requires that the entity document an assessment of the effectiveness of its UVLS program:

> The Load-Serving Entity, Transmission Owner, Transmission Operator, and Distribution Provider that owns or operates a UVLS program shall periodically (at least every five years or as required by changes in system conditions) conduct and document an assessment of the effectiveness of the UVLS program.

Accordingly, retiring PRC-010-0 R2 presents no gap to reliability or to the information NERC and the Regional Entity need to monitor compliance. A review of R2 indicates that it is a needlessly burdensome administrative and data collection/retention requirement that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1 and B2). Also, there are some inherent inefficiencies that result by a small number of requirements, such as PRC-010-0 R2 being a data production requirement, while there are other and more appropriate established methods to collect and review the data than a Reliability Standard via Rules of Procedure Section 401.

Criterion A
R2 is an administrative and data collection requirement that does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B
- Criterion B1(Administrative)
- Criterion B2 (Data Collection/Data Retention)

Criteria C
1. PRC-010-0 R2 has not been part of a FFT filing.

2. PRC-010-0 R2 is subject to Standards Development Project 2008-02 Undervoltage Load Shedding, which is not currently active and is only estimated to be completed until the second quarter of 2014. Since the purpose of Project 2008-02 does not necessarily include a review of R2 and its 2014 completion date is well into the future, it is appropriate to include PRC-010-0 R2 in the P81 Project.

3. This requirement has a Lower VRF.

4. This requirement is not part of the AML.

5. The retirement of PRC-010-0 R2 does not pose any negative impact to NERC's published and posted reliability principles, particularly since submission of a program assessment or documentation of its analysis of UVLS program performance to a Regional Entity does not seem to implicate any of the principles.

6. For similar reasons, there is no negative impact on a defense in depth strategy because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of PRC-010-0 R2 promotes a results-based approach because it is a data collection requirement, and, therefore, does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire PRC-010-0 R2.

PRC-022-1 R2 – Under-Voltage Load Shedding Program Performance

R2. Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program shall provide documentation of its analysis of UVLS program performance to its Regional Reliability Organization within 90 calendar days of a request.

Background/Commission Directives
PRC-022-1 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[76] In Order No. 693 at paragraph 1565 the Commission approved PRC-022-1 without a discussion of R2. There are no outstanding Commission directives with respect to R2.

Technical Justification
Outside the context of a Reliability Standard, under Section 400 of the NERC Rules of Procedure, NERC and the Regional Entities have the authority to require an entity to submit documentation of its analysis of UVLS program performance for purposes of monitoring compliance. Thus, the retirement of PRC-022-1 R2 does not affect the ability for NERC and the Regional Entities to require Reliability Coordinators to produce documentation to monitor compliance with PRC-022-1 R1 and its sub-requirements. Furthermore, PRC-022-1 R1 already requires that the entity document UVLS performance:

> Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program to mitigate the risk of voltage collapse or voltage instability in the BES shall analyze and document all UVLS operations and Misoperations.

Accordingly, retiring PRC-022-1 R2 presents no gap to reliability or to the information NERC and the Regional Entities need to monitor compliance. In this context, a review of R2 indicates that it is a needlessly burdensome administrative and data collection requirement that that does little, if anything, to benefit or protect the reliable operation of the BES. (Criteria A, B1 and B2). Also, similar to the retention of records requirements in CIP-007-3, -4 R7.3, FAC-002-1 R2 and PRC-010-0 R2, the ERO compliance program efficiency will increase since it will no longer need to track a static requirement of whether a UVLS program assessment was submitted within 30 days of a request by NERC or the Regional Entity, and instead, compliance monitoring may focus on the more substantive requirements of PRC-022-1.

Criterion A

[76] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

R2 is an administrative and data collection requirement that does little, if anything, to benefit or protect the reliable operation of the BES.

Criteria B

- Criterion B1(Administrative)
- Criterion B2 (Data Collection/Data Retention)

Criteria C

1. PRC-022-1 R2 has not been part of a FFT filing.

2. PRC-022-1 R2 is subject to Standards Development Project 2008-02 Undervoltage Load Shedding, which is not currently active and is only estimated to be completed until the second quarter of 2014. Since the purpose of Project 2008-02 does not necessarily include a review of R2 and its 2014 completion date is well into the future, it is appropriate to include PRC-022-1 R2 in the P81 Project.

3. PRC-022-1 R2 has a Lower VRF.

4. This requirement is not part of the AML.

5. The retirement of PRC-022-1 R2 does not pose any negative impact to NERC's published and posted reliability principles, particularly since submission of a program assessment or documentation of its analysis of UVLS program performance to a Regional Entity does not seem to implicate any of the principles.

6. For similar reasons, there is no negative impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of PRC-022-1 R2 promotes a results-based approach because it is a data collection requirement, and, therefore, does not provide the foundation for performing a reliability task.

Accordingly, for the above reasons, it is appropriate to retire PRC-022-1 R2.

***VAR-001-2 R5 – Voltage and Reactive Control*

R5. Each Purchasing-Selling Entity and Load Serving Entity shall arrange for (self-provide or purchase) reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching;, and controllable load– to satisfy its reactive requirements identified by its Transmission Service Provider.

Background/Commission Directives
VAR-001-1 was submitted for Commission approval on April 4, 2006, in Docket No. RM06-16-000. When approving VAR-001-1, in Order No. 693 at paragraph 1858,[77] the Commission recognized:

> . . . that all transmission customers of public utilities are required to purchase Ancillary Service No. 2 under the OATT or self-supply, but the OATT does not require them to provide information to transmission operators needed to accurately study reactive power needs. The Commission directs the ERO to address the reactive power requirements for LSEs on a comparable basis with purchasing-selling entities.

On September 9, 2010, NERC submitted VAR-001-2, which included revisions to Requirement R5 to satisfy Commission directives in Order No. 693, including the directive in paragraph 1858. This directive was addressed by adding "Load Serving Entities" to the standard as applicable entities and making them subject to the same requirements as Purchasing Selling Entities. These modifications to VAR-001-2 were accepted by the Commission on January 10, 2011.[78]

Technical Justification
VAR-001-2 R5 does little, if anything, to benefit or protect the reliable operation of the BES because it is redundant with FERC's *pro forma* open access transmission tariff ("OATT"). (Criteria A and B7). To elaborate, VAR-001-2 R5 provides for the PSE and LSE (transmission customers) to arrange for or self provide reactive resources the same as required under Schedule 2 of the OATT. Specifically, as a general matter Schedule 2 of the OATT states:

> **Schedule 2 Reactive Supply and Voltage Control from Generation or Other**
>
> In order to maintain transmission voltages on the Transmission Provider's transmission facilities within acceptable limits, generation facilities and non-generation resources capable of providing this service that are under the control of the control area operator) are operated to produce (or absorb) reactive power. Thus, Reactive Supply and Voltage Control from Generation or Other Sources Service must be provided for each transaction on the Transmission Provider's transmission facilities. The amount of Reactive Supply and Voltage Control from Generation or Other Sources Service that must be supplied with respect to the Transmission Customer's transaction will be determined based on the reactive power support necessary to maintain transmission voltages within limits that are

[77] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[78] *North American Electric Reliability Corp.*, 134 FERC ¶ 61,015 (2011).

> generally accepted in the region and consistently adhered to by the Transmission Provider.
>
> Reactive Supply and Voltage Control from Generation or Other Sources Service is to be provided directly by the Transmission Provider (if the Transmission Provider is the Control Area operator) or indirectly by the Transmission Provider making arrangements with the Control Area operator that performs this service for the Transmission Provider's Transmission System. The Transmission Customer must purchase this service from the Transmission Provider or the Control Area operator. A Transmission Customer may satisfy all or part of its obligation through self provision or purchases provided that the self-provided or purchased reactive power reduces the Transmission Provider's reactive power requirements and is from generating facilities under the control of the Transmission Provider or Control Area operator. The Transmission Customer's Service Agreement shall specify any such reactive supply arrangements. To the extent the Control Area operator performs this service for the Transmission Provider, charges to the Transmission Customer are to reflect only a pass-through of the costs charged to the Transmission Provider by the Control Area operator. The Transmission Provider's rates for Reactive Supply and Voltage Control from Generation Sources Services shall be set out in Appendix A to this Schedule.

Given the importance of the procurement or self providing of reactive power, even in a market setting a form of Schedule 2 is found in the tariffs of MISO and PJM, for example. Also, other contractual mechanism, such as Interchange agreements, also are used to ensure transmission customers (suc as PSEs and LSEs) provide reactive power, While NERC complied with the Commission's directive to add LSEs to VAR-001-2 R5, a review of this requirement in light of Schedule 2 indicates that the reliability objective of ensuring that PSEs as well as LSEs either acquire or self provide reactive power resources associated with its transmission service requests is accomplished via Schedule 2, and, therefore, there is no need to reiterate it in VAR-001-2 R5. The repetitive nature of VAR-001-2 R5 is also apparent in the context of how a PSE or LSE generally demonstrates compliance – via screenshots from Open Access Same-Time Information System ("OASIS") reservations that show the mandatory acquiring or self providing of reactive power resources per Schedule 2.

The reliability objective of VAR-001-2 is also accomplished in VAR-001-2 R2 (that is not proposed for retirement) which reads:

> Each Transmission Operator shall acquire sufficient reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching;, [sic] and controllable load – within its area to protect the voltage levels under normal and

Contingency conditions. This includes the Transmission Operator's share of the reactive requirements of interconnecting transmission circuits.

The Transmission Operator's adherence to R2 is a double check for the obligations under Schedule 2 to ensure there are sufficient reactive power resources to protect the voltage levels under normal and Contingency conditions. This double check, however, does not relieve PESs and LESs from their obligations under Schedule 2 of the OATT or Interchange agreements.

In addition, in the Electric Reliability Council of Texas (ERCOT) region, where there is no FERC approved OATT, reactive power is handled via Section 3.15 of the ERCOT Nodal Protocols that describes how ERCOT establishes a Voltage Profile for the grid, and then in detail explains the responsibilities of the Generators, Distribution Providers and Texas Transmission Service Providers (not to be confused with a NERC TSP), to meet the Voltage Profile and ensure that those entities have sufficient reactive support to do so. There is further Operating Guide detail on the responsibilities for entities to deploy reactive resources approximately, within performance criteria in the Operating Guide Section 3. Thus, as in non-ERCOT regions, ERCOT has protocols that are duplicative of VAR-001-2 R5.

Given the redundant nature of VAR-001-2 R5 it would also assist the ERO compliance program to retire it, so that time and resources can be reallocated to focus on adherence to other Reliability Standard requirements.

Criterion A
VAR-001-2 R5 does little, if anything, to benefit or protect the reliable operation of the BES because it is redundant with FERC's *pro forma* OATT.

Criteria B

- Criterion B7 (Redundant)

Criteria C

1. VAR-001-2 R5 has not been part of a FFT filing.

2. VAR-001-2 R5 is subject to Standards Development Project 2008-01 Voltage and Reactive Planning Control. Given that Project 2008-01 is not currently active and is only estimated to be completed until the second quarter of 2014 and the purpose of this project does not necessarily include a review of R5, it is appropriate to include VAR-001-2 R5 in the P81 Project. Also, retiring this requirement via P81 Project may facilitate the efficiency of Project 2008-01.

3. This requirement has a High VRF. However, the reliability objective of VAR-001-2 R5 will be accomplished via Schedule 2 of the OATT, ERCOT protocols and R2 of VAR-001-2. Thus, the High VRF is not dispositive, and VAR-001-2 R5 remains appropriate for retirement.

4. VAR-001-2 R5 is in the third tier of the AML.

5. Because VAR-001-2 R5 is redundant with the *pro forma* OATT and ERCOT protocols, (as well as the reliability objective of VAR-001-2 R5 is accomplished via Schedule 2 of the OATT, ERCOT protocols and R2 of VAR-001-2), the retirement of VAR-001-2 R5 does not pose any negative impact to the following NERC published and posted reliability principles:

   Principle 1. Interconnected bulk power systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.

   Principle 2. The frequency and voltage of interconnected bulk power systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.

6. Retirement does not negatively impact defense in depth because no other requirement depends on it to help cover a reliability gap or risk to reliability.

7. The retirement of VAR-001-2 R5 is neutral regarding whether it promotes a results-based approach because the requirement is results-based, but already covered in the *pro forma* OATT, Schedule 2 and ERCOT protocols.

Accordingly, for the above reasons, it is appropriate to retire VAR-001-2 R5.

V. The Initial Phase Reliability Standards Provided for Informational Purposes

The following requirements are already scheduled to be retired or subsumed via another Standards Development Project that has been approved by stakeholders and the NERC Board of Trustees (or due to be before the NERC Board of Trustees in November), and, thus, are presented here for informational purposes only. For regulatory efficiency, these requirements will not be presented for comment and vote, and, therefore, will not be presented to the NERC Board of Trustees for approval or filed with the Commission or Canadian governmental authorities as part of the P81 Project.

CIP-001-2a R4 Sabotage Reporting

R4. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, and Load-Serving Entity shall establish communications contacts, as applicable, with local Federal Bureau of Investigation (FBI) or Royal Canadian Mounted Police (RCMP) officials and develop reporting procedures as appropriate to their circumstances.

Background

CIP-001-1 was filed for Commission approval on November 15, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[79] CIP-001-1a was filed for Commission approval on April 21, 2010 in Docket No. RD10-11-000, and was approved by an unpublished letter order on February 2, 2011.[80]

CIP-001-2a was filed for Commission approval as a Regional Variance for the ERCOT Region, containing an interpretation of CIP-001-1, on June 21, 2011 in Docket No. RD11-6-000 and was approved by unpublished letter order on August 2, 2011.[81]

As part of EOP-004-2, on November 5, 2012, stakeholders approved the retirement of CIP-001-2a R4. EOP-004-2 was approved by the NERC Board of Trustees on November 7, 2012. Thus, CIP-001-2a R4 is presented here for informational purposes only.

COM-001-1.1 R6- Telecommunications

Each NERCNet User Organization shall adhere to the requirements in Attachment 1-COM-001-0, "NERCNet Security Policy."

Background

COM-001-1 was submitted for Commission approval on November 15, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[82] COM-001-1.1 was submitted for Commission approval on February 6, 2009 in Docket No. RD09-2-000 as errata and was approved by unpublished letter order on May 13, 2009.[83]

[81] Letter Order, Petition of the North American Electric Reliability Corporation for Approval of the Reliability Standard CIP-001-2a – Sabotage Reporting with a Regional Variance for Texas Reliability Entity, Docket No. RD11-6-000 (August 2, 2011).

[82] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

[83] Letter Order, Electric Reliability Organization Errata Petition Updating Accepted Reliability Coordination and Transmission Operations Reliability Standards, Docket No. RD09-2-000 (May 13, 2009).

As part of COM-001-2, on September 17, 2012, stakeholders approved the retirement of COM-001-1.1 R6 in Project 2006-06 (Reliability Coordination). This project is due to be presented to the NERC Board of Trustees in November. Thus, COM-001-1 R6 is presented here for informational purposes only.

EOP-004-1 R1 – Disturbance Reporting

R1. Each Regional Reliability Organization shall establish and maintain a Regional reporting procedure to facilitate preparation of preliminary and final disturbance reports.

Background

EOP-004-1 was submitted to the Commission for approval on November 15, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[84]

As part of EOP-004-2, on November 5, 2012, stakeholders approved the retirement of EOP-001-1 R1. EOP-004-2 was approved by the NERC Board of Trustees on November 7, 2012. Thus, EOP-001-1 R1 is presented here for informational purposes only.

EOP-009-0 R2 – Documentation of Blackstart Generating Unit Test Results

R2. The Generator Owner or Generator Operator shall provide documentation of the test results of the startup and operation of each blackstart generating unit to the Regional Reliability Organizations and upon request to NERC.

Background

EOP-009-0 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[85] In Order No. 749, the Commission approved the retirement of EOP-009-0 as of July 1, 2013, based on the approval of EOP-005-2, which did not carry forward R2 of EOP-009-0. Thus, EOP-009-0 R2 is presented here for informational purposes only.

FAC-008-1 R1.3.5 – Facility Ratings Methodology

R1.3.5. Other assumptions.

Background

[84] *Mandatory Reliability Standards for the Bulk-Power System*, Order No. 693, FERC Stats. & Regs. ¶ 31,242, *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

[85] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

FAC-008-1 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[86]

"On May 12, 2010, the NERC Board of Trustees approved the proposed FAC-008-2 Reliability Standard that addressed the first two of the FERC directives in Order No. 693. NERC's proposed FAC-008-2 Reliability Standard was not filed with FERC for approval, but instead was revisited by the standard drafting team so that the third Order No. 693 directive could be addressed in response to FERC's March 18, 2010 Order…"[87]

FAC-008-3 was submitted for Commission approval on June 15, 2011 in Docket No. RD11-10-000 and was approved on November 17, 2011.[88]

FAC-008-3 (which combined FAC-008 and FAC-009) has been approved by the Commission without the "other assumptions" language.[89] Since FAC-008-3 will become effective on January 1, 2013, FAC-008-1 R1.3.5 is presented here for informational purposes only.

PRC-008-0 R1; PRC-008-0 R2 – Underfrequency Load Shedding Equipment Maintenance Programs

R1. The Transmission Owner and Distribution Provider with a UFLS program (as required by its Regional Reliability Organization) shall have a UFLS equipment maintenance and testing program in place. This UFLS equipment maintenance and testing program shall include UFLS equipment identification, the schedule for UFLS equipment testing, and the schedule for UFLS equipment maintenance.

R2. The Transmission Owner and Distribution Provider with a UFLS program (as required by its Regional Reliability Organization) shall implement its UFLS equipment maintenance and testing program and shall provide UFLS maintenance and testing program results to its Regional Reliability Organization and NERC on request (within 30 calendar days).

Background

[86] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

[88] *Order Approving Reliability Standard*, 137 FERC ¶ 61,123 (2011).
[89] *Id.*

PRC-008-0 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[90]

Under Standards Development Project 2007-17 Protection System Maintenance, which recently passed on August 27, 2012, PRC-008-0 is scheduled to be retired, subsumed and replaced with PRC-005-2. PRC-005-2 will likely be presented to the NERC Board of Trustees in November for approval, and, thus, PRC-008-0 is only presented here for informational purposes.

PRC-009-0 R1; PRC-009-0 R1.1; PRC-009-0 R1.2; PRC-009-0 R1.3; PRC-009-0 R1.4; PRC-009-0 R2 – UFLS Performance Following an Underfrequency Event

R1. The Transmission Owner, Transmission Operator, Load-Serving Entity and Distribution Provider that owns or operates a UFLS program (as required by its Regional Reliability Organization) shall analyze and document its UFLS program performance in accordance with its Regional Reliability Organization's UFLS program. The analysis shall address the performance of UFLS equipment and program effectiveness following system events resulting in system frequency excursions below the initializing set points of the UFLS program. The analysis shall include, but not be limited to:

R1.1. A description of the event including initiating conditions.

R1.2. A review of the UFLS set points and tripping times.

R1.3. A simulation of the event.

R1.4. A summary of the findings.

R2. The Transmission Owner, Transmission Operator, Load-Serving Entity, and Distribution Provider that owns or operates a UFLS program (as required by its Regional Reliability Organization) shall provide documentation of the analysis of the UFLS program to its Regional Reliability Organization and NERC on request 90 calendar days after the system event.

Background

PRC-009-0 was submitted for Commission approval on April 4, 2006 in Docket No. RM06-16-000 and was approved on March 16, 2007 in Order No. 693.[91] In Order No.

[90] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

[91] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).

763 at paragraph 103[92] the Commission accepted the retirement of PRC-009-0 as appropriately replaced with PRC-006-1. Consistent with Order No. 763, PRC-009-0 will become inactive on September 30, 2013 and will be replaced by PRC-006-1. Thus, PRC-009-0 is presented here for informational purposes only.

TOP-001-1a R3 – Reliability Responsibilities and Authorities

R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall comply with reliability directives issued by the Reliability Coordinator, and each Balancing Authority and Generator Operator shall comply with reliability directives issued by the Transmission Operator, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances the Transmission Operator, Balancing Authority, or Generator Operator shall immediately inform the Reliability Coordinator or Transmission Operator of the inability to perform the directive so that the Reliability Coordinator or Transmission Operator can implement alternate remedial actions.

Background

TOP-001-1 was submitted for Commission approval on November 15, 2006 in Docket No. RM06-16-000 and was approved by the Commission on March 16, 2007 in Order No. 693.[93] TOP-001-1a was submitted for approval on July 16, 2010 in Docket No. RM10-29-000 and was approved on September 15, 2011 in Order No. 753.[94]

IRO-001-1a R8 reads:

> Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall immediately inform the Reliability Coordinator of the inability to perform the directive so that the Reliability Coordinator may implement alternate remedial actions.

[92] *Automatic Underfrequency Load Shedding and Load Shedding Plans Re-liability Standards*, 139 FERC ¶ 61,098 (2012).
[93] *Mandatory Reliability Standards for the Bulk-Power System*, 72 FR 16416 (Apr. 4, 2007), FERC Stats. & Regs. ¶ 31,242 (2007). ("Order No. 693"), *order on reh'g*, Order No. 693-A, 120 FERC ¶ 61,053 (2007).
[94] *Electric Reliability Organization Interpretation of Transmission Operations Reliability Standard*, 136 FERC ¶ 61,176, (September 15, 2011) (Order No. 753).

Although there is redundancy between TOP-001-1a R3 and IRO-001-1a R8 as related to Reliability Coordinators, this redundancy was addressed in Standards Development Project 2007-03 (Real-time Operations). Specifically, Project 2007-03 eliminated the redundancy in the current version of TOP-001-2 R1 that replaces TOP-001-1a R3 and reads:

> Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Reliability Directive issued and identified as such by its Transmission Operator(s), unless such action would violate safety, equipment, regulatory, or statutory requirements.

TOP-001-2 has been approved by the NERC Board of Trustees and will be filed with the Commission for approval; therefore, TOP-001-1a R3 is presented for informational purposes only.

TOP-005-2a R1 – Operational Reliability Information

R1. As a condition of receiving data from the Interregional Security Network (ISN), each ISN data recipient shall sign the NERC Confidentiality Agreement for "Electric System Reliability Data."

Background

Without directly addressing R1 of TOP-005-1 or TOP-005-2a the Commission approved both versions of TOP-005.[95] A review of the Standards Development Project 2007-03 Real-time Transmission Operations indicates it proposes R1 of TOP-005-1 to be retired. The reasoning provided by the SDT was the following:

> Confidentiality is not a reliability issue, but a market or business issue. Since this is not a reliability issue, it does not belong in the Reliability Standards and can be deleted.[96]

As stated above, in the context of Project 2007-03, TOP-001-1a was approved by the NERC Board of Trustees and will be filed with the Commission for approval; therefore, TOP-005-2a R1 is presented for informational purposes only.

[95] Order No. 693 at paragraphs 1648 through 1652 (approval of TOP-005-1); *Mandatory Reliability Standards for Interconnection Reliability Operating Limits*, 134 F.E.R.C. ¶ 61,213 (2011) (approval of TOP-005-2a).

[96] Mapping Document Project 2007-03 Real-time Operations at page 31 (April 27 2012).

Complete Violation Severity Levels Matrix

Encompassing All Commission-Approved Reliability Standards

September 21, 2012

Change History Table is located at the end of the document

Complete Violation Severity Level Matrix (BAL)
Encompassing All Commission-Approved Reliability Standards

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
BAL-001-0.1a	R1.	Each Balancing Authority shall operate such that, on a rolling 12-month basis, the average of the clock-minute averages of the Balancing Authority's Area Control Error (ACE) divided by 10B (B is the clock-minute average of the Balancing Authority Area's Frequency Bias) times the corresponding clock-minute averages of the Interconnection's Frequency Error is less than a specific limit. This limit is a constant derived from a targeted frequency bound (separately calculated for each Interconnection) that is reviewed and set as necessary by the NERC Operating Committee. ***See Standard for Formula.***	The Balancing Authority Area's value of CPS1 is less than 100% but greater than or equal to 95%.	The Balancing Authority Area's value of CPS1 is less than 95% but greater than or equal to 90%.	The Balancing Authority Area's value of CPS1 is less than 90% but greater than or equal to 85%.	The Balancing Authority Area's value of CPS1 is less than 85%.
BAL-001-0.1a	R2.	Each Balancing Authority shall operate such that its average ACE for at least 90% of clock-ten-minute periods (6 non-overlapping periods per hour) during a calendar month is within a specific limit, referred to as L_{10}. ***See Standard for Formula.***	The Balancing Authority Area's value of CPS2 is less than 90% but greater than or equal to 85%.	The Balancing Authority Area's value of CPS2 is less than 85% but greater than or equal to 80%.	The Balancing Authority Area's value of CPS2 is less than 80% but greater than or equal to 75%.	The Balancing Authority Area's value of CPS2 is less than 75%.
BAL-001-0.1a	R3.	Each Balancing Authority providing Overlap Regulation Service shall evaluate Requirement R1 (i.e., Control Performance Standard 1 or CPS1) and Requirement R2 (i.e., Control Performance Standard 2 or CPS2) using the characteristics of the combined ACE and combined Frequency Bias Settings.	N/A	N/A	N/A	The Balancing Authority providing Overlap Regulation Service failed to use a combined ACE and frequency bias.
BAL-001-0.1a	R4.	Any Balancing Authority receiving Overlap Regulation Service shall not	N/A	N/A	N/A	The Balancing Authority receiving

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
		have its control performance evaluated (i.e. from a control performance perspective, the Balancing Authority has shifted all control requirements to the Balancing Authority providing Overlap Regulation Service).				Overlap Regulation Service failed to ensure that control performance was being evaluated in a manner consistent with the calculation methodology as described in BAL-001-01 R3.
BAL-002-1	R1.	Each Balancing Authority shall have access to and/or operate Contingency Reserve to respond to Disturbances. Contingency Reserve may be supplied from generation, controllable load resources, or coordinated adjustments to Interchange Schedules.	N/A	N/A	N/A	The Balancing Authority does not have access to and/or operate Contingency Reserve to respond to Disturbances.
BAL-002-1	R1.1.	A Balancing Authority may elect to fulfill its Contingency Reserve obligations by participating as a member of a Reserve Sharing Group. In such cases, the Reserve Sharing Group shall have the same responsibilities and obligations as each Balancing Authority with respect to monitoring and meeting the requirements of Standard BAL-002.	N/A	N/A	N/A	The Balancing Authority has elected to fulfill its Contingency Reserve obligations by participating as a member of a Reserve Sharing Group and the Reserve Sharing Group has not provided the same responsibilities and obligations as required of the responsible entity with respect to monitoring and meeting the requirements of Standard BAL-002.
BAL-002-1	R2.	Each Regional Reliability Organization, sub-Regional Reliability	The Regional Reliability	The Regional Reliability	The Regional Reliability	The Regional Reliability

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
		Organization or Reserve Sharing Group shall specify its Contingency Reserve policies, including:	Organization, sub-Regional Reliability Organization, or Reserve Sharing Group has failed to specify 1 of the following sub-requirements.	Organization, sub-Regional Reliability Organization, or Reserve Sharing Group has failed to specify 2 or 3 of the following sub-requirements.	Organization, sub-Regional Reliability Organization, or Reserve Sharing Group has failed to specify 4 or 5 of the following sub-requirements.	Organization, sub-Regional Reliability Organization, or Reserve Sharing Group has failed to specify all 6 of the following sub-requirements.
BAL-002-1	R2.1.	The minimum reserve requirement for the group.	N/A	N/A	N/A	The Regional Reliability Organization, sub-Regional Reliability Organization, or Reserve Sharing Group has failed to specify the minimum reserve requirement for the group.
BAL-002-1	R2.2.	Its allocation among members.	N/A	N/A	N/A	The Regional Reliability Organization, sub-Regional Reliability Organization, or Reserve Sharing Group has failed to specify the allocation of reserves among members.
BAL-002-1	R2.3.	The permissible mix of Operating Reserve – Spinning and Operating Reserve – Supplemental that may be included in Contingency Reserve.	N/A	N/A	N/A	The Regional Reliability Organization, sub-Regional Reliability Organization, or Reserve Sharing Group has failed to specify the permissible mix of Operating Reserve –

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						Spinning and Operating Reserve – Supplemental that may be included in Contingency Reserve.
BAL-002-1	R2.4.	The procedure for applying Contingency Reserve in practice.	N/A	N/A	N/A	The Regional Reliability Organization, sub-Regional Reliability Organization, or Reserve Sharing Group has failed to provide the procedure for applying Contingency Reserve in practice.
BAL-002-1	R2.5.	The limitations, if any, upon the amount of interruptible load that may be included.	N/A	N/A	N/A	The Regional Reliability Organization, sub-Regional Reliability Organization, or Reserve Sharing Group has failed to specify the limitations, if any, upon the amount of interruptible load that may be included.
BAL-002-1	R2.6.	The same portion of resource capacity (e.g. reserves from jointly owned generation) shall not be counted more than once as Contingency Reserve by multiple Balancing Authorities.	N/A	N/A	N/A	The Regional Reliability Organization, sub-Regional Reliability Organization, or Reserve Sharing Group has allowed the same portion of resource capacity (e.g., reserves from jointly owned generation) to be

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						counted more than once as Contingency Reserve by multiple Balancing Authorities.
BAL-002-1	R3.	Each Balancing Authority or Reserve Sharing Group shall activate sufficient Contingency Reserve to comply with the DCS.	The Balancing Authority or Reserve Sharing Group's Average Percent Recovery per the NERC DCS quarterly report was less than 100% but greater than or equal to 95%.	The Balancing Authority or Reserve Sharing Group's Average Percent Recovery per the NERC DCS quarterly report was less than 95% but greater than or equal to 90%.	The Balancing Authority or Reserve Sharing Group's Average Percent Recovery per the NERC DCS quarterly report was less than 90% but greater than or equal to 85%.	The Balancing Authority or Reserve Sharing Group's Average Percent Recovery per the NERC DCS quarterly report was less than 85%.
BAL-002-1	R3.1.	As a minimum, the Balancing Authority or Reserve Sharing Group shall carry at least enough Contingency Reserve to cover the most severe single contingency. All Balancing Authorities and Reserve Sharing Groups shall review, no less frequently than annually, their probable contingencies to determine their prospective most severe single contingencies.	The Balancing Authority or Reserve Sharing Group failed to review their probable contingencies to determine their prospective most severe single contingencies annually.	N/A	N/A	The Balancing Authority or Reserve Sharing Group failed to carry at least enough Contingency Reserve to cover the most severe single contingency.
BAL-002-1	R4.	A Balancing Authority or Reserve Sharing Group shall meet the Disturbance Recovery Criterion within the Disturbance Recovery Period for 100% of Reportable Disturbances. The Disturbance Recovery Criterion is:	The Balancing Authority or Reserve Sharing Group met the Disturbance Recovery Criterion within the Disturbance Recovery Period for more than 90% and less than 100% of Reportable Disturbances.	The Balancing Authority or Reserve Sharing Group met the Disturbance Recovery Criterion within the Disturbance Recovery Period for more than 80% and less than or equal to 90% of Reportable Disturbances.	The Balancing Authority or Reserve Sharing Group met the Disturbance Recovery Criterion within the Disturbance Recovery Period for more than 70% and less than or equal to 80% of Reportable Disturbances.	The Balancing Authority or Reserve Sharing Group met the Disturbance Recovery Criterion within the Disturbance Recovery Period for more than 0% and less than or equal to 70% of Reportable Disturbances.

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
BAL-002-1	R4.1.	A Balancing Authority shall return its ACE to zero if its ACE just prior to the Reportable Disturbance was positive or equal to zero. For negative initial ACE values just prior to the Disturbance, the Balancing Authority shall return ACE to its pre-Disturbance value.	N/A	N/A	N/A	The Balancing Authority failed to return its ACE to zero if its ACE just prior to the Reportable Disturbance was positive or equal to zero or for negative initial ACE values failed to return ACE to its pre-Disturbance value.
BAL-002-1	R4.2.	The default Disturbance Recovery Period is 15 minutes after the start of a Reportable Disturbance.	N/A	N/A	N/A	N/A
BAL-002-1	R5.	Each Reserve Sharing Group shall comply with the DCS. A Reserve Sharing Group shall be considered in a Reportable Disturbance condition whenever a group member has experienced a Reportable Disturbance and calls for the activation of Contingency Reserves from one or more other group members. (If a group member has experienced a Reportable Disturbance but does not call for reserve activation from other members of the Reserve Sharing Group, then that member shall report as a single Balancing Authority.) Compliance may be demonstrated by either of the following two methods:	The Reserve Sharing Group met the DCS requirement for more than 90% and less than 100% of Reportable Disturbances.	The Reserve Sharing Group met the DCS requirements for more than 80% and less than or equal to 90% of Reportable Disturbances.	The Reserve Sharing Group met the DCS requirements for more than 70% and less than or equal to 80% of Reportable Disturbances.	The Reserve Sharing Group met the DCS requirements for more than 0% and less than or equal to 70% of Reportable Disturbances.
BAL-002-1	R5.1.	The Reserve Sharing Group reviews group ACE (or equivalent) and demonstrates compliance to the DCS. To be in compliance, the group ACE (or its equivalent) must meet the	N/A	N/A	N/A	N/A

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
		Disturbance Recovery Criterion after the schedule change(s) related to reserve sharing have been fully implemented, and within the Disturbance Recovery Period.				
BAL-002-1	R5.2.	The Reserve Sharing Group reviews each member's ACE in response to the activation of reserves. To be in compliance, a member's ACE (or its equivalent) must meet the Disturbance Recovery Criterion after the schedule change(s) related to reserve sharing have been fully implemented, and within the Disturbance Recovery Period.	N/A	N/A	N/A	N/A
BAL-002-1	R6.	A Balancing Authority or Reserve Sharing Group shall fully restore its Contingency Reserves within the Contingency Reserve Restoration Period for its Interconnection.	The Balancing Authority or Reserve Sharing Group restored less than 100% but greater than 90% of its contingency reserves during the Contingency Reserve Restoration Period.	The Balancing Authority or Reserve Sharing Group restored less than or equal to 90% but greater than 80% of its contingency reserves during the Contingency Reserve Restoration Period.	The Balancing Authority or Reserve Sharing Group restored less than or equal to 80% but greater than or equal to 70% of its Contingency Reserve during the Contingency Reserve Restoration Period.	The Balancing Authority or Reserve Sharing Group restored less than 70% of its Contingency Reserves during the Contingency Reserve Restoration Period.
BAL-002-1	R6.1.	The Contingency Reserve Restoration Period begins at the end of the Disturbance Recovery Period.	N/A	N/A	N/A	N/A
BAL-002-1	R6.2.	The default Contingency Reserve Restoration Period is 90 minutes.	N/A	N/A	N/A	N/A

						implementation of, and adherence to, Standards CIP-002-4 through CIP-009-4.
CIP-003-4	R2.1.	The senior manager shall be identified by name, title, and date of designation.	N/A	N/A	N/A	The senior manager is not identified by name, title, and date of designation.
CIP-003-4	R2.2.	Changes to the senior manager must be documented within thirty calendar days of the effective date.	Changes to the senior manager were documented in greater than 30 but less than 60 days of the effective date.	Changes to the senior manager were documented in 60 or more but less than 90 days of the effective date.	Changes to the senior manager were documented in 90 or more but less than 120 days of the effective date.	Changes to the senior manager were documented in 120 or more days of the effective date.
CIP-003-4	R2.3.	Where allowed by Standards CIP-002-4 through CIP-009-4, the senior manager may delegate authority for specific actions to a named delegate or delegates. These delegations shall be documented in the same manner as R2.1 and R2.2, and approved by the senior manager.	N/A	N/A	The identification of a senior manager's delegate does not include at least one of the following; name, title, or date of the designation, OR The document is not approved by the senior manager, OR Changes to the delegated authority are not documented within thirty calendar days of the effective date.	A senior manager's delegate is not identified by name, title, and date of designation; the document delegating the authority does not identify the authority being delegated; the document delegating the authority is not approved by the senior manager; AND changes to the delegated authority are not documented within thirty calendar days of the effective date.

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
CIP-003-4	R2.4.	The senior manager or delegate(s), shall authorize and document any exception from the requirements of the cyber security policy.	N/A	N/A	N/A	The senior manager or delegate(s) did not authorize and document any exceptions from the requirements of the cyber security policy as required.
CIP-003-4	R3. (Retired)	Exceptions — Instances where the Responsible Entity cannot conform to its cyber security policy must be documented as exceptions and authorized by the senior manager or delegate(s).	N/A	N/A	In Instances where the Responsible Entity cannot conform to its cyber security policy (pertaining to CIP 002 through CIP 009), exceptions were documented, but were not authorized by the senior manager or delegate(s).	In Instances where the Responsible Entity cannot conform to its cyber security policy (pertaining to CIP 002 through CIP 009), exceptions were not documented, and were not authorized by the senior manager or delegate(s).
CIP-003-4	R3.1. (Retired)	Exceptions to the Responsible Entity's cyber security policy must be documented within thirty days of being approved by the senior manager or delegate(s).	Exceptions to the Responsible Entity's cyber security policy were documented in more than 30 but less than 60 days of being approved by the senior manager or delegate(s).	Exceptions to the Responsible Entity's cyber security policy were documented in 60 or more but less than 90 days of being approved by the senior manager or delegate(s).	Exceptions to the Responsible Entity's cyber security policy were documented in 90 or more but less than 120 days of being approved by the senior manager or delegate(s).	Exceptions to the Responsible Entity's cyber security policy were documented in 120 or more days of being approved by the senior manager or delegate(s).
CIP-003-4	R3.2. (Retired)	Documented exceptions to the cyber security policy must include an explanation as to why the exception is necessary and any compensating	N/A	N/A	The Responsible Entity has a documented exception to the	The Responsible Entity has a documented exception to the

N/A	The Responsible Entity did not review the list(s) of its personnel who have access to Critical Cyber Assets quarterly.	The Responsible Entity did not update the list(s) within seven calendar days of any change of personnel with such access to Critical Cyber Assets, nor any change in the access rights of such personnel.	The Responsible Entity did not review the list(s) of all personnel who have access to Critical Cyber Assets quarterly, nor update the list(s) within seven calendar days of any change of personnel with such access to Critical Cyber Assets, nor any change in the access rights of such personnel.
CIP-004-4	R4.2.	The Responsible Entity shall revoke such access to Critical Cyber Assets within 24 hours for personnel terminated for cause and within seven calendar days for personnel who no longer require such access to Critical Cyber Assets.	N/A	The Responsible Entity did not revoke access within seven calendar days for personnel who no longer require such access to Critical Cyber Assets.	The Responsible Entity did not revoke access to Critical Cyber Assets within 24 hours for personnel terminated for cause.	The Responsible Entity did not revoke access to Critical Cyber Assets within 24 hours for personnel terminated for cause nor within seven calendar days for personnel who no longer require such access to Critical Cyber Assets.

Complete Violation Severity Level Matrix (CIP)
Encompassing All Commission-Approved Reliability Standards

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
CIP-005-3a	R1.	Electronic Security Perimeter — The Responsible Entity shall ensure that every Critical Cyber Asset resides within an Electronic Security Perimeter. The Responsible Entity shall identify and document the Electronic Security Perimeter(s) and all access points to the perimeter(s).	N/A	N/A	N/A	The Responsible Entity did not ensure that every Critical Cyber Asset resides within an Electronic Security Perimeter. OR The Responsible Entity did not identify and document the Electronic Security Perimeter(s) and all access points to the perimeter(s).
CIP-005-3a	R1.1.	Access points to the Electronic Security Perimeter(s) shall include any externally connected communication end point (for example, dial-up modems) terminating at any device within the Electronic Security Perimeter(s).	N/A	N/A	N/A	Access points to the Electronic Security Perimeter(s) do not include all externally connected communication end point (for example, dial-up modems) terminating at any device within the Electronic Security Perimeter(s).
CIP-005-3a	R1.2.	For a dial-up accessible Critical Cyber Asset that uses a non-routable protocol, the Responsible Entity shall define an Electronic Security Perimeter for that single access point at the dial-up device.	N/A	N/A	N/A	For one or more dial-up accessible Critical Cyber Assets that use a non-routable protocol, the Responsible Entity did not define an Electronic Security Perimeter for that single access point at

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						the dial-up device.
CIP-005-3a	R1.3.	Communication links connecting discrete Electronic Security Perimeters shall not be considered part of the Electronic Security Perimeter. However, end points of these communication links within the Electronic Security Perimeter(s) shall be considered access points to the Electronic Security Perimeter(s).	N/A	N/A	N/A	At least one end point of a communication link within the Electronic Security Perimeter(s) connecting discrete Electronic Security Perimeters was not considered an access point to the Electronic Security Perimeter.
CIP-005-3a	R1.4.	Any non-critical Cyber Asset within a defined Electronic Security Perimeter shall be identified and protected pursuant to the requirements of Standard CIP-005-3.	N/A	N/A	N/A	One or more noncritical Cyber Asset within a defined Electronic Security Perimeter is not identified. OR Is not protected pursuant to the requirements of Standard CIP-005.
CIP-005-3a	R1.5.	Cyber Assets used in the access control and/or monitoring of the Electronic Security Perimeter(s) shall be afforded the protective measures as a specified in Standard CIP- 003-3; Standard CIP-004-3 Requirement R3; Standard CIP-005-3 Requirements R2 and R3; Standard CIP-006-3 Requirement R3; Standard CIP-007-3 Requirements R1 and R3 through R9; Standard CIP-008-3; and Standard CIP-	N/A	N/A	N/A	A Cyber Asset used in the access control and/or monitoring of the Electronic Security Perimeter(s) was not afforded one (1) or more of the protective measures as specified in Standard CIP-003-3; Standard CIP-004-3

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
		009-3.				Requirement R3; Standard CIP-005-3 Requirements R2 and R3; Standard CIP-006-3c Requirements R3; Standard CIP-007-3 Requirements R1 and R3 through R9; Standard CIP-008-3; and Standard CIP-009-3.
CIP-005-3a	R1.6.	The Responsible Entity shall maintain documentation of Electronic Security Perimeter(s), all interconnected Critical and non-critical Cyber Assets within the Electronic Security Perimeter(s), all electronic access points to the Electronic Security Perimeter(s) and the Cyber Assets deployed for the access control and monitoring of these access points.	N/A	N/A	N/A	The Responsible Entity did not maintain documentation of one or more of the following: Electronic Security Perimeter(s), interconnected Critical and noncritical Cyber Assets within the Electronic Security Perimeter(s), electronic access points to the Electronic Security Perimeter(s) and Cyber Assets deployed for the access control and monitoring of these access points.
CIP-005-3a	R2.	Electronic Access Controls — The Responsible Entity shall implement and	N/A	N/A	N/A	The Responsible Entity did not

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
		document the organizational processes and technical and procedural mechanisms for control of electronic access at all electronic access points to the Electronic Security Perimeter(s).				implement or did not document the organizational processes and technical and procedural mechanisms for control of electronic access at all electronic access points to the Electronic Security Perimeter(s).
CIP-005-3a	R2.1.	These processes and mechanisms shall use an access control model that denies access by default, such that explicit access permissions must be specified.	N/A	N/A	N/A	The processes and mechanisms did not use an access control model that denies access by default, such that explicit access permissions must be specified.
CIP-005-3a	R2.2.	At all access points to the Electronic Security Perimeter(s), the Responsible Entity shall enable only ports and services required for operations and for monitoring Cyber Assets within the Electronic Security Perimeter, and shall document, individually or by specified grouping, the configuration of those ports and services.	N/A	N/A	N/A	At one or more access points to the Electronic Security Perimeter(s), the Responsible Entity enabled ports and services not required for operations and for monitoring Cyber Assets within the Electronic Security Perimeter, or did not document, individually or by specified grouping, the configuration of those ports and

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						services.
CIP-005-3a	R2.3.	The Responsible Entity shall implement and maintain a procedure for securing dial-up access to the Electronic Security Perimeter(s).	N/A	N/A	N/A	The Responsible Entity did not implement or maintain a procedure for securing dial-up access to the Electronic Security Perimeter(s) where applicable.
CIP-005-3a	R2.4.	Where external interactive access into the Electronic Security Perimeter has been enabled, the Responsible Entity shall implement strong procedural or technical controls at the access points to ensure authenticity of the accessing party, where technically feasible.	N/A	N/A	N/A	Where external interactive access into the Electronic Security Perimeter has been enabled the Responsible Entity did not implement strong procedural or technical controls at the access points to ensure authenticity of the accessing party, where technically feasible.
CIP-005-3a	R2.5.	The required documentation shall, at least, identify and describe:	N/A	N/A	N/A	The required documentation for R2 did not include one or more of the elements described in R2.5.1 through R2.5.4.
CIP-005-3a	R2.5.1.	The processes for access request and authorization.	N/A	N/A	N/A	N/A
CIP-005-3a	R2.5.2.	The authentication methods.	N/A	N/A	N/A	N/A

		004-3 Requirement R4.				
CIP-005-3a	R2.5.4.	The controls used to secure dial-up accessible connections.	N/A	N/A	N/A	N/A
CIP-005-3a	R2.6. (Retired)	Appropriate Use Banner — Where technically feasible, electronic access control devices shall display an appropriate use banner on the user screen upon all interactive access attempts. The Responsible Entity shall maintain a document identifying the content of the banner.	The Responsible Entity did not maintain a document identifying the content of the banner. OR Where technically feasible less than 5% electronic access control devices did not display an appropriate use banner on the user screen upon all interactive access attempts.	Where technically feasible 5% but less than 10% of electronic access control devices did not display an appropriate use banner on the user screen upon all interactive access attempts.	Where technically feasible 10% but less than 15% of electronic access control devices did not display an appropriate use banner on the user screen upon all interactive access attempts.	Where technically feasible, 15% or more electronic access control devices did not display an appropriate use banner on the user screen upon all interactive access attempts.
CIP-005-3a	R3.	Monitoring Electronic Access — The Responsible Entity shall implement and document an electronic or manual process(es) for monitoring and logging access at access points to the Electronic Security Perimeter(s) twenty-four hours a day, seven days a week.	N/A	N/A	N/A	The Responsible Entity did not implement or did not document electronic or manual processes monitoring and logging access points.
CIP-005-3a	R3.1.	For dial-up accessible Critical Cyber Assets that use non-routable protocols, the Responsible Entity shall implement and document monitoring process(es) at each access point to the dial-up device, where technically feasible.	N/A	N/A	N/A	Where technically feasible, the Responsible Entity did not implement or did not document electronic or manual processes for

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						monitoring at one or more access points to dial-up devices.
CIP-005-3a	R3.2.	Where technically feasible, the security monitoring process(es) shall detect and alert for attempts at or actual unauthorized accesses. These alerts shall provide for appropriate notification to designated response personnel. Where alerting is not technically feasible, the Responsible Entity shall review or otherwise assess access logs for attempts at or actual unauthorized accesses at least every ninety calendar days.	N/A	N/A	N/A	Where technically feasible, the Responsible Entity did not implement security monitoring process(es) to detect and alert for attempts at or actual unauthorized accesses. OR The above alerts do not provide for appropriate notification to designated response personnel. OR Where alerting is not technically feasible, the Responsible Entity did not review or otherwise assess access logs for attempts at or actual unauthorized accesses at least every ninety calendar days.
CIP-005-3a	R4.	Cyber Vulnerability Assessment — The Responsible Entity shall perform a cyber vulnerability assessment of the electronic access points to the Electronic Security Perimeter(s) at least annually. The	N/A	N/A	N/A	The Responsible Entity did not perform a Vulnerability Assessment at least

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
		vulnerability assessment shall include, at a minimum, the following:				annually for one or more of the access points to the Electronic Security Perimeter(s). OR The vulnerability assessment did not include one (1) or more of the subrequirements R4.1, R4.2, R4.3, R4.4, R4.5.
CIP-005-3a	R4.1.	A document identifying the vulnerability assessment process;	N/A	N/A	N/A	N/A
CIP-005-3a	R4.2.	A review to verify that only ports and services required for operations at these access points are enabled;	N/A	N/A	N/A	N/A
CIP-005-3a	R4.3.	The discovery of all access points to the Electronic Security Perimeter;	N/A	N/A	N/A	N/A
CIP-005-3a	R4.4.	A review of controls for default accounts, passwords, and network management community strings;	N/A	N/A	N/A	N/A
CIP-005-3a	R4.5.	Documentation of the results of the assessment, the action plan to remediate or mitigate vulnerabilities identified in the assessment, and the execution status of that action plan.	N/A	N/A	N/A	N/A
CIP-005-3a	R5.	Documentation Review and Maintenance — The Responsible Entity shall review, update, and maintain all documentation to support compliance with the requirements of Standard CIP-005-3.	The Responsible Entity did not review, update, and maintain at least one but less than or equal to	The Responsible Entity did not review, update, and maintain greater than 5% but less than or equal to 10% of the	The Responsible Entity did not review, update, and maintain greater than 10% but less than or equal to 15% of the	The Responsible Entity did not review, update, and maintain greater than 15% of the documentation to support compliance

CIP-007-3	R1.	Test Procedures — The Responsible Entity shall ensure that new Cyber Assets and significant changes to existing Cyber Assets within the Electronic Security Perimeter do not adversely affect existing cyber security controls. For purposes of Standard CIP-007-3, a significant change shall, at a minimum, include implementation of security patches, cumulative service packs, vendor releases, and version upgrades of operating systems, applications, database platforms, or other third-party software or firmware.	N/A	N/A	N/A	The Responsible Entity did not ensure the prevention of adverse affects described in R1, by not including the required minimum significant changes. OR The Responsible Entity did not address one or more of the following: R1.1, R1.2, R1.3.
CIP-007-3	R1.1.	The Responsible Entity shall create, implement, and maintain cyber security test procedures in a manner that minimizes adverse effects on the production system or its operation.	N/A	N/A	N/A	N/A
CIP-007-3	R1.2.	The Responsible Entity shall document that testing is performed in a manner that reflects the production environment.	N/A	N/A	N/A	N/A
CIP-007-3	R1.3.	The Responsible Entity shall document test results.	N/A	N/A	N/A	N/A
CIP-007-3	R2.	Ports and Services — The Responsible Entity shall establish, document and implement a process to ensure that only those ports and services required for normal and emergency operations are enabled.	N/A	N/A	N/A	The Responsible Entity did not establish (implement) or did not document a process to ensure that only those ports and services required for normal and emergency operations are enabled.

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
CIP-007-3	R2.1.	The Responsible Entity shall enable only those ports and services required for normal and emergency operations.	N/A	N/A	N/A	The Responsible Entity enabled one or more ports or services not required for normal and emergency operations on Cyber Assets inside the Electronic Security Perimeter(s).
CIP-007-3	R2.2.	The Responsible Entity shall disable other ports and services, including those used for testing purposes, prior to production use of all Cyber Assets inside the Electronic Security Perimeter(s).	N/A	N/A	N/A	The Responsible Entity did not disable one or more other ports or services, including those used for testing purposes, prior to production use for Cyber Assets inside the Electronic Security Perimeter(s).
CIP-007-3	R2.3.	In the case where unused ports and services cannot be disabled due to technical limitations, the Responsible Entity shall document compensating measure(s) applied to mitigate risk exposure.	N/A	N/A	N/A	For cases where unused ports and services cannot be disabled due to technical limitations, the Responsible Entity did not document compensating measure(s) applied to mitigate risk.
CIP-007-3	R3.	Security Patch Management — The Responsible Entity, either separately or as a component of the documented configuration management process specified in CIP-003-3 Requirement R6, shall establish, document and implement a security patch management program	N/A	N/A	N/A	The Responsible Entity did not establish (implement) or did not document, either separately or as a component of the

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
		for tracking, evaluating, testing, and installing applicable cyber security software patches for all Cyber Assets within the Electronic Security Perimeter(s).				documented configuration management process specified in CIP-003-3 Requirement R6, a security patch management program for tracking, evaluating, testing, and installing applicable cyber security software patches for all Cyber Assets within the Electronic Security Perimeter(s).
CIP-007-3	R3.1.	The Responsible Entity shall document the assessment of security patches and security upgrades for applicability within thirty calendar days of availability of the patches or upgrades.	N/A	N/A	N/A	The Responsible Entity did not document the assessment of security patches and security upgrades for applicability as required in Requirement R3 within 30 calendar days after the availability of the patches and upgrades.
CIP-007-3	R3.2.	The Responsible Entity shall document the implementation of security patches. In any case where the patch is not installed, the Responsible Entity shall document compensating measure(s) applied to mitigate risk exposure.	N/A	N/A	N/A	The Responsible Entity did not document the implementation of applicable security patches as required in R3.

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						OR Where an applicable patch was not installed, the Responsible Entity did not document the compensating measure(s) applied to mitigate risk.
CIP-007-3	R4.	Malicious Software Prevention — The Responsible Entity shall use anti-virus software and other malicious software ("malware") prevention tools, where technically feasible, to detect, prevent, deter, and mitigate the introduction, exposure, and propagation of malware on all Cyber Assets within the Electronic Security Perimeter(s).	N/A	N/A	N/A	The Responsible Entity, where technically feasible, did not use anti-virus software or other malicious software ("malware") prevention tools, on one or more Cyber Assets within the Electronic Security Perimeter(s).
CIP-007-3	R4.1.	The Responsible Entity shall document and implement anti-virus and malware prevention tools. In the case where anti-virus software and malware prevention tools are not installed, the Responsible Entity shall document compensating measure(s) applied to mitigate risk exposure.	N/A	N/A	N/A	The Responsible Entity did not document the implementation of antivirus and malware prevention tools for cyber assets within the electronic security perimeter. OR The Responsible Entity did not document the implementation of

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						compensating measure(s) applied to mitigate risk exposure where antivirus and malware prevention tools are not installed.
CIP-007-3	R4.2.	The Responsible Entity shall document and implement a process for the update of anti-virus and malware prevention "signatures." The process must address testing and installing the signatures.	N/A	N/A	N/A	The Responsible Entity did not document or did not implement a process including addressing testing and installing the signatures for the update of anti-virus and malware prevention "signatures."
CIP-007-3	R5.	Account Management — The Responsible Entity shall establish, implement, and document technical and procedural controls that enforce access authentication of, and accountability for, all user activity, and that minimize the risk of unauthorized system access.	N/A	N/A	N/A	The Responsible Entity did not document or did not implement technical and procedural controls that enforce access authentication of, and accountability for, all user activity.
CIP-007-3	R5.1.	The Responsible Entity shall ensure that individual and shared system accounts and authorized access permissions are consistent with the concept of "need to know" with respect to work functions performed.	N/A	N/A	N/A	The Responsible Entity did not ensure that individual and shared system accounts and authorized access permissions are consistent with the concept of "need to

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						know" with respect to work functions performed.
CIP-007-3	R5.1.1.	The Responsible Entity shall ensure that user accounts are implemented as approved by designated personnel. Refer to Standard CIP-003-3 Requirement R5.	N/A	N/A	N/A	One or more user accounts implemented by the Responsible Entity were not implemented as approved by designated personnel.
CIP-007-3	R5.1.2.	The Responsible Entity shall establish methods, processes, and procedures that generate logs of sufficient detail to create historical audit trails of individual user account access activity for a minimum of ninety days.	N/A	The Responsible Entity generated logs with sufficient detail to create historical audit trails of individual user account access activity, however the logs do not contain activity for a minimum of 90 days.	The Responsible Entity generated logs with insufficient detail to create historical audit trails of individual user account access activity.	The Responsible Entity did not generate logs of individual user account access activity.
CIP-007-3	R5.1.3.	The Responsible Entity shall review, at least annually, user accounts to verify access privileges are in accordance with Standard CIP-003-3 Requirement R5 and Standard CIP-004-3 Requirement R4.	N/A	N/A	N/A	The Responsible Entity did not review, at least annually, user accounts to verify access privileges are in accordance with Standard CIP-003-3 Requirement R5 and Standard CIP-004-3 Requirement R4.
CIP-007-3	R5.2.	The Responsible Entity shall implement a policy to minimize and manage the	N/A	N/A	N/A	The Responsible Entity did not

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
		scope and acceptable use of administrator, shared, and other generic account privileges including factory default accounts.				implement a policy to minimize and manage the scope and acceptable use of administrator, shared, and other generic account privileges including factory default accounts.
CIP-007-3	R5.2.1.	The policy shall include the removal, disabling, or renaming of such accounts where possible. For such accounts that must remain enabled, passwords shall be changed prior to putting any system into service.	N/A	N/A	The Responsible Entity's policy did not include the removal, disabling, or renaming of such accounts where possible, however for accounts that must remain enabled, passwords were changed prior to putting any system into service.	For accounts that must remain enabled, the Responsible Entity did not change passwords prior to putting any system into service.
CIP-007-3	R5.2.2.	The Responsible Entity shall identify those individuals with access to shared accounts.	N/A	N/A	N/A	The Responsible Entity did not identify all individuals with access to shared accounts.
CIP-007-3	R5.2.3.	Where such accounts must be shared, the Responsible Entity shall have a policy for managing the use of such accounts that limits access to only those with authorization, an audit trail of the account use (automated or manual), and steps for securing the account in the event of personnel changes (for example, change in assignment or termination).	N/A	N/A	N/A	Where such accounts must be shared, the Responsible Entity has not implemented (one or more components of) a policy for managing the use of such accounts that limits

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						access to only those with authorization, an audit trail of the account use (automated or manual), and steps for securing the account in the event of personnel changes (for example, change in assignment or termination).
CIP-007-3	R5.3.	At a minimum, the Responsible Entity shall require and use passwords, subject to the following, as technically feasible:	N/A	N/A	N/A	The Responsible Entity does not require passwords subject to R5.3.1, R5.3.2, R5.3.3. OR Does not use passwords subject to R5.3.1, R5.3.2, R5.3.3.
CIP-007-3	R5.3.1.	Each password shall be a minimum of six characters.	N/A	N/A	N/A	N/A
CIP-007-3	R5.3.2.	Each password shall consist of a combination of alpha, numeric, and “special” characters.	N/A	N/A	N/A	N/A
CIP-007-3	R5.3.3.	Each password shall be changed at least annually, or more frequently based on risk.	N/A	N/A	N/A	N/A
CIP-007-3	R6.	Security Status Monitoring — The Responsible Entity shall ensure that all Cyber Assets within the Electronic Security Perimeter, as technically feasible, implement automated tools or organizational process controls to	N/A	N/A	N/A	The Responsible Entity as technically feasible, did not implement automated tools or organizational

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
		monitor system events that are related to cyber security.				process controls, to monitor system events that are related to cyber security on one or more of Cyber Assets inside the Electronic Security Perimeter(s).
CIP-007-3	R6.1.	The Responsible Entity shall implement and document the organizational processes and technical and procedural mechanisms for monitoring for security events on all Cyber Assets within the Electronic Security Perimeter.	N/A	N/A	N/A	The Responsible Entity did not implement or did not document the organizational processes and technical and procedural mechanisms for monitoring for security events on all Cyber Assets within the Electronic Security Perimeter.
CIP-007-3	R6.2.	The security monitoring controls shall issue automated or manual alerts for detected Cyber Security Incidents.	N/A	N/A	N/A	The Responsible entity's security monitoring controls do not issue automated or manual alerts for detected Cyber Security Incidents.
CIP-007-3	R6.3.	The Responsible Entity shall maintain logs of system events related to cyber security, where technically feasible, to support incident response as required in Standard CIP-008-3.	N/A	N/A	N/A	The Responsible Entity did not maintain logs of system events related to cyber security, where technically feasible, to support

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						incident response as required in Standard CIP-008.
CIP-007-3	R6.4.	The Responsible Entity shall retain all logs specified in Requirement R6 for ninety calendar days.	N/A	N/A	N/A	The Responsible Entity did not retain one or more of the logs specified in Requirement R6 for at least 90 calendar days.
CIP-007-3	R6.5.	The Responsible Entity shall review logs of system events related to cyber security and maintain records documenting review of logs.	N/A	N/A	N/A	The Responsible Entity did not review logs of system events related to cyber security nor maintain records documenting review of logs.
CIP-007-3	R7.	Disposal or Redeployment — The Responsible Entity shall establish and implement formal methods, processes, and procedures for disposal or redeployment of Cyber Assets within the Electronic Security Perimeter(s) as identified and documented in Standard CIP-005-3.	N/A	N/A	The Responsible Entity established and implemented formal methods, processes, and procedures for redeployment of Cyber Assets within the Electronic Security Perimeter(s) as identified and documented in Standard CIP-005- 3 but did not address redeployment as specified in R7.2.	The Responsible Entity did not establish or implement formal methods, processes, and procedures for disposal or redeployment of Cyber Assets within the Electronic Security Perimeter(s) as identified and documented in Standard CIP-005-3. OR

		risk.				
CIP-007-4	R6.	Security Status Monitoring — The Responsible Entity shall ensure that all Cyber Assets within the Electronic Security Perimeter, as technically feasible, implement automated tools or organizational process controls to monitor system events that are related to cyber security.	The Responsible Entity, as technically feasible, did not implement automated tools or organizational process controls to monitor system events that are related to cyber security for at least one but less than 5% of Cyber Assets inside the Electronic Security Perimeter(s).	The Responsible Entity, as technically feasible, did not implement automated tools or organizational process controls to monitor system events that are related to cyber security for 5% or more but less than 10% of Cyber Assets inside the Electronic Security Perimeter(s).	The Responsible Entity did not implement automated tools or organizational process controls, as technically feasible, to monitor system events that are related to cyber security for 10% or more but less than 15% of Cyber Assets inside the Electronic Security Perimeter(s).	The Responsible Entity did not implement automated tools or organizational process controls, as technically feasible, to monitor system events that are related to cyber security for 15% or more of Cyber Assets inside the Electronic Security Perimeter(s).
CIP-007-4	R6.1.	The Responsible Entity shall implement and document the organizational processes and technical and procedural mechanisms for monitoring for security events on all Cyber Assets within the Electronic Security Perimeter.	N/A	The Responsible Entity implemented but did not document the organizational processes and technical and procedural mechanisms for monitoring for security events on all Cyber Assets within the Electronic Security Perimeter.	The Responsible Entity documented but did not implement the organizational processes and technical and procedural mechanisms for monitoring for security events on all Cyber Assets within the Electronic Security Perimeter.	The Responsible Entity did not implement nor document the organizational processes and technical and procedural mechanisms for monitoring for security events on all Cyber Assets within the Electronic Security Perimeter.

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
CIP-007-4	R6.2.	The security monitoring controls shall issue automated or manual alerts for detected Cyber Security Incidents.	N/A	N/A	N/A	The Responsible entity's security monitoring controls do not issue automated or manual alerts for detected Cyber Security Incidents.
CIP-007-4	R6.3.	The Responsible Entity shall maintain logs of system events related to cyber security, where technically feasible, to support incident response as required in Standard CIP-008-4.	N/A	N/A	N/A	The Responsible Entity did not maintain logs of system events related to cyber security, where technically feasible, to support incident response as required in Standard CIP-008-4.
CIP-007-4	R6.4.	The Responsible Entity shall retain all logs specified in Requirement R6 for ninety calendar days.	The Responsible Entity retained the logs specified in Requirement R6, for at least 60 days, but less than 90 days.	The Responsible Entity retained the logs specified in Requirement R6, for at least 30 days, but less than 60 days.	The Responsible Entity retained the logs specified in Requirement R6, for at least one day, but less than 30 days.	The Responsible Entity did not retain any logs specified in Requirement R6.
CIP-007-4	R6.5.	The Responsible Entity shall review logs of system events related to cyber security and maintain records documenting review of logs.	N/A	N/A	N/A	The Responsible Entity did not review logs of system events related to cyber security nor maintain records documenting review of logs.

		Reliability Coordinator; and				Authority did not declare an Energy Emergency through its Reliability Coordinator.
EOP-002-3.1	R6.6.	Reducing load, through procedures such as public appeals, voltage reductions, curtailing interruptible loads and firm loads.	N/A	N/A	N/A	The Balancing Authority did not implement one or more of the procedures stated in the requirement.
EOP-002-3.1	R7.	Once the Balancing Authority has exhausted the steps listed in Requirement 6, or if these steps cannot be completed in sufficient time to resolve the emergency condition, the Balancing Authority shall:	N/A	N/A	The Balancing Authority has met only one of the two requirements	The Balancing Authority has not met either of the two requirements
EOP-002-3.1	R7.1.	Manually shed firm load without delay to return its ACE to zero; and	N/A	N/A	N/A	The Balancing Authority did not manually shed firm load without delay to return it's ACE to zero.
EOP-002-3.1	R7.2.	Request the Reliability Coordinator to declare an Energy Emergency Alert in accordance with Attachment 1-EOP-002 "Energy Emergency Alerts."	The Balancing Authority's implementation of an Energy Emergency Alert has missed minor program/procedural elements in Attachment 1-EOP-002-0.	N/A	N/A	The Balancing Authority has failed to meet one or more of the requirements of Attachment 1-EOP-002-0.
EOP-002-3.1	R8.	A Reliability Coordinator that has any Balancing Authority within its Reliability Coordinator area experiencing a potential or actual Energy Emergency shall initiate an Energy Emergency Alert as detailed in	The Reliability Coordinator's implementation of an Energy Emergency Alert has missed	N/A	N/A	The Reliability Coordinator has failed to meet one or more of the requirements of Attachment 1-EOP-

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
		Attachment 1-EOP-002 "Energy Emergency Alerts." The Reliability Coordinator shall act to mitigate the emergency condition, including a request for emergency assistance if required.	minor program/procedural elements in Attachment 1-EOP-002-0.			002-0.
EOP-002-3.1	R9.	When a Transmission Service Provider expects to elevate the transmission service priority of an Interchange Transaction from Priority 6 (Network Integration Transmission Service from Non-designated Resources) to Priority 7 (Network Integration Transmission Service from designated Network Resources) as permitted in its transmission tariff:	The Reliability Coordinator failed to comply with one (1) of the sub-components.	The Reliability Coordinator failed to comply with two (2) of the sub-components.	The Reliability Coordinator has failed to comply with three (3) of the sub-components.	The Reliability Coordinator has failed to comply with all four (4) of the sub-components.
EOP-002-3.1	R9.1.	The deficient Load-Serving Entity shall request its Reliability Coordinator to initiate an Energy Emergency Alert in accordance with Attachment 1-EOP-002 "Energy Emergency Alerts."	N/A	N/A	N/A	The Load-Serving Entity failed to request its Reliability Coordinator to initiate an Energy Emergency Alert.
EOP-002-3.1	R9.2.	The Reliability Coordinator shall submit the report to NERC for posting on the NERC Website, noting the expected total MW that may have its transmission service priority changed.	N/A	N/A	N/A	The Reliability Coordinator has failed to report to NERC as directed in the requirement.
EOP-002-3.1	R9.3.	The Reliability Coordinator shall use EEA 1 to forecast the change of the priority of transmission service of an Interchange Transaction on the system from Priority 6 to Priority 7.	N/A	N/A	N/A	The Reliability Coordinator failed to use EEA 1 to forecast the change of the priority of transmission service as directed in the requirement.
EOP-002-3.1	R9.4.	The Reliability Coordinator shall use EEA 2 to announce the change of the priority of transmission service of an Interchange Transaction on the system from Priority 6 to	N/A	N/A	N/A	The Reliability Coordinator failed to use EEA 2 to announce the change

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
		Priority 7.				of the priority of transmission service as directed in the requirement.
EOP-003-1	R1.	After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer load rather than risk an uncontrolled failure of components or cascading outages of the Interconnection.	N/A	N/A	N/A	The Transmission Operator or Balancing Authority failed to shed customer load.
EOP-003-1	R2.	Each Transmission Operator and Balancing Authority shall establish plans for automatic load shedding for underfrequency or undervoltage conditions.	N/A	N/A	N/A	The responsible entity did not establish plans for automatic load shedding as directed by the requirement.
EOP-003-1	R3.	Each Transmission Operator and Balancing Authority shall coordinate load shedding plans among other interconnected Transmission Operators and Balancing Authorities.	The responsible entity did not coordinate load shedding plans, as directed by the requirement, affecting 5% or less of its required entities.	The responsible entity did not coordinate load shedding plans, as directed by the requirement, affecting more than 5% up to (and including) 10% of its required entities.	The responsible entity did not coordinate load shedding plans, as directed by the requirement, affecting more than 10%, up to (and including) 15% or less, of its required entities.	The responsible entity did not coordinate load shedding plans, as directed by the requirement, affecting more than 15% of its required entities.
EOP-003-1	R4.	A Transmission Operator or Balancing Authority shall consider one or more of these factors in designing an automatic load shedding scheme: frequency, rate of frequency decay, voltage level, rate of voltage decay, or power flow levels.	N/A	N/A	N/A	The applicable entity did not consider one of the five required elements, as directed by the requirement.
EOP-003-1	R5.	A Transmission Operator or Balancing Authority shall implement load shedding in steps established to minimize the risk of further uncontrolled separation, loss of generation, or system shutdown.	N/A	N/A	N/A	The Transmission Operator or Balancing Authority failed to implement load shedding in steps

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						established to minimize the risk of further uncontrolled separation, loss of generation, or system shutdown.
EOP-003-1	R6.	After a Transmission Operator or Balancing Authority Area separates from the Interconnection, if there is insufficient generating capacity to restore system frequency following automatic underfrequency load shedding, the Transmission Operator or Balancing Authority shall shed additional load.	N/A	N/A	N/A	The Transmission Operator or Balancing Authority failed to shed additional load after it had separated from the Interconnection when there was insufficient generating capacity to restore system frequency following automatic underfrequency load shedding.
EOP-003-1	R7.	The Transmission Operator and Balancing Authority shall coordinate automatic load shedding throughout their areas with underfrequency isolation of generating units, tripping of shunt capacitors, and other automatic actions that will occur under abnormal frequency, voltage, or power flow conditions.	The applicable entity did not coordinate automatic load shedding, as directed by the requirement, affecting 5% or less of its automatic actions.	The applicable entity did not coordinate automatic load shedding, as directed by the requirement, affecting between 5 - 10% of its automatic actions.	The applicable entity did not coordinate automatic load shedding, as directed by the requirement, affecting 10-15%, inclusive, of its automatic actions.	The applicable entity did not coordinate automatic load shedding, as directed by the requirement, affecting greater than 15% of its automatic actions.
EOP-003-1	R8.	Each Transmission Operator or Balancing Authority shall have plans for operator-controlled manual load shedding to respond to real-time emergencies. The Transmission Operator or Balancing Authority shall be capable of implementing the load shedding in a timeframe adequate for responding to the emergency.	N/A	The responsible entity did not have plans for operator controlled manual load shedding, as directed by the requirement.	The responsible entity has plans for manual load shedding but did not have the capability to implement the load shedding, as directed by the requirement.	The responsible entity did not have plans for operator controlled manual load shedding, as directed by the requirement nor had the capability to implement the load shedding, as directed by the requirement.

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
EOP-005-1	R1.	Each Transmission Operator shall have a restoration plan to reestablish its electric system in a stable and orderly manner in the event of a partial or total shutdown of its system, including necessary operating instructions and procedures to cover emergency conditions, and the loss of vital telecommunications channels. Each Transmission Operator shall include the applicable elements listed in Attachment 1-EOP-005 in developing a restoration plan.	The responsible entity has a restoration plan that includes 75 % or more but less than 100% of the applicable elements listed in Attachment 1.	The responsible entity has a restoration plan that includes 50% to 75% of the applicable elements listed in Attachment 1.	The responsible entity has a restoration plan that includes 25% - 50% of the applicable elements listed in Attachment 1.	The responsible entity has a restoration plan that includes less than 25% of the applicable elements listed in Attachment 1 OR the responsible entity has no restoration plan.
EOP-005-1	R2.	Each Transmission Operator shall review and update its restoration plan at least annually and whenever it makes changes in the power system network, and shall correct deficiencies found during the simulated restoration exercises.	The Transmission Operator failed to review or update its restoration plan when it made changes in the power system network.	The Transmission Operator failed to review and update its restoration plan at least annually.	The Transmission Operator failed to review and update its restoration plan at least annually or whenever it made changes in the power system network, and failed to correct deficiencies found during the simulated restoration exercises.	The Transmission Operator failed to review and update its restoration plan at least annually and whenever it made changes in the power system network, and failed to correct deficiencies found during the simulated restoration exercises.
EOP-005-1	R3.	Each Transmission Operator shall develop restoration plans with a priority of restoring the integrity of the Interconnection.	N/A	N/A	N/A	The Transmission Operator's restoration plans failed to make restoration of the integrity of the Interconnection a priority.
EOP-005-1	R4.	Each Transmission Operator shall coordinate its restoration plans with the Generator Owners and Balancing Authorities within its area, its Reliability Coordinator, and neighboring Transmission Operators and Balancing Authorities.	The Transmission Operator failed to coordinate its restoration plans with 5% or less of the entities identified in the requirement.	The Transmission Operator failed to coordinate its restoration plans with more than 5% up to (and including) 10% of the entities identified in the	The Transmission Operator failed to coordinate its restoration plans with more than 10% up to (and including) 15% of the entities identified in	The Transmission Operator failed to coordinate its restoration plans with more than 15% of the entities identified in the requirement.

				requirement.	the requirement.	
EOP-005-1	R5.	Each Transmission Operator and Balancing Authority shall periodically test its telecommunication facilities needed to implement the restoration plan.	N/A	N/A	N/A	The responsible entity failed to periodically test its telecommunication facilities needed to implement the restoration plan.
EOP-005-1	R6.	Each Transmission Operator and Balancing Authority shall train its operating personnel in the implementation of the restoration plan. Such training shall include simulated exercises, if practicable.	The Transmission Operator or Balancing Authority failed to train 5% or less of its operating personnel in the implementation of the restoration plan.	The Transmission Operator or Balancing Authority failed to train more than 5% up to (and including) 10 % of its operating personnel in the implementation of the restoration plan.	The Transmission Operator or Balancing Authority failed to train more than 10 % up to (and including) 15% of its operating personnel in the implementation of the restoration plan.	The Transmission Operator or Balancing Authority failed to train more than 15% of its operating personnel in the implementation of the restoration plan.
EOP-005-1	R7.	Each Transmission Operator and Balancing Authority shall verify the restoration procedure by actual testing or by simulation.	N/A	N/A	N/A	The Transmission Operator or Balancing Authority did not verify the restoration procedure by actual testing or by simulation.
EOP-005-1	R8.	Each Transmission Operator shall verify that the number, size, availability, and location of system blackstart generating units are sufficient to meet Regional Reliability Organization restoration plan requirements for the Transmission Operator's area.	N/A	N/A	N/A	The Transmission Operator failed to verify that the number, size, availability, and location of system blackstart generating units are sufficient to meet Regional Reliability Organization restoration plan

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						requirements for the Transmission Operator's area.
EOP-005-1	R9.	The Transmission Operator shall document the Cranking Paths, including initial switching requirements, between each blackstart generating unit and the unit(s) to be started and shall provide this documentation for review by the Regional Reliability Organization upon request. Such documentation may include Cranking Path diagrams.	N/A	N/A	The Transmission Operator documented the Cranking Paths, including initial switching requirements, between each blackstart generating unit and the unit(s) to be started, but did not provide the documentation as requested by the Regional Reliability Organization.	The Transmission Operator failed to document the Cranking Paths, including initial switching requirements, between each blackstart generating unit and the unit(s) to be started.
EOP-005-1	R10.	The Transmission Operator shall demonstrate, through simulation or testing, that the blackstart generating units in its restoration plan can perform their intended functions as required in the regional restoration plan.	For less than 25% of the blackstart generating units in its restoration plan, the Transmission Operator failed to demonstrate, through simulation or testing, that these blackstart generating units can perform their intended functions as required in the regional restoration plan.	For 25% or more, but less than 50% of the blackstart generating units in its restoration plan, the Transmission Operator failed to demonstrate, through simulation or testing, that these blackstart generating units can perform their intended functions as required in the regional restoration plan.	For 50% or more, but less than 75% of the blackstart generating units in its restoration plan, the Transmission Operator failed to demonstrate, through simulation or testing, that these blackstart generating units can perform their intended functions as required in the regional restoration plan.	For 75% or more of the blackstart generating units in its restoration plan, the Transmission Operator failed to demonstrate, through simulation or testing, that these blackstart generating units can perform their intended functions as required in the regional restoration plan.
EOP-005-1	R10.1.	The Transmission Operator shall perform this simulation or testing at least once every five years.	N/A	N/A	N/A	The Transmission Operator failed to perform the required simulation or testing at least once every five years.

		Coordinator Areas.				major system islands or synchronizing points as stated in Requirement R5.
EOP-006-1	R6.	The Reliability Coordinator shall take actions to restore normal operations once an operating emergency has been mitigated in accordance with its restoration plan.	N/A	N/A	N/A	The Reliability Coordinator failed to take actions to restore normal operations once an operating emergency was mitigated in accordance with its restoration plan.
EOP-008-0	R1.	Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have a plan to continue reliability operations in the event its control center becomes inoperable. The contingency plan must meet the following requirements:	The Reliability Coordinator, Transmission Operator and Balancing Authority failed to comply with one of the sub-requirements.	The Reliability Coordinator, Transmission Operator and Balancing Authority failed to comply with two of the sub-requirements.	The Reliability Coordinator, Transmission Operator and Balancing Authority failed to comply with three or four of the sub-requirements.	The Reliability Coordinator, Transmission Operator and Balancing Authority failed to comply with more than four of the sub-requirements.
EOP-008-0	R1.1.	The contingency plan shall not rely on data or voice communication from the primary control facility to be viable.	The responsible entity's contingency plan relies on data or voice communication from the primary control facility for up to 25% of the functions identified in R1.2 and R1.3.	The responsible entity's contingency plan relies on data or voice communication from the primary control facility for 25% to 50% of the functions identified in R1.2 and R1.3.	The responsible entity's contingency plan relies on data or voice communication from the primary control facility for 50% to 75% of the functions identified in R1.2 and R1.3.	The responsible entity's contingency plan relies on data and voice communication from the primary control facility for more than 75% of the functions identified in R1.2 and R1.3.
EOP-008-0	R1.2.	The plan shall include procedures and responsibilities for providing basic tie line control and procedures and for maintaining the status of all inter-area schedules, such that there is an hourly accounting of all schedules.	N/A	N/A	N/A	The responsible entity's plan failed to include procedures and responsibilities for providing basic tie line control and

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						procedures and for maintaining the status of all inter-area schedules, such that there is an hourly accounting of all schedules.
EOP-008-0	R1.3.	The contingency plan must address monitoring and control of critical transmission facilities, generation control, voltage control, time and frequency control, control of critical substation devices, and logging of significant power system events. The plan shall list the critical facilities.	The responsible entity's contingency plan failed to address one of the elements listed in the requirement.	The responsible entity's contingency plan failed to address two of the elements listed in the requirement.	The responsible entity's contingency plan failed to address three of the elements listed in the requirement.	The responsible entity's contingency plan failed to address four or more of the elements listed in the requirement.
EOP-008-0	R1.4.	The plan shall include procedures and responsibilities for maintaining basic voice communication capabilities with other areas.	N/A	N/A	N/A	The responsible entity's plan failed to include procedures and responsibilities for maintaining basic voice communication capabilities with other areas.
EOP-008-0	R1.5.	The plan shall include procedures and responsibilities for conducting periodic tests, at least annually, to ensure viability of the plan.	N/A	N/A	N/A	The responsible entity's plan failed to include procedures and responsibilities for conducting periodic tests, at least annually, to ensure viability of the plan.
EOP-008-0	R1.6.	The plan shall include procedures and responsibilities for providing annual training to ensure that operating personnel are able to implement the contingency plans.	N/A	N/A	N/A	The responsible entity's plan failed to include procedures and responsibilities for providing annual training to ensure that operating personnel

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						are able to implement the contingency plans.
EOP-008-0	R1.7.	The plan shall be reviewed and updated annually.	The responsible entity's plan was reviewed within 3 months of passing its annual review date.	The responsible entity's plan was reviewed within 6 months of passing its annual review date.	The responsible entity's plan was reviewed within 9 months of passing its annual review date.	The responsible entity's plan was reviewed more than 9 months of passing its annual review date.
EOP-008-0	R1.8.	Interim provisions must be included if it is expected to take more than one hour to implement the contingency plan for loss of primary control facility.	N/A	N/A	N/A	The responsible entity failed to make interim provisions when it is took more than one hour to implement the contingency plan for loss of primary control facility.
EOP-009-0	R1.	The Generator Operator of each blackstart generating unit shall test the startup and operation of each system blackstart generating unit identified in the BCP as required in the Regional BCP (Reliability Standard EOP-007-0_R1). Testing records shall include the dates of the tests, the duration of the tests, and an indication of whether the tests met Regional BCP requirements.	The Generator Operator Blackstart unit testing and recording is missing minor program/procedural elements.	Startup and testing of each Blackstart unit was performed, but the testing records are incomplete. The testing records are missing 25% or less of data requested in the requirement'.	The Generator Operator's failed to test 25% or less of the Blackstart units or testing records are incomplete. The testing records are missing between 25% and 50% of data requested in the requirement.	The Generator Operator failed to test more than 25% of its Blackstart units or does not have Blackstart testing records or is missing more than 50% of the required data.
EOP-009-0	R2.	The Generator Owner or Generator Operator shall provide documentation of the test results of the startup and operation of each blackstart generating unit to the Regional Reliability Organizations and upon request to NERC.	N/A	N/A	N/A	The Generator Owner or Generator Operator did not provide the required blackstart documentation to its Regional Reliability Organization or upon request to NERC.

		coordinated recommendations.				documentation.
FAC-002-1	R2. (Retired)	The Planning Authority, Transmission Planner, Generator Owner, Transmission Owner, Load-Serving Entity, and Distribution Provider shall each retain its documentation (of its evaluation of the reliability impact of the new facilities and their connections on the interconnected transmission systems) for three years and shall provide the documentation to the Regional Reliability Organization(s) and NERC on request (within 30 calendar days).	The responsible entity provided the documentation more than 30 calendar days, but not more than 45 calendar days, after a request.	The responsible entity provided the documentation more than 45 calendar days, but not more than 60 calendar days, after a request.	The responsible entity provided the documentation more than 60 calendar days, but not more than 120 calendar days, after a request.	The responsible entity provided the documentation more than 120 calendar days after a request or was unable to provide the documentation.
FAC-003-1	R1.	The Transmission owner shall prepare, and keep current, a formal transmission vegetation management program (TVMP). The TVMP shall include the Transmission Owner's objectives, practices, approved procedures, and work Specifications. 1. ANSI A300, Tree Care Operations – Tree, Shrub, and Other Woody Plant Maintenance – Standard Practices, while not a requirement of this standard, is considered to be an industry best practice.	The responsible entity did not include and keep current one of the four required elements of its TVMP, as directed by the requirement.	The responsible entity did not include and keep current two of the four required elements of its TVMP, as directed by the requirement.	The responsible entity did not include and keep current three of the four required elements of its TVMP, as directed by the requirement.	The responsible entity did not include and keep current all required elements of the TVMP, as directed by the requirement.
FAC-003-1	R1.1.	The TVMP shall define a schedule for and the type (aerial, ground) of ROW vegetation inspections. This schedule should be flexible enough to adjust for changing conditions. The inspection schedule shall be based on the anticipated growth of vegetation and any other environmental or operational factors that could impact the relationship of vegetation to the Transmission Owner's transmission lines.	N/A	N/A	The applicable entity TVMP did not define a schedule, as directed by the requirement, or the type of ROW vegetation inspections, as directed by the requirement.	The applicable entity TVMP did not define a schedule, as directed by the requirement, nor the type of ROW vegetation inspections, as directed by the requirement.
FAC-003-1	R1.2.	The Transmission Owner, in the TVMP, shall identify and document clearances between vegetation and any overhead, ungrounded supply conductors, taking into	N/A	N/A	N/A	The responsible entity, in its TVMP, failed to identify and document clearances between

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
		consideration transmission line voltage, the effects of ambient temperature on conductor sag under maximum design loading, and the effects of wind velocities on conductor sway. Specifically, the Transmission Owner shall establish clearances to be achieved at the time of vegetation management work identified herein as Clearance 1, and shall also establish and maintain a set of clearances identified herein as Clearance 2 to prevent flashover between vegetation and overhead ungrounded supply conductors.				vegetation and any overhead, ungrounded supply conductors. OR The responsible entity, in its TVMP, failed to take into consideration transmission line voltage, or the effects of ambient temperature on conductor sag under maximum design loading, or the effects of wind velocities on conductor sway. OR The responsible entity, in its TVMP, failed to establish Clearance 1 or Clearance 2 values.
FAC-003-1	R1.2.1.	Clearance 1 — The Transmission Owner shall determine and document appropriate clearance distances to be achieved at the time of transmission vegetation management work based upon local conditions and the expected time frame in which the Transmission Owner plans to return for future vegetation management work. Local conditions may include, but are not limited to: operating voltage, appropriate vegetation management techniques, fire risk, reasonably anticipated tree and conductor movement, species types and growth rates, species failure characteristics, local climate and rainfall patterns, line terrain and elevation, location	N/A	N/A	N/A	The responsible entity failed to determine and document an appropriate clearance distance to be achieved at the time of transmission vegetation management work taking into account local conditions and the expected time frame in which the responsible entity expects to return for future vegetation

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
		of the vegetation within the span, and worker approach distance requirements. Clearance 1 distances shall be greater than those defined by Clearance 2 below.				management work. OR The responsible entity documented a Clearance 1 value that was smaller than its Clearance 2 value.
FAC-003-1	R1.2.2.	Clearance 2 — The Transmission Owner shall determine and document specific radial clearances to be maintained between vegetation and conductors under all rated electrical operating conditions. These minimum clearance distances are necessary to prevent flashover between vegetation and conductors and will vary due to such factors as altitude and operating voltage. These Transmission Owner-specific minimum clearance distances shall be no less than those set forth in the Institute of Electrical and Electronics Engineers (IEEE) Standard 516-2003 (*Guide for Maintenance Methods on Energized Power Lines*) and as specified in its Section 4.2.2.3, Minimum Air Insulation Distances without Tools in the Air Gap.	N/A	N/A	N/A	The responsible entity failed to determine and document Clearance 2 values taking into account local conditions and the expected time frame in which the responsible entity expects to return for future vegetation management work.
FAC-003-1	R1.2.2.1.	Where transmission system transient overvoltage factors are not known, clearances shall be derived from Table 5, IEEE 516-2003, phase-to-ground distances, with appropriate altitude correction factors applied.	N/A	N/A	N/A	Where transmission system transient overvoltage factors were not known, clearances were not derived from Table 5, IEEE 516-2003, phase-to-ground distances, with appropriate altitude correction factors applied.

		the planned vegetation management work and ensuring that the vegetation management work was completed according to work specifications.	requirement.	specified in the requirement.		
FAC-003-1	R3.	The Transmission Owner shall report quarterly to its RRO, or the RRO's designee, sustained transmission line outages determined by the Transmission Owner to have been caused by vegetation.	The responsible entity failed to provide a quarterly outage report, but did not experience any reportable outages. OR The responsible entity provided a quarterly report, but failed to report in the manner specified by one or more of the following subcomponents of R3: R3.1 or R3.2.	The responsible entity provided a quarterly report, but failed to include information required by R3.3.	The responsible entity provided a quarterly outage report, but failed to include a reportable Category 3 outage as described in R3.4.3.	The responsible entity experienced reportable outages but failed to provide a quarterly report. OR The responsible entity provided a quarterly outage report, but failed to include a reportable Category 1 (as described in R3.4.1) or Category 2 outage (as described in R3.4.2).
FAC-003-1	R3.1.	Multiple sustained outages on an individual line, if caused by the same vegetation, shall be reported as one outage regardless of the actual number of outages within a 24-hour period.	N/A	N/A	N/A	N/A
FAC-003-1	R3.2.	The Transmission Owner is not required to report to the RRO, or the RRO's designee, certain sustained transmission line outages caused by vegetation: (1) Vegetation-related outages that result from vegetation falling into lines from outside the ROW that result from natural disasters shall not be considered reportable (examples of disasters that could create non-reportable outages include, but are not limited to, earthquakes, fires, tornados, hurricanes, landslides, wind shear, major storms as defined either by the Transmission Owner or an applicable	N/A	N/A	N/A	N/A

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
		regulatory body, ice storms, and floods), and (2) Vegetation-related outages due to human or animal activity shall not be considered reportable (examples of human or animal activity that could cause a non-reportable outage include, but are not limited to, logging, animal severing tree, vehicle contact with tree, arboricultural activities or horticultural or agricultural activities, or removal or digging of vegetation).				
FAC-003-1	R3.3.	The outage information provided by the Transmission Owner to the RRO, or the RRO's designee, shall include at a minimum: the name of the circuit(s) outaged, the date, time and duration of the outage; a description of the cause of the outage; other pertinent comments; and any countermeasures taken by the Transmission Owner.	N/A	N/A	N/A	N/A
FAC-003-1	R3.4.	An outage shall be categorized as one of the following:	N/A	N/A	N/A	N/A
FAC-003-1	R3.4.1.	Category 1 — Grow-ins: Outages caused by vegetation growing into lines from vegetation inside and/or outside of the ROW;	N/A	N/A	N/A	N/A
FAC-003-1	R3.4.2.	Category 2 — Fall-ins: Outages caused by vegetation falling into lines from inside the ROW;	N/A	N/A	N/A	N/A
FAC-003-1	R3.4.3.	Category 3 — Fall-ins: Outages caused by vegetation falling into lines from outside the ROW.	N/A	N/A	N/A	N/A
FAC-003-1	R4.	The RRO shall report the outage information provided to it by Transmission Owner's, as required by Requirement 3, quarterly to NERC, as well as any actions	Not applicable.	Not applicable.	The RRO did not submit a quarterly report to NERC for a	The RRO did not submit a quarterly report to NERC for more than two

PRC-021-1	R2.	Each Transmission Owner and Distribution Provider that owns a UVLS program shall provide its UVLS program data to the Regional Reliability Organization within 30 calendar days of a request.	The responsible entity updated its UVLS data more than 30 calendar days but less than or equal to 40 calendar days following a request from its Regional Reliability Organization.	The responsible entity updated its UVLS data more than 40 calendar days but less than or equal to 50 calendar days following a request from its Regional Reliability Organization.	The responsible entity updated its UVLS data more than 50 calendar days but less than or equal to 60 calendar days following a request from its Regional Reliability Organization.	The responsible entity did not update its UVLS data for more than 60 calendar days following a request from its Regional Reliability Organization.
PRC-022-1	R1.	Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program to mitigate the risk of voltage collapse or voltage instability in the BES shall analyze and document all UVLS operations and Misoperations. The analysis shall include:	The overall analysis program did not address one of the subrequirements in R1.1 through R1.5.	The overall analysis program did not address two of the subrequirements in R1.1 through R1.5.	The overall analysis program did not address three of the subrequirements in R1.1 through R1.5.	The responsible entity failed to analyze and document a UVLS operation and Misoperation. OR The overall analysis program did not address four or more of the subrequirements in R1.1 through R1.5.
PRC-022-1	R1.1.	A description of the event including initiating conditions.	N/A	N/A	N/A	N/A
PRC-022-1	R1.2.	A review of the UVLS set points and tripping times.	N/A	N/A	N/A	N/A

		Term Planning].				
PRC-023-1	R2.	The Transmission Owner, Generator Owner, or Distribution Provider that uses a circuit capability with the practical limitations described in R1.6, R1.7, R1.8, R1.9, R1.12, or R1.13 shall use the calculated circuit capability as the Facility Rating of the circuit and shall obtain the agreement of the Planning Coordinator, Transmission Operator, and Reliability Coordinator with the calculated circuit capability. [Time Horizon: Long Term Planning]	Criteria described in R1.6, R1.7. R1.8. R1.9, R1.12, or R.13 was used but evidence does not exist that agreement was obtained in accordance with R2.			
PRC-023-1	R3.	The Planning Coordinator shall determine which of the facilities (transmission lines operated at 100 kV to 200 kV and transformers with low voltage terminals connected at 100 kV to 200 kV) in its Planning Coordinator Area are critical to the reliability of the Bulk Electric System to identify the facilities from 100 kV to 200 kV that must meet Requirement 1 to prevent potential cascade tripping that may occur when protective relay settings limit transmission loadability. [Time Horizon: Long Term Planning]		Provided the list of facilities critical to the reliability of the Bulk Electric System to the appropriate Reliability Coordinators, Transmission Owners, Generator Owners, and Distribution Providers between 31 days and 45 days after the list was established or updated.	Provided the list of facilities critical to the reliability of the Bulk Electric System to the appropriate Reliability Coordinators, Transmission Owners, Generator Owners, and Distribution Providers between 46 days and 60 days after list was established or updated.	Does not have a process in place to determine facilities that are critical to the reliability of the Bulk Electric System. OR Does not maintain a current list of facilities critical to the reliability of the Bulk Electric System, OR Did not provide the list of facilities critical to the reliability of the Bulk Electric System to the appropriate Reliability Coordinators, Transmission Owners, Generator Owners, and Distribution Providers, or provided the list more than 60

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						days after the list was established or updated.
PRC-023-2	R1	Each Transmission Owner, Generator Owner, and Distribution Provider shall use any one of the following criteria (Requirement R1, criteria 1 through 13) for any specific circuit terminal to prevent its phase protective relay settings from limiting transmission system loadability while maintaining reliable protection of the BES for all fault conditions. Each Transmission Owner, Generator Owner, and Distribution Provider shall evaluate relay loadability at 0.85 per unit voltage and a power factor angle of 30 degrees. [See Standard for Criteria]	N/A	N/A	N/A	The responsible entity did not use any one of the following criteria (Requirement R1 criterion 1 through 13) for any specific circuit terminal to prevent its phase protective relay settings from limiting transmission system loadability while maintaining reliable protection of the Bulk Electric System for all fault conditions. OR The responsible entity did not evaluate relay loadability at 0.85 per unit voltage and a power factor angle of 30 degrees.
PRC-023-2	R2	Each Transmission Owner, Generator Owner, and Distribution Provider shall set its out-of-step blocking elements to allow tripping of phase protective relays for faults that occur during the loading conditions used to verify transmission line relay loadability per Requirement R1.	N/A	N/A	N/A	The responsible entity failed to ensure that its out-of-step blocking elements allowed tripping of phase protective relays for faults that occur during the loading conditions used to verify transmission line relay loadability per Requirement R1.

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
PRC-023-2	R3	Each Transmission Owner, Generator Owner, and Distribution Provider that uses a circuit capability with the practical limitations described in Requirement R1, criterion 6, 7, 8, 9, 12, or 13 shall use the calculated circuit capability as the Facility Rating of the circuit and shall obtain the agreement of the Planning Coordinator, Transmission Operator, and Reliability Coordinator with the calculated circuit capability.	N/A	N/A	N/A	The responsible entity that uses a circuit capability with the practical limitations described in Requirement R1 criterion 6, 7, 8, 9, 12, or 13 did not use the calculated circuit capability as the Facility Rating of the circuit. OR The responsible entity did not obtain the agreement of the Planning Coordinator, Transmission Operator, and Reliability Coordinator with the calculated circuit capability.
PRC-023-2	R4	Each Transmission Owner, Generator Owner, and Distribution Provider that chooses to use Requirement R1 criterion 2 as the basis for verifying transmission line relay loadability shall provide its Planning Coordinator, Transmission Operator, and Reliability Coordinator with an updated list of circuits associated with those transmission line relays at least once each calendar year, with no more than 15 months between reports.	N/A	N/A	N/A	The responsible entity did not provide its Planning Coordinator, Transmission Operator, and Reliability Coordinator with an updated list of circuits that have transmission line relays set according to the criteria established in

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						Requirement R1 criterion 2 at least once each calendar year, with no more than 15 months between reports.
PRC-023-2	R5	Each Transmission Owner, Generator Owner, and Distribution Provider that sets transmission line relays according to Requirement R1 criterion 12 shall provide an updated list of the circuits associated with those relays to its Regional Entity at least once each calendar year, with no more than 15 months between reports, to allow the ERO to compile a list of all circuits that have protective relay settings that limit circuit capability.	N/A	N/A	N/A	The responsible entity did not provide its Regional Entity, with an updated list of circuits that have transmission line relays set according to the criteria established in Requirement R1 criterion 12 at least once each calendar year, with no more than 15 months between reports.
PRC-023-2	R6	Each Planning Coordinator shall conduct an assessment at least once each calendar year, with no more than 15 months between assessments, by applying the criteria in Attachment B to determine the circuits in its Planning Coordinator area for which Transmission Owners, Generator Owners, and Distribution Providers must comply with Requirements R1 through R5. The Planning Coordinator shall: *[See standard for what the Planning Coordinator shall do]*	N/A	The Planning Coordinator used the criteria established within Attachment B to determine the circuits in its Planning Coordinator area for which applicable entities must comply with the standard and met parts 6.1 and 6.2, but more than 15 months and less than 24 months lapsed between	The Planning Coordinator used the criteria established within Attachment B to determine the circuits in its Planning Coordinator area for which applicable entities must comply with the standard and met parts 6.1 and 6.2, but 24 months or more lapsed between assessments. VAR-001-2	R1.	Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators.	The applicable entity did not ensure the development and/or maintenance and/or implementation of formal policies and procedures, as directed by the requirement, affecting 5% or less of their individual and neighboring areas voltage levels and Mvar flows.	The applicable entity did not ensure the development and/or maintenance and/or implementation of formal policies and procedures, as directed by the requirement, affecting between 5-10% of their individual and neighboring areas voltage levels and Mvar flows.	The applicable entity did not ensure the development and/or maintenance and/or implementation of formal policies and procedures, as directed by the requirement, affecting 10-15%, inclusive, of their individual and neighboring areas voltage levels and Mvar flows.	The applicable entity did not ensure the development and/or maintenance and/or implementation of formal policies and procedures, as directed by the requirement, affecting greater than 15% of their individual and neighboring areas voltage levels and Mvar flows.
VAR-001-2	R2.	Each Transmission Operator shall acquire sufficient reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching;, and controllable load – within its area to protect the voltage levels under normal and Contingency conditions. This includes the Transmission Operator's share of the reactive requirements of interconnecting transmission circuits.	The Transmission Operator acquired 95% but less than 100% of the reactive resources within its area needed to protect the voltage levels under normal and Contingency conditions including the Transmission Operator's share of the reactive requirements of interconnecting transmission circuits.	The Transmission Operator acquired 90% but less than 95% of the reactive resources within its area needed to protect the voltage levels under normal and Contingency conditions including the Transmission Operator's share of the reactive requirements of interconnecting transmission circuits.	The Transmission Operator acquired 85% but less than 90% of the reactive resources within its area needed to protect the voltage levels under normal and Contingency conditions including the Transmission Operator's share of the reactive requirements of interconnecting transmission circuits.	The Transmission Operator acquired less than 85% of the reactive resources within its area needed to protect the voltage levels under normal and Contingency conditions including the Transmission Operator's share of the reactive requirements of interconnecting transmission circuits.
VAR-001-2	R3.	The Transmission Operator shall specify criteria that exempts generators from compliance with the requirements defined in Requirement 4, and Requirement 6.1.	N/A	N/A	N/A	The Transmission Operator did not specify criteria that exempts generators from compliance with

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						the requirements defined in Requirement 4, and Requirement 6.1. to all of the parties involved.
VAR-001-2	R3.1.	Each Transmission Operator shall maintain a list of generators in its area that are exempt from following a voltage or Reactive Power schedule.	The Transmission Operator maintain the list of generators in its area that are exempt from following a voltage or Reactive Power schedule but is missing one or more entities. The missing entities shall represent less than 25% of those eligible for the list	The Transmission Operator maintain the list of generators in its area that are exempt from following a voltage or Reactive Power schedule but is missing two or more entities. The missing entities shall represent less than 50% of those eligible for the list	The Transmission Operator maintain the list of generators in its area that are exempt from following a voltage or Reactive Power schedule but is missing three or more entities. The missing entities shall represent less than 75% of those eligible for the list	The Transmission Operator maintain the list of generators in its area that are exempt from following a voltage or Reactive Power schedule but is missing four or more entities. The missing entities shall represent 75% or more of those eligible for the list.
VAR-001-2	R3.2.	For each generator that is on this exemption list, the Transmission Operator shall notify the associated Generator Owner.	The Transmission Operator failed to notify up to 25% of the associated Generator Owner of each generator that are on this exemption list.	The Transmission Operator failed to notify 25% up to 50% of the associated Generator Owners of each generator that are on this exemption list.	The Transmission Operator failed to notify 50% up to 75% of the associated Generator Owner of each generator that are on this exemption list.	The Transmission Operator failed to notify 75% up to 100% of the associated Generator Owner of each generator that are on this exemption list.
VAR-001-2	R4.	Each Transmission Operator shall specify a voltage or Reactive Power schedule [4] at the interconnection between the generator facility and the Transmission Owner's facilities to be maintained by each generator. The Transmission Operator shall provide the voltage or Reactive Power schedule to the	N/A	N/A	The Transmission Operator provide Voltage or Reactive Power schedules were for some but not all generating units as required in R4.	The Transmission Operator provide No evidence that voltage or Reactive Power schedules were provided to Generator Operators as required

[4] The voltage schedule is a target voltage to be maintained within a tolerance band during a specified period.

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
		associated Generator Operator and direct the Generator Operator to comply with the schedule in automatic voltage control mode (AVR in service and controlling voltage).				in R4.
VAR-001-2	R5. (Retired)	Each Purchasing-Selling Entity and Load Serving Entity shall arrange for (self-provide or purchase) reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching;, and controllable load– to satisfy its reactive requirements identified by its Transmission Service Provider.	The applicable entity did not arrange for reactive resources, as directed by the requirement, affecting 5% or less of its reactive requirements.	The applicable entity did not arrange for reactive resources, as directed by the requirement, affecting between 5-10% of its reactive requirements.	The applicable entity did not arrange for reactive resources, as directed by the requirement, affecting 10-15%, inclusive, of its reactive requirements.	The applicable entity did not arrange for reactive resources, as directed by the requirement, affecting greater than 15% of its reactive requirements.
VAR-001-2	R6.	The Transmission Operator shall know the status of all transmission Reactive Power resources, including the status of voltage regulators and power system stabilizers.	The applicable entity did not know the status of all transmission reactive power resources, including the status of voltage regulators and power system stabilizers, as directed by the requirement, affecting 5% or less of the required resources.	The applicable entity did not know the status of all transmission reactive power resources, including the status of voltage regulators and power system stabilizers, as directed by the requirement, affecting between 5-10% of the required resources.	The applicable entity did not know the status of all transmission reactive power resources, including the status of voltage regulators and power system stabilizers, as directed by the requirement, affecting 10-15%, inclusive, of the required resources.	The applicable entity did not know the status of all transmission reactive power resources, including the status of voltage regulators and power system stabilizers, as directed by the requirement, affecting 15% or greater of required resources.
VAR-001-2	R6.1.	When notified of the loss of an automatic voltage regulator control, the Transmission Operator shall direct the Generator Operator to maintain or change either its voltage schedule or its Reactive Power schedule.	N/A	N/A	N/A	The Transmission Operator has not provided evidence to show that directives were issued to the Generator Operator to maintain or change either its voltage schedule or its Reactive Power

Standard Number	Requirement Number	Text of Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
						schedule in accordance with R6.1.
VAR-001-2	R7.	The Transmission Operator shall be able to operate or direct the operation of devices necessary to regulate transmission voltage and reactive flow.	The applicable entity was not able to operate or direct the operation of devices necessary to regulate transmission voltage and reactive flow, affecting 5% or less of the required devices.	The applicable entity was not able to operate or direct the operation of devices necessary to regulate transmission voltage and reactive flow, affecting between 5-10% of the required devices.	The applicable entity was not able to operate or direct the operation of devices necessary to regulate transmission voltage and reactive flow, affecting 10-15%, inclusive, of the required devices.	The applicable entity was not able to operate or direct the operation of devices necessary to regulate transmission voltage and reactive flow, affecting greater than 15% of the required devices.
VAR-001-2	R8.	Each Transmission Operator shall operate or direct the operation of capacitive and inductive reactive resources within its area – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching; controllable load; and, if necessary, load shedding – to maintain system and Interconnection voltages within established limits.	The applicable entity did operate or direct the operation of capacitive and inductive reactive resources or load shedding within its area, as directed by the requirement, affecting 5% or less of the required resources.	The applicable entity did operate or direct the operation of capacitive and inductive reactive resources or load shedding within its area, as directed by the requirement, affecting between 5-10% of the required resources.	The applicable entity did operate or direct the operation of capacitive and inductive reactive resources or load shedding within its area, as directed by the requirement, affecting 10-15%, inclusive, of the required resources.	The applicable entity did operate or direct the operation of capacitive and inductive reactive resources or load shedding within its area, as directed by the requirement, affecting greater than 15% of the required resources.
VAR-001-2	R9.	Each Transmission Operator shall maintain reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching;, and controllable load– to support its voltage under first Contingency conditions.	The Transmission Operator maintains 95% or more of the reactive resources needed to support its voltage under first Contingency conditions.	The Transmission Operator maintains 85% or more but less than 95% of the reactive resources needed to support its voltage under first Contingency conditions.	The Transmission Operator maintains 75% or more but less then 85% of the reactive resources needed to support its voltage under first Contingency conditions.	The Transmission Operator maintains less than 75% of the reactive resources needed to support its voltage under first Contingency conditions.
VAR-001-2	R9.1.	Each Transmission Operator shall disperse and locate the reactive resources so that the resources can be applied effectively and quickly when Contingencies occur.	The applicable entity did not disperse and/or locate the reactive resources, as directed in	The applicable entity did not disperse and/or locate the reactive resources, as	The applicable entity did not disperse and/or locate the reactive resources, as directed	The applicable entity did not disperse and/or locate the reactive resources, as directed

CIP-003-4	R3.3.	Authorized exceptions to the cyber security policy must be reviewed and approved annually by the senior manager or delegate(s) to ensure the exceptions are still required and valid. Such review and approval shall be documented.
CIP-003-4	R4.2.	The Responsible Entity shall classify information to be protected under this program based on the sensitivity of the Critical Cyber Asset information.
CIP-005-3a	R2.6.	Appropriate Use Banner —Where technically feasible, electronic access control devices shall display an appropriate use banner on the user screen upon all interactive access attempts. The Responsible Entity shall maintain a document identifying the content of the banner.

Standard Version	Requirement Name	Requirement Text
CIP-005-4a	R2.6.	Appropriate Use Banner —Where technically feasible, electronic access control devices shall display an appropriate use banner on the user screen upon all interactive access attempts. The Responsible Entity shall maintain a document identifying the content of the banner.
CIP-007-3	R7.3.	The Responsible Entity shall maintain records that such assets were disposed of or redeployed in accordance with documented procedures.
CIP-007-4	R7.3.	The Responsible Entity shall maintain records that such assets were disposed of or redeployed in accordance with documented procedures.
EOP-005-2	R3.1.	If there are no changes to the previously submitted restoration plan, the Transmission Operator shall confirm annually on a predetermined schedule to its Reliability Coordinator that it has reviewed its restoration plan and no changes were necessary.
FAC-002-1	R2.	The Planning Authority, Transmission Planner, Generator Owner, Transmission Owner, Load-Serving Entity, and Distribution Provider shall each retain its documentation (of its evaluation of the reliability impact of the new facilities and their connections on the interconnected transmission systems) for three years and shall provide the documentation to the Regional Reliability Organization(s) and NERC on request (within 30 calendar days).
FAC-008-1	R2.	The Transmission Owner and Generator Owner shall each make its Facility Ratings Methodology available for inspection and technical review by those Reliability Coordinators, Transmission Operators, Transmission Planners, and Planning Authorities that have responsibility for the area in which the associated Facilities are located, within 15 business days of receipt of a request.
FAC-008-1	R3.	If a Reliability Coordinator, Transmission Operator, Transmission Planner, or Planning Authority provides written comments on its technical review of a Transmission Owner's or Generator Owner's Facility Ratings Methodology, the Transmission Owner or Generator Owner shall provide a written response to that commenting entity within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Facility Ratings Methodology and, if no change will be made to that Facility Ratings Methodology, the reason why.
FAC-008-3	R4.	Each Transmission Owner shall make its Facility Ratings methodology and each Generator Owner shall each make its documentation for determining its Facility Ratings and its Facility Ratings methodology available for inspection and technical review by those Reliability Coordinators, Transmission Operators, Transmission Planners and Planning Coordinators that have responsibility for the area in which the associated Facilities are located, within 21 calendar days of receipt of a request.

Standard Version	Requirement Name	Requirement Text
FAC-008-3	R5.	If a Reliability Coordinator, Transmission Operator, Transmission Planner or Planning Coordinator provides documented comments on its technical review of a Transmission Owner's Facility Ratings methodology or Generator Owner's documentation for determining its Facility Ratings and its Facility Rating methodology, the Transmission Owner or Generator Owner shall provide a response to that commenting entity within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Facility Ratings methodology and, if no change will be made to that Facility Ratings methodology, the reason why.
FAC-010-2.1	R5.	If a recipient of the SOL Methodology provides documented technical comments on the methodology, the Planning Authority shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the SOL Methodology and, if no change will be made to that SOL Methodology, the reason why.
FAC-011-2	R5.	If a recipient of the SOL Methodology provides documented technical comments on the methodology, the Reliability Coordinator shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the SOL Methodology and, if no change will be made to that SOL Methodology, the reason why.
FAC-013-2	R3.	If a recipient of the Transfer Capability methodology provides documented concerns with the methodology, the Planning Coordinator shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Transfer Capability methodology and, if no change will be made to that Transfer Capability methodology, the reason why.
INT-007-1	R1.2.	All reliability entities involved in the Arranged Interchange are currently in the NERC registry.
IRO-016-1	R2.	The Reliability Coordinator shall document (via operator logs or other data sources) its actions taken for either the event or for the disagreement on the problem(s) or for both.
NUC-001-2	R9.1.	Administrative elements:
NUC-001-2	R9.1.1.	Definitions of key terms used in the agreement.
NUC-001-2	R9.1.2.	Names of the responsible entities, organizational relationships, and responsibilities related to the NPIRs.
NUC-001-2	R9.1.3.	A requirement to review the agreement(s) at least every three years.
NUC-001-2	R9.1.4.	A dispute resolution mechanism.

Standard Version	Requirement Name	Requirement Text
PRC-010-0	R2.	The Load-Serving Entity, Transmission Owner, Transmission Operator, and Distribution Provider that owns or operates a UVLS program shall provide documentation of its current UVLS program assessment to its Regional Reliability Organization and NERC on request (30 calendar days).
PRC-022-1	R2.	Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program shall provide documentation of its analysis of UVLS program performance to its Regional Reliability Organization within 90 calendar days of a request.
VAR-001-2	R5.	Each Purchasing-Selling Entity and Load Serving Entity shall arrange for (self-provide or purchase) reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching;, and controllable load– to satisfy its reactive requirements identified by its Transmission Service Provider.

A. Introduction

1. **Title:** **Automatic Generation Control**

2. **Number:** BAL-005-0.2b

3. **Purpose:** This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the Regulating Reserve. The standard also ensures that all facilities and load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved.

4. **Applicability:**

   4.1. Balancing Authorities

   4.2. Generator Operators

   4.3. Transmission Operators

   4.4. Load Serving Entities

5. **Effective Date:** May 13, 2009

B. Requirements

R1. All generation, transmission, and load operating within an Interconnection must be included within the metered boundaries of a Balancing Authority Area.

R1.1. Each Generator Operator with generation facilities operating in an Interconnection shall ensure that those generation facilities are included within the metered boundaries of a Balancing Authority Area.

R1.2. Each Transmission Operator with transmission facilities operating in an Interconnection shall ensure that those transmission facilities are included within the metered boundaries of a Balancing Authority Area.

R1.3. Each Load-Serving Entity with load operating in an Interconnection shall ensure that those loads are included within the metered boundaries of a Balancing Authority Area.

R2. Each Balancing Authority shall maintain Regulating Reserve that can be controlled by AGC to meet the Control Performance Standard. (Retired)

R3. A Balancing Authority providing Regulation Service shall ensure that adequate metering, communications, and control equipment are employed to prevent such service from becoming a Burden on the Interconnection or other Balancing Authority Areas.

R4. A Balancing Authority providing Regulation Service shall notify the Host Balancing Authority for whom it is controlling if it is unable to provide the service, as well as any Intermediate Balancing Authorities.

R5. A Balancing Authority receiving Regulation Service shall ensure that backup plans are in place to provide replacement Regulation Service should the supplying Balancing Authority no longer be able to provide this service.

R6. The Balancing Authority's AGC shall compare total Net Actual Interchange to total Net Scheduled Interchange plus Frequency Bias obligation to determine the Balancing Authority's ACE. Single Balancing Authorities operating asynchronously may employ alternative ACE calculations such as (but not limited to) flat frequency control. If a Balancing Authority is unable to calculate ACE for more than 30 minutes it shall notify its Reliability Coordinator.

R7. The Balancing Authority shall operate AGC continuously unless such operation adversely impacts the reliability of the Interconnection. If AGC has become inoperative, the Balancing Authority shall use manual control to adjust generation to maintain the Net Scheduled Interchange.

R8. The Balancing Authority shall ensure that data acquisition for and calculation of ACE occur at least every six seconds.

R8.1. Each Balancing Authority shall provide redundant and independent frequency metering equipment that shall automatically activate upon detection of failure of the primary source. This overall installation shall provide a minimum availability of 99.95%.

R9. The Balancing Authority shall include all Interchange Schedules with Adjacent Balancing Authorities in the calculation of Net Scheduled Interchange for the ACE equation.

R9.1. Balancing Authorities with a high voltage direct current (HVDC) link to another Balancing Authority connected asynchronously to their Interconnection may choose to omit the Interchange Schedule related to the HVDC link from the ACE equation if it is modeled as internal generation or load.

R10. The Balancing Authority shall include all Dynamic Schedules in the calculation of Net Scheduled Interchange for the ACE equation.

R11. Balancing Authorities shall include the effect of ramp rates, which shall be identical and agreed to between affected Balancing Authorities, in the Scheduled Interchange values to calculate ACE.

R12. Each Balancing Authority shall include all Tie Line flows with Adjacent Balancing Authority Areas in the ACE calculation.

R12.1. Balancing Authorities that share a tie shall ensure Tie Line MW metering is telemetered to both control centers, and emanates from a common, agreed-upon source using common primary metering equipment. Balancing Authorities shall ensure that megawatt-hour data is telemetered or reported at the end of each hour.

R12.2. Balancing Authorities shall ensure the power flow and ACE signals that are utilized for calculating Balancing Authority performance or that are transmitted for Regulation Service are not filtered prior to transmission, except for the Anti-aliasing Filters of Tie Lines.

R12.3. Balancing Authorities shall install common metering equipment where Dynamic Schedules or Pseudo-Ties are implemented between two or more Balancing Authorities to deliver the output of Jointly Owned Units or to serve remote load.

R13. Each Balancing Authority shall perform hourly error checks using Tie Line megawatt-hour meters with common time synchronization to determine the accuracy of its control equipment. The Balancing Authority shall adjust the component (e.g., Tie Line meter) of ACE that is in error (if known) or use the interchange meter error (I_{ME}) term of the ACE equation to compensate for any equipment error until repairs can be made.

R14. The Balancing Authority shall provide its operating personnel with sufficient instrumentation and data recording equipment to facilitate monitoring of control performance, generation response, and after-the-fact analysis of area performance. As a minimum, the Balancing Authority shall provide its operating personnel with real-time values for ACE, Interconnection frequency and Net Actual Interchange with each Adjacent Balancing Authority Area.

R15. The Balancing Authority shall provide adequate and reliable backup power supplies and shall periodically test these supplies at the Balancing Authority's control center and other critical

locations to ensure continuous operation of AGC and vital data recording equipment during loss of the normal power supply.

R16. The Balancing Authority shall sample data at least at the same periodicity with which ACE is calculated. The Balancing Authority shall flag missing or bad data for operator display and archival purposes. The Balancing Authority shall collect coincident data to the greatest practical extent, i.e., ACE, Interconnection frequency, Net Actual Interchange, and other data shall all be sampled at the same time.

R17. Each Balancing Authority shall at least annually check and calibrate its time error and frequency devices against a common reference. The Balancing Authority shall adhere to the minimum values for measuring devices as listed below:

Device	Accuracy
Digital frequency transducer	≤ 0.001 Hz
MW, MVAR, and voltage transducer	≤ 0.25 % of full scale
Remote terminal unit	≤ 0.25 % of full scale
Potential transformer	≤ 0.30 % of full scale
Current transformer	≤ 0.50 % of full scale

C. Measures

Not specified.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Balancing Authorities shall be prepared to supply data to NERC in the format defined below:

1.1.1. Within one week upon request, Balancing Authorities shall provide NERC or the Regional Reliability Organization CPS source data in daily CSV files with time stamped one minute averages of: 1) ACE and 2) Frequency Error.

1.1.2. Within one week upon request, Balancing Authorities shall provide NERC or the Regional Reliability Organization DCS source data in CSV files with time stamped scan rate values for: 1) ACE and 2) Frequency Error for a time period of two minutes prior to thirty minutes after the identified Disturbance.

1.2. Compliance Monitoring Period and Reset Timeframe

Not specified.

1.3. Data Retention

1.3.1. Each Balancing Authority shall retain its ACE, actual frequency, Scheduled Frequency, Net Actual Interchange, Net Scheduled Interchange, Tie Line meter error correction and Frequency Bias Setting data in digital format at the same scan rate at which the data is collected for at least one year.

1.3.2. Each Balancing Authority or Reserve Sharing Group shall retain documentation of the magnitude of each Reportable Disturbance as well as the ACE charts and/or samples used to calculate Balancing Authority or

Reserve Sharing Group disturbance recovery values. The data shall be retained for one year following the reporting quarter for which the data was recorded.

1.4. Additional Compliance Information

Not specified.

2. Levels of Non-Compliance

Not specified.

E. Regional Differences

None identified.

F. Associated Documents

1. Appendix 1 — Interpretation of Requirement R17 (February 12, 2008).

Version History

Version	Date	Action	Change Tracking
0	February 8, 2005	Adopted by NERC Board of Trustees	New
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed "Proposed" from Effective Date	Errata
0a	December 19, 2007	Added Appendix 1 – Interpretation of R17 approved by BOT on May 2, 2007	Addition
0a	January 16, 2008	Section F: added "1."; changed hyphen to "en dash." Changed font style for "Appendix 1" to Arial	Errata

0.2b	TBD	R2 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

Appendix 1

Effective Date: August 27, 2008 (U.S.)

Interpretation of BAL-005-0 Automatic Generation Control, R17

Request for Clarification received from PGE on July 31, 2007

PGE requests clarification regarding the measuring devices for which the requirement applies, specifically clarification if the requirement applies to the following measuring devices:

- *Only equipment within the operations control room*
- *Only equipment that provides values used to calculate AGC ACE*
- *Only equipment that provides values to its SCADA system*
- *Only equipment owned or operated by the BA*
- *Only to new or replacement equipment*
- *To all equipment that a BA owns or operates*

BAL-005-0

R17. Each Balancing Authority shall at least annually check and calibrate its time error and frequency devices against a common reference. The Balancing Authority shall adhere to the minimum values for measuring devices as listed below:

Device	Accuracy
Digital frequency transducer	≤ 0.001 Hz
MW, MVAR, and voltage transducer	≤ 0.25% of full scale
Remote terminal unit	≤ 0.25% of full scale
Potential transformer	≤ 0.30% of full scale
Current transformer	≤ 0.50% of full scale

Existing Interpretation Approved by Board of Trustees May 2, 2007

BAL-005-0, Requirement 17 requires that the Balancing Authority check and calibrate its control room time error and frequency devices against a common reference at least annually. The requirement to "annually check and calibrate" does not address any devices outside of the operations control room.

The table represents the design accuracy of the listed devices. There is no requirement within the standard to "annually check and calibrate" the devices listed in the table, unless they are included in the control center time error and frequency devices.

Interpretation provided by NERC Frequency Task Force on September 7, 2007 and Revised on November 16, 2007

As noted in the existing interpretation, BAL-005-0 Requirement 17 applies only to the time error and frequency devices that provide, or in the case of back-up equipment may provide, input into the reporting or compliance ACE equation or provide real-time time error or frequency information to the system

operator. Frequency inputs from other sources that are for reference only are excluded. The time error and frequency measurement devices may not necessarily be located in the system operations control room or owned by the Balancing Authority; however the Balancing Authority has the responsibility for the accuracy of the frequency and time error measurement devices. No other devices are included in R 17. The other devices listed in the table at the end of R17 are for reference only and do not have any mandatory calibration or accuracy requirements.

New or replacement equipment that provides the same functions noted above requires the same calibrations. Some devices used for time error and frequency measurement cannot be calibrated as such. In this case, these devices should be cross-checked against other properly calibrated equipment and replaced if the devices do not meet the required level of accuracy.

A. Introduction

1. Title: Cyber Security — Security Management Controls

2. Number: CIP-003-3

3. Purpose: Standard CIP-003-3 requires that Responsible Entities have minimum security management controls in place to protect Critical Cyber Assets. Standard CIP-003-3 should be read as part of a group of standards numbered Standards CIP-002-3 through CIP-009-3.

4. Applicability:

4.1. Within the text of Standard CIP-003-3, "Responsible Entity" shall mean:

4.1.1 Reliability Coordinator.

4.1.2 Balancing Authority.

4.1.3 Interchange Authority.

4.1.4 Transmission Service Provider.

4.1.5 Transmission Owner.

4.1.6 Transmission Operator.

4.1.7 Generator Owner.

4.1.8 Generator Operator.

4.1.9 Load Serving Entity.

4.1.10 NERC.

4.1.11 Regional Entity.

4.2. The following are exempt from Standard CIP-003-3:

4.2.1 Facilities regulated by the U.S. Nuclear Regulatory Commission or the Canadian Nuclear Safety Commission.

4.2.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.3 Responsible Entities that, in compliance with Standard CIP-002-3, identify that they have no Critical Cyber Assets shall only be required to comply with CIP-003-3 Requirement R2.

5. Effective Date: The first day of the third calendar quarter after applicable regulatory approvals have been received (or the Reliability Standard otherwise becomes effective the first day of the third calendar quarter after BOT adoption in those jurisdictions where regulatory approval is not required).

B. Requirements

R1. Cyber Security Policy — The Responsible Entity shall document and implement a cyber security policy that represents management's commitment and ability to secure its Critical Cyber Assets. The Responsible Entity shall, at minimum, ensure the following:

R1.1. The cyber security policy addresses the requirements in Standards CIP-002-3 through CIP-009-3, including provision for emergency situations.

R1.2. The cyber security policy is readily available to all personnel who have access to, or are responsible for, Critical Cyber Assets. (Retired)

R1.3. Annual review and approval of the cyber security policy by the senior manager assigned pursuant to R2.

R2. Leadership — The Responsible Entity shall assign a single senior manager with overall responsibility and authority for leading and managing the entity's implementation of, and adherence to, Standards CIP-002-3 through CIP-009-3.

R2.1. The senior manager shall be identified by name, title, and date of designation.

R2.2. Changes to the senior manager must be documented within thirty calendar days of the effective date.

R2.3. Where allowed by Standards CIP-002-3 through CIP-009-3, the senior manager may delegate authority for specific actions to a named delegate or delegates. These delegations shall be documented in the same manner as R2.1 and R2.2, and approved by the senior manager.

R2.4. The senior manager or delegate(s), shall authorize and document any exception from the requirements of the cyber security policy.

R3. Exceptions — Instances where the Responsible Entity cannot conform to its cyber security policy must be documented as exceptions and authorized by the senior manager or delegate(s). (Retired)

R3.1. Exceptions to the Responsible Entity's cyber security policy must be documented within thirty days of being approved by the senior manager or delegate(s). (Retired)

R3.2. Documented exceptions to the cyber security policy must include an explanation as to why the exception is necessary and any compensating measures. (Retired)

R3.3. Authorized exceptions to the cyber security policy must be reviewed and approved annually by the senior manager or delegate(s) to ensure the exceptions are still required and valid. Such review and approval shall be documented. (Retired)

R4. Information Protection — The Responsible Entity shall implement and document a program to identify, classify, and protect information associated with Critical Cyber Assets.

R4.1. The Critical Cyber Asset information to be protected shall include, at a minimum and regardless of media type, operational procedures, lists as required in Standard CIP-002-3, network topology or similar diagrams, floor plans of computing centers that contain Critical Cyber Assets, equipment layouts of Critical Cyber Assets, disaster recovery plans, incident response plans, and security configuration information.

R4.2. The Responsible Entity shall classify information to be protected under this program based on the sensitivity of the Critical Cyber Asset information. (Retired)

R4.3. The Responsible Entity shall, at least annually, assess adherence to its Critical Cyber Asset information protection program, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.

R5. Access Control — The Responsible Entity shall document and implement a program for managing access to protected Critical Cyber Asset information.

R5.1. The Responsible Entity shall maintain a list of designated personnel who are responsible for authorizing logical or physical access to protected information.

R5.1.1. Personnel shall be identified by name, title, and the information for which they are responsible for authorizing access.

R5.1.2. The list of personnel responsible for authorizing access to protected information shall be verified at least annually.

R5.2. The Responsible Entity shall review at least annually the access privileges to protected information to confirm that access privileges are correct and that they correspond with the Responsible Entity's needs and appropriate personnel roles and responsibilities.

R5.3. The Responsible Entity shall assess and document at least annually the processes for controlling access privileges to protected information.

R6. Change Control and Configuration Management — The Responsible Entity shall establish and document a process of change control and configuration management for adding, modifying, replacing, or removing Critical Cyber Asset hardware or software, and implement supporting configuration management activities to identify, control and document all entity or vendor-related changes to hardware and software components of Critical Cyber Assets pursuant to the change control process.

C. Measures

M1. The Responsible Entity shall make available documentation of its cyber security policy as specified in Requirement R1. Additionally, the Responsible Entity shall demonstrate that the cyber security policy is available as specified in Requirement R1.2. (R1.2 retired)

M2. The Responsible Entity shall make available documentation of the assignment of, and changes to, its leadership as specified in Requirement R2.

M3. The Responsible Entity shall make available documentation of the exceptions, as specified in Requirement R3. (Retired)

M4. The Responsible Entity shall make available documentation of its information protection program as specified in Requirement R4.

M5. The Responsible Entity shall make available its access control documentation as specified in Requirement R5.

M6. The Responsible Entity shall make available its change control and configuration management documentation as specified in Requirement R6.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

1.1.1 Regional Entity for Responsible Entities that do not perform delegated tasks for their Regional Entity.

1.1.2 ERO for Regional Entity.

1.1.3 Third-party monitor without vested interest in the outcome for NERC.

1.2. Compliance Monitoring Period and Reset Time Frame

Not applicable.

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

1.4.1 The Responsible Entity shall keep all documentation and records from the previous full calendar year unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

1.4.2 The Compliance Enforcement Authority in conjunction with the Registered Entity shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

1.5.1 None

2. Violation Severity Levels (To be developed later.)

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
2		Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a responsible entity. Rewording of Effective Date. Requirement R2 applies to all Responsible Entities, including Responsible Entities which have no Critical Cyber Assets. Modified the personnel identification information requirements in R5.1.1 to include name, title, and the information for which they are responsible for authorizing access (removed the business phone information). Changed compliance monitor to Compliance Enforcement Authority.	
3		Update version number from -2 to -3	
3	12/16/09	Approved by the NERC Board of Trustees	Update

3	TBD	R1.2, R3, R3.1, R3.2, R3.3, and R4.2 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. Title: Cyber Security — Security Management Controls

2. Number: CIP-003-4

3. Purpose: Standard CIP-003-4 requires that Responsible Entities have minimum security management controls in place to protect Critical Cyber Assets. Standard CIP-003-4 should be read as part of a group of standards numbered Standards CIP-002-4 through CIP-009-4.

4. Applicability:

4.1. Within the text of Standard CIP-003-4, "Responsible Entity" shall mean:

4.1.1 Reliability Coordinator.

4.1.2 Balancing Authority.

4.1.3 Interchange Authority.

4.1.4 Transmission Service Provider.

4.1.5 Transmission Owner.

4.1.6 Transmission Operator.

4.1.7 Generator Owner.

4.1.8 Generator Operator.

4.1.9 Load Serving Entity.

4.1.10 NERC.

4.1.11 Regional Entity.

4.2. The following are exempt from Standard CIP-003-4:

4.2.1 Facilities regulated by the Canadian Nuclear Safety Commission.

4.2.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.3 In nuclear plants, the systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F. R. Section 73.54

4.2.4 Responsible Entities that, in compliance with Standard CIP-002-4, identify that they have no Critical Cyber Assets shall only be required to comply with CIP-003-4 Requirement R2.

5. Effective Date: The first day of the eighth calendar quarter after applicable regulatory approvals have been received (or the Reliability Standard otherwise becomes effective the first day of the ninth calendar quarter after BOT adoption in those jurisdictions where regulatory approval is not required).

B. Requirements

R1. Cyber Security Policy — The Responsible Entity shall document and implement a cyber security policy that represents management's commitment and ability to secure its Critical Cyber Assets. The Responsible Entity shall, at minimum, ensure the following:

R1.1. The cyber security policy addresses the requirements in Standards CIP-002-4 through CIP-009-4, including provision for emergency situations.

R1.2. The cyber security policy is readily available to all personnel who have access to, or are responsible for, Critical Cyber Assets. (Retired)

R1.3. Annual review and approval of the cyber security policy by the senior manager assigned pursuant to R2.

R2. Leadership — The Responsible Entity shall assign a single senior manager with overall responsibility and authority for leading and managing the entity's implementation of, and adherence to, Standards CIP-002-4 through CIP-009-4.

R2.1. The senior manager shall be identified by name, title, and date of designation.

R2.2. Changes to the senior manager must be documented within thirty calendar days of the effective date.

R2.3. Where allowed by Standards CIP-002-4 through CIP-009-4, the senior manager may delegate authority for specific actions to a named delegate or delegates. These delegations shall be documented in the same manner as R2.1 and R2.2, and approved by the senior manager.

R2.4. The senior manager or delegate(s), shall authorize and document any exception from the requirements of the cyber security policy.

R3. Exceptions — Instances where the Responsible Entity cannot conform to its cyber security policy must be documented as exceptions and authorized by the senior manager or delegate(s). (Retired)

R3.1. Exceptions to the Responsible Entity's cyber security policy must be documented within thirty days of being approved by the senior manager or delegate(s). (Retired)

R3.2. Documented exceptions to the cyber security policy must include an explanation as to why the exception is necessary and any compensating measures. (Retired)

R3.3. Authorized exceptions to the cyber security policy must be reviewed and approved annually by the senior manager or delegate(s) to ensure the exceptions are still required and valid. Such review and approval shall be documented. (Retired)

R4. Information Protection — The Responsible Entity shall implement and document a program to identify, classify, and protect information associated with Critical Cyber Assets.

R4.1. The Critical Cyber Asset information to be protected shall include, at a minimum and regardless of media type, operational procedures, lists as required in Standard CIP-002-4, network topology or similar diagrams, floor plans of computing centers that contain Critical Cyber Assets, equipment layouts of Critical Cyber Assets, disaster recovery plans, incident response plans, and security configuration information.

R4.2. The Responsible Entity shall classify information to be protected under this program based on the sensitivity of the Critical Cyber Asset information. (Retired)

R4.3. The Responsible Entity shall, at least annually, assess adherence to its Critical Cyber Asset information protection program, document the assessment results, and implement an action plan to remediate deficiencies identified during the assessment.

R5. Access Control — The Responsible Entity shall document and implement a program for managing access to protected Critical Cyber Asset information.

R5.1. The Responsible Entity shall maintain a list of designated personnel who are responsible for authorizing logical or physical access to protected information.

R5.1.1. Personnel shall be identified by name, title, and the information for which they are responsible for authorizing access.

R5.1.2. The list of personnel responsible for authorizing access to protected information shall be verified at least annually.

R5.2. The Responsible Entity shall review at least annually the access privileges to protected information to confirm that access privileges are correct and that they correspond with the Responsible Entity's needs and appropriate personnel roles and responsibilities.

R5.3. The Responsible Entity shall assess and document at least annually the processes for controlling access privileges to protected information.

R6. Change Control and Configuration Management — The Responsible Entity shall establish and document a process of change control and configuration management for adding, modifying, replacing, or removing Critical Cyber Asset hardware or software, and implement supporting configuration management activities to identify, control and document all entity or vendor-related changes to hardware and software components of Critical Cyber Assets pursuant to the change control process.

C. Measures

M1. The Responsible Entity shall make available documentation of its cyber security policy as specified in Requirement R1. Additionally, the Responsible Entity shall demonstrate that the cyber security policy is available as specified in Requirement R1.2. (R1.2 retired)

M2. The Responsible Entity shall make available documentation of the assignment of, and changes to, its leadership as specified in Requirement R2.

M3. The Responsible Entity shall make available documentation of the exceptions, as specified in Requirement R3. (Retired)

M4. The Responsible Entity shall make available documentation of its information protection program as specified in Requirement R4.

M5. The Responsible Entity shall make available its access control documentation as specified in Requirement R5.

M6. The Responsible Entity shall make available its change control and configuration management documentation as specified in Requirement R6.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

1.2. The RE shall serve as the CEA with the following exceptions:

1.2.1 For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.

1.2.2 For Reliability Coordinators and other functional entities that work for their Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

1.2.3 For Responsible Entities that are also Regional Entities, the ERO or a Regional Entity approved by the ERO and FERC or other applicable governmental authorities shall serve as the Compliance Enforcement Authority.

1.2.4 For the ERO, a third-party monitor without vested interest in the outcome for the ERO shall serve as the Compliance Enforcement Authority.

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

1.4.1 The Responsible Entity shall keep all documentation and records from the previous full calendar year unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

1.4.2 The Compliance Enforcement Authority in conjunction with the Registered Entity shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

1.5.1 None

2. Violation Severity Levels

Requirement	VRF	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	MEDIUM	N/A	N/A	The Responsible Entity has documented but not implemented a cyber security policy.	The Responsible Entity has not documented nor implemented a cyber security policy.
R1.1.	LOWER	N/A	N/A	N/A	The Responsible Entity's cyber security policy does not address all the requirements in Standards CIP-002-4 through CIP-009-4, including provision for emergency situations.
R1.2. (Retired)	LOWER	N/A	N/A	N/A	The Responsible Entity's cyber security policy is not readily available to all personnel who have access to, or are responsible for, Critical Cyber Assets.
R1.3	LOWER	N/A	N/A	The Responsible Entity's senior manager, assigned pursuant to R2, annually reviewed but did not annually approve its cyber security policy.	The Responsible Entity's senior manager, assigned pursuant to R2, did not annually review nor approve its cyber security policy.
R2.	LOWER	N/A	N/A	N/A	The Responsible Entity has not assigned a single senior manager with overall responsibility and authority for leading and managing the entity's implementation of, and adherence to, Standards CIP-002-4 through CIP-009-4.
R2.1.	LOWER	N/A	N/A	N/A	The senior manager is not identified by name, title, and date of designation.
R2.2.	LOWER	Changes to the senior manager were documented in greater than 30 but less than 60 days of the effective date.	Changes to the senior manager were documented in 60 or more but less than 90 days of the effective date.	Changes to the senior manager were documented in 90 or more but less than 120 days of the effective date.	Changes to the senior manager were documented in 120 or more days of the effective date.
R2.3.	LOWER	N/A	N/A	The identification of a senior manager's delegate does not include at least one of the following; name, title, or date of the designation, OR The document is not approved by the senior manager, OR Changes to the delegated authority are not documented	A senior manager's delegate is not identified by name, title, and date of designation; the document delegating the authority does not identify the authority being delegated; the document delegating the authority is not approved by the senior manager; AND changes to the delegated authority are not documented within thirty calendar days of the effective date.

Requirement	VRF	Lower VSL	Moderate VSL	High VSL	Severe VSL
				within thirty calendar days of the effective date.	
R2.4	LOWER	N/A	N/A	N/A	The senior manager or delegate(s) did not authorize and document any exceptions from the requirements of the cyber security policy as required.
R3. (Retired)	LOWER	N/A	N/A	In Instances where the Responsible Entity cannot conform to its cyber security policy (pertaining to CIP 002 through CIP 009), exceptions were documented, but were not authorized by the senior manager or delegate(s).	In Instances where the Responsible Entity cannot conform to its cyber security policy (pertaining to CIP 002 through CIP 009), exceptions were not documented, and were not authorized by the senior manager or delegate(s).
R3.1. (Retired)	LOWER	Exceptions to the Responsible Entity's cyber security policy were documented in more than 30 but less than 60 days of being approved by the senior manager or delegate(s).	Exceptions to the Responsible Entity's cyber security policy were documented in 60 or more but less than 90 days of being approved by the senior manager or delegate(s).	Exceptions to the Responsible Entity's cyber security policy were documented in 90 or more but less than 120 days of being approved by the senior manager or delegate(s).	Exceptions to the Responsible Entity's cyber security policy were documented in 120 or more days of being approved by the senior manager or delegate(s).
R3.2. (Retired)	LOWER	N/A	N/A	The Responsible Entity has a documented exception to the cyber security policy (pertaining to CIP 002-4 through CIP 009-4) but did not include either: 1) an explanation as to why the exception is necessary, or 2) any compensating measures.	The Responsible Entity has a documented exception to the cyber security policy (pertaining to CIP 002-4 through CIP 009-4) but did not include both: 1) an explanation as to why the exception is necessary, and 2) any compensating measures.
R3.3. (Retired)	LOWER	N/A	N/A	Exceptions to the cyber security policy (pertaining to CIP 002-4 through CIP 009-4) were reviewed but not approved annually by the senior manager or delegate(s) to ensure the exceptions are still required and valid.	Exceptions to the cyber security policy (pertaining to CIP 002-4 through CIP 009-4) were not reviewed nor approved annually by the senior manager or delegate(s) to ensure the exceptions are still required and valid.

Version History

Version	Date	Action	Change Tracking
2		Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a responsible entity. Rewording of Effective Date. Requirement R2 applies to all Responsible Entities, including Responsible Entities which have no Critical Cyber Assets. Modified the personnel identification information requirements in R5.1.1 to include name, title, and the information for which they are responsible for authorizing access (removed the business phone information). Changed compliance monitor to Compliance Enforcement Authority.	
3		Update version number from -2 to -3	
3	12/16/09	Approved by the NERC Board of Trustees	Update
4	Board approved 01/24/2011	Update version number from “3” to “4”	Update to conform to changes to CIP-002-4 (Project 2008-06)
4	4/19/12	FERC Order issued approving CIP-003-4 (approval becomes effective June 25, 2012) Added approved VRF/VSL table to section D.2.	
3, 4	TBD	R1.2, R3, R3.1, R3.2, R3.3, and R4.2 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. Title: Cyber Security — Electronic Security Perimeter(s)

2. Number: CIP-005-3a

3. Purpose: Standard CIP-005-3 requires the identification and protection of the Electronic Security Perimeter(s) inside which all Critical Cyber Assets reside, as well as all access points on the perimeter. Standard CIP-005-3 should be read as part of a group of standards numbered Standards CIP-002-3 through CIP-009-3.

4. Applicability

4.1. Within the text of Standard CIP-005-3, "Responsible Entity" shall mean:

4.1.1 Reliability Coordinator.

4.1.2 Balancing Authority.

4.1.3 Interchange Authority.

4.1.4 Transmission Service Provider.

4.1.5 Transmission Owner.

4.1.6 Transmission Operator.

4.1.7 Generator Owner.

4.1.8 Generator Operator.

4.1.9 Load Serving Entity.

4.1.10 NERC.

4.1.11 Regional Entity

4.2. The following are exempt from Standard CIP-005-3:

4.2.1 Facilities regulated by the U.S. Nuclear Regulatory Commission or the Canadian Nuclear Safety Commission.

4.2.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.3 Responsible Entities that, in compliance with Standard CIP-002-3, identify that they have no Critical Cyber Assets.

5. Effective Date: The first day of the third calendar quarter after applicable regulatory approvals have been received (or the Reliability Standard otherwise becomes effective in those jurisdictions where regulatory approval is not required).

B. Requirements

R1. Electronic Security Perimeter — The Responsible Entity shall ensure that every Critical Cyber Asset resides within an Electronic Security Perimeter. The Responsible Entity shall identify and document the Electronic Security Perimeter(s) and all access points to the perimeter(s).

R1.1. Access points to the Electronic Security Perimeter(s) shall include any externally connected communication end point (for example, dial-up modems) terminating at any device within the Electronic Security Perimeter(s).

R1.2. For a dial-up accessible Critical Cyber Asset that uses a non-routable protocol, the Responsible Entity shall define an Electronic Security Perimeter for that single access point at the dial-up device.

R1.3. Communication links connecting discrete Electronic Security Perimeters shall not be considered part of the Electronic Security Perimeter. However, end points of these communication links within the Electronic Security Perimeter(s) shall be considered access points to the Electronic Security Perimeter(s).

R1.4. Any non-critical Cyber Asset within a defined Electronic Security Perimeter shall be identified and protected pursuant to the requirements of Standard CIP-005-3.

R1.5. Cyber Assets used in the access control and/or monitoring of the Electronic Security Perimeter(s) shall be afforded the protective measures as a specified in Standard CIP-003-3; Standard CIP-004-3 Requirement R3; Standard CIP-005-3 Requirements R2 and R3; Standard CIP-006-3 Requirement R3; Standard CIP-007-3 Requirements R1 and R3 through R9; Standard CIP-008-3; and Standard CIP-009-3.

R1.6. The Responsible Entity shall maintain documentation of Electronic Security Perimeter(s), all interconnected Critical and non-critical Cyber Assets within the Electronic Security Perimeter(s), all electronic access points to the Electronic Security Perimeter(s) and the Cyber Assets deployed for the access control and monitoring of these access points.

R2. Electronic Access Controls — The Responsible Entity shall implement and document the organizational processes and technical and procedural mechanisms for control of electronic access at all electronic access points to the Electronic Security Perimeter(s).

R2.1. These processes and mechanisms shall use an access control model that denies access by default, such that explicit access permissions must be specified.

R2.2. At all access points to the Electronic Security Perimeter(s), the Responsible Entity shall enable only ports and services required for operations and for monitoring Cyber Assets within the Electronic Security Perimeter, and shall document, individually or by specified grouping, the configuration of those ports and services.

R2.3. The Responsible Entity shall implement and maintain a procedure for securing dial-up access to the Electronic Security Perimeter(s).

R2.4. Where external interactive access into the Electronic Security Perimeter has been enabled, the Responsible Entity shall implement strong procedural or technical controls at the access points to ensure authenticity of the accessing party, where technically feasible.

R2.5. The required documentation shall, at least, identify and describe:

R2.5.1. The processes for access request and authorization.

R2.5.2. The authentication methods.

R2.5.3. The review process for authorization rights, in accordance with Standard CIP-004-3 Requirement R4.

R2.5.4. The controls used to secure dial-up accessible connections.

R2.6. Appropriate Use Banner — Where technically feasible, electronic access control devices shall display an appropriate use banner on the user screen upon all interactive access attempts. The Responsible Entity shall maintain a document identifying the content of the banner. (Retired)

R3. Monitoring Electronic Access — The Responsible Entity shall implement and document an electronic or manual process(es) for monitoring and logging access at access points to the Electronic Security Perimeter(s) twenty-four hours a day, seven days a week.

R3.1. For dial-up accessible Critical Cyber Assets that use non-routable protocols, the Responsible Entity shall implement and document monitoring process(es) at each access point to the dial-up device, where technically feasible.

R3.2. Where technically feasible, the security monitoring process(es) shall detect and alert for attempts at or actual unauthorized accesses. These alerts shall provide for appropriate notification to designated response personnel. Where alerting is not technically feasible, the Responsible Entity shall review or otherwise assess access logs for attempts at or actual unauthorized accesses at least every ninety calendar days.

R4. Cyber Vulnerability Assessment — The Responsible Entity shall perform a cyber vulnerability assessment of the electronic access points to the Electronic Security Perimeter(s) at least annually. The vulnerability assessment shall include, at a minimum, the following:

R4.1. A document identifying the vulnerability assessment process;

R4.2. A review to verify that only ports and services required for operations at these access points are enabled;

R4.3. The discovery of all access points to the Electronic Security Perimeter;

R4.4. A review of controls for default accounts, passwords, and network management community strings;

R4.5. Documentation of the results of the assessment, the action plan to remediate or mitigate vulnerabilities identified in the assessment, and the execution status of that action plan.

R5. Documentation Review and Maintenance — The Responsible Entity shall review, update, and maintain all documentation to support compliance with the requirements of Standard CIP-005-3.

R5.1. The Responsible Entity shall ensure that all documentation required by Standard CIP-005-3 reflect current configurations and processes and shall review the documents and procedures referenced in Standard CIP-005-3 at least annually.

R5.2. The Responsible Entity shall update the documentation to reflect the modification of the network or controls within ninety calendar days of the change.

R5.3. The Responsible Entity shall retain electronic access logs for at least ninety calendar days. Logs related to reportable incidents shall be kept in accordance with the requirements of Standard CIP-008-3.

C. Measures

M1. The Responsible Entity shall make available documentation about the Electronic Security Perimeter as specified in Requirement R1.

M2. The Responsible Entity shall make available documentation of the electronic access controls to the Electronic Security Perimeter(s), as specified in Requirement R2.

M3. The Responsible Entity shall make available documentation of controls implemented to log and monitor access to the Electronic Security Perimeter(s) as specified in Requirement R3.

M4. The Responsible Entity shall make available documentation of its annual vulnerability assessment as specified in Requirement R4.

M5. The Responsible Entity shall make available access logs and documentation of review, changes, and log retention as specified in Requirement R5.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

1.1.1 Regional Entity for Responsible Entities that do not perform delegated tasks for their Regional Entity.

1.1.2 ERO for Regional Entity.

1.1.3 Third-party monitor without vested interest in the outcome for NERC.

1.2. Compliance Monitoring Period and Reset Time Frame

Not applicable.

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

1.4.1 The Responsible Entity shall keep logs for a minimum of ninety calendar days, unless: a) longer retention is required pursuant to Standard CIP-008-3, Requirement R2; b) directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

1.4.2 The Responsible Entity shall keep other documents and records required by Standard CIP-005-3 from the previous full calendar year.

1.4.3 The Compliance Enforcement Authority in conjunction with the Registered Entity shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

2. Violation Severity Levels (To be developed later.)

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
1	01/16/06	D.2.3.1 — Change “Critical Assets,” to “Critical Cyber Assets” as intended.	03/24/06
2		Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a responsible entity. Rewording of Effective Date. Revised the wording of the Electronic Access Controls requirement stated in R2.3 to clarify that the Responsible Entity	

		shall “implement and maintain” a procedure for securing dial-up access to the Electronic Security Perimeter(s). Changed compliance monitor to Compliance Enforcement Authority.	
3		Update version from -2 to -3	
3	12/16/09	Approved by the NERC Board of Trustees	Update
3a	02/16/10	Added Appendix 1 – Interpretation of R1.3 approved by BOT on February 16, 2010	Interpretation
3a	02/02/11	Approved by FERC	
3a	TBD	R2.6 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

Appendix 1

Requirement Number and Text of Requirement
Section 4.2.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters. **Requirement R1.3** Communication links connecting discrete Electronic Security Perimeters shall not be considered part of the Electronic Security Perimeter. However, end points of these communication links within the Electronic Security Perimeter(s) shall be considered access points to the Electronic Security Perimeter(s).
Question 1 (Section 4.2.2)
What kind of cyber assets are referenced in 4.2.2 as "associated"? What else could be meant except the devices forming the communication link?
Response to Question 1
In the context of applicability, associated Cyber Assets refer to any communications devices external to the Electronic Security Perimeter, i.e., beyond the point at which access to the Electronic Security Perimeter is controlled. Devices controlling access into the Electronic Security Perimeter are not exempt.
Question 2 (Section 4.2.2)
Is the communication link physical or logical? Where does it begin and terminate?
Response to Question 2
The drafting team interprets the data communication link to be physical or logical, and its termination points depend upon the design and architecture of the communication link.
Question 3 (Requirement R1.3)
Please clarify what is meant by an “endpoint”? Is it physical termination? Logical termination of OSI layer 2, layer 3, or above?
Response to Question 3
The drafting team interprets the endpoint to mean the device at which a physical or logical communication link terminates. The endpoint is the Electronic Security Perimeter access point if access into the Electronic Security Perimeter is controlled at the endpoint, irrespective of which Open Systems Interconnection (OSI) layer is managing the communication.
Question 4 (Requirement R1.3)
If “endpoint” is defined as logical and refers to layer 3 and above, please clarify if the termination points of an encrypted tunnel (layer 3) must be treated as an “access point? If two control centers are owned and managed by the same entity, connected via an encrypted link by properly applied Federal

Information Processing Standards, with tunnel termination points that are within the control center ESPs and PSPs and do not terminate on the firewall but on a separate internal device, and the encrypted traffic already passes through a firewall access point at each ESP boundary where port/protocol restrictions are applied, must these encrypted communication tunnel termination points be treated as "access points" in addition to the firewalls through which the encrypted traffic has already passed?
Response to Question 4
In the case where the “endpoint” is defined as logical and is >= layer 3, the termination points of an encrypted tunnel must be treated as an “access point.” The encrypted communication tunnel termination points referred to above are “access points.”

A. Introduction

1. Title: Cyber Security — Electronic Security Perimeter(s)

2. Number: CIP-005-4a

3. Purpose: Standard CIP-005-4a requires the identification and protection of the Electronic Security Perimeter(s) inside which all Critical Cyber Assets reside, as well as all access points on the perimeter. Standard CIP-005-4a should be read as part of a group of standards numbered Standards CIP-002-4 through CIP-009-4.

4. Applicability

4.1. Within the text of Standard CIP-005-4a, "Responsible Entity" shall mean:

4.1.1 Reliability Coordinator.

4.1.2 Balancing Authority.

4.1.3 Interchange Authority.

4.1.4 Transmission Service Provider.

4.1.5 Transmission Owner.

4.1.6 Transmission Operator.

4.1.7 Generator Owner.

4.1.8 Generator Operator.

4.1.9 Load Serving Entity.

4.1.10 NERC.

4.1.11 Regional Entity

4.2. The following are exempt from Standard CIP-005-4a:

4.2.1 Facilities regulated by the Canadian Nuclear Safety Commission.

4.2.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.3 Responsible Entities that, in compliance with Standard CIP-002-4, identify that they have no Critical Cyber Assets.

4.2.4 In nuclear plants, the systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F. R. Section 73.54.

5. Effective Date: The first day of the eighth calendar quarter after applicable regulatory approvals have been received (or the Reliability Standard otherwise becomes effective the first day of the ninth calendar quarter after BOT adoption in those jurisdictions where regulatory approval is not required).

B. Requirements

R1. Electronic Security Perimeter — The Responsible Entity shall ensure that every Critical Cyber Asset resides within an Electronic Security Perimeter. The Responsible Entity shall identify and document the Electronic Security Perimeter(s) and all access points to the perimeter(s).

R1.1. Access points to the Electronic Security Perimeter(s) shall include any externally connected communication end point (for example, dial-up modems) terminating at any device within the Electronic Security Perimeter(s).

R1.2. For a dial-up accessible Critical Cyber Asset that uses a non-routable protocol, the Responsible Entity shall define an Electronic Security Perimeter for that single access point at the dial-up device.

R1.3. Communication links connecting discrete Electronic Security Perimeters shall not be considered part of the Electronic Security Perimeter. However, end points of these communication links within the Electronic Security Perimeter(s) shall be considered access points to the Electronic Security Perimeter(s).

R1.4. Any non-critical Cyber Asset within a defined Electronic Security Perimeter shall be identified and protected pursuant to the requirements of Standard CIP-005-4a.

R1.5. Cyber Assets used in the access control and/or monitoring of the Electronic Security Perimeter(s) shall be afforded the protective measures as a specified in Standard CIP-003-4; Standard CIP-004-4 Requirement R3; Standard CIP-005-4a Requirements R2 and R3; Standard CIP-006-4c Requirement R3; Standard CIP-007-4 Requirements R1 and R3 through R9; Standard CIP-008-4; and Standard CIP-009-4.

R1.6. The Responsible Entity shall maintain documentation of Electronic Security Perimeter(s), all interconnected Critical and non-critical Cyber Assets within the Electronic Security Perimeter(s), all electronic access points to the Electronic Security Perimeter(s) and the Cyber Assets deployed for the access control and monitoring of these access points.

R2. Electronic Access Controls — The Responsible Entity shall implement and document the organizational processes and technical and procedural mechanisms for control of electronic access at all electronic access points to the Electronic Security Perimeter(s).

R2.1. These processes and mechanisms shall use an access control model that denies access by default, such that explicit access permissions must be specified.

R2.2. At all access points to the Electronic Security Perimeter(s), the Responsible Entity shall enable only ports and services required for operations and for monitoring Cyber Assets within the Electronic Security Perimeter, and shall document, individually or by specified grouping, the configuration of those ports and services.

R2.3. The Responsible Entity shall implement and maintain a procedure for securing dial-up access to the Electronic Security Perimeter(s).

R2.4. Where external interactive access into the Electronic Security Perimeter has been enabled, the Responsible Entity shall implement strong procedural or technical controls at the access points to ensure authenticity of the accessing party, where technically feasible.

R2.5. The required documentation shall, at least, identify and describe:

R2.5.1. The processes for access request and authorization.

R2.5.2. The authentication methods.

R2.5.3. The review process for authorization rights, in accordance with Standard CIP-004-4 Requirement R4.

R2.5.4. The controls used to secure dial-up accessible connections.

R2.6. Appropriate Use Banner — Where technically feasible, electronic access control devices shall display an appropriate use banner on the user screen upon all interactive access attempts. The Responsible Entity shall maintain a document identifying the content of the banner. (Retired)

R3. Monitoring Electronic Access — The Responsible Entity shall implement and document an electronic or manual process(es) for monitoring and logging access at access points to the Electronic Security Perimeter(s) twenty-four hours a day, seven days a week.

R3.1. For dial-up accessible Critical Cyber Assets that use non-routable protocols, the Responsible Entity shall implement and document monitoring process(es) at each access point to the dial-up device, where technically feasible.

R3.2. Where technically feasible, the security monitoring process(es) shall detect and alert for attempts at or actual unauthorized accesses. These alerts shall provide for appropriate notification to designated response personnel. Where alerting is not technically feasible, the Responsible Entity shall review or otherwise assess access logs for attempts at or actual unauthorized accesses at least every ninety calendar days.

R4. Cyber Vulnerability Assessment — The Responsible Entity shall perform a cyber vulnerability assessment of the electronic access points to the Electronic Security Perimeter(s) at least annually. The vulnerability assessment shall include, at a minimum, the following:

R4.1. A document identifying the vulnerability assessment process;

R4.2. A review to verify that only ports and services required for operations at these access points are enabled;

R4.3. The discovery of all access points to the Electronic Security Perimeter;

R4.4. A review of controls for default accounts, passwords, and network management community strings;

R4.5. Documentation of the results of the assessment, the action plan to remediate or mitigate vulnerabilities identified in the assessment, and the execution status of that action plan.

R5. Documentation Review and Maintenance — The Responsible Entity shall review, update, and maintain all documentation to support compliance with the requirements of Standard CIP-005-4a.

R5.1. The Responsible Entity shall ensure that all documentation required by Standard CIP-005-4a reflect current configurations and processes and shall review the documents and procedures referenced in Standard CIP-005-4a at least annually.

R5.2. The Responsible Entity shall update the documentation to reflect the modification of the network or controls within ninety calendar days of the change.

R5.3. The Responsible Entity shall retain electronic access logs for at least ninety calendar days. Logs related to reportable incidents shall be kept in accordance with the requirements of Standard CIP-008-4.

C. Measures

M1. The Responsible Entity shall make available documentation about the Electronic Security Perimeter as specified in Requirement R1.

M2. The Responsible Entity shall make available documentation of the electronic access controls to the Electronic Security Perimeter(s), as specified in Requirement R2.

M3. The Responsible Entity shall make available documentation of controls implemented to log and monitor access to the Electronic Security Perimeter(s) as specified in Requirement R3.

M4. The Responsible Entity shall make available documentation of its annual vulnerability assessment as specified in Requirement R4.

M5. The Responsible Entity shall make available access logs and documentation of review, changes, and log retention as specified in Requirement R5.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

1.2. The RE shall serve as the CEA with the following exceptions:

1.2.1 For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.

1.2.1 For Reliability Coordinators and other functional entities that work for their Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

1.2.1 For Responsible Entities that are also Regional Entities, the ERO or a Regional Entity approved by the ERO and FERC or other applicable governmental authorities shall serve as the Compliance Enforcement Authority.

1.2.2 For the ERO, a third-party monitor without vested interest in the outcome for the ERO shall serve as the Compliance Enforcement Authority.

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

1.4.1 The Responsible Entity shall keep logs for a minimum of ninety calendar days, unless: a) longer retention is required pursuant to Standard CIP-008-4, Requirement R2; b) directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

1.4.2 The Responsible Entity shall keep other documents and records required by Standard CIP-005-4a from the previous full calendar year.

1.4.3 The Compliance Enforcement Authority in conjunction with the Registered Entity shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

2. Violation Severity Levels

Requirement	VRF	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	MEDIUM	The Responsible Entity did not document one or more access points to the Electronic Security Perimeter(s).	The Responsible Entity identified but did not document one or more Electronic Security Perimeter(s).	The Responsible Entity did not ensure that one or more of the Critical Cyber Assets resides within an Electronic Security Perimeter. OR The Responsible Entity did not identify nor document one or more Electronic Security Perimeter(s).	The Responsible Entity did not ensure that one or more Critical Cyber Assets resides within an Electronic Security Perimeter, and the Responsible Entity did not identify and document the Electronic Security Perimeter(s) and all access points to the perimeter(s) for all Critical Cyber Assets.
R1.1.	MEDIUM	N/A	N/A	N/A	Access points to the Electronic Security Perimeter(s) do not include all externally connected communication end point (for example, dial-up modems) terminating at any device within the Electronic Security Perimeter(s).
R1.2.	MEDIUM	N/A	N/A	N/A	For one or more dial-up accessible Critical Cyber Assets that use a non-routable protocol, the Responsible Entity did not define an Electronic Security Perimeter for that single access point at the dial-up device.
R1.3.	MEDIUM	N/A	N/A	N/A	At least one end point of a communication link within the Electronic Security Perimeter(s) connecting discrete Electronic Security Perimeters was not considered an access point to the Electronic Security Perimeter.
R1.4.	MEDIUM	N/A	One or more non-critical Cyber Asset within a defined Electronic Security Perimeter is not identified but is protected pursuant to the requirements of Standard CIP-005.	One or more non-critical Cyber Asset within a defined Electronic Security Perimeter is identified but not protected pursuant to the requirements of Standard CIP-005.	One or more non-critical Cyber Asset within a defined Electronic Security Perimeter is not identified and is not protected pursuant to the requirements of Standard CIP-005.
R1.5.	MEDIUM	A Cyber Asset used in the access control and/or monitoring of the Electronic Security Perimeter(s) is provided with all but one (1) of the protective measures as specified in Standard CIP-003-4; Standard CIP-004-4 Requirement	A Cyber Asset used in the access control and/or monitoring of the Electronic Security Perimeter(s) is provided with all but two (2) of the protective measures as specified in Standard CIP-003-4; Standard CIP-004-4 Requirement R3; Standard CIP-005-4 Requirements R2 and R3;	A Cyber Asset used in the access control and/or monitoring of the Electronic Security Perimeter(s) is provided with all but three (3) of the protective measures as specified in Standard CIP-003-4; Standard CIP-004-4 Requirement R3; Standard CIP-005-4 Requirements R2 and R3; Standard CIP-006-4 Requirement R3; Standard CIP-007-4 Requirements R1 and R3 through R9; Standard CIP-008-4;	A Cyber Asset used in the access control and/or monitoring of the Electronic Security Perimeter(s) is provided without four (4) or more of the protective measures as specified in Standard CIP-003-4; Standard CIP-004-4 Requirement R3; Standard CIP-005-4 Requirements R2 and R3; Standard CIP-006-4 Requirement R3; Standard CIP-007-4 Requirements R1 and R3 through R9; Standard CIP-008-4;

Requirement	VRF	Lower VSL	Moderate VSL	High VSL	Severe VSL
		R3; Standard CIP-005-4 Requirements R2 and R3; Standard CIP-006-4 Requirement R3; Standard CIP-007-4 Requirements R1 and R3 through R9; Standard CIP-008-4; and Standard CIP-009-4.	Standard CIP-006-4 Requirement R3; Standard CIP-007-4 Requirements R1 and R3 through R9; Standard CIP-008-4; and Standard CIP-009-4.	and Standard CIP-009-4.	and Standard CIP-009-4.
R1.6.	LOWER	N/A	N/A	The Responsible Entity did not maintain documentation of one of the following: Electronic Security Perimeter(s), interconnected Critical and non-critical Cyber Assets within the Electronic Security Perimeter(s), electronic access point to the Electronic Security Perimeter(s) or Cyber Asset deployed for the access control and monitoring of these access points.	The Responsible Entity did not maintain documentation of two or more of the following: Electronic Security Perimeter(s), interconnected Critical and non-critical Cyber Assets within the Electronic Security Perimeter(s), electronic access points to the Electronic Security Perimeter(s) and Cyber Assets deployed for the access control and monitoring of these access points.
R2.	MEDIUM	N/A	The Responsible Entity implemented but did not document the organizational processes and technical and procedural mechanisms for control of electronic access at all electronic access points to the Electronic Security Perimeter(s).	The Responsible Entity documented but did not implement the organizational processes and technical and procedural mechanisms for control of electronic access at all electronic access points to the Electronic Security Perimeter(s).	The Responsible Entity did not implement nor document the organizational processes and technical and procedural mechanisms for control of electronic access at all electronic access points to the Electronic Security Perimeter(s).
R2.1.	MEDIUM	N/A	N/A	N/A	The processes and mechanisms did not use an access control model that denies access by default, such that explicit access permissions must be specified.
R2.2. Version History

Version	Date	Action	Change Tracking
1	01/16/06	D.2.3.1 — Change "Critical Assets," to "Critical Cyber Assets" as intended.	03/24/06
2	Approved by NERC Board of Trustees 5/6/09	Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment. Replaced the RRO with the RE as a responsible entity. Rewording of Effective Date. Revised the wording of the Electronic Access Controls requirement stated in R2.3 to clarify that the Responsible Entity shall "implement and maintain" a procedure for securing dial-up access to the Electronic Security Perimeter(s). Changed compliance monitor to Compliance Enforcement Authority.	Revised.
3	12/16/09	Changed CIP-005-2 to CIP-005-3. Changed all references to CIP Version "2" standards to CIP Version "3" standards. For Violation Severity Levels, changed, "To be developed later" to "Developed separately."	Conforming revisions for FERC Order on CIP V2 Standards (9/30/2009)
2a	02/16/10	Added Appendix 1 — Interpretation of R1.3 approved by BOT on February 16, 2010	Addition
4a	01/24/11	Adopted by the NERC Board of Trustees	Update to conform to changes to CIP-002-4 (Project 2008-06) Update version number from "3" to "4a"
4a	4/19/12	FERC Order issued approving CIP-005-4a (approval becomes effective June 25, 2012) Added approved VRF/VSL table to section D.2.	
3a, 4a	TBD	R2.6 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

Appendix 1

Requirement Number and Text of Requirement
Section 4.2.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters. **Requirement R1.3** Communication links connecting discrete Electronic Security Perimeters shall not be considered part of the Electronic Security Perimeter. However, end points of these communication links within the Electronic Security Perimeter(s) shall be considered access points to the Electronic Security Perimeter(s).
Question 1 (Section 4.2.2)
What kind of cyber assets are referenced in 4.2.2 as "associated"? What else could be meant except the devices forming the communication link?
Response to Question 1
In the context of applicability, associated Cyber Assets refer to any communications devices external to the Electronic Security Perimeter, i.e., beyond the point at which access to the Electronic Security Perimeter is controlled. Devices controlling access into the Electronic Security Perimeter are not exempt.
Question 2 (Section 4.2.2)
Is the communication link physical or logical? Where does it begin and terminate?
Response to Question 2
The drafting team interprets the data communication link to be physical or logical, and its termination points depend upon the design and architecture of the communication link.
Question 3 (Requirement R1.3)
Please clarify what is meant by an “endpoint”? Is it physical termination? Logical termination of OSI layer 2, layer 3, or above?
Response to Question 3
The drafting team interprets the endpoint to mean the device at which a physical or logical communication link terminates. The endpoint is the Electronic Security Perimeter access point if access into the Electronic Security Perimeter is controlled at the endpoint, irrespective of which Open Systems Interconnection (OSI) layer is managing the communication.
Question 4 (Requirement R1.3)
If “endpoint” is defined as logical and refers to layer 3 and above, please clarify if the termination points of an encrypted tunnel (layer 3) must be treated as an “access point? If two control centers are

owned and managed by the same entity, connected via an encrypted link by properly applied Federal Information Processing Standards, with tunnel termination points that are within the control center ESPs and PSPs and do not terminate on the firewall but on a separate internal device, and the encrypted traffic already passes through a firewall access point at each ESP boundary where port/protocol restrictions are applied, must these encrypted communication tunnel termination points be treated as "access points" in addition to the firewalls through which the encrypted traffic has already passed?
Response to Question 4
In the case where the “endpoint” is defined as logical and is >= layer 3, the termination points of an encrypted tunnel must be treated as an “access point.” The encrypted communication tunnel termination points referred to above are “access points.”

A. Introduction

1. Title: Cyber Security — Systems Security Management

2. Number: CIP-007-3

3. Purpose: Standard CIP-007-3 requires Responsible Entities to define methods, processes, and procedures for securing those systems determined to be Critical Cyber Assets, as well as the other (non-critical) Cyber Assets within the Electronic Security Perimeter(s). Standard CIP-007-3 should be read as part of a group of standards numbered Standards CIP-002-3 through CIP-009-3.

4. Applicability:

4.1. Within the text of Standard CIP-007-3, "Responsible Entity" shall mean:

4.1.1 Reliability Coordinator.

4.1.2 Balancing Authority.

4.1.3 Interchange Authority.

4.1.4 Transmission Service Provider.

4.1.5 Transmission Owner.

4.1.6 Transmission Operator.

4.1.7 Generator Owner.

4.1.8 Generator Operator.

4.1.9 Load Serving Entity.

4.1.10 NERC.

4.1.11 Regional Entity.

4.2. The following are exempt from Standard CIP-007-3:

4.2.1 Facilities regulated by the U.S. Nuclear Regulatory Commission or the Canadian Nuclear Safety Commission.

4.2.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.3 Responsible Entities that, in compliance with Standard CIP-002-3, identify that they have no Critical Cyber Assets.

5. Effective Date: The first day of the third calendar quarter after applicable regulatory approvals have been received (or the Reliability Standard otherwise becomes effective the first day of the third calendar quarter after BOT adoption in those jurisdictions where regulatory approval is not required).

B. Requirements

R1. Test Procedures — The Responsible Entity shall ensure that new Cyber Assets and significant changes to existing Cyber Assets within the Electronic Security Perimeter do not adversely affect existing cyber security controls. For purposes of Standard CIP-007-3, a significant change shall, at a minimum, include implementation of security patches, cumulative service packs, vendor releases, and version upgrades of operating systems, applications, database platforms, or other third-party software or firmware.

R1.1. The Responsible Entity shall create, implement, and maintain cyber security test procedures in a manner that minimizes adverse effects on the production system or its operation.

R1.2. The Responsible Entity shall document that testing is performed in a manner that reflects the production environment.

R1.3. The Responsible Entity shall document test results.

R2. Ports and Services — The Responsible Entity shall establish, document and implement a process to ensure that only those ports and services required for normal and emergency operations are enabled.

R2.1. The Responsible Entity shall enable only those ports and services required for normal and emergency operations.

R2.2. The Responsible Entity shall disable other ports and services, including those used for testing purposes, prior to production use of all Cyber Assets inside the Electronic Security Perimeter(s).

R2.3. In the case where unused ports and services cannot be disabled due to technical limitations, the Responsible Entity shall document compensating measure(s) applied to mitigate risk exposure.

R3. Security Patch Management — The Responsible Entity, either separately or as a component of the documented configuration management process specified in CIP-003-3 Requirement R6, shall establish, document and implement a security patch management program for tracking, evaluating, testing, and installing applicable cyber security software patches for all Cyber Assets within the Electronic Security Perimeter(s).

R3.1. The Responsible Entity shall document the assessment of security patches and security upgrades for applicability within thirty calendar days of availability of the patches or upgrades.

R3.2. The Responsible Entity shall document the implementation of security patches. In any case where the patch is not installed, the Responsible Entity shall document compensating measure(s) applied to mitigate risk exposure.

R4. Malicious Software Prevention — The Responsible Entity shall use anti-virus software and other malicious software ("malware") prevention tools, where technically feasible, to detect, prevent, deter, and mitigate the introduction, exposure, and propagation of malware on all Cyber Assets within the Electronic Security Perimeter(s).

R4.1. The Responsible Entity shall document and implement anti-virus and malware prevention tools. In the case where anti-virus software and malware prevention tools are not installed, the Responsible Entity shall document compensating measure(s) applied to mitigate risk exposure.

R4.2. The Responsible Entity shall document and implement a process for the update of anti-virus and malware prevention "signatures." The process must address testing and installing the signatures.

R5. Account Management — The Responsible Entity shall establish, implement, and document technical and procedural controls that enforce access authentication of, and accountability for, all user activity, and that minimize the risk of unauthorized system access.

R5.1. The Responsible Entity shall ensure that individual and shared system accounts and authorized access permissions are consistent with the concept of "need to know" with respect to work functions performed.

R5.1.1. The Responsible Entity shall ensure that user accounts are implemented as approved by designated personnel. Refer to Standard CIP-003-3 Requirement R5.

R5.1.2. The Responsible Entity shall establish methods, processes, and procedures that generate logs of sufficient detail to create historical audit trails of individual user account access activity for a minimum of ninety days.

R5.1.3. The Responsible Entity shall review, at least annually, user accounts to verify access privileges are in accordance with Standard CIP-003-3 Requirement R5 and Standard CIP-004-3 Requirement R4.

R5.2. The Responsible Entity shall implement a policy to minimize and manage the scope and acceptable use of administrator, shared, and other generic account privileges including factory default accounts.

R5.2.1. The policy shall include the removal, disabling, or renaming of such accounts where possible. For such accounts that must remain enabled, passwords shall be changed prior to putting any system into service.

R5.2.2. The Responsible Entity shall identify those individuals with access to shared accounts.

R5.2.3. Where such accounts must be shared, the Responsible Entity shall have a policy for managing the use of such accounts that limits access to only those with authorization, an audit trail of the account use (automated or manual), and steps for securing the account in the event of personnel changes (for example, change in assignment or termination).

R5.3. At a minimum, the Responsible Entity shall require and use passwords, subject to the following, as technically feasible:

R5.3.1. Each password shall be a minimum of six characters.

R5.3.2. Each password shall consist of a combination of alpha, numeric, and "special" characters.

R5.3.3. Each password shall be changed at least annually, or more frequently based on risk.

R6. Security Status Monitoring — The Responsible Entity shall ensure that all Cyber Assets within the Electronic Security Perimeter, as technically feasible, implement automated tools or organizational process controls to monitor system events that are related to cyber security.

R6.1. The Responsible Entity shall implement and document the organizational processes and technical and procedural mechanisms for monitoring for security events on all Cyber Assets within the Electronic Security Perimeter.

R6.2. The security monitoring controls shall issue automated or manual alerts for detected Cyber Security Incidents.

R6.3. The Responsible Entity shall maintain logs of system events related to cyber security, where technically feasible, to support incident response as required in Standard CIP-008-3.

R6.4. The Responsible Entity shall retain all logs specified in Requirement R6 for ninety calendar days.

R6.5. The Responsible Entity shall review logs of system events related to cyber security and maintain records documenting review of logs.

R7. Disposal or Redeployment — The Responsible Entity shall establish and implement formal methods, processes, and procedures for disposal or redeployment of Cyber Assets within the Electronic Security Perimeter(s) as identified and documented in Standard CIP-005-3.

R7.1. Prior to the disposal of such assets, the Responsible Entity shall destroy or erase the data storage media to prevent unauthorized retrieval of sensitive cyber security or reliability data.

R7.2. Prior to redeployment of such assets, the Responsible Entity shall, at a minimum, erase the data storage media to prevent unauthorized retrieval of sensitive cyber security or reliability data.

R7.3. The Responsible Entity shall maintain records that such assets were disposed of or redeployed in accordance with documented procedures. (Retired)

R8. Cyber Vulnerability Assessment — The Responsible Entity shall perform a cyber vulnerability assessment of all Cyber Assets within the Electronic Security Perimeter at least annually. The vulnerability assessment shall include, at a minimum, the following:

R8.1. A document identifying the vulnerability assessment process;

R8.2. A review to verify that only ports and services required for operation of the Cyber Assets within the Electronic Security Perimeter are enabled;

R8.3. A review of controls for default accounts; and,

R8.4. Documentation of the results of the assessment, the action plan to remediate or mitigate vulnerabilities identified in the assessment, and the execution status of that action plan.

R9. Documentation Review and Maintenance — The Responsible Entity shall review and update the documentation specified in Standard CIP-007-3 at least annually. Changes resulting from modifications to the systems or controls shall be documented within thirty calendar days of the change being completed.

C. Measures

M1. The Responsible Entity shall make available documentation of its security test procedures as specified in Requirement R1.

M2. The Responsible Entity shall make available documentation as specified in Requirement R2.

M3. The Responsible Entity shall make available documentation and records of its security patch management program, as specified in Requirement R3.

M4. The Responsible Entity shall make available documentation and records of its malicious software prevention program as specified in Requirement R4.

M5. The Responsible Entity shall make available documentation and records of its account management program as specified in Requirement R5.

M6. The Responsible Entity shall make available documentation and records of its security status monitoring program as specified in Requirement R6.

M7. The Responsible Entity shall make available documentation and records of its program for the disposal or redeployment of Cyber Assets as specified in Requirement R7.

M8. The Responsible Entity shall make available documentation and records of its annual vulnerability assessment of all Cyber Assets within the Electronic Security Perimeters(s) as specified in Requirement R8.

M9. The Responsible Entity shall make available documentation and records demonstrating the review and update as specified in Requirement R9.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

1.1.1 Regional Entity for Responsible Entities that do not perform delegated tasks for their Regional Entity.

1.1.2 ERO for Regional Entity.

1.1.3 Third-party monitor without vested interest in the outcome for NERC.

1.2. Compliance Monitoring Period and Reset Time Frame

Not applicable.

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

1.4.1 The Responsible Entity shall keep all documentation and records from the previous full calendar year unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

1.4.2 The Responsible Entity shall retain security–related system event logs for ninety calendar days, unless longer retention is required pursuant to Standard CIP-008-3 Requirement R2.

1.4.3 The Compliance Enforcement Authority in conjunction with the Registered Entity shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information.

2. Violation Severity Levels (To be developed later.)

E. Regional Variances

None identified.

A. Introduction

1. Title: Cyber Security — Systems Security Management

2. Number: CIP-007-4

3. Purpose: Standard CIP-007-4 requires Responsible Entities to define methods, processes, and procedures for securing those systems determined to be Critical Cyber Assets, as well as the other (non-critical) Cyber Assets within the Electronic Security Perimeter(s). Standard CIP-007-4 should be read as part of a group of standards numbered Standards CIP-002-4 through CIP-009-4.

4. Applicability:

4.1. Within the text of Standard CIP-007-4, "Responsible Entity" shall mean:

4.1.1 Reliability Coordinator.

4.1.2 Balancing Authority.

4.1.3 Interchange Authority.

4.1.4 Transmission Service Provider.

4.1.5 Transmission Owner.

4.1.6 Transmission Operator.

4.1.7 Generator Owner.

4.1.8 Generator Operator.

4.1.9 Load Serving Entity.

4.1.10 NERC.

4.1.11 Regional Entity.

4.2. The following are exempt from Standard CIP-007-4:

4.2.1 Facilities regulated by the Canadian Nuclear Safety Commission.

4.2.2 Cyber Assets associated with communication networks and data communication links between discrete Electronic Security Perimeters.

4.2.3 In nuclear plants, the systems, structures, and components that are regulated by the Nuclear Regulatory Commission under a cyber security plan pursuant to 10 C.F. R. Section 73.54

4.2.4 Responsible Entities that, in compliance with Standard CIP-002-4, identify that they have no Critical Cyber Assets.

5. Effective Date: The first day of the eighth calendar quarter after applicable regulatory approvals have been received (or the Reliability Standard otherwise becomes effective the first day of the ninth calendar quarter after BOT adoption in those jurisdictions where regulatory approval is not required).

B. Requirements

R1. Test Procedures — The Responsible Entity shall ensure that new Cyber Assets and significant changes to existing Cyber Assets within the Electronic Security Perimeter do not adversely affect existing cyber security controls. For purposes of Standard CIP-007-4, a significant change shall, at a minimum, include implementation of security patches, cumulative service packs, vendor releases, and version upgrades of operating systems, applications, database platforms, or other third-party software or firmware.

R1.1. The Responsible Entity shall create, implement, and maintain cyber security test procedures in a manner that minimizes adverse effects on the production system or its operation.

R1.2. The Responsible Entity shall document that testing is performed in a manner that reflects the production environment.

R1.3. The Responsible Entity shall document test results.

R2. Ports and Services — The Responsible Entity shall establish, document and implement a process to ensure that only those ports and services required for normal and emergency operations are enabled.

R2.1. The Responsible Entity shall enable only those ports and services required for normal and emergency operations.

R2.2. The Responsible Entity shall disable other ports and services, including those used for testing purposes, prior to production use of all Cyber Assets inside the Electronic Security Perimeter(s).

R2.3. In the case where unused ports and services cannot be disabled due to technical limitations, the Responsible Entity shall document compensating measure(s) applied to mitigate risk exposure.

R3. Security Patch Management — The Responsible Entity, either separately or as a component of the documented configuration management process specified in CIP-003-4 Requirement R6, shall establish, document and implement a security patch management program for tracking, evaluating, testing, and installing applicable cyber security software patches for all Cyber Assets within the Electronic Security Perimeter(s).

R3.1. The Responsible Entity shall document the assessment of security patches and security upgrades for applicability within thirty calendar days of availability of the patches or upgrades.

R3.2. The Responsible Entity shall document the implementation of security patches. In any case where the patch is not installed, the Responsible Entity shall document compensating measure(s) applied to mitigate risk exposure.

R4. Malicious Software Prevention — The Responsible Entity shall use anti-virus software and other malicious software ("malware") prevention tools, where technically feasible, to detect, prevent, deter, and mitigate the introduction, exposure, and propagation of malware on all Cyber Assets within the Electronic Security Perimeter(s).

R4.1. The Responsible Entity shall document and implement anti-virus and malware prevention tools. In the case where anti-virus software and malware prevention tools are not installed, the Responsible Entity shall document compensating measure(s) applied to mitigate risk exposure.

R4.2. The Responsible Entity shall document and implement a process for the update of anti-virus and malware prevention "signatures." The process must address testing and installing the signatures.

R5. Account Management — The Responsible Entity shall establish, implement, and document technical and procedural controls that enforce access authentication of, and accountability for, all user activity, and that minimize the risk of unauthorized system access.

R5.1. The Responsible Entity shall ensure that individual and shared system accounts and authorized access permissions are consistent with the concept of "need to know" with respect to work functions performed.

R5.1.1. The Responsible Entity shall ensure that user accounts are implemented as approved by designated personnel. Refer to Standard CIP-003-4 Requirement R5.

R5.1.2. The Responsible Entity shall establish methods, processes, and procedures that generate logs of sufficient detail to create historical audit trails of individual user account access activity for a minimum of ninety days.

R5.1.3. The Responsible Entity shall review, at least annually, user accounts to verify access privileges are in accordance with Standard CIP-003-4 Requirement R5 and Standard CIP-004-4 Requirement R4.

R5.2. The Responsible Entity shall implement a policy to minimize and manage the scope and acceptable use of administrator, shared, and other generic account privileges including factory default accounts.

R5.2.1. The policy shall include the removal, disabling, or renaming of such accounts where possible. For such accounts that must remain enabled, passwords shall be changed prior to putting any system into service.

R5.2.2. The Responsible Entity shall identify those individuals with access to shared accounts.

R5.2.3. Where such accounts must be shared, the Responsible Entity shall have a policy for managing the use of such accounts that limits access to only those with authorization, an audit trail of the account use (automated or manual), and steps for securing the account in the event of personnel changes (for example, change in assignment or termination).

R5.3. At a minimum, the Responsible Entity shall require and use passwords, subject to the following, as technically feasible:

R5.3.1. Each password shall be a minimum of six characters.

R5.3.2. Each password shall consist of a combination of alpha, numeric, and "special" characters.

R5.3.3. Each password shall be changed at least annually, or more frequently based on risk.

R6. Security Status Monitoring — The Responsible Entity shall ensure that all Cyber Assets within the Electronic Security Perimeter, as technically feasible, implement automated tools or organizational process controls to monitor system events that are related to cyber security.

R6.1. The Responsible Entity shall implement and document the organizational processes and technical and procedural mechanisms for monitoring for security events on all Cyber Assets within the Electronic Security Perimeter.

R6.2. The security monitoring controls shall issue automated or manual alerts for detected Cyber Security Incidents.

R6.3. The Responsible Entity shall maintain logs of system events related to cyber security, where technically feasible, to support incident response as required in Standard CIP-008-4.

R6.4. The Responsible Entity shall retain all logs specified in Requirement R6 for ninety calendar days.

R6.5. The Responsible Entity shall review logs of system events related to cyber security and maintain records documenting review of logs.

R7. Disposal or Redeployment — The Responsible Entity shall establish and implement formal methods, processes, and procedures for disposal or redeployment of Cyber Assets within the Electronic Security Perimeter(s) as identified and documented in Standard CIP-005-4.

R7.1. Prior to the disposal of such assets, the Responsible Entity shall destroy or erase the data storage media to prevent unauthorized retrieval of sensitive cyber security or reliability data.

R7.2. Prior to redeployment of such assets, the Responsible Entity shall, at a minimum, erase the data storage media to prevent unauthorized retrieval of sensitive cyber security or reliability data.

R7.3. The Responsible Entity shall maintain records that such assets were disposed of or redeployed in accordance with documented procedures. (Retired)

R8. Cyber Vulnerability Assessment — The Responsible Entity shall perform a cyber vulnerability assessment of all Cyber Assets within the Electronic Security Perimeter at least annually. The vulnerability assessment shall include, at a minimum, the following:

R8.1. A document identifying the vulnerability assessment process;

R8.2. A review to verify that only ports and services required for operation of the Cyber Assets within the Electronic Security Perimeter are enabled;

R8.3. A review of controls for default accounts; and,

R8.4. Documentation of the results of the assessment, the action plan to remediate or mitigate vulnerabilities identified in the assessment, and the execution status of that action plan.

R9. Documentation Review and Maintenance — The Responsible Entity shall review and update the documentation specified in Standard CIP-007-4 at least annually. Changes resulting from modifications to the systems or controls shall be documented within thirty calendar days of the change being completed.

C. Measures

M1. The Responsible Entity shall make available documentation of its security test procedures as specified in Requirement R1.

M2. The Responsible Entity shall make available documentation as specified in Requirement R2.

M3. The Responsible Entity shall make available documentation and records of its security patch management program, as specified in Requirement R3.

M4. The Responsible Entity shall make available documentation and records of its malicious software prevention program as specified in Requirement R4.

M5. The Responsible Entity shall make available documentation and records of its account management program as specified in Requirement R5.

M6. The Responsible Entity shall make available documentation and records of its security status monitoring program as specified in Requirement R6.

M7. The Responsible Entity shall make available documentation and records of its program for the disposal or redeployment of Cyber Assets as specified in Requirement R7.

M8. The Responsible Entity shall make available documentation and records of its annual vulnerability assessment of all Cyber Assets within the Electronic Security Perimeters(s) as specified in Requirement R8.

M9. The Responsible Entity shall make available documentation and records demonstrating the review and update as specified in Requirement R9.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

1.2. The RE shall serve as the CEA with the following exceptions:

1.2.1 For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.

1.2.2 For Reliability Coordinators and other functional entities that work for their Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

1.2.3 For Responsible Entities that are also Regional Entities, the ERO or a Regional Entity approved by the ERO and FERC or other applicable governmental authorities shall serve as the Compliance Enforcement Authority.

1.2.4 For the ERO, a third-party monitor without vested interest in the outcome for the ERO shall serve as the Compliance Enforcement Authority.

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

1.4.1 The Responsible Entity shall keep all documentation and records from the previous full calendar year unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

1.4.2 The Responsible Entity shall retain security–related system event logs for ninety calendar days, unless longer retention is required pursuant to Standard CIP-008-4 Requirement R2.

1.4.3 The Compliance Enforcement Authority in conjunction with the Registered Entity shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information.

2. Violation Severity Levels

Requirement	VRF	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	MEDIUM	N/A	The Responsible Entity did create, implement and maintain the test procedures as required in R1.1, **but did not document** that testing is performed as required in R1.2. OR The Responsible Entity did not document the test results as required in R1.3.	The Responsible Entity did not create, implement and maintain the test procedures as required in R1.1.	The Responsible Entity did not create, implement and maintain the test procedures as required in R1.1, AND The Responsible Entity did not document that testing was performed as required in R1.2 AND The Responsible Entity did not document the test results as required in R1.3.
R1.1.	MEDIUM	N/A	N/A	N/A	N/A
R1.2.	LOWER	N/A	N/A	N/A	N/A
R1.3.	LOWER	N/A	N/A	N/A	N/A
R2.	MEDIUM	N/A	The Responsible Entity established (implemented) but did not document a process to ensure that only those ports and services required for normal and emergency operations are enabled.	The Responsible Entity documented but did not establish (implement) a process to ensure that only those ports and services required for normal and emergency operations are enabled.	The Responsible Entity did not establish (implement) nor document a process to ensure that only those ports and services required for normal and emergency operations are enabled.
R2.1.	MEDIUM	The Responsible Entity enabled ports and services not required for normal and emergency operations on at least one but less than 5% of the Cyber Assets inside the Electronic Security Perimeter(s).	The Responsible Entity enabled ports and services not required for normal and emergency operations on 5% or more but less than 10% of the Cyber Assets inside the Electronic Security Perimeter(s).	The Responsible Entity enabled ports and services not required for normal and emergency operations on 10% or more but less than 15% of the Cyber Assets inside the Electronic Security Perimeter(s).	The Responsible Entity enabled ports and services not required for normal and emergency operations on 15% or more of the Cyber Assets inside the Electronic Security Perimeter(s).
R2.2.	MEDIUM	The Responsible Entity did not disable other ports and services, including those used for	The Responsible Entity did not disable other ports and services, including those used for testing purposes, prior to production use	The Responsible Entity did not disable other ports and services, including those used for testing purposes, prior to production use for 10% or more but less than 15% of the Cyber Assets inside the Electronic Security Perimeter(s).	The Responsible Entity did not disable other ports and services, including those used for testing purposes, prior to production use for 15% or more of the Cyber Assets inside the Electronic Security Perimeter(s).

		testing purposes, prior to production use for at least one but less than 5% of the Cyber Assets inside the Electronic Security Perimeter(s).	for 5% or more but less than 10% of the Cyber Assets inside the Electronic Security Perimeter(s).		
R2.3.	MEDIUM	N/A	N/A	N/A	For cases where unused ports and services cannot be disabled due to technical limitations, the Responsible Entity did not document compensating measure(s) applied to mitigate risk exposure.
R3.	LOWER	The Responsible Entity established (implemented) and documented, either separately or as a component of the documented configuration management process specified in CIP-003-4 Requirement R6, a security patch management program **but** did not include one or more of the following: tracking, evaluating, testing, and installing applicable cyber security software patches for all Cyber Assets within the Electronic Security Perimeter(s).	The Responsible Entity established (implemented) but did not document, either separately or as a component of the documented configuration management process specified in CIP-003-4 Requirement R6, a security patch management program for tracking, evaluating, testing, and installing applicable cyber security software patches for all Cyber Assets within the Electronic Security Perimeter(s).	The Responsible Entity documented but did not establish (implement), either separately or as a component of the documented configuration management process specified in CIP-003-4 Requirement R6, a security patch management program for tracking, evaluating, testing, and installing applicable cyber security software patches for all Cyber Assets within the Electronic Security Perimeter(s).	The Responsible Entity did not establish (implement) nor document, either separately or as a component of the documented configuration management process specified in CIP-003-4 Requirement R6, a security patch management program for tracking, evaluating, testing, and installing applicable cyber security software patches for all Cyber Assets within the Electronic Security Perimeter(s).
R3.1.	LOWER	The Responsible Entity documented the assessment of security patches and security upgrades for applicability as required in Requirement R3 in more than 30 but less than 60 calendar days after the availability of the patches and upgrades.	The Responsible Entity documented the assessment of security patches and security upgrades for applicability as required in Requirement R3 in 60 or more but less than 90 calendar days after the availability of the patches and upgrades.	The Responsible Entity documented the assessment of security patches and security upgrades for applicability as required in Requirement R3 in 90 or more but less than 120 calendar days after the availability of the patches and upgrades.	The Responsible Entity documented the assessment of security patches and security upgrades for applicability as required in Requirement R3 in 120 calendar days or more after the availability of the patches and upgrades.

R3.2.	LOWER	N/A	N/A	N/A	The Responsible Entity did not document the implementation of applicable security patches as required in R3. OR Where an applicable patch was not installed, the Responsible Entity did not document the compensating measure(s) applied to mitigate risk exposure.
R4.	MEDIUM	The Responsible Entity, as technically feasible, did not use anti-virus software and other malicious software ("malware") prevention tools, nor implemented compensating measures, on at least one but less than 5% of Cyber Assets within the Electronic Security Perimeter(s).	The Responsible Entity, as technically feasible, did not use anti-virus software and other malicious software ("malware") prevention tools, nor implemented compensating measures, on at least 5% but less than 10% of Cyber Assets within the Electronic Security Perimeter(s).	The Responsible Entity, as technically feasible, did not use anti-virus software and other malicious software ("malware") prevention tools, nor implemented compensating measures, on at least 10% but less than 15% of Cyber Assets within the Electronic Security Perimeter(s).	The Responsible Entity, as technically feasible, did not use anti-virus software and other malicious software ("malware") prevention tools, nor implemented compensating measures, on 15% or more Cyber Assets within the Electronic Security Perimeter(s).
R4.1.	MEDIUM	N/A	N/A	N/A	The Responsible Entity did not document the implementation of antivirus and malware prevention tools for cyber assets within the electronic security perimeter. OR The Responsible Entity did not document the implementation of compensating measure(s) applied to mitigate risk exposure where antivirus and malware prevention tools are not installed.
R4.2.	MEDIUM	The Responsible Entity, as technically feasible, documented and implemented a process for the update of anti-virus and malware prevention "signatures.", but the process did not address testing and installation of the signatures.	The Responsible Entity, as technically feasible, did not document but implemented a process, including addressing testing and installing the signatures, for the update of anti-virus and malware prevention "signatures."	The Responsible Entity, as technically feasible, documented but did not implement a process, including addressing testing and installing the signatures, for the update of anti-virus and malware prevention "signatures."	The Responsible Entity, as technically feasible, did not document nor implement a process including addressing testing and installing the signatures for the update of anti-virus and malware prevention "signatures."
R5.	LOWER	N/A	The Responsible Entity implemented but did not document technical and procedural controls that enforce access authentication of, and accountability for, all user activity.	The Responsible Entity documented but did not implement technical and procedural controls that enforce access authentication of, and accountability for, all user activity.	The Responsible Entity did not document nor implement technical and procedural controls that enforce access authentication of, and accountability for, all user activity.

R5.1.	MEDIUM	N/A	N/A	N/A	The Responsible Entity did not ensure that individual and shared system accounts and authorized access permissions are consistent with the concept of "need to know" with respect to work functions performed.
R5.1.1.	LOWER	At least one user account but less than 1% of user accounts implemented by the Responsible Entity, were not approved by designated personnel.	One (1) % or more of user accounts but less than 3% of user accounts implemented by the Responsible Entity were not approved by designated personnel.	Three (3) % or more of user accounts but less than 5% of user accounts implemented by the Responsible Entity were not approved by designated personnel.	Five (5) % or more of user accounts implemented by the Responsible Entity were not approved by designated personnel.
R5.1.2.	LOWER	N/A	The Responsible Entity generated logs with sufficient detail to create historical audit trails of individual user account access activity, however the logs do not contain activity for a minimum of 90 days.	The Responsible Entity generated logs with insufficient detail to create historical audit trails of individual user account access activity.	The Responsible Entity did not generate logs of individual user account access activity.
R5.1.3.	MEDIUM	N/A	N/A	N/A	The Responsible Entity did not review, at least annually, user accounts to verify access privileges are in accordance with Standard CIP-003-4 Requirement R5 and Standard CIP-004-4 Requirement R4.
R5.2.	LOWER	N/A	N/A	N/A	The Responsible Entity did not implement a policy to minimize and manage the scope and acceptable use of administrator, shared, and other generic account privileges including factory default accounts.
R5.2.1.	MEDIUM	N/A	N/A	The Responsible Entity's policy did not include the removal, disabling, or renaming of such accounts where possible, however for accounts that must remain enabled, passwords were changed prior to putting any system into service.	For accounts that must remain enabled, the Responsible Entity did not change passwords prior to putting any system into service.
R5.2.2.	LOWER	N/A	N/A	N/A	The Responsible Entity did not identify all individuals with access to shared accounts.
R5.2.3.	MEDIUM	N/A	Where such accounts must be shared, the Responsible Entity has a policy for managing the use of such accounts, but is missing 1 of the following 3 items: a) limits access to only those with authorization, b) has an audit trail of the account use (automated or	Where such accounts must be shared, the Responsible Entity has a policy for managing the use of such accounts, but is missing 2 of the following 3 items: a) limits access to only those with authorization, b) has an audit trail of the account use (automated or manual), c) has specified steps for securing the account in the event of personnel changes (for example, change in assignment or termination).	Where such accounts must be shared, the Responsible Entity does not have a policy for managing the use of such accounts that limits access to only those with authorization, an audit trail of the account use (automated or manual), and steps for securing the account in the event of personnel changes (for example, change in assignment or termination).

			manual), c) has specified steps for securing the account in the event of personnel changes (for example, change in assignment or termination).		
R5.3.	LOWER	The Responsible Entity requires and uses passwords as technically feasible, but only addresses 2 of the requirements in R5.3.1, R5.3.2., R5.3.3.	The Responsible Entity requires and uses passwords as technically feasible but only addresses 1 of the requirements in R5.3.1, R5.3.2., R5.3.3.	The Responsible Entity requires but does not use passwords as required in R5.3.1, R5.3.2., R5.3.3 and did not demonstrate why it is not technically feasible.	The Responsible Entity does not require nor use passwords as required in R5.3.1, R5.3.2., R5.3.3 and did not demonstrate why it is not technically feasible.
R5.3.1.	LOWER	N/A	N/A	N/A	N/A
R5.3.2.	LOWER	N/A	N/A	N/A	N/A
R5.3.3.	MEDIUM	N/A	N/A	N/A	N/A
R6.	LOWER	The Responsible Entity, as technically feasible, did not implement automated tools or organizational process controls to monitor system events that are related to cyber security for at least one but less than 5% of Cyber Assets inside the Electronic Security Perimeter(s).	The Responsible Entity, as technically feasible, did not implement automated tools or organizational process controls to monitor system events that are related to cyber security for 5% or more but less than 10% of Cyber Assets inside the Electronic Security Perimeter(s).	The Responsible Entity did not implement automated tools or organizational process controls, as technically feasible, to monitor system events that are related to cyber security for 10% or more but less than 15% of Cyber Assets inside the Electronic Security Perimeter(s).	The Responsible Entity did not implement automated tools or organizational process controls, as technically feasible, to monitor system events that are related to cyber security for 15% or more of Cyber Assets inside the Electronic Security Perimeter(s).
R6.1.	MEDIUM	N/A	The Responsible Entity implemented but did not document the organizational processes and technical and procedural mechanisms for monitoring for security events on all Cyber Assets within the Electronic Security Perimeter.	The Responsible Entity documented but did not implement the organizational processes and technical and procedural mechanisms for monitoring for security events on all Cyber Assets within the Electronic Security Perimeter.	The Responsible Entity did not implement nor document the organizational processes and technical and procedural mechanisms for monitoring for security events on all Cyber Assets within the Electronic Security Perimeter.

R6.2.	MEDIUM	N/A	N/A	N/A	The Responsible entity's security monitoring controls do not issue automated or manual alerts for detected Cyber Security Incidents.
R6.3.	MEDIUM	N/A	N/A	N/A	The Responsible Entity did not maintain logs of system events related to cyber security, where technically feasible, to support incident response as required in Standard CIP-008-4.
R6.4.	LOWER	The Responsible Entity retained the logs specified in Requirement R6, for at least 60 days, but less than 90 days.	The Responsible Entity retained the logs specified in Requirement R6, for at least 30 days, but less than 60 days.	The Responsible Entity retained the logs specified in Requirement R6, for at least one day, but less than 30 days.	The Responsible Entity did not retain any logs specified in Requirement R6.
R6.5.	LOWER	N/A	N/A	N/A	The Responsible Entity did not review logs of system events related to cyber security nor maintain records documenting review of logs.
R7.	LOWER	The Responsible Entity established and implemented formal methods, processes, and procedures for disposal and redeployment of Cyber Assets within the Electronic Security Perimeter(s) as identified and documented in Standard CIP- 005-4 **but** did not maintain records as specified in R7.3. (Retired)	The Responsible Entity established and implemented formal methods, processes, and procedures for disposal of Cyber Assets within the Electronic Security Perimeter(s) as identified and documented in Standard CIP-005-4 **but** did not address redeployment as specified in R7.2.	The Responsible Entity established and implemented formal methods, processes, and procedures for redeployment of Cyber Assets within the Electronic Security Perimeter(s) as identified and documented in Standard CIP-005-4 **but** did not address disposal as specified in R7.1.	The Responsible Entity did not establish or implement formal methods, processes, and procedures for disposal or redeployment of Cyber Assets within the Electronic Security Perimeter(s) as identified and documented in Standard CIP-005-4.
R7.1.	LOWER	N/A	N/A	N/A	N/A
R7.2.	LOWER	N/A	N/A	N/A	N/A
R7.3. (Retired)	LOWER	N/A	N/A	N/A	N/A

R8	LOWER	The Responsible Entity performed at least annually a Vulnerability Assessment that included 95% or more but less than 100% of Cyber Assets within the Electronic Security Perimeter.	The Responsible Entity performed at least annually a Vulnerability Assessment that included 90% or more but less than 95% of Cyber Assets within the Electronic Security Perimeter.	The Responsible Entity performed at least annually a Vulnerability Assessment that included more than 85% but less than 90% of Cyber Assets within the Electronic Security Perimeter.	The Responsible Entity performed at least annually a Vulnerability Assessment for 85% or less of Cyber Assets within the Electronic Security Perimeter. OR The vulnerability assessment did not include one (1) or more of the subrequirements 8.1, 8.2, 8.3, 8.4.

None identified.

Version History

Version	Date	Action	Change Tracking
2		Modifications to clarify the requirements and to bring the compliance elements into conformance with the latest guidelines for developing compliance elements of standards. Removal of reasonable business judgment and acceptance of risk. Revised the Purpose of this standard to clarify that Standard CIP-007-2 requires Responsible Entities to define methods, processes, and procedures for securing Cyber Assets and other (non-Critical) Assets within an Electronic Security Perimeter. Replaced the RRO with the RE as a responsible entity. Rewording of Effective Date. R9 changed ninety (90) days to thirty (30) days Changed compliance monitor to Compliance Enforcement Authority.	
3		Updated version numbers from -2 to -3	
3	12/16/09	Approved by the NERC Board of Trustees	
4	Board approved 01/24/2011	Update version number from “3” to “4”	Update to conform to changes to CIP-002-4 (Project 2008-06)
4	4/19/12	FERC Order issued approving CIP-007-4 (approval becomes effective June 25, 2012) Added approved VRF/VSL table to section D.2.	
3, 4	TBD	R7.3 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. Title: **System Restoration from Blackstart Resources**

2. Number: EOP-005-2

3. Purpose: Ensure plans, Facilities, and personnel are prepared to enable System restoration from Blackstart Resources to assure reliability is maintained during restoration and priority is placed on restoring the Interconnection.

4. Applicability:

4.1. Transmission Operators.

4.2. Generator Operators.

4.3. Transmission Owners identified in the Transmission Operators restoration plan.

4.4. Distribution Providers identified in the Transmission Operators restoration plan.

5. Proposed Effective Date: Twenty-four months after the first day of the first calendar quarter following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all requirements go into effect twenty-four months after Board of Trustees adoption.

B. Requirements

R1. Each Transmission Operator shall have a restoration plan approved by its Reliability Coordinator. The restoration plan shall allow for restoring the Transmission Operator's System following a Disturbance in which one or more areas of the Bulk Electric System (BES) shuts down and the use of Blackstart Resources is required to restore the shut down area to service, to a state whereby the choice of the next Load to be restored is not driven by the need to control frequency or voltage regardless of whether the Blackstart Resource is located within the Transmission Operator's System. The restoration plan shall include: *[Time Horizon = Operations Planning]*

R1.1. Strategies for system restoration that are coordinated with the Reliability Coordinator's high level strategy for restoring the Interconnection.

R1.2. A description of how all Agreements or mutually agreed upon procedures or protocols for off-site power requirements of nuclear power plants, including priority of restoration, will be fulfilled during System restoration.

R1.3. Procedures for restoring interconnections with other Transmission Operators under the direction of the Reliability Coordinator.

R1.4. Identification of each Blackstart Resource and its characteristics including but not limited to the following: the name of the Blackstart Resource, location, megawatt and megavar capacity, and type of unit.

R1.5. Identification of Cranking Paths and initial switching requirements between each Blackstart Resource and the unit(s) to be started.

R1.6. Identification of acceptable operating voltage and frequency limits during restoration.

R1.7. Operating Processes to reestablish connections within the Transmission Operator's System for areas that have been restored and are prepared for reconnection.

R1.8. Operating Processes to restore Loads required to restore the System, such as station service for substations, units to be restarted or stabilized, the Load needed to stabilize generation and frequency, and provide voltage control.

R1.9. Operating Processes for transferring authority back to the Balancing Authority in accordance with the Reliability Coordinator's criteria.

R2. Each Transmission Operator shall provide the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan. *[Time Horizon = Operations Planning]*

R3. Each Transmission Operator shall review its restoration plan and submit it to its Reliability Coordinator annually on a mutually agreed predetermined schedule. *[Time Horizon = Operations Planning]*

R3.1. If there are no changes to the previously submitted restoration plan, the Transmission Operator shall confirm annually on a predetermined schedule to its Reliability Coordinator that it has reviewed its restoration plan and no changes were necessary. (Retired)

R4. Each Transmission Operator shall update its restoration plan within 90 calendar days after identifying any unplanned permanent System modifications, or prior to implementing a planned BES modification, that would change the implementation of its restoration plan. *[Time Horizon = Operations Planning]*

R4.1. Each Transmission Operator shall submit its revised restoration plan to its Reliability Coordinator for approval within the same 90 calendar day period.

R5. Each Transmission Operator shall have a copy of its latest Reliability Coordinator approved restoration plan within its primary and backup control rooms so that it is available to all of its System Operators prior to its implementation date. *[Time Horizon = Operations Planning]*

R6. Each Transmission Operator shall verify through analysis of actual events, steady state and dynamic simulations, or testing that its restoration plan accomplishes its intended function. This shall be completed every five years at a minimum. Such analysis, simulations or testing shall verify: *[Time Horizon = Long-term Planning]*

R6.1. The capability of Blackstart Resources to meet the Real and Reactive Power requirements of the Cranking Paths and the dynamic capability to supply initial Loads.

R6.2. The location and magnitude of Loads required to control voltages and frequency within acceptable operating limits.

R6.3. The capability of generating resources required to control voltages and frequency within acceptable operating limits.

R7. Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, each

affected Transmission Operator shall implement its restoration plan. If the restoration plan cannot be executed as expected the Transmission Operator shall utilize its restoration strategies to facilitate restoration. *[Time Horizon = Real-time Operations]*

R8. Following a Disturbance in which one or more areas of the BES shuts down and the use of Blackstart Resources is required to restore the shut down area to service, the Transmission Operator shall resynchronize area(s) with neighboring Transmission Operator area(s) only with the authorization of the Reliability Coordinator or in accordance with the established procedures of the Reliability Coordinator. *[Time Horizon = Real-time Operations]*

R9. Each Transmission Operator shall have Blackstart Resource testing requirements to verify that each Blackstart Resource is capable of meeting the requirements of its restoration plan. These Blackstart Resource testing requirements shall include: *[Time Horizon = Operations Planning]*

R9.1. The frequency of testing such that each Blackstart Resource is tested at least once every three calendar years.

R9.2. A list of required tests including:

R9.2.1. The ability to start the unit when isolated with no support from the BES or when designed to remain energized without connection to the remainder of the System.

R9.2.2. The ability to energize a bus. If it is not possible to energize a bus during the test, the testing entity must affirm that the unit has the capability to energize a bus such as verifying that the breaker close coil relay can be energized with the voltage and frequency monitor controls disconnected from the synchronizing circuits.

R9.3. The minimum duration of each of the required tests.

R10. Each Transmission Operator shall include within its operations training program, annual System restoration training for its System Operators to assure the proper execution of its restoration plan. This training program shall include training on the following: *[Time Horizon = Operations Planning]*

R10.1. System restoration plan including coordination with the Reliability Coordinator and Generator Operators included in the restoration plan.

R10.2. Restoration priorities.

R10.3. Building of cranking paths.

R10.4. Synchronizing (re-energized sections of the System).

R11. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall provide a minimum of two hours of System restoration training every two calendar years to their field switching personnel identified as performing unique tasks associated with the Transmission Operator's restoration plan that are outside of their normal tasks. *[Time Horizon = Operations Planning]*

R12. Each Transmission Operator shall participate in its Reliability Coordinator's restoration drills, exercises, or simulations as requested by its Reliability Coordinator. *[Time Horizon = Operations Planning]*

R13. Each Transmission Operator and each Generator Operator with a Blackstart Resource shall have written Blackstart Resource Agreements or mutually agreed upon procedures or protocols, specifying the terms and conditions of their arrangement. Such Agreements shall include references to the Blackstart Resource testing requirements. *[Time Horizon = Operations Planning]*

R14. Each Generator Operator with a Blackstart Resource shall have documented procedures for starting each Blackstart Resource and energizing a bus. *[Time Horizon = Operations Planning]*

R15. Each Generator Operator with a Blackstart Resource shall notify its Transmission Operator of any known changes to the capabilities of that Blackstart Resource affecting the ability to meet the Transmission Operator's restoration plan within 24 hours following such change. *[Time Horizon = Operations Planning]*

R16. Each Generator Operator with a Blackstart Resource shall perform Blackstart Resource tests, and maintain records of such testing, in accordance with the testing requirements set by the Transmission Operator to verify that the Blackstart Resource can perform as specified in the restoration plan. *[Time Horizon = Operations Planning]*

R16.1. Testing records shall include at a minimum: name of the Blackstart Resource, unit tested, date of the test, duration of the test, time required to start the unit, an indication of any testing requirements not met under Requirement R9.

R16.2. Each Generator Operator shall provide the blackstart test results within 30 calendar days following a request from its Reliability Coordinator or Transmission Operator.

R17. Each Generator Operator with a Blackstart Resource shall provide a minimum of two hours of training every two calendar years to each of its operating personnel responsible for the startup of its Blackstart Resource generation units and energizing a bus. The training program shall include training on the following: *[Time Horizon = Operations Planning]*

R17.1. System restoration plan including coordination with the Transmission Operator.

R17.2. The procedures documented in Requirement R14.

R18. Each Generator Operator shall participate in the Reliability Coordinator's restoration drills, exercises, or simulations as requested by the Reliability Coordinator. *[Time Horizon = Operations Planning]*

C. Measures

M1. Each Transmission Operator shall have a dated, documented System restoration plan developed in accordance with Requirement R1 that has been approved by its Reliability Coordinator as shown with the documented approval from its Reliability Coordinator.

M2. Each Transmission Operator shall have evidence such as e-mails with receipts or registered mail receipts that it provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan in accordance with Requirement R2.

M3. Each Transmission Operator shall have documentation such as a dated review signature sheet, revision histories, e-mails with receipts, or registered mail receipts, that it has annually reviewed and submitted the Transmission Operator's restoration plan to its Reliability Coordinator in accordance with Requirement R3.

M4. Each Transmission Operator shall have documentation such as dated review signature sheets, revision histories, e-mails with receipts, or registered mail receipts, that it has updated its restoration plan and submitted it to its Reliability Coordinator in accordance with Requirement R4.

M5. Each Transmission Operator shall have documentation that it has made the latest Reliability Coordinator approved copy of its restoration plan available in its primary and backup control rooms and its System Operators prior to its implementation date in accordance with Requirement R5.

M6. Each Transmission Operator shall have documentation such as power flow outputs, that it has verified that its latest restoration plan will accomplish its intended function in accordance with Requirement R6.

M7. If there has been a Disturbance in which Blackstart Resources have been utilized in restoring the shut down area of the BES to service, each Transmission Operator involved shall have evidence such as voice recordings, e-mail, dated computer printouts, or operator logs, that it implemented its restoration plan or restoration plan strategies in accordance with Requirement R7.

M8. If there has been a Disturbance in which Blackstart Resources have been utilized in restoring the shut down area of the BES to service, each Transmission Operator involved in such an event shall have evidence, such as voice recordings, e-mail, dated computer printouts, or operator logs, that it resynchronized shut down areas in accordance with Requirement R8.

M9. Each Transmission Operator shall have documented Blackstart Resource testing requirements in accordance with Requirement R9.

M10. Each Transmission Operator shall have an electronic or hard copy of the training program material provided for its System Operators for System restoration training in accordance with Requirement R10.

M11. Each Transmission Operator, each applicable Transmission Owner, and each applicable Distribution Provider shall have an electronic or hard copy of the training program material provided to their field switching personnel for System restoration training and the corresponding training records including training dates and duration in accordance with Requirement R11.

M12. Each Transmission Operator shall have evidence, such as training records, that it participated in the Reliability Coordinator's restoration drills, exercises, or simulations as requested in accordance with Requirement R12.

M13. Each Transmission Operator and Generator Operator with a Blackstart Resource shall have the dated Blackstart Resource Agreements or mutually agreed upon procedures or protocols in accordance with Requirement R13.

M14. Each Generator Operator with a Blackstart Resource shall have dated documented procedures on file for starting each unit and energizing a bus in accordance with Requirement R14.

M15. Each Generator Operator with a Blackstart Resource shall provide evidence, such as e-mails with receipts or registered mail receipts, showing that it notified its Transmission Operator of any known changes to its Blackstart Resource capabilities within twenty-four hours of such changes in accordance with Requirement R15.

M16. Each Generator Operator with a Blackstart Resource shall maintain dated documentation of its Blackstart Resource test results and shall have evidence such as e-mails with receipts or registered mail receipts, that it provided these records to its Reliability Coordinator and Transmission Operator when requested in accordance with Requirement R16.

M17. Each Generator Operator with a Blackstart Resource shall have an electronic or hard copy of the training program material provided to its operating personnel responsible for the startup and synchronization of its Blackstart Resource generation units and a copy of its dated training records including training dates and durations showing that it has provided training in accordance with Requirement R17.

M18. Each Generator Operator shall have evidence, such as dated training records, that it participated in the Reliability Coordinator's restoration drills, exercises, or simulations if requested to do so in accordance with Requirement R18.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity.

1.2. Compliance Monitoring Period and Reset Time Frame

Not applicable.

1.3. Compliance Monitoring and Enforcement Processes:

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

The Transmission Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Approved restoration plan and any restoration plans in force since the last compliance audit for Requirement R1, Measure M1.
- Provided the entities identified in its approved restoration plan with a description of any changes to their roles and specific tasks prior to the implementation date of the plan for the current calendar year and three prior calendar years for Requirement R2, Measure M2.
- Submission of the Transmission Operator's annually reviewed restoration plan to its Reliability Coordinator for the current calendar year and three prior calendar years for Requirement R3, Measure M3.
- Submission of an updated restoration plan to its Reliability Coordinator for all versions for the current calendar year and the prior three years for Requirement R4, Measure M4.
- The current, restoration plan approved by the Reliability Coordinator and any restoration plans for the last three calendar years that was made available in its control rooms for Requirement R5, Measure M5.
- The verification results for the current, approved restoration plan and the previous approved restoration plan for Requirement R6, Measure M6.
- Implementation of its restoration plan or restoration plan strategies on any occasion for three calendar years if there has been a Disturbance in which Blackstart Resources have been utilized in restoring the shut down area of the BES to service for Requirement R7, Measure M7.
- Resynchronization of shut down areas on any occasion over three calendar years if there has been a Disturbance in which Blackstart Resources have been utilized in restoring the shut down area of the BES to service for Requirement R8, Measure M8.
- The verification process and results for the current Blackstart Resource testing requirements and the last previous Blackstart Resource testing requirements for Requirement R9, Measure M9.
- Actual training program materials or descriptions for three calendar years for Requirement R10, Measure M10.
- Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last compliance audit as well as one previous compliance audit period for Requirement R12, Measure M12.

If a Transmission Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Transmission Operator, applicable Transmission Owner, and applicable Distribution provider shall keep data or evidence to show compliance as identified

below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Actual training program materials or descriptions and actual training records for three calendar years for Requirement R11, Measure M11.

If a Transmission Operator, applicable Transmission owner, or applicable Distribution Provider is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Transmission Operator and Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Current Blackstart Resource Agreements and any Blackstart Resource Agreements or mutually agreed upon procedures or protocols in force since its last compliance audit for Requirement R13, Measure M13.

The Generator Operator with a Blackstart Resource shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Current documentation and any documentation in force since its last compliance audit on procedures to start each Blackstart Resources and for energizing a bus for Requirement R14, Measure M14.
- Notification to its Transmission Operator of any known changes to its Blackstart Resource capabilities over the last three calendar years for Requirement R15, Measure M15.
- The verification test results for the current set of requirements and one previous set for its Blackstart Resources for Requirement R16, Measure M16.
- Actual training program materials and actual training records for three calendar years for Requirement R17, Measure M17.

If a Generation Operator with a Blackstart Resource is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Generator Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Records of participation in all requested Reliability Coordinator restoration drills, exercises, or simulations since its last compliance audit for Requirement R18, Measure M18.

If a Generation Operator is found non-compliant for any requirement, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None.

2. Violation Severity Levels

E. Regional Variances

None.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed "Proposed" from Effective Date	Errata
1	May 2, 2007	Approved by Board of Trustees	Revised
2	TBD	Revisions pursuant to Project 2006-03	Updated testing requirements Incorporated Attachment 1 into the requirements Updated Measures and Compliance to match new Requirements
2	August 5, 2009	Adopted by Board of Trustees	Revised
2	March 17, 2011	Order issued by FERC approving EOP-005-2 (approval effective 5/23/11)	
2	TBD	R3.1 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. Title: Coordination of Plans For New Generation, Transmission, and End-User Facilities

2. Number: FAC-002-1

3. Purpose: To avoid adverse impacts on reliability, Generator Owners and Transmission Owners and electricity end-users must meet facility connection and performance requirements.

4. Applicability:

4.1. Generator Owner

4.2. Transmission Owner

4.3. Distribution Provider

4.4. Load-Serving Entity

4.5. Transmission Planner

4.6. Planning Authority

5. (Proposed) Effective Date: The first day of the first calendar quarter six months after applicable regulatory approval; or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter six months after Board of Trustees' adoption.

B. Requirements

R1. The Generator Owner, Transmission Owner, Distribution Provider, and Load-Serving Entity seeking to integrate generation facilities, transmission facilities, and electricity end-user facilities shall each coordinate and cooperate on its assessments with its Transmission Planner and Planning Authority. The assessment shall include:

1.1. Evaluation of the reliability impact of the new facilities and their connections on the interconnected transmission systems.

1.2. Ensurance of compliance with NERC Reliability Standards and applicable Regional, subregional, Power Pool, and individual system planning criteria and facility connection requirements.

1.3. Evidence that the parties involved in the assessment have coordinated and cooperated on the assessment of the reliability impacts of new facilities on the interconnected transmission systems. While these studies may be performed independently, the results shall be jointly evaluated and coordinated by the entities involved.

1.4. Evidence that the assessment included steady-state, short-circuit, and dynamics studies as necessary to evaluate system performance under both normal and contingency conditions in accordance with Reliability Standards TPL-001-0, TPL-002-0, and TPL-003-0.

1.5. Documentation that the assessment included study assumptions, system performance, alternatives considered, and jointly coordinated recommendations.

R2. The Planning Authority, Transmission Planner, Generator Owner, Transmission Owner, Load-Serving Entity, and Distribution Provider shall each retain its documentation (of its evaluation of the reliability impact of the new facilities and their connections on the interconnected

transmission systems) for three years and shall provide the documentation to the Regional Reliability Organization(s) and NERC on request (within 30 calendar days). (Retired)

C. Measures

M1. The Planning Authority, Transmission Planner, Generator Owner, Transmission Owner, Load-Serving Entity, and Distribution Provider's documentation of its assessment of the reliability impacts of new facilities shall address all items in Reliability Standard FAC-002-0_R1.

M2. The Planning Authority, Transmission Planner, Generator Owner, Transmission Owner, Load-Serving Entity, and Distribution Provider shall each have evidence of its assessment of the reliability impacts of new facilities and their connections on the interconnected transmission systems is retained and provided to other entities in accordance with Reliability Standard FAC-002-0_R2. (Retired)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity.

1.2. Compliance Monitoring Period and Reset Timeframe

Not applicable.

1.3. Compliance Monitoring and Enforcement Processes:

Compliance Audits
Self-Certifications
Spot Checking
Compliance Violation Investigations
Self-Reporting

Complaints

1.4. Data Retention

Evidence of the assessment of the reliability impacts of new facilities and their connections on the interconnected transmission systems: Three years.

1.5. Additional Compliance Information

None

2. Violation Severity Levels (no changes)

E. Regional Differences

1. None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	January 13, 2006	Removed duplication of "Regional Reliability Organizations(s).	Errata
1	TBD	Modified to address Order No. 693 Directives contained in paragraph 693.	Revised.

1	TBD	R2 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. Title: **Facility Ratings Methodology**

2. Number: FAC-008-1

3. Purpose: To ensure that Facility Ratings used in the reliable planning and operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies.

4. Applicability

4.1. Transmission Owner

4.2. Generator Owner

5. Effective Date: August 7, 2006

B. Requirements

R1. The Transmission Owner and Generator Owner shall each document its current methodology used for developing Facility Ratings (Facility Ratings Methodology) of its solely and jointly owned Facilities. The methodology shall include all of the following:

R1.1. A statement that a Facility Rating shall equal the most limiting applicable Equipment Rating of the individual equipment that comprises that Facility.

R1.2. The method by which the Rating (of major BES equipment that comprises a Facility) is determined.

R1.2.1. The scope of equipment addressed shall include, but not be limited to, generators, transmission conductors, transformers, relay protective devices, terminal equipment, and series and shunt compensation devices.

R1.2.2. The scope of Ratings addressed shall include, as a minimum, both Normal and Emergency Ratings.

R1.3. Consideration of the following:

R1.3.1. Ratings provided by equipment manufacturers.

R1.3.2. Design criteria (e.g., including applicable references to industry Rating practices such as manufacturer's warranty, IEEE, ANSI or other standards).

R1.3.3. Ambient conditions.

R1.3.4. Operating limitations.

R1.3.5. Other assumptions.

R2. The Transmission Owner and Generator Owner shall each make its Facility Ratings Methodology available for inspection and technical review by those Reliability Coordinators, Transmission Operators, Transmission Planners, and Planning Authorities that have responsibility for the area in which the associated Facilities are located, within 15 business days of receipt of a request. (Retired)

R3. If a Reliability Coordinator, Transmission Operator, Transmission Planner, or Planning Authority provides written comments on its technical review of a Transmission Owner's or Generator Owner's Facility Ratings Methodology, the Transmission Owner or Generator Owner shall provide a written response to that commenting entity within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the

Facility Ratings Methodology and, if no change will be made to that Facility Ratings Methodology, the reason why. (Retired)

C. Measures

M1. The Transmission Owner and Generator Owner shall each have a documented Facility Ratings Methodology that includes all of the items identified in FAC-008 Requirement 1.1 through FAC-008 Requirement 1.3.5.

M2. The Transmission Owner and Generator Owner shall each have evidence it made its Facility Ratings Methodology available for inspection within 15 business days of a request as follows: (Retired)

M2.1 The Reliability Coordinator shall have access to the Facility Ratings Methodologies used for Rating Facilities in its Reliability Coordinator Area. (Retired)

M2.2 The Transmission Operator shall have access to the Facility Ratings Methodologies used for Rating Facilities in its portion of the Reliability Coordinator Area. (Retired)

M2.3 The Transmission Planner shall have access to the Facility Ratings Methodologies used for Rating Facilities in its Transmission Planning Area. (Retired)

M2.4 The Planning Authority shall have access to the Facility Ratings Methodologies used for Rating Facilities in its Planning Authority Area. (Retired)

M3. If the Reliability Coordinator, Transmission Operator, Transmission Planner, or Planning Authority provides documented comments on its technical review of a Transmission Owner's or Generator Owner's Facility Ratings Methodology, the Transmission Owner or Generator Owner shall have evidence that it provided a written response to that commenting entity within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Facility Ratings Methodology and, if no change will be made to that Facility Ratings Methodology, the reason why. (Retired)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Regional Reliability Organization

1.2. Compliance Monitoring Period and Reset Time Frame

Each Transmission Owner and Generator Owner shall self-certify its compliance to the Compliance Monitor at least once every three years. New Transmission Owners and Generator Owners shall each demonstrate compliance through an on-site audit conducted by the Compliance Monitor within the first year that it commences operation. The Compliance Monitor shall also conduct an on-site audit once every nine years and an investigation upon complaint to assess performance.

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

1.3. Data Retention

The Transmission Owner and Generator Owner shall each keep all superseded portions of its Facility Ratings Methodology for 12 months beyond the date of the change in that methodology and shall keep all documented comments on the Facility Ratings Methodology and associated responses for three years. In addition, entities found non-compliant shall keep information related to the non-compliance until found compliant.

The Compliance Monitor shall keep the last audit and all subsequent compliance records.

1.4. Additional Compliance Information

The Transmission Owner and Generator Owner shall each make the following available for inspection during an on-site audit by the Compliance Monitor or within 15 business days of a request as part of an investigation upon complaint:

1.4.1 Facility Ratings Methodology

1.4.2 Superseded portions of its Facility Ratings Methodology that had been replaced, changed or revised within the past 12 months

1.4.3 Documented comments provided by a Reliability Coordinator, Transmission Operator, Transmission Planner or Planning Authority on its technical review of a Transmission Owner's or Generator Owner's Facility Ratings methodology, and the associated responses

2. Levels of Non-Compliance

2.1. Level 1: There shall be a level one non-compliance if any of the following conditions exists:

2.1.1 The Facility Ratings Methodology does not contain a statement that a Facility Rating shall equal the most limiting applicable Equipment Rating of the individual equipment that comprises that Facility.

2.1.2 The Facility Ratings Methodology does not address one of the required equipment types identified in FAC-008 R1.2.1.

2.1.3 No evidence of responses to a Reliability Coordinator's, Transmission Operator, Transmission Planner, or Planning Authority's comments on the Facility Ratings Methodology. (Retired)

2.2. Level 2: The Facility Ratings Methodology is missing the assumptions used to determine Facility Ratings or does not address two of the required equipment types identified in FAC-008 R1.2.1.

2.3. Level 3: The Facility Ratings Methodology does not address three of the required equipment types identified in FAC-008-1 R1.2.1.

2.4. Level 4: The Facility Ratings Methodology does not address both Normal and Emergency Ratings ~~or the Facility Ratings Methodology was not made available for inspection within 15 business days of receipt of a request~~. (Deleted text retired)

E. Regional Differences

None Identified.

Version History

Version	Date	Action	Change Tracking
1	01/01/05	1. Lower cased the word "draft" and "drafting team" where appropriate. 2. Changed incorrect use of certain hyphens (-) to "en dash" (–) and "em dash (—)." 3. Changed "Timeframe" to "Time	01/20/05

		Frame" and "twelve" to "12" in item D, 1.2.	
1	TBD	R2 and R3 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. **Title:** **Facility Ratings**

2. **Number:** FAC-008-3

3. **Purpose:** To ensure that Facility Ratings used in the reliable planning and operation of the Bulk Electric System (BES) are determined based on technically sound principles. A Facility Rating is essential for the determination of System Operating Limits.

4. **Applicability**

   4.1. Transmission Owner.

   4.2. Generator Owner.

5. **Effective Date:** The first day of the first calendar quarter that is twelve months beyond the date approved by applicable regulatory authorities, or in those jurisdictions where regulatory approval is not required, the first day of the first calendar quarter twelve months following BOT adoption.

B. Requirements

R1. Each Generator Owner shall have documentation for determining the Facility Ratings of its solely and jointly owned generator Facility(ies) up to the low side terminals of the main step up transformer if the Generator Owner does not own the main step up transformer and the high side terminals of the main step up transformer if the Generator Owner owns the main step up transformer. *[Violation Risk Factor: Lower] [Time Horizon: Long-term Planning]*

1.1. The documentation shall contain assumptions used to rate the generator and at least one of the following:

- Design or construction information such as design criteria, ratings provided by equipment manufacturers, equipment drawings and/or specifications, engineering analyses, method(s) consistent with industry standards (e.g. ANSI and IEEE), or an established engineering practice that has been verified by testing or engineering analysis.
- Operational information such as commissioning test results, performance testing or historical performance records, any of which may be supplemented by engineering analyses.

1.2. The documentation shall be consistent with the principle that the Facility Ratings do not exceed the most limiting applicable Equipment Rating of the individual equipment that comprises that Facility.

R2. Each Generator Owner shall have a documented methodology for determining Facility Ratings (Facility Ratings methodology) of its solely and jointly owned equipment connected between the location specified in R1 and the point of interconnection with the Transmission Owner that contains all of the following. *[Violation Risk Factor: Medium] [Time Horizon: Long-term Planning]*

2.1. The methodology used to establish the Ratings of the equipment that comprises the Facility(ies) shall be consistent with at least one of the following:

- Ratings provided by equipment manufacturers or obtained from equipment manufacturer specifications such as nameplate rating.

- One or more industry standards developed through an open process such as Institute of Electrical and Electronic Engineers (IEEE) or International Council on Large Electric Systems (CIGRE).
- A practice that has been verified by testing, performance history or engineering analysis.

2.2. The underlying assumptions, design criteria, and methods used to determine the Equipment Ratings identified in Requirement R2, Part 2.1 including identification of how each of the following were considered:

2.2.1. Equipment Rating standard(s) used in development of this methodology.

2.2.2. Ratings provided by equipment manufacturers or obtained from equipment manufacturer specifications.

2.2.3. Ambient conditions (for particular or average conditions or as they vary in real-time).

2.2.4. Operating limitations.[1]

2.3. A statement that a Facility Rating shall respect the most limiting applicable Equipment Rating of the individual equipment that comprises that Facility.

2.4. The process by which the Rating of equipment that comprises a Facility is determined.

2.4.1. The scope of equipment addressed shall include, but not be limited to, conductors, transformers, relay protective devices, terminal equipment, and series and shunt compensation devices.

2.4.2. The scope of Ratings addressed shall include, as a minimum, both Normal and Emergency Ratings.

R3. Each Transmission Owner shall have a documented methodology for determining Facility Ratings (Facility Ratings methodology) of its solely and jointly owned Facilities (except for those generating unit Facilities addressed in R1 and R2) that contains all of the following: *[Violation Risk Factor: Medium] [Time Horizon: Long-term Planning]*

3.1. The methodology used to establish the Ratings of the equipment that comprises the Facility shall be consistent with at least one of the following:

- Ratings provided by equipment manufacturers or obtained from equipment manufacturer specifications such as nameplate rating.
- One or more industry standards developed through an open process such as Institute of Electrical and Electronics Engineers (IEEE) or International Council on Large Electric Systems (CIGRE).
- A practice that has been verified by testing, performance history or engineering analysis.

3.2. The underlying assumptions, design criteria, and methods used to determine the Equipment Ratings identified in Requirement R3, Part 3.1 including identification of how each of the following were considered:

3.2.1. Equipment Rating standard(s) used in development of this methodology.

[1] Such as temporary de-ratings of impaired equipment in accordance with good utility practice.

3.2.2. Ratings provided by equipment manufacturers or obtained from equipment manufacturer specifications.

3.2.3. Ambient conditions (for particular or average conditions or as they vary in real-time).

3.2.4. Operating limitations.[2]

3.3. A statement that a Facility Rating shall respect the most limiting applicable Equipment Rating of the individual equipment that comprises that Facility.

3.4. The process by which the Rating of equipment that comprises a Facility is determined.

3.4.1. The scope of equipment addressed shall include, but not be limited to, transmission conductors, transformers, relay protective devices, terminal equipment, and series and shunt compensation devices.

3.4.2. The scope of Ratings addressed shall include, as a minimum, both Normal and Emergency Ratings.

R4. Each Transmission Owner shall make its Facility Ratings methodology and each Generator Owner shall each make its documentation for determining its Facility Ratings and its Facility Ratings methodology available for inspection and technical review by those Reliability Coordinators, Transmission Operators, Transmission Planners and Planning Coordinators that have responsibility for the area in which the associated Facilities are located, within 21 calendar days of receipt of a request. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]* (Retired)

R5. If a Reliability Coordinator, Transmission Operator, Transmission Planner or Planning Coordinator provides documented comments on its technical review of a Transmission Owner's Facility Ratings methodology or Generator Owner's documentation for determining its Facility Ratings and its Facility Rating methodology, the Transmission Owner or Generator Owner shall provide a response to that commenting entity within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Facility Ratings methodology and, if no change will be made to that Facility Ratings methodology, the reason why. *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning]* (Retired)

R6. Each Transmission Owner and Generator Owner shall have Facility Ratings for its solely and jointly owned Facilities that are consistent with the associated Facility Ratings methodology or documentation for determining its Facility Ratings. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

R7. Each Generator Owner shall provide Facility Ratings (for its solely and jointly owned Facilities that are existing Facilities, new Facilities, modifications to existing Facilities and re-ratings of existing Facilities) to its associated Reliability Coordinator(s), Planning Coordinator(s), Transmission Planner(s), Transmission Owner(s) and Transmission Operator(s) as scheduled by such requesting entities. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

R8. Each Transmission Owner (and each Generator Owner subject to Requirement R2) shall provide requested information as specified below (for its solely and jointly owned Facilities that are existing Facilities, new Facilities, modifications to existing Facilities and re-ratings of existing Facilities) to its associated Reliability Coordinator(s), Planning Coordinator(s), Transmission Planner(s), Transmission Owner(s) and Transmission Operator(s): *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

[2] Such as temporary de-ratings of impaired equipment in accordance with good utility practice.

8.1. As scheduled by the requesting entities:

8.1.1. Facility Ratings

8.1.2. Identity of the most limiting equipment of the Facilities

8.2. Within 30 calendar days (or a later date if specified by the requester), for any requested Facility with a Thermal Rating that limits the use of Facilities under the requester's authority by causing any of the following: 1) An Interconnection Reliability Operating Limit, 2) A limitation of Total Transfer Capability, 3) An impediment to generator deliverability, or 4) An impediment to service to a major load center:

8.2.1. Identity of the existing next most limiting equipment of the Facility

8.2.2. The Thermal Rating for the next most limiting equipment identified in Requirement R8, Part 8.2.1.

C. Measures

M1. Each Generator Owner shall have documentation that shows how its Facility Ratings were determined as identified in Requirement 1.

M2. Each Generator Owner shall have a documented Facility Ratings methodology that includes all of the items identified in Requirement 2, Parts 2.1 through 2.4.

M3. Each Transmission Owner shall have a documented Facility Ratings methodology that includes all of the items identified in Requirement 3, Parts 3.1 through 3.4.

M4. Each Transmission Owner shall have evidence, such as a copy of a dated electronic note, or other comparable evidence to show that it made its Facility Ratings methodology available for inspection within 21 calendar days of a request in accordance with Requirement 4. The Generator Owner shall have evidence, such as a copy of a dated electronic note, or other comparable evidence to show that it made its documentation for determining its Facility Ratings or its Facility Ratings methodology available for inspection within 21 calendar days of a request in accordance with Requirement R4. (Retired)

M5. If the Reliability Coordinator, Transmission Operator, Transmission Planner or Planning Coordinator provides documented comments on its technical review of a Transmission Owner's or Generator Owner's Facility Ratings methodology or a Generator Owner's documentation for determining its Facility Ratings, the Transmission Owner or Generator Owner shall have evidence, (such as a copy of a dated electronic or hard copy note, or other comparable evidence from the Transmission Owner or Generator Owner addressed to the commenter that includes the response to the comment,) that it provided a response to that commenting entity in accordance with Requirement R5. (Retired)

M6. Each Transmission Owner and Generator Owner shall have evidence to show that its Facility Ratings are consistent with the documentation for determining its Facility Ratings as specified in Requirement R1 or consistent with its Facility Ratings methodology as specified in Requirements R2 and R3 (Requirement R6).

M7. Each Generator Owner shall have evidence, such as a copy of a dated electronic note, or other comparable evidence to show that it provided its Facility Ratings to its associated Reliability Coordinator(s), Planning Coordinator(s), Transmission Planner(s), Transmission Owner(s) and Transmission Operator(s) in accordance with Requirement R7.

M8. Each Transmission Owner (and Generator Owner subject to Requirement R2) shall have evidence, such as a copy of a dated electronic note, or other comparable evidence to show that it provided its Facility Ratings and identity of limiting equipment to its associated Reliability

Coordinator(s), Planning Coordinator(s), Transmission Planner(s), Transmission Owner(s) and Transmission Operator(s) in accordance with Requirement R8.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring and Enforcement Processes:

- Self-Certifications
- Spot Checking
- Compliance Audits
- Self-Reporting
- Compliance Violation Investigations
- Complaints

1.3. Data Retention

The Generator Owner shall keep its current documentation (for R1) and any modifications to the documentation that were in force since last compliance audit period for Measure M1 and Measure M6.

The Generator Owner shall keep its current, in force Facility Ratings methodology (for R2) and any modifications to the methodology that were in force since last compliance audit period for Measure M2 and Measure M6.

The Transmission Owner shall keep its current, in force Facility Ratings methodology (for R3) and any modifications to the methodology that were in force since the last compliance audit for Measure M3 and Measure M6.

The Transmission Owner and Generator Owner shall keep its current, in force Facility Ratings and any changes to those ratings for three calendar years for Measure M6.

The Generator Owner and Transmission Owner shall each keep evidence for Measure M4, and Measure M5, for three calendar years. (Retired)

The Generator Owner shall keep evidence for Measure M7 for three calendar years.

The Transmission Owner (and Generator Owner that is subject to Requirement R2) shall keep evidence for Measure M8 for three calendar years.

If a Generator Owner or Transmission Owner is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit and all subsequent compliance records.

1.4. Additional Compliance Information

None

Violation Severity Levels

R #	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	N/A	• The Generator Owner's Facility Rating documentation did not address Requirement R1, Part 1.1.	The Generator Owner's Facility Rating documentation did not address Requirement R1, Part 1.2.	The Generator Owner failed to provide documentation for determining its Facility Ratings.
R2	The Generator Owner failed to include in its Facility Rating methodology one of the following Parts of Requirement R2: • 2.1. • 2.2.1 • 2.2.2 • 2.2.3 • 2.2.4	The Generator Owner failed to include in its Facility Rating methodology two of the following Parts of Requirement R2: • 2.1 • 2.2.1 • 2.2.2 • 2.2.3 • 2.2.4	The Generator Owner's Facility Rating methodology did not address all the components of Requirement R2, Part 2.4. OR The Generator Owner failed to include in its Facility Rating Methodology, three of the following Parts of Requirement R2: • 2.1. • 2.2.1 • 2.2.2 • 2.2.3 • 2.2.4	The Generator Owner's Facility Rating methodology failed to recognize a facility's rating based on the most limiting component rating as required in Requirement R2, Part 2.3 OR The Generator Owner failed to include in its Facility Rating Methodology four or more of the following Parts of Requirement R2: • 2.1 • 2.2.1 • 2.2.2 • 2.2.3 • 2.2.4
R3	The Transmission Owner failed to include in its Facility Rating methodology one of the following Parts of Requirement R3: • 3.1 • 3.2.1	The Transmission Owner failed to include in its Facility Rating methodology two of the following Parts of Requirement R3: • 3.1 • 3.2.1	The Transmission Owner's Facility Rating methodology did not address either of the following Parts of Requirement R3: • 3.4.1 • 3.4.2	The Transmission Owner's Facility Rating methodology failed to recognize a Facility's rating based on the most limiting component rating as required in Requirement R3, Part 3.3 OR

R #	Lower VSL	Moderate VSL	High VSL	Severe VSL
	• 3.2.2 • 3.2.3 • 3.2.4	• 3.2.2 • 3.2.3 • 3.2.4	OR The Transmission Owner failed to include in its Facility Rating methodology three of the following Parts of Requirement R3: • 3.1 • 3.2.1 • 3.2.2 • 3.2.3 • 3.2.4	The Transmission Owner failed to include in its Facility Rating methodology four or more of the following Parts of Requirement R3: • 3.1 • 3.2.1 • 3.2.2 • 3.2.3 • 3.2.4
R4 (Retired)	The responsible entity made its Facility Ratings methodology or Facility Ratings documentation available within more than 21 calendar days but less than or equal to 31 calendar days after a request.	The responsible entity made its Facility Ratings methodology or Facility Ratings documentation available within more than 31 calendar days but less than or equal to 41 calendar days after a request.	The responsible entity made its Facility Rating methodology or Facility Ratings documentation available within more than 41 calendar days but less than or equal to 51 calendar days after a request.	The responsible entity failed to make its Facility Ratings methodology or Facility Ratings documentation available in more than 51 calendar days after a request. (R3)
R5 (Retired)	The responsible entity provided a response in more than 45 calendar days but less than or equal to 60 calendar days after a request. (R5)	The responsible entity provided a response in more than 60 calendar days but less than or equal to 70 calendar days after a request. OR The responsible entity provided a response within 45 calendar days, and the response indicated that a change will not be made to the Facility Ratings methodology or Facility Ratings documentation but did not indicate why no change will be made. (R5)	The responsible entity provided a response in more than 70 calendar days but less than or equal to 80 calendar days after a request. OR The responsible entity provided a response within 45 calendar days, but the response did not indicate whether a change will be made to the Facility Ratings methodology or Facility Ratings documentation. (R5)	The responsible entity failed to provide a response as required in more than 80 calendar days after the comments were received. (R5)

R #	Lower VSL	Moderate VSL	High VSL	Severe VSL
R6	The responsible entity failed to establish Facility Ratings consistent with the associated Facility Ratings methodology or documentation for determining the Facility Ratings for 5% or less of its solely owned and jointly owned Facilities. (R6)	The responsible entity failed to establish Facility Ratings consistent with the associated Facility Ratings methodology or documentation for determining the Facility Ratings for more than 5% or more, but less than up to (and including) 10% of its solely owned and jointly owned Facilities. (R6)	The responsible entity failed to establish Facility Ratings consistent with the associated Facility Ratings methodology or documentation for determining the Facility Ratings for more than 10% up to (and including) 15% of its solely owned and jointly owned Facilities. (R6)	The responsible entity failed to establish Facility Ratings consistent with the associated Facility Ratings methodology or documentation for determining the Facility Ratings for more than15% of its solely owned and jointly owned Facilities. (R6)
R7	The Generator Owner provided its Facility Ratings to all of the requesting entities but missed meeting the schedules by up to and including 15 calendar days.	The Generator Owner provided its Facility Ratings to all of the requesting entities but missed meeting the schedules by more than 15 calendar days but less than or equal to 25 calendar days.	The Generator Owner provided its Facility Ratings to all of the requesting entities but missed meeting the schedules by more than 25 calendar days but less than or equal to 35 calendar days.	The Generator Owner provided its Facility Ratings to all of the requesting entities but missed meeting the schedules by more than 35 calendar days. OR The Generator Owner failed to provide its Facility Ratings to the requesting entities.
R8	The responsible entity provided its Facility Ratings to all of the requesting entities but missed meeting the schedules by up to and including 15 calendar days. (R8, Part 8.1) OR The responsible entity provided less than 100%, but not less than or equal to 95% of the required Rating information to all of the requesting entities. (R8, Part 8.1)	The responsible entity provided its Facility Ratings to all of the requesting entities but missed meeting the schedules by more than 15 calendar days but less than or equal to 25 calendar days. (R8, Part 8.1) OR The responsible entity provided less than 95%, but not less than or equal to 90% of the required Rating information to all of the requesting entities. (R8, Part 8.1) OR	The responsible entity provided its Facility Ratings to all of the requesting entities but missed meeting the schedules by more than 25 calendar days but less than or equal to 35 calendar days. (R8, Part 8.1) OR The responsible entity provided less than 90%, but not less than or equal to 85% of the required Rating information to all of the requesting entities. (R8, Part 8.1) OR	The responsible entity provided its Facility Ratings to all of the requesting entities but missed meeting the schedules by more than 35 calendar days. (R8, Part 8.1) OR The responsible entity provided less than 85% of the required Rating information to all of the requesting entities. (R8, Part 8.1) OR The responsible entity provided the required Rating information to the requesting entity, but did so more

R #	Lower VSL	Moderate VSL	High VSL	Severe VSL
	OR The responsible entity provided the required Rating information to the requesting entity, but the information was provided up to and including 15 calendar days late. (R8, Part 8.2) OR The responsible entity provided less than 100%, but not less than or equal to 95% of the required Rating information to the requesting entity. (R8, Part 8.2)	The responsible entity provided the required Rating information to the requesting entity, but did so more 15 calendar days but less than or equal to 25 calendar days late. (R8, Part 8.2) OR The responsible entity provided less than 95%, but not less than or equal to 90% of the required Rating information to the requesting entity. (R8, Part 8.2)	The responsible entity provided the required Rating information to the requesting entity, but did so more than 25 calendar days but less than or equal to 35 calendar days late. (R8, Part 8.2) OR The responsible entity provided less than 90%, but no less than or equal to 85% of the required Rating information to the requesting entity. (R8, Part 8.2)	than 35 calendar days late. (R8, Part 8.2) OR The responsible entity provided less than 85 % of the required Rating information to the requesting entity. (R8, Part 8.2) OR The responsible entity failed to provide its Rating information to the requesting entity. (R8, Part 8.1)

A. Introduction

1. Title: **System Operating Limits Methodology for the Planning Horizon**

2. Number: FAC-010-2.1

3. Purpose: To ensure that System Operating Limits (SOLs) used in the reliable planning of the Bulk Electric System (BES) are determined based on an established methodology or methodologies.

4. Applicability

4.1. Planning Authority

5. Effective Date: April 19, 2010

B. Requirements

R1. The Planning Authority shall have a documented SOL Methodology for use in developing SOLs within its Planning Authority Area. This SOL Methodology shall:

R1.1. Be applicable for developing SOLs used in the planning horizon.

R1.2. State that SOLs shall not exceed associated Facility Ratings.

R1.3. Include a description of how to identify the subset of SOLs that qualify as IROLs.

R2. The Planning Authority's SOL Methodology shall include a requirement that SOLs provide BES performance consistent with the following:

R2.1. In the pre-contingency state and with all Facilities in service, the BES shall demonstrate transient, dynamic and voltage stability; all Facilities shall be within their Facility Ratings and within their thermal, voltage and stability limits. In the determination of SOLs, the BES condition used shall reflect expected system conditions and shall reflect changes to system topology such as Facility outages.

R2.2. Following the single Contingencies[1] identified in Requirement 2.2.1 through Requirement 2.2.3, the system shall demonstrate transient, dynamic and voltage stability; all Facilities shall be operating within their Facility Ratings and within their thermal, voltage and stability limits; and Cascading or uncontrolled separation shall not occur.

R2.2.1. Single line to ground or three-phase Fault (whichever is more severe), with Normal Clearing, on any Faulted generator, line, transformer, or shunt device.

R2.2.2. Loss of any generator, line, transformer, or shunt device without a Fault.

R2.2.3. Single pole block, with Normal Clearing, in a monopolar or bipolar high voltage direct current system.

R2.3. Starting with all Facilities in service, the system's response to a single Contingency, may include any of the following:

R2.3.1. Planned or controlled interruption of electric supply to radial customers or some local network customers connected to or supplied by the Faulted Facility or by the affected area.

[1] The Contingencies identified in R2.2.1 through R2.2.3 are the minimum contingencies that must be studied but are not necessarily the only Contingencies that should be studied.

R2.3.2. System reconfiguration through manual or automatic control or protection actions.

R2.4. To prepare for the next Contingency, system adjustments may be made, including changes to generation, uses of the transmission system, and the transmission system topology.

R2.5. Starting with all Facilities in service and following any of the multiple Contingencies identified in Reliability Standard TPL-003 the system shall demonstrate transient, dynamic and voltage stability; all Facilities shall be operating within their Facility Ratings and within their thermal, voltage and stability limits; and Cascading or uncontrolled separation shall not occur.

R2.6. In determining the system's response to any of the multiple Contingencies, identified in Reliability Standard TPL-003, in addition to the actions identified in R2.3.1 and R2.3.2, the following shall be acceptable:

R2.6.1. Planned or controlled interruption of electric supply to customers (load shedding), the planned removal from service of certain generators, and/or the curtailment of contracted Firm (non-recallable reserved) electric power Transfers.

R3. The Planning Authority's methodology for determining SOLs, shall include, as a minimum, a description of the following, along with any reliability margins applied for each:

R3.1. Study model (must include at least the entire Planning Authority Area as well as the critical modeling details from other Planning Authority Areas that would impact the Facility or Facilities under study).

R3.2. Selection of applicable Contingencies.

R3.3. Level of detail of system models used to determine SOLs.

R3.4. Allowed uses of Special Protection Systems or Remedial Action Plans.

R3.5. Anticipated transmission system configuration, generation dispatch and Load level.

R3.6. Criteria for determining when violating a SOL qualifies as an Interconnection Reliability Operating Limit (IROL) and criteria for developing any associated IROL T_v.

R4. The Planning Authority shall issue its SOL Methodology, and any change to that methodology, to all of the following prior to the effectiveness of the change:

R4.1. Each adjacent Planning Authority and each Planning Authority that indicated it has a reliability-related need for the methodology.

R4.2. Each Reliability Coordinator and Transmission Operator that operates any portion of the Planning Authority's Planning Authority Area.

R4.3. Each Transmission Planner that works in the Planning Authority's Planning Authority Area.

R5. If a recipient of the SOL Methodology provides documented technical comments on the methodology, the Planning Authority shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the SOL Methodology and, if no change will be made to that SOL Methodology, the reason why. (Retired)

C. Measures

M1. The Planning Authority's SOL Methodology shall address all of the items listed in Requirement 1 through Requirement 3.

M2. The Planning Authority shall have evidence it issued its SOL Methodology and any changes to that methodology, including the date they were issued, in accordance with Requirement 4.

M3. If the recipient of the SOL Methodology provides documented comments on its technical review of that SOL methodology, the Planning Authority that distributed that SOL Methodology shall have evidence that it provided a written response to that commenter within 45 calendar days of receipt of those comments in accordance with Requirement 5. (Retired)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Regional Reliability Organization

1.2. Compliance Monitoring Period and Reset Time Frame

Each Planning Authority shall self-certify its compliance to the Compliance Monitor at least once every three years. New Planning Authorities shall demonstrate compliance through an on-site audit conducted by the Compliance Monitor within the first year that it commences operation. The Compliance Monitor shall also conduct an on-site audit once every nine years and an investigation upon complaint to assess performance.

The Performance-Reset Period shall be twelve months from the last non-compliance.

1.3. Data Retention

The Planning Authority shall keep all superseded portions to its SOL Methodology for 12 months beyond the date of the change in that methodology ~~and shall keep all documented comments on its SOL Methodology and associated responses for three years~~. In addition, entities found non-compliant shall keep information related to the non-compliance until found compliant. (Deleted text retired)

The Compliance Monitor shall keep the last audit and all subsequent compliance records.

1.4. Additional Compliance Information

The Planning Authority shall make the following available for inspection during an on-site audit by the Compliance Monitor or within 15 business days of a request as part of an investigation upon complaint:

1.4.1 SOL Methodology.

1.4.2 Documented comments provided by a recipient of the SOL Methodology on its technical review of a SOL Methodology, and the associated responses. (Retired)

1.4.3 Superseded portions of its SOL Methodology that had been made within the past 12 months.

1.4.4 Evidence that the SOL Methodology and any changes to the methodology that occurred within the past 12 months were issued to all required entities.

2. Levels of Non-Compliance for Western Interconnection: (To be replaced with VSLs once developed and approved by WECC)

2.1. Level 1: There shall be a level one non-compliance if either of the following conditions exists:

2.1.1 The SOL Methodology did not include a statement indicating that Facility Ratings shall not be exceeded.

2.1.2 No evidence of responses to a recipient's comments on the SOL Methodology. (Retired)

2.2. Level 2: The SOL Methodology did not include a requirement to address all of the elements in R2.1 through R2.3 and E1.

2.3. Level 3: There shall be a level three non-compliance if any of the following conditions exists:

2.3.1 The SOL Methodology did not include a statement indicating that Facility Ratings shall not be exceeded and the methodology did not include evaluation of system response to one of the three types of single Contingencies identified in R2.2.

2.3.2 The SOL Methodology did not include a statement indicating that Facility Ratings shall not be exceeded and the methodology did not include evaluation of system response to two of the seven types of multiple Contingencies identified in E1.1.

2.3.3 The System Operating Limits Methodology did not include a statement indicating that Facility Ratings shall not be exceeded and the methodology did not address two of the six required topics in R3.

2.4. Level 4: The SOL Methodology was not issued to all required entities in accordance with R4

3. Violation Severity Levels:

Requirement	Lower	Moderate	High	Severe
R1	Not applicable.	The Planning Authority has a documented SOL Methodology for use in developing SOLs within its Planning Authority Area, but it does not address R1.2	The Planning Authority has a documented SOL Methodology for use in developing SOLs within its Planning Authority Area, but it does not address R1.3.	The Planning Authority has a documented SOL Methodology for use in developing SOLs within its Planning Authority Area, but it does not address R1.1. OR The Planning Authority has no documented SOL Methodology for use in developing SOLs within its Planning Authority Area.
R2	The Planning Authority's SOL Methodology requires that SOLs are set to meet BES performance following single and multiple contingencies, but does not address the pre-contingency state (R2.1)	The Planning Authority's SOL Methodology requires that SOLs are set to meet BES performance in the pre-contingency state and following single contingencies, but does not address multiple contingencies. (R2.5-R2.6)	The Planning Authority's SOL Methodology requires that SOLs are set to meet BES performance in the pre-contingency state and following multiple contingencies, but does not meet the performance for response to single contingencies. (R2.2 –R2.4)	The Planning Authority's SOL Methodology requires that SOLs are set to meet BES performance in the pre-contingency state but does not require that SOLs be set to meet the BES performance specified for response to single contingencies (R2.2-R2.4) and does not require that SOLs be set to meet the BES performance specified for response to multiple contingencies. (R2.5-R2.6)
R3	The Planning Authority has a methodology for determining SOLs that includes a description for all but one of the following: R3.1 through R3.6.	The Planning Authority has a methodology for determining SOLs that includes a description for all but two of the following: R3.1 through R3.6.	The Planning Authority has a methodology for determining SOLs that includes a description for all but three of the following: R3.1 through R3.6.	The Planning Authority has a methodology for determining SOLs that is missing a description of four or more of the following: R3.1 through R3.6.
R4	One or both of the following: The Planning Authority issued its SOL Methodology and changes	One of the following: The Planning Authority issued its SOL Methodology and changes	One of the following: The Planning Authority issued its SOL Methodology and changes	One of the following: The Planning Authority failed to issue its SOL Methodology and

Requirement	Lower	Moderate	High	Severe
	to that methodology to all but one of the required entities. For a change in methodology, the changed methodology was provided up to 30 calendar days after the effectiveness of the change.	to that methodology to all but one of the required entities AND for a change in methodology, the changed methodology was provided 30 calendar days or more, but less than 60 calendar days after the effectiveness of the change. OR The Planning Authority issued its SOL Methodology and changes to that methodology to all but two of the required entities AND for a change in methodology, the changed methodology was provided up to 30 calendar days after the effectiveness of the change.	to that methodology to all but one of the required entities AND for a change in methodology, the changed methodology was provided 60 calendar days or more, but less than 90 calendar days after the effectiveness of the change. OR The Planning Authority issued its SOL Methodology and changes to that methodology to all but two of the required entities AND for a change in methodology, the changed methodology was provided 30 calendar days or more, but less than 60 calendar days after the effectiveness of the change. OR The Planning Authority issued its SOL Methodology and changes to that methodology to all but three of the required entities AND for a change in methodology, the changed methodology was provided up to 30 calendar days after the effectiveness of the change.	changes to that methodology to more than three of the required entities. The Planning Authority issued its SOL Methodology and changes to that methodology to all but one of the required entities AND for a change in methodology, the changed methodology was provided 90 calendar days or more after the effectiveness of the change. OR The Planning Authority issued its SOL Methodology and changes to that methodology to all but two of the required entities AND for a change in methodology, the changed methodology was provided 60 calendar days or more, but less than 90 calendar days after the effectiveness of the change. OR The Planning Authority issued its SOL Methodology and changes to that methodology to all but three of the required entities AND for a change in methodology, the changed methodology was provided 30 calendar days or more, but less than 60 calendar days after the effectiveness of the change. The Planning Authority issued its SOL Methodology and changes to that methodology to all but

Requirement	Lower	Moderate	High	Severe
				four of the required entities AND for a change in methodology, the changed methodology was provided up to 30 calendar days after the effectiveness of the change.
R5 (Retired)	The Planning Authority received documented technical comments on its SOL Methodology and provided a complete response in a time period that was longer than 45 calendar days but less than 60 calendar days.	The Planning Authority received documented technical comments on its SOL Methodology and provided a complete response in a time period that was 60 calendar days or longer but less than 75 calendar days.	The Planning Authority received documented technical comments on its SOL Methodology and provided a complete response in a time period that was 75 calendar days or longer but less than 90 calendar days. OR The Planning Authority's response to documented technical comments on its SOL Methodology indicated that a change will not be made, but did not include an explanation of why the change will not be made.	The Planning Authority received documented technical comments on its SOL Methodology and provided a complete response in a time period that was 90 calendar days or longer. OR The Planning Authority's response to documented technical comments on its SOL Methodology did not indicate whether a change will be made to the SOL Methodology.

E. Regional Differences

1. The following Interconnection-wide Regional Difference shall be applicable in the Western Interconnection:

1.1. As governed by the requirements of R2.5 and R2.6, starting with all Facilities in service, shall require the evaluation of the following multiple Facility Contingencies when establishing SOLs:

1.1.1 Simultaneous permanent phase to ground Faults on different phases of each of two adjacent transmission circuits on a multiple circuit tower, with Normal Clearing. If multiple circuit towers are used only for station entrance and exit purposes, and if they do not exceed five towers at each station, then this condition is an acceptable risk and therefore can be excluded.

1.1.2 A permanent phase to ground Fault on any generator, transmission circuit, transformer, or bus section with Delayed Fault Clearing except for bus sectionalizing breakers or bus-tie breakers addressed in E1.1.7

1.1.3 Simultaneous permanent loss of both poles of a direct current bipolar Facility without an alternating current Fault.

1.1.4 The failure of a circuit breaker associated with a Special Protection System to operate when required following: the loss of any element without a Fault; or a permanent phase to ground Fault, with Normal Clearing, on any transmission circuit, transformer or bus section.

1.1.5 A non-three phase Fault with Normal Clearing on common mode Contingency of two adjacent circuits on separate towers unless the event frequency is determined to be less than one in thirty years.

1.1.6 A common mode outage of two generating units connected to the same switchyard, not otherwise addressed by FAC-010.

1.1.7 The loss of multiple bus sections as a result of failure or delayed clearing of a bus tie or bus sectionalizing breaker to clear a permanent Phase to Ground Fault.

1.2. SOLs shall be established such that for multiple Facility Contingencies in E1.1.1 through E1.1.5 operation within the SOL shall provide system performance consistent with the following:

1.2.1 All Facilities are operating within their applicable Post-Contingency thermal, frequency and voltage limits.

1.2.2 Cascading does not occur.

1.2.3 Uncontrolled separation of the system does not occur.

1.2.4 The system demonstrates transient, dynamic and voltage stability.

1.2.5 Depending on system design and expected system impacts, the controlled interruption of electric supply to customers (load shedding), the planned removal from service of certain generators, and/or the curtailment of contracted firm (non-recallable reserved) electric power transfers may be necessary to maintain the overall security of the interconnected transmission systems.

1.2.6 Interruption of firm transfer, Load or system reconfiguration is permitted through manual or automatic control or protection actions.

1.2.7 To prepare for the next Contingency, system adjustments are permitted, including changes to generation, Load and the transmission system topology when determining limits.

1.3. SOLs shall be established such that for multiple Facility Contingencies in E1.1.6 through E1.1.7 operation within the SOL shall provide system performance consistent with the following with respect to impacts on other systems:

1.3.1 Cascading does not occur.

1.4. The Western Interconnection may make changes (performance category adjustments) to the Contingencies required to be studied and/or the required responses to Contingencies for specific facilities based on actual system performance and robust design. Such changes will apply in determining SOLs.

Version History

A. Introduction

1. Title: **System Operating Limits Methodology for the Operations Horizon**

2. Number: FAC-011-2

3. Purpose: To ensure that System Operating Limits (SOLs) used in the reliable operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies.

4. Applicability

4.1. Reliability Coordinator

5. Effective Date: April 29, 2009

B. Requirements

R1. The Reliability Coordinator shall have a documented methodology for use in developing SOLs (SOL Methodology) within its Reliability Coordinator Area. This SOL Methodology shall:

R1.1. Be applicable for developing SOLs used in the operations horizon.

R1.2. State that SOLs shall not exceed associated Facility Ratings.

R1.3. Include a description of how to identify the subset of SOLs that qualify as IROLs.

R2. The Reliability Coordinator's SOL Methodology shall include a requirement that SOLs provide BES performance consistent with the following:

R2.1. In the pre-contingency state, the BES shall demonstrate transient, dynamic and voltage stability; all Facilities shall be within their Facility Ratings and within their thermal, voltage and stability limits. In the determination of SOLs, the BES condition used shall reflect current or expected system conditions and shall reflect changes to system topology such as Facility outages.

R2.2. Following the single Contingencies[1] identified in Requirement 2.2.1 through Requirement 2.2.3, the system shall demonstrate transient, dynamic and voltage stability; all Facilities shall be operating within their Facility Ratings and within their thermal, voltage and stability limits; and Cascading or uncontrolled separation shall not occur.

R2.2.1. Single line to ground or 3-phase Fault (whichever is more severe), with Normal Clearing, on any Faulted generator, line, transformer, or shunt device.

R2.2.2. Loss of any generator, line, transformer, or shunt device without a Fault.

R2.2.3. Single pole block, with Normal Clearing, in a monopolar or bipolar high voltage direct current system.

R2.3. In determining the system's response to a single Contingency, the following shall be acceptable:

R2.3.1. Planned or controlled interruption of electric supply to radial customers or some local network customers connected to or supplied by the Faulted Facility or by the affected area.

[1] The Contingencies identified in FAC-011 R2.2.1 through R2.2.3 are the minimum contingencies that must be studied but are not necessarily the only Contingencies that should be studied.

R2.3.2. Interruption of other network customers, (a) only if the system has already been adjusted, or is being adjusted, following at least one prior outage, or (b) if the real-time operating conditions are more adverse than anticipated in the corresponding studies

R2.3.3. System reconfiguration through manual or automatic control or protection actions.

R2.4. To prepare for the next Contingency, system adjustments may be made, including changes to generation, uses of the transmission system, and the transmission system topology.

R3. The Reliability Coordinator's methodology for determining SOLs, shall include, as a minimum, a description of the following, along with any reliability margins applied for each:

R3.1. Study model (must include at least the entire Reliability Coordinator Area as well as the critical modeling details from other Reliability Coordinator Areas that would impact the Facility or Facilities under study.)

R3.2. Selection of applicable Contingencies

R3.3. A process for determining which of the stability limits associated with the list of multiple contingencies (provided by the Planning Authority in accordance with FAC-014 Requirement 6) are applicable for use in the operating horizon given the actual or expected system conditions.

R3.3.1. This process shall address the need to modify these limits, to modify the list of limits, and to modify the list of associated multiple contingencies.

R3.4. Level of detail of system models used to determine SOLs.

R3.5. Allowed uses of Special Protection Systems or Remedial Action Plans.

R3.6. Anticipated transmission system configuration, generation dispatch and Load level

R3.7. Criteria for determining when violating a SOL qualifies as an Interconnection Reliability Operating Limit (IROL) and criteria for developing any associated IROL T_v.

R4. The Reliability Coordinator shall issue its SOL Methodology and any changes to that methodology, prior to the effectiveness of the Methodology or of a change to the Methodology, to all of the following:

R4.1. Each adjacent Reliability Coordinator and each Reliability Coordinator that indicated it has a reliability-related need for the methodology.

R4.2. Each Planning Authority and Transmission Planner that models any portion of the Reliability Coordinator's Reliability Coordinator Area.

R4.3. Each Transmission Operator that operates in the Reliability Coordinator Area.

R5. If a recipient of the SOL Methodology provides documented technical comments on the methodology, the Reliability Coordinator shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the SOL Methodology and, if no change will be made to that SOL Methodology, the reason why. (Retired)

C. Measures

M1. The Reliability Coordinator's SOL Methodology shall address all of the items listed in Requirement 1 through Requirement 3.

M2. The Reliability Coordinator shall have evidence it issued its SOL Methodology, and any changes to that methodology, including the date they were issued, in accordance with Requirement 4.

M3. If the recipient of the SOL Methodology provides documented comments on its technical review of that SOL methodology, the Reliability Coordinator that distributed that SOL Methodology shall have evidence that it provided a written response to that commenter within 45 calendar days of receipt of those comments in accordance with Requirement 5 (Retired)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Regional Reliability Organization

1.2. Compliance Monitoring Period and Reset Time Frame

Each Reliability Coordinator shall self-certify its compliance to the Compliance Monitor at least once every three years. New Reliability Authorities shall demonstrate compliance through an on-site audit conducted by the Compliance Monitor within the first year that it commences operation. The Compliance Monitor shall also conduct an on-site audit once every nine years and an investigation upon complaint to assess performance.

The Performance-Reset Period shall be twelve months from the last non-compliance.

1.3. Data Retention

The Reliability Coordinator shall keep all superseded portions to its SOL Methodology for 12 months beyond the date of the change in that methodology ~~and shall keep all documented comments on its SOL Methodology and associated responses for three years~~. In addition, entities found non-compliant shall keep information related to the non-compliance until found compliant. (Deleted text retired)

The Compliance Monitor shall keep the last audit and all subsequent compliance records.

1.4. Additional Compliance Information

The Reliability Coordinator shall make the following available for inspection during an on-site audit by the Compliance Monitor or within 15 business days of a request as part of an investigation upon complaint:

1.4.1 SOL Methodology.

1.4.2 Documented comments provided by a recipient of the SOL Methodology on its technical review of a SOL Methodology, and the associated responses. (Retired)

1.4.3 Superseded portions of its SOL Methodology that had been made within the past 12 months.

1.4.4 Evidence that the SOL Methodology and any changes to the methodology that occurred within the past 12 months were issued to all required entities.

2. Levels of Non-Compliance for Western Interconnection: (To be replaced with VSLs once developed and approved by WECC)

2.1. Level 1: There shall be a level one non-compliance if either of the following conditions exists:

2.1.1 The SOL Methodology did not include a statement indicating that Facility Ratings shall not be exceeded.

2.1.2 No evidence of responses to a recipient's comments on the SOL Methodology (Retired)

2.2. Level 2: The SOL Methodology did not include a requirement to address all of the elements in R3.1, R3.2, R3.4 through R3.7 and E1.

2.3. Level 3: There shall be a level three non-compliance if any of the following conditions exists:

2.3.1 The SOL Methodology did not include a statement indicating that Facility Ratings shall not be exceeded and the methodology did not include evaluation of system response to one of the three types of single Contingencies identified in R2.2.

2.3.2 The SOL Methodology did not include a statement indicating that Facility Ratings shall not be exceeded and the methodology did not include evaluation of system response to two of the seven types of multiple Contingencies identified in E1.1.

2.3.3 The System Operating Limits Methodology did not include a statement indicating that Facility Ratings shall not be exceeded and the methodology did not address two of the six required topics in R3.1, R3.2, R3.4 through R3.7.

2.4. Level 4: The SOL Methodology was not issued to all required entities in accordance with R4.

3. Violation Severity Levels:

Requirement	Lower	Moderate	High	Severe
R1	Not applicable.	The Reliability Coordinator has a documented SOL Methodology for use in developing SOLs within its Reliability Coordinator Area, but it does not address R1.2	The Reliability Coordinator has a documented SOL Methodology for use in developing SOLs within its Reliability Coordinator Area, but it does not address R1.3.	The Reliability Coordinator has a documented SOL Methodology for use in developing SOLs within its Reliability Coordinator Area, but it does not address R1.1. OR The Reliability Coordinator has no documented SOL Methodology for use in developing SOLs within its Reliability Coordinator Area.
R2	The Reliability Coordinator's SOL Methodology requires that SOLs are set to meet BES performance following single contingencies, but does not require that SOLs are set to meet BES performance in the pre-contingency state. (R2.1)	Not applicable.	The Reliability Coordinator's SOL Methodology requires that SOLs are set to meet BES performance in the pre-contingency state, but does not require that SOLs are set to meet BES performance following single contingencies. (R2.2 – R2.4)	The Reliability Coordinator's SOL Methodology does not require that SOLs are set to meet BES performance in the pre-contingency state and does not require that SOLs are set to meet BES performance following single contingencies. (R2.1 through R2.4)
R3	The Reliability Coordinator has a methodology for determining SOLs that includes a description for all but one of the following: R3.1 through R3.7.	The Reliability Coordinator has a methodology for determining SOLs that includes a description for all but two of the following: R3.1 through R3.7.	The Reliability Coordinator has a methodology for determining SOLs that includes a description for all but three of the following: R3.1 through R3.7.	The Reliability Coordinator has a methodology for determining SOLs that is missing a description of three or more of the following: R3.1 through R3.7.
R4	One or both of the following: The Reliability Coordinator issued its SOL Methodology and changes to that methodology to all but one of the required entities. For a change in methodology, the changed methodology was	One of the following: The Reliability Coordinator issued its SOL Methodology and changes to that methodology to all but one of the required entities AND for a change in methodology, the changed methodology was provided 30	One of the following: The Reliability Coordinator issued its SOL Methodology and changes to that methodology to all but one of the required entities AND for a change in methodology, the changed methodology was provided 60	One of the following: The Reliability Coordinator failed to issue its SOL Methodology and changes to that methodology to more than three of the required entities. The Reliability Coordinator issued its SOL Methodology and

Requirement	Lower	Moderate	High	Severe
	provided up to 30 calendar days after the effectiveness of the change.	calendar days or more, but less than 60 calendar days after the effectiveness of the change. OR The Reliability Coordinator issued its SOL Methodology and changes to that methodology to all but two of the required entities AND for a change in methodology, the changed methodology was provided up to 30 calendar days after the effectiveness of the change.	calendar days or more, but less than 90 calendar days after the effectiveness of the change. OR The Reliability Coordinator issued its SOL Methodology and changes to that methodology to all but two of the required entities AND for a change in methodology, the changed methodology was provided 30 calendar days or more, but less than 60 calendar days after the effectiveness of the change. OR The Reliability Coordinator issued its SOL Methodology and changes to that methodology to all but three of the required entities AND for a change in methodology, the changed methodology was provided up to 30 calendar days after the effectiveness of the change.	changes to that methodology to all but one of the required entities AND for a change in methodology, the changed methodology was provided 90 calendar days or more after the effectiveness of the change. OR The Reliability Coordinator issued its SOL Methodology and changes to that methodology to all but two of the required entities AND for a change in methodology, the changed methodology was provided 60 calendar days or more, but less than 90 calendar days after the effectiveness of the change. OR The Reliability Coordinator issued its SOL Methodology and changes to that methodology to all but three of the required entities AND for a change in methodology, the changed methodology was provided 30 calendar days or more, but less than 60 calendar days after the effectiveness of the change. OR The Reliability Coordinator issued its SOL Methodology and changes to that methodology to all but four of the required entities AND for a change in methodology, the changed methodology was provided up to

Requirement	Lower	Moderate	High	Severe
				30 calendar days after the effectiveness of the change.
R5 (Retired)	The Reliability Coordinator received documented technical comments on its SOL Methodology and provided a complete response in a time period that was longer than 45 calendar days but less than 60 calendar days.	The Reliability Coordinator received documented technical comments on its SOL Methodology and provided a complete response in a time period that was 60 calendar days or longer but less than 75 calendar days.	The Reliability Coordinator received documented technical comments on its SOL Methodology and provided a complete response in a time period that was 75 calendar days or longer but less than 90 calendar days. OR The Reliability Coordinator's response to documented technical comments on its SOL Methodology indicated that a change will not be made, but did not include an explanation of why the change will not be made.	The Reliability Coordinator received documented technical comments on its SOL Methodology and provided a complete response in a time period that was 90 calendar days or longer. OR The Reliability Coordinator's response to documented technical comments on its SOL Methodology did not indicate whether a change will be made to the SOL Methodology.

Regional Differences

1. The following Interconnection-wide Regional Difference shall be applicable in the Western Interconnection:

1.1. As governed by the requirements of R3.3, starting with all Facilities in service, shall require the evaluation of the following multiple Facility Contingencies when establishing SOLs:

1.1.1 Simultaneous permanent phase to ground Faults on different phases of each of two adjacent transmission circuits on a multiple circuit tower, with Normal Clearing. If multiple circuit towers are used only for station entrance and exit purposes, and if they do not exceed five towers at each station, then this condition is an acceptable risk and therefore can be excluded.

1.1.2 A permanent phase to ground Fault on any generator, transmission circuit, transformer, or bus section with Delayed Fault Clearing except for bus sectionalizing breakers or bus-tie breakers addressed in E1.1.7

1.1.3 Simultaneous permanent loss of both poles of a direct current bipolar Facility without an alternating current Fault.

1.1.4 The failure of a circuit breaker associated with a Special Protection System to operate when required following: the loss of any element without a Fault; or a permanent phase to ground Fault, with Normal Clearing, on any transmission circuit, transformer or bus section.

1.1.5 A non-three phase Fault with Normal Clearing on common mode Contingency of two adjacent circuits on separate towers unless the event frequency is determined to be less than one in thirty years.

1.1.6 A common mode outage of two generating units connected to the same switchyard, not otherwise addressed by FAC-011.

1.1.7 The loss of multiple bus sections as a result of failure or delayed clearing of a bus tie or bus sectionalizing breaker to clear a permanent Phase to Ground Fault.

1.2. SOLs shall be established such that for multiple Facility Contingencies in E1.1.1 through E1.1.5 operation within the SOL shall provide system performance consistent with the following:

1.2.1 All Facilities are operating within their applicable Post-Contingency thermal, frequency and voltage limits.

1.2.2 Cascading does not occur.

1.2.3 Uncontrolled separation of the system does not occur.

1.2.4 The system demonstrates transient, dynamic and voltage stability.

1.2.5 Depending on system design and expected system impacts, the controlled interruption of electric supply to customers (load shedding), the planned removal from service of certain generators, and/or the curtailment of contracted firm (non-recallable reserved) electric power transfers may be necessary to maintain the overall security of the interconnected transmission systems.

1.2.6 Interruption of firm transfer, Load or system reconfiguration is permitted through manual or automatic control or protection actions.

1.2.7 To prepare for the next Contingency, system adjustments are permitted, including changes to generation, Load and the transmission system topology when determining limits.

1.3. SOLs shall be established such that for multiple Facility Contingencies in E1.1.6 through E1.1.7 operation within the SOL shall provide system performance consistent with the following with respect to impacts on other systems:

1.3.1 Cascading does not occur.

1.4. The Western Interconnection may make changes (performance category adjustments) to the Contingencies required to be studied and/or the required responses to Contingencies for specific facilities based on actual system performance and robust design. Such changes will apply in determining SOLs.

Version History

Version	Date	Action	Change Tracking
1	November 1, 2006	Adopted by Board of Trustees	New

2	June 24, 2008	Adopted by Board of Trustees: FERC Order 705	Revised
2	January 22, 2010	Updated effective date and footer to April 29, 2009 based on the March 20, 2009 FERC Order	Update
2	TBD	R5 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. Title: Assessment of Transfer Capability for the Near-Term Transmission Planning Horizon

2. Number: FAC-013-2

3. Purpose: To ensure that Planning Coordinators have a methodology for, and perform an annual assessment to identify potential future Transmission System weaknesses and limiting Facilities that could impact the Bulk Electric System's (BES) ability to reliably transfer energy in the Near-Term Transmission Planning Horizon.

4. Applicability:

4.1. Planning Coordinators

5. Effective Date:

In those jurisdictions where regulatory approval is required, the latter of either the first day of the first calendar quarter twelve months after applicable regulatory approval or the first day of the first calendar quarter six months after MOD-001-1, MOD-028-1, MOD-029-1, and MOD-030-2 are effective.

In those jurisdictions where no regulatory approval is required, the latter of either the first day of the first calendar quarter twelve months after Board of Trustees adoption or the first day of the first calendar quarter six months after MOD-001-1, MOD-028-1, MOD-029-1 and MOD-030-2 are effective.

B. Requirements

R1. Each Planning Coordinator shall have a documented methodology it uses to perform an annual assessment of Transfer Capability in the Near-Term Transmission Planning Horizon (Transfer Capability methodology). The Transfer Capability methodology shall include, at a minimum, the following information: *[Violation Risk Factor: Medium] [Time Horizon: Long-term Planning]*

1.1. Criteria for the selection of the transfers to be assessed.

1.2. A statement that the assessment shall respect known System Operating Limits (SOLs).

1.3. A statement that the assumptions and criteria used to perform the assessment are consistent with the Planning Coordinator's planning practices.

1.4. A description of how each of the following assumptions and criteria used in performing the assessment are addressed:

1.4.1. Generation dispatch, including but not limited to long term planned outages, additions and retirements.

1.4.2. Transmission system topology, including but not limited to long term planned Transmission outages, additions, and retirements.

1.4.3. System demand.

1.4.4. Current approved and projected Transmission uses.

1.4.5. Parallel path (loop flow) adjustments.

1.4.6. Contingencies

1.4.7. Monitored Facilities.

1.5. A description of how simulations of transfers are performed through the adjustment of generation, Load or both.

R2. Each Planning Coordinator shall issue its Transfer Capability methodology, and any revisions to the Transfer Capability methodology, to the following entities subject to the following: *[Violation Risk Factor: Lower] [Time Horizon: Long-term Planning]*

2.1. Distribute to the following prior to the effectiveness of such revisions:

2.1.1. Each Planning Coordinator adjacent to the Planning Coordinator's Planning Coordinator area or overlapping the Planning Coordinator's area.

2.1.2. Each Transmission Planner within the Planning Coordinator's Planning Coordinator area.

2.2. Distribute to each functional entity that has a reliability-related need for the Transfer Capability methodology and submits a request for that methodology within 30 calendar days of receiving that written request.

R3. If a recipient of the Transfer Capability methodology provides documented concerns with the methodology, the Planning Coordinator shall provide a documented response to that recipient within 45 calendar days of receipt of those comments. The response shall indicate whether a change will be made to the Transfer Capability methodology and, if no change will be made to that Transfer Capability methodology, the reason why. *[Violation Risk Factor: Lower][Time Horizon: Long-term Planning]* (Retired)

R4. During each calendar year, each Planning Coordinator shall conduct simulations and document an assessment based on those simulations in accordance with its Transfer Capability methodology for at least one year in the Near-Term Transmission Planning Horizon. *[Violation Risk Factor: Medium] [Time Horizon: Long-term Planning]*

R5. Each Planning Coordinator shall make the documented Transfer Capability assessment results available within 45 calendar days of the completion of the assessment to the recipients of its Transfer Capability methodology pursuant to Requirement R2, Parts 2.1 and Part 2.2. However, if a functional entity that has a reliability related need for the results of the annual assessment of the Transfer Capabilities makes a written request for such an assessment after the completion of the assessment, the Planning Coordinator shall make the documented Transfer Capability assessment results available to that entity within 45 calendar days of receipt of the request *[Violation Risk Factor: Lower] [Time Horizon: Long-term Planning]*

R6. If a recipient of a documented Transfer Capability assessment requests data to support the assessment results, the Planning Coordinator shall provide such data to that entity within 45 calendar days of receipt of the request. The provision of such data shall be subject to the legal and regulatory obligations of the Planning Coordinator's area regarding the disclosure of confidential and/or sensitive information. *[Violation Risk Factor: Lower] [Time Horizon: Long-term Planning]*

C. Measures

M1. Each Planning Coordinator shall have a Transfer Capability methodology that includes the information specified in Requirement R1.

M2. Each Planning Coordinator shall have evidence such as dated e-mail or dated transmittal letters that it provided the new or revised Transfer Capability methodology in accordance with Requirement R2

M3. Each Planning Coordinator shall have evidence, such as dated e-mail or dated transmittal letters, that the Planning Coordinator provided a written response to that commenter in accordance with Requirement R3. (Retired)

M4. Each Planning Coordinator shall have evidence such as dated assessment results, that it conducted and documented a Transfer Capability assessment in accordance with Requirement R4.

M5. Each Planning Coordinator shall have evidence, such as dated copies of e-mails or transmittal letters, that it made its documented Transfer Capability assessment available to the entities in accordance with Requirement R5.

M6. Each Planning Coordinator shall have evidence, such as dated copies of e-mails or transmittal letters, that it made its documented Transfer Capability assessment data available in accordance with Requirement R6.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity

1.2. Data Retention

The Planning Coordinator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Planning Coordinator shall have its current Transfer Capability methodology and any prior versions of the Transfer Capability methodology that were in force since the last compliance audit to show compliance with Requirement R1.
- The Planning Coordinator shall retain evidence since its last compliance audit to show compliance with Requirement R2.
- The Planning Coordinator shall retain evidence to show compliance with Requirements R3, R4, R5 and R6 for the most recent assessment. (R3 retired)
- If a Planning Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant or for the time periods specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.3. Compliance Monitoring and Assessment Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Additional Compliance Information

None

2. Violation Severity Levels

R #	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	The Planning Coordinator has a Transfer Capability methodology but failed to address one or two of the items listed in Requirement R1, Part 1.4.	The Planning Coordinator has a Transfer Capability methodology, but failed to incorporate one of the following Parts of Requirement R1 into that methodology: • Part 1.1 • Part 1.2 • Part 1.3 • Part 1.5 OR The Planning Coordinator has a Transfer Capability methodology but failed to address three of the items listed in Requirement R1, Part 1.4.	The Planning Coordinator has a Transfer Capability methodology, but failed to incorporate two of the following Parts of Requirement R1 into that methodology: • Part 1.1 • Part 1.2 • Part 1.3 • Part 1.5 OR The Planning Coordinator has a Transfer Capability methodology but failed to address four of the items listed in Requirement R1, Part 1.4.	The Planning Coordinator did not have a Transfer Capability methodology. OR The Planning Coordinator has a Transfer Capability methodology, but failed to incorporate three or more of the following Parts of Requirement R1 into that methodology: • Part 1.1 • Part 1.2 • Part 1.3 • Part 1.5 OR The Planning Coordinator has a Transfer Capability methodology but failed to address more than four of the items listed in Requirement R1, Part 1.4.

R2	The Planning Coordinator notified one or more of the parties specified in Requirement R2 of a new or revised Transfer Capability methodology after its implementation, but not more than 30 calendar days after its implementation. OR The Planning Coordinator provided the transfer Capability methodology more than 30 calendar days but not more than 60 calendar days after the receipt of a request.	The Planning Coordinator notified one or more of the parties specified in Requirement R2 of a new or revised Transfer Capability methodology more than 30 calendar days after its implementation, but not more than 60 calendar days after its implementation. OR The Planning Coordinator provided the Transfer Capability methodology more than 60 calendar days but not more than 90 calendar days after receipt of a request	The Planning Coordinator notified one or more of the parties specified in Requirement R2 of a new or revised Transfer Capability methodology more than 60 calendar days, but not more than 90 calendar days after its implementation. OR The Planning Coordinator provided the Transfer Capability methodology more than 90 calendar days but not more than 120 calendar days after receipt of a request.	The Planning Coordinator failed to notify one or more of the parties specified in Requirement R2 of a new or revised Transfer Capability methodology more than 90 calendar days after its implementation. OR The Planning Coordinator provided the Transfer Capability methodology more than 120 calendar days after receipt of a request.
R3 **(Retired)**	The Planning Coordinator provided a documented response to a documented concern with its Transfer Capability methodology as required in Requirement R3 more than 45 calendar days, but not more than 60 calendar days after receipt of the concern.	The Planning Coordinator provided a documented response to a documented concern with its Transfer Capability methodology as required in Requirement R3 more than 60 calendar days, but not more than 75 calendar days after receipt of the concern.	The Planning Coordinator provided a documented response to a documented concern with its Transfer Capability methodology as required in Requirement R3 more than 75 calendar days, but not more than 90 calendar days after receipt of the concern.	The Planning Coordinator failed to provide a documented response to a documented concern with its Transfer Capability methodology as required in Requirement R3 by more than 90 calendar days after receipt of the concern. OR The Planning Coordinator failed to respond to a documented concern with its Transfer Capability methodology.

R4.	The Planning Coordinator conducted a Transfer Capability assessment outside the calendar year, but not by more than 30 calendar days.	The Planning Coordinator conducted a Transfer Capability assessment outside the calendar year, by more than 30 calendar days, but not by more than 60 calendar days.	The Planning Coordinator conducted a Transfer Capability assessment outside the calendar year, by more than 60 calendar days, but not by more than 90 calendar days.	The Planning Coordinator failed to conduct a Transfer Capability assessment outside the calendar year by more than 90 calendar days. OR The Planning Coordinator failed to conduct a Transfer Capability assessment.

R5	The Planning Coordinator made its documented Transfer Capability assessment available to one or more of the recipients of its Transfer Capability methodology more than 45 calendar days after the requirements of R5,, but not more than 60 calendar days after completion of the assessment.	The Planning Coordinator made its Transfer Capability assessment available to one or more of the recipients of its Transfer Capability methodology more than 60 calendar days after the requirements of R5, but not more than 75 calendar days after completion of the assessment.	The Planning Coordinator made its Transfer Capability assessment available to one or more of the recipients of its Transfer Capability methodology more than 75 calendar days after the requirements of R5, but not more than 90 days after completion of the assessment.	The Planning Coordinator failed to make its documented Transfer Capability assessment available to one or more of the recipients of its Transfer Capability methodology more than 90 days after the requirements of R5. OR The Planning Coordinator failed to make its documented Transfer Capability assessment available to any of the recipients of its Transfer Capability methodology under the requirements of R5.
R6	The Planning Coordinator provided the requested data as required in Requirement R6 more than 45 calendar days after receipt of the request for data, but not more than 60 calendar days after the receipt of the request for data.	The Planning Coordinator provided the requested data as required in Requirement R6 more than 60 calendar days after receipt of the request for data, but not more than 75 calendar days after the receipt of the request for data.	The Planning Coordinator provided the requested data as required in Requirement R6 more than 75 calendar days after receipt of the request for data, but not more than 90 calendar days after the receipt of the request for data.	The Planning Coordinator provided the requested data as required in Requirement R6 more than 90 after the receipt of the request for data. OR The Planning Coordinator failed to provide the requested data as required in Requirement R6.

A. Introduction

1. Title: **Interchange Confirmation**

2. Number: **INT-007-1**

3. Purpose: To ensure that each Arranged Interchange is checked for reliability before it is implemented.

4. Applicability

4.1. Interchange Authority.

5. Effective Date: January 1, 2007

B. Requirements

R1. The Interchange Authority shall verify that Arranged Interchange is balanced and valid prior to transitioning Arranged Interchange to Confirmed Interchange by verifying the following:

R1.1. Source Balancing Authority megawatts equal sink Balancing Authority megawatts (adjusted for losses, if appropriate).

R1.2. All reliability entities involved in the Arranged Interchange are currently in the NERC registry. (Retired)

R1.3. The following are defined:

R1.3.1. Generation source and load sink.

R1.3.2. Megawatt profile.

R1.3.3. Ramp start and stop times.

R1.3.4. Interchange duration.

R1.4. Each Balancing Authority and Transmission Service Provider that received the Arranged Interchange information from the Interchange Authority for reliability assessment has provided approval.

C. Measures

M1. For each Arranged Interchange, the Interchange Authority shall show evidence that it has verified the Arranged Interchange information prior to the dissemination of the Confirmed Interchange.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Regional Reliability Organization.

1.2. Compliance Monitoring Period and Reset Time Frame

The Performance-Reset Period shall be twelve months from the last noncompliance to Requirement 1.

1.3. Data Retention

The Interchange Authority shall keep 90 days of historical data. The Compliance Monitor shall keep audit records for a minimum of three calendar years.

1.4. Additional Compliance Information

Each Interchange Authority shall demonstrate compliance to the Compliance Monitor within the first year that this standard becomes effective or the first year the entity commences operation by self-certification to the Compliance Monitor.

Subsequent to the initial compliance review, compliance may be:

1.4.1 Verified by audit at least once every three years.

1.4.2 Verified by spot checks in years between audits.

1.4.3 Verified by annual audits of noncompliant Interchange Authorities, until compliance is demonstrated.

1.4.4 Verified at any time as the result of a complaint. Complaints must be lodged within 60 days of the incident. Complaints will be evaluated by the Compliance Monitor.

Each Interchange Authority shall make the following available for inspection by the Compliance Monitor upon request:

1.4.5 For compliance audits and spot checks, relevant data and system log records for the audit period which indicate an Interchange Authority's verification that all Arranged Interchange was balanced and valid as defined in R1. The Compliance Monitor may request up to a three-month period of historical data ending with the date the request is received by the Interchange Authority.

1.4.6 For specific complaints, only those data and system log records associated with the specific Interchange event contained in the complaint which indicate an Interchange Authority's verification that an Arranged Interchange was balanced and valid as defined in R1 for that specific Interchange

2. Levels of Non-Compliance

2.1. Level 1: One occurrence[1] where Interchange-related data was not verified as defined in R1.

2.2. Level 2: Two occurrences where Interchange-related data was not verified as defined in R1.

2.3. Level 3: Three occurrences where Interchange-related data was not verified as defined in R1.

2.4. Level 4: Four or more occurrences where Interchange-related data was not verified as defined in R1.

E. Regional Differences

None

[1] This does not include instances of not verifying due to extenuating circumstances approved by the Compliance Monitor.

Version History

Version	Date	Action	Change Tracking
1	TBD	R1.2 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. Title: **Coordination of Real-time Activities Between Reliability Coordinators**

2. Number: **IRO-016-1**

3. Purpose: To ensure that each Reliability Coordinator's operations are coordinated such that they will not have an Adverse Reliability Impact on other Reliability Coordinator Areas and to preserve the reliability benefits of interconnected operations.

4. Applicability

4.1. Reliability Coordinator

5. Effective Date: November 1, 2006

B. Requirements

R1. The Reliability Coordinator that identifies a potential, expected, or actual problem that requires the actions of one or more other Reliability Coordinators shall contact the other Reliability Coordinator(s) to confirm that there is a problem and then discuss options and decide upon a solution to prevent or resolve the identified problem.

R1.1. If the involved Reliability Coordinators agree on the problem and the actions to take to prevent or mitigate the system condition, each involved Reliability Coordinator shall implement the agreed-upon solution, and notify the involved Reliability Coordinators of the action(s) taken.

R1.2. If the involved Reliability Coordinators cannot agree on the problem(s) each Reliability Coordinator shall re-evaluate the causes of the disagreement (bad data, status, study results, tools, etc.).

R1.2.1. If time permits, this re-evaluation shall be done before taking corrective actions.

R1.2.2. If time does not permit, then each Reliability Coordinator shall operate as though the problem(s) exist(s) until the conflicting system status is resolved.

R1.3. If the involved Reliability Coordinators cannot agree on the solution, the more conservative solution shall be implemented.

R2. The Reliability Coordinator shall document (via operator logs or other data sources) its actions taken for either the event or for the disagreement on the problem(s) or for both. (Retired)

C. Measures

M1. For each event that requires Reliability Coordinator-to-Reliability Coordinator coordination, each involved Reliability Coordinator shall have evidence (operator logs or other data sources) of the actions taken for either the event or for the disagreement on the problem or for both.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Regional Reliability Organization

1.2. Compliance Monitoring Period and Reset Time Frame

The performance reset period shall be one calendar year.

1.3. Data Retention

The Reliability Coordinator shall keep auditable evidence for a rolling 12 months. In addition, entities found non-compliant shall keep information related to the non-compliance until it has been found compliant. The Compliance Monitor shall keep compliance data for a minimum of three years or until the Reliability Coordinator has achieved full compliance, whichever is longer.

1.4. Additional Compliance Information

The Reliability Coordinator shall demonstrate compliance through self-certification submitted to its Compliance Monitor annually. The Compliance Monitor shall use a scheduled on-site review at least once every three years. The Compliance Monitor shall conduct an investigation upon a complaint that is received within 30 days of an alleged infraction's discovery date. The Compliance Monitor shall complete the investigation and report back to all involved Reliability Coordinators (the Reliability Coordinator that complained as well as the Reliability Coordinator that was investigated) within 45 days after the start of the investigation. As part of an audit or investigation, the Compliance Monitor shall interview other Reliability Coordinators within the Interconnection and verify that the Reliability Coordinator being audited or investigated has been coordinating actions to prevent or resolve potential, expected, or actual problems that adversely impact the Interconnection.

The Reliability Coordinator shall have the following available for its Compliance Monitor to inspect during a scheduled, on-site review or within five working days of a request as part of an investigation upon complaint:

1.4.1 Evidence (operator log or other data source) to show coordination with other Reliability Coordinators.

2. Levels of Non-Compliance

2.1. Level 1: For potential, actual or expected events which required Reliability Coordinator-to-Reliability Coordinator coordination, the Reliability Coordinator did coordinate, but did not have evidence that it coordinated with other Reliability Coordinators.

2.2. Level 2: Not applicable.

2.3. Level 3: Not applicable.

2.4. Level 4: For potential, actual or expected events which required Reliability Coordinator-to-Reliability Coordinator coordination, the Reliability Coordinator did not coordinate with other Reliability Coordinators.

E. Regional Differences

None identified.

Version History

Version	Date	Action	Change Tracking
Version 1	August 10, 2005	1. Changed incorrect use of certain hyphens (-) to "en dash (–)." 2. Hyphenated "30-day" and "Reliability Coordinator-to-Reliability Coordinator" when used as adjective.	01/20/06

		3. Changed standard header to be consistent with standard "Title." 4. Added "periods" to items where appropriate. 5. Initial capped heading "Definitions of Terms Used in Standard." 6. Changed "Timeframe" to "Time Frame" in item D, 1.2. 7. Lower cased all words that are not "defined" terms — drafting team, and self-certification. 8. Changed apostrophes to "smart" symbols. 9. Removed comma after word "condition" in item R.1.1. 10. Added comma after word "expected" in item 1.4, last sentence. 11. Removed extra spaces between words where appropriate.	
1	TBD	R2 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. Title: **Nuclear Plant Interface Coordination**

2. Number: NUC-001-2

3. Purpose: This standard requires coordination between Nuclear Plant Generator Operators and Transmission Entities for the purpose of ensuring nuclear plant safe operation and shutdown.

4. Applicability:

4.1. Nuclear Plant Generator Operator.

4.2. Transmission Entities shall mean all entities that are responsible for providing services related to Nuclear Plant Interface Requirements (NPIRs). Such entities may include one or more of the following:

4.2.1 Transmission Operators.

4.2.2 Transmission Owners.

4.2.3 Transmission Planners.

4.2.4 Transmission Service Providers.

4.2.5 Balancing Authorities.

4.2.6 Reliability Coordinators.

4.2.7 Planning Coordinators.

4.2.8 Distribution Providers.

4.2.9 Load-serving Entities.

4.2.10 Generator Owners.

4.2.11 Generator Operators.

5. Effective Date: April 1, 2010

B. Requirements

R1. The Nuclear Plant Generator Operator shall provide the proposed NPIRs in writing to the applicable Transmission Entities and shall verify receipt [*Risk Factor: Lower*]

R2. The Nuclear Plant Generator Operator and the applicable Transmission Entities shall have in effect one or more Agreements[1] that include mutually agreed to NPIRs and document how the Nuclear Plant Generator Operator and the applicable Transmission Entities shall address and implement these NPIRs. [*Risk Factor: Medium*]

R3. Per the Agreements developed in accordance with this standard, the applicable Transmission Entities shall incorporate the NPIRs into their planning analyses of the electric system and shall communicate the results of these analyses to the Nuclear Plant Generator Operator. [*Risk Factor: Medium*]

R4. Per the Agreements developed in accordance with this standard, the applicable Transmission Entities shall: [*Risk Factor: High*]

1. Agreements may include mutually agreed upon procedures or protocols in effect between entities or between departments of a vertically integrated system.

R4.1. Incorporate the NPIRs into their operating analyses of the electric system.

R4.2. Operate the electric system to meet the NPIRs.

R4.3. Inform the Nuclear Plant Generator Operator when the ability to assess the operation of the electric system affecting NPIRs is lost.

R5. The Nuclear Plant Generator Operator shall operate per the Agreements developed in accordance with this standard. [*Risk Factor: High*]

R6. Per the Agreements developed in accordance with this standard, the applicable Transmission Entities and the Nuclear Plant Generator Operator shall coordinate outages and maintenance activities which affect the NPIRs. [*Risk Factor: Medium*]

R7. Per the Agreements developed in accordance with this standard, the Nuclear Plant Generator Operator shall inform the applicable Transmission Entities of actual or proposed changes to nuclear plant design, configuration, operations, limits, protection systems, or capabilities that may impact the ability of the electric system to meet the NPIRs. [*Risk Factor: High*]

R8. Per the Agreements developed in accordance with this standard, the applicable Transmission Entities shall inform the Nuclear Plant Generator Operator of actual or proposed changes to electric system design, configuration, operations, limits, protection systems, or capabilities that may impact the ability of the electric system to meet the NPIRs. [*Risk Factor: High*]

R9. The Nuclear Plant Generator Operator and the applicable Transmission Entities shall include, as a minimum, the following elements within the agreement(s) identified in R2: [*Risk Factor: Medium*]

R9.1. Administrative elements: (Retired)

R9.1.1. Definitions of key terms used in the agreement. (Retired)

R9.1.2. Names of the responsible entities, organizational relationships, and responsibilities related to the NPIRs. (Retired)

R9.1.3. A requirement to review the agreement(s) at least every three years. (Retired)

R9.1.4. A dispute resolution mechanism. (Retired)

R9.2. Technical requirements and analysis:

R9.2.1. Identification of parameters, limits, configurations, and operating scenarios included in the NPIRs and, as applicable, procedures for providing any specific data not provided within the agreement.

R9.2.2. Identification of facilities, components, and configuration restrictions that are essential for meeting the NPIRs.

R9.2.3. Types of planning and operational analyses performed specifically to support the NPIRs, including the frequency of studies and types of Contingencies and scenarios required.

R9.3. Operations and maintenance coordination:

R9.3.1. Designation of ownership of electrical facilities at the interface between the electric system and the nuclear plant and responsibilities for operational control coordination and maintenance of these facilities.

R9.3.2. Identification of any maintenance requirements for equipment not owned or controlled by the Nuclear Plant Generator Operator that are necessary to meet the NPIRs.

R9.3.3. Coordination of testing, calibration and maintenance of on-site and off-site power supply systems and related components.

R9.3.4. Provisions to address mitigating actions needed to avoid violating NPIRs and to address periods when responsible Transmission Entity loses the ability to assess the capability of the electric system to meet the NPIRs. These provisions shall include responsibility to notify the Nuclear Plant Generator Operator within a specified time frame.

R9.3.5. Provision for considering, within the restoration process, the requirements and urgency of a nuclear plant that has lost all off-site and on-site AC power. .

R9.3.6. Coordination of physical and cyber security protection of the Bulk Electric System at the nuclear plant interface to ensure each asset is covered under at least one entity's plan.

R9.3.7. Coordination of the NPIRs with transmission system Special Protection Systems and underfrequency and undervoltage load shedding programs.

R9.4. Communications and training:

R9.4.1. Provisions for communications between the Nuclear Plant Generator Operator and Transmission Entities, including communications protocols, notification time requirements, and definitions of terms.

R9.4.2. Provisions for coordination during an off-normal or emergency event affecting the NPIRs, including the need to provide timely information explaining the event, an estimate of when the system will be returned to a normal state, and the actual time the system is returned to normal.

R9.4.3. Provisions for coordinating investigations of causes of unplanned events affecting the NPIRs and developing solutions to minimize future risk of such events.

R9.4.4. Provisions for supplying information necessary to report to government agencies, as related to NPIRs.

R9.4.5. Provisions for personnel training, as related to NPIRs.

C. Measures

M1. The Nuclear Plant Generator Operator shall, upon request of the Compliance Enforcement Authority, provide a copy of the transmittal and receipt of transmittal of the proposed NPIRs to the responsible Transmission Entities. (Requirement 1)

M2. The Nuclear Plant Generator Operator and each Transmission Entity shall each have a copy of the Agreement(s) addressing the elements in Requirement 9 available for inspection upon request of the Compliance Enforcement Authority. (Requirement 2 and 9)

M3. Each Transmission Entity responsible for planning analyses in accordance with the Agreement shall, upon request of the Compliance Enforcement Authority, provide a copy of the planning analyses results transmitted to the Nuclear Plant Generator Operator, showing incorporation of the NPIRs. The Compliance Enforcement Authority shall refer to the Agreements developed in accordance with this standard for specific requirements. (Requirement 3)

M4. Each Transmission Entity responsible for operating the electric system in accordance with the Agreement shall demonstrate or provide evidence of the following, upon request of the Compliance Enforcement Authority:

M4.1 The NPIRs have been incorporated into the current operating analysis of the electric system. (Requirement 4.1)

M4.2 The electric system was operated to meet the NPIRs. (Requirement 4.2)

M4.3 The Transmission Entity informed the Nuclear Plant Generator Operator when it became aware it lost the capability to assess the operation of the electric system affecting the NPIRs. (Requirement 4.3)

M5. The Nuclear Plant Generator Operator shall, upon request of the Compliance Enforcement Authority, demonstrate or provide evidence that the Nuclear Power Plant is being operated consistent with the Agreements developed in accordance with this standard. (Requirement 5)

M6. The Transmission Entities and Nuclear Plant Generator Operator shall, upon request of the Compliance Enforcement Authority, provide evidence of the coordination between the Transmission Entities and the Nuclear Plant Generator Operator regarding outages and maintenance activities which affect the NPIRs. (Requirement 6)

M7. The Nuclear Plant Generator Operator shall provide evidence that it informed the applicable Transmission Entities of changes to nuclear plant design, configuration, operations, limits, protection systems, or capabilities that would impact the ability of the Transmission Entities to meet the NPIRs. (Requirement 7)

M8. The Transmission Entities shall each provide evidence that it informed the Nuclear Plant Generator Operator of changes to electric system design, configuration, operations, limits, protection systems, or capabilities that would impact the ability of the Nuclear Plant Generator Operator to meet the NPIRs. (Requirement 8)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity.

1.2. Compliance Monitoring Period and Reset Time Frame

Not applicable.

1.3. Compliance Monitoring and Enforcement Processes:

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

The Responsible Entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- For Measure 1, the Nuclear Plant Generator Operator shall keep its latest transmittals and receipts.
- For Measure 2, the Nuclear Plant Generator Operator and each Transmission Entity shall have its current, in-force agreement.
- For Measure 3, the Transmission Entity shall have the latest planning analysis results.
- For Measures 4.3, 6 and 8, the Transmission Entity shall keep evidence for two years plus current.
- For Measures 5, 6 and 7, the Nuclear Plant Generator Operator shall keep evidence for two years plus current.

If a Responsible Entity is found non-compliant it shall keep information related to the noncompliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None.

2. Violation Severity Levels

2.1. Lower: Agreement(s) exist per this standard and NPIRs were identified and implemented, but documentation described in M1-M8 was not provided.

2.2. Moderate: Agreement(s) exist per R2 and NPIRs were identified and implemented, but one or more elements of the Agreement in R9 were not met.

2.3. High: One or more requirements of R3 through R8 were not met.

2.4. Severe: No proposed NPIRs were submitted per R1, no Agreement exists per this standard, or the Agreements were not implemented.

E. Regional Differences

The design basis for Canadian (CANDU) NPPs does not result in the same licensing requirements as U.S. NPPs. NRC design criteria specifies that in addition to emergency on-site electrical power, electrical power from the electric network also be provided to permit safe shutdown. This requirement is specified in such NRC Regulations as 10 CFR 50 Appendix A — General Design Criterion 17 and 10 CFR 50.63 Loss of all alternating current power. There are no equivalent Canadian Regulatory requirements for Station Blackout (SBO) or coping times as they do not form part of the licensing basis for CANDU NPPs.
Therefore the definition of NPLR for Canadian CANDU units will be as follows:

Nuclear Plant Licensing Requirements (NPLR) are requirements included in the design basis of the nuclear plant and are statutorily mandated for the operation of the plant; when used in this standard, NPLR shall mean nuclear power plant licensing requirements for avoiding preventable challenges to nuclear safety as a result of an electric system disturbance, transient, or condition.

A. Introduction

1. Title: **Technical Assessment of the Design and Effectiveness of Undervoltage Load Shedding Program.**

2. Number: PRC-010-0

3. Purpose: Provide System preservation measures in an attempt to prevent system voltage collapse or voltage instability by implementing an Undervoltage Load Shedding (UVLS) program.

4. Applicability:

4.1. Load-Serving Entity that operates a UVLS program

4.2. Transmission Owner that owns a UVLS program

4.3. Transmission Operator that operates a UVLS program

4.4. Distribution Provider that owns or operates a UVLS program

5. Effective Date: April 1, 2005

B. Requirements

R1. The Load-Serving Entity, Transmission Owner, Transmission Operator, and Distribution Provider that owns or operates a UVLS program shall periodically (at least every five years or as required by changes in system conditions) conduct and document an assessment of the effectiveness of the UVLS program. This assessment shall be conducted with the associated Transmission Planner(s) and Planning Authority(ies).

R1.1. This assessment shall include, but is not limited to:

R1.1.1. Coordination of the UVLS programs with other protection and control systems in the Region and with other Regional Reliability Organizations, as appropriate.

R1.1.2. Simulations that demonstrate that the UVLS programs performance is consistent with Reliability Standards TPL-001-0, TPL-002-0, TPL-003-0 and TPL-004-0.

R1.1.3. A review of the voltage set points and timing.

R2. The Load-Serving Entity, Transmission Owner, Transmission Operator, and Distribution Provider that owns or operates a UVLS program shall provide documentation of its current UVLS program assessment to its Regional Reliability Organization and NERC on request (30 calendar days). (Retired)

C. Measures

M1. Each Transmission Owner's and Distribution Provider's UVLS program shall include the elements identified in Reliability Standard PRC-010-0_R1.

M2. Each Load-Serving Entity, Transmission Owner, Transmission Operator, and Distribution Provider that owns or operates a UVLS program shall have evidence it provided documentation of its current UVLS program assessment to its Regional Reliability Organization and NERC as specified in Reliability Standard PRC-010-0_R2. (Retired)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Compliance Monitor: Regional Reliability Organizations. Each Regional Reliability Organization shall report compliance and violations to NERC via the NERC Compliance Reporting process.

1.2. Compliance Monitoring Period and Reset Timeframe

Assessments every five years or as required by System changes.

Current assessment on request (30 calendar days.)

1.3. Data Retention

None specified.

1.4. Additional Compliance Information

None.

2. Levels of Non-Compliance

2.1. Level 1: Not applicable.

2.2. Level 2: Not applicable.

2.3. Level 3: Not applicable.

2.4. Level 4: An assessment of the UVLS program did not address one of the three requirements listed in Reliability Standard PRC-010-0_R1.1 or an assessment of the UVLS program was not provided.

E. Regional Differences

1. None identified.

Version History

Version	Date	Action	Change Tracking

Standard PRC-022-1 — Under-Voltage Load Shedding Program Performance

A. Introduction

1. **Title:** **Under-Voltage Load Shedding Program Performance**

2. **Number:** **PRC-022-1**

3. **Purpose:** Ensure that Under Voltage Load Shedding (UVLS) programs perform as intended to mitigate the risk of voltage collapse or voltage instability in the Bulk Electric System (BES).

4. **Applicability**

   4.1. Transmission Operator that operates a UVLS program.

   4.2. Distribution Provider that operates a UVLS program.

   4.3. Load-Serving Entity that operates a UVLS program.

5. **Effective Date:** May 1, 2006

B. Requirements

R1. Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program to mitigate the risk of voltage collapse or voltage instability in the BES shall analyze and document all UVLS operations and Misoperations. The analysis shall include:

R1.1. A description of the event including initiating conditions.

R1.2. A review of the UVLS set points and tripping times.

R1.3. A simulation of the event, if deemed appropriate by the Regional Reliability Organization. For most events, analysis of sequence of events may be sufficient and dynamic simulations may not be needed.

R1.4. A summary of the findings.

R1.5. For any Misoperation, a Corrective Action Plan to avoid future Misoperations of a similar nature.

R2. Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program shall provide documentation of its analysis of UVLS program performance to its Regional Reliability Organization within 90 calendar days of a request. (Retired)

C. Measures

M1. Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program shall have documentation of its analysis of UVLS operations and Misoperations in accordance with Requirement 1.1 through 1.5.

M2. Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program shall have evidence that it provided documentation of its analysis of UVLS program performance within 90 calendar days of a request by the Regional Reliability Organization. (Retired)

D. Compliance

1. Compliance Monitoring Process

   1.1. Compliance Monitoring Responsibility

   Regional Reliability Organization.

   1.2. Compliance Monitoring Period and Reset Time Frame

One calendar year.

1.3. Data Retention

Each Transmission Operator, Load-Serving Entity, and Distribution Provider that operates a UVLS program shall retain documentation of its analyses of UVLS operations and Misoperations for two years. The Compliance Monitor shall retain any audit data for three years.

1.4. Additional Compliance Information

Transmission Operator, Load-Serving Entity, and Distribution Provider shall demonstrate compliance through self-certification or audit (periodic, as part of targeted monitoring or initiated by complaint or event), as determined by the Compliance Monitor.

2. Levels of Non-Compliance

2.1. Level 1: Not applicable.

2.2. Level 2: Documentation of the analysis of UVLS performance was provided but did not include one of the five requirements in R1.

2.3. Level 3: Documentation of the analysis of UVLS performance was provided but did not include two or more of the five requirements in R1.

2.4. Level 4: Documentation of the analysis of UVLS performance was not provided.

E. Regional Differences

None identified.

Version History

Version	Date	Action	Change Tracking
1	December 1, 2005	1. Removed comma after 2004 in "Development Steps Completed," #1. 2. Changed incorrect use of certain hyphens (-) to "en dash" (–) and "em dash (—)." 3. Lower cased the word "region," "board," and "regional" throughout document where appropriate. 4. Added or removed "periods" where appropriate. 5. Changed "Timeframe" to "Time Frame" in item D, 1.2.	January 20, 2006
1	TBD	R2 and associated elements retired as part of the Paragraph 81 project (Project 2013-02)	

A. Introduction

1. **Title:** **Voltage and Reactive Control**

2. **Number:** VAR-001-2

3. **Purpose:** To ensure that voltage levels, reactive flows, and reactive resources are monitored, controlled, and maintained within limits in real time to protect equipment and the reliable operation of the Interconnection.

4. **Applicability:**

   4.1. Transmission Operators.

   4.2. Purchasing-Selling Entities.

   4.3. Load Serving Entities.

5. **(Proposed) Effective Date:** The first day of the first calendar quarter six months after applicable regulatory approval; or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter six months after Board of Trustees' adoption.

B. Requirements

R1. Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators.

R2. Each Transmission Operator shall acquire sufficient reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching;, and controllable load – within its area to protect the voltage levels under normal and Contingency conditions. This includes the Transmission Operator's share of the reactive requirements of interconnecting transmission circuits.

R3. The Transmission Operator shall specify criteria that exempts generators from compliance with the requirements defined in Requirement 4, and Requirement 6.1.

R3.1. Each Transmission Operator shall maintain a list of generators in its area that are exempt from following a voltage or Reactive Power schedule.

R3.2. For each generator that is on this exemption list, the Transmission Operator shall notify the associated Generator Owner.

R4. Each Transmission Operator shall specify a voltage or Reactive Power schedule [1] at the interconnection between the generator facility and the Transmission Owner's facilities to be maintained by each generator. The Transmission Operator shall provide the voltage or Reactive Power schedule to the associated Generator Operator and direct the Generator Operator to comply with the schedule in automatic voltage control mode (AVR in service and controlling voltage).

R5. Each Purchasing-Selling Entity and Load Serving Entity shall arrange for (self-provide or purchase) reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching;, and controllable load– to satisfy its reactive requirements identified by its Transmission Service Provider. (Retired)

[1] The voltage schedule is a target voltage to be maintained within a tolerance band during a specified period.

R6. The Transmission Operator shall know the status of all transmission Reactive Power resources, including the status of voltage regulators and power system stabilizers.

R6.1. When notified of the loss of an automatic voltage regulator control, the Transmission Operator shall direct the Generator Operator to maintain or change either its voltage schedule or its Reactive Power schedule.

R7. The Transmission Operator shall be able to operate or direct the operation of devices necessary to regulate transmission voltage and reactive flow.

R8. Each Transmission Operator shall operate or direct the operation of capacitive and inductive reactive resources within its area – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching; controllable load; and, if necessary, load shedding – to maintain system and Interconnection voltages within established limits.

R9. Each Transmission Operator shall maintain reactive resources – which may include, but is not limited to, reactive generation scheduling; transmission line and reactive resource switching;, and controllable load– to support its voltage under first Contingency conditions.

R9.1. Each Transmission Operator shall disperse and locate the reactive resources so that the resources can be applied effectively and quickly when Contingencies occur.

R10. Each Transmission Operator shall correct IROL or SOL violations resulting from reactive resource deficiencies (IROL violations must be corrected within 30 minutes) and complete the required IROL or SOL violation reporting.

R11. After consultation with the Generator Owner regarding necessary step-up transformer tap changes, the Transmission Operator shall provide documentation to the Generator Owner specifying the required tap changes, a timeframe for making the changes, and technical justification for these changes.

R12. The Transmission Operator shall direct corrective action, including load reduction, necessary to prevent voltage collapse when reactive resources are insufficient.

C. Measures

M1. The Transmission Operator shall have evidence it provided a voltage or Reactive Power schedule as specified in Requirement 4 to each Generator Operator it requires to follow such a schedule.

M2. The Transmission Operator shall have evidence to show that, for each generating unit in its area that is exempt from following a voltage or Reactive Power schedule, the associated Generator Owner was notified of this exemption in accordance with Requirement 3.2.

M3. The Transmission Operator shall have evidence to show that it issued directives as specified in Requirement 6.1 when notified by a Generator Operator of the loss of an automatic voltage regulator control.

M4. The Transmission Operator shall have evidence that it provided documentation to the Generator Owner when a change was needed to a generating unit's step-up transformer tap in accordance with Requirement 11.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity.

1.2. Compliance Monitoring Period and Reset Time Frame

One calendar year.

1.3. Compliance Monitoring and Enforcement Processes:

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

The Transmission Operator shall retain evidence for Measures 1 through 4 for 12 months.

The Compliance Monitor shall retain any audit data for three years.

1.5. Additional Compliance Information

The Transmission Operator shall demonstrate compliance through self-certification or audit (periodic, as part of targeted monitoring or initiated by complaint or event), as determined by the Compliance Monitor.

2. Violation Severity Levels (no changes)

E. Regional Differences

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
1	August 2, 2006	BOT Adoption	Revised

NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION

Standards Announcement

Project 2013-02 Paragraph 81

Recirculation Ballot is now open through 8 p.m. Thursday, January 17, 2013

Now Available

A recirculation ballot window for the 20 standards with 36 requirements being proposed for retirement in this project is now open through **8 p.m. Eastern on Thursday, January 17, 2013**.

The following documents are posted on the project page for review and balloting:

- **Redline of Standards with Proposed Retirements** – A PDF document containing a redline of each of the affected standards, indicating the requirements and associated elements proposed to be retired with a "(Retired)" and with the version number remaining the same. When these Requirements are retired, the version numbers of the standards will NOT be incremented. After evaluating the options and consulting with the Standards Committee and Standards Committee Process Subcommittee, the P81 drafting team determined that this was the most practical approach. Incrementing the version numbers of each standard is impractical because, in some cases, a subsequent version has already been developed. In addition, incrementing the version would require renumbering Requirements where a retired Requirement created a gap in numbering, and this creates an undesirable administrative burden for entities using certain systems to manage their compliance programs.
- **Implementation Plan** – The implementation plan for retiring the Phase I requirements.

After considering stakeholder comments from the formal comment period and initial ballot that ended on December 10, 2012, the drafting team made some minor clarifying changes to the technical white paper. Additionally, CIP-001-2a R4 and EOP-004-1 R1 were moved to the 'Informational Purposes Only' section in the technical paper, as EOP-004-2 has been filed with regulatory authorities and the EOP-004-2 implementation plan calls for the retirement of CIP-001-2a R4 and EOP-004-1 R1.

Instructions

In the recirculation ballot, votes are counted by exception. Only members of the ballot pool may cast a ballot; all ballot pool members may change their previously cast votes. A ballot pool member who failed to cast a ballot during the last ballot window may cast a ballot in the recirculation ballot window. If a ballot pool member does not participate in the recirculation ballot, that member's vote cast in the previous ballot will be carried over as that member's vote in the recirculation ballot.

Members of the ballot pool associated with this project may log in and submit their vote for the standard by clicking here.

Next Steps

Voting results will be posted and announced after the ballot window closes. If approved, the standards with requirements being proposed for retirement will be submitted to the Board of Trustees and then filed with the appropriate regulatory authorities.

Background

On March 15, 2012, the Federal Energy Regulatory Commission (FERC) issued an order on NERC's Find, Fix and Track process that stated the following in P81:

> "The Commission notes that NERC's FFT initiative is predicated on the view that many violations of requirements currently included in Reliability Standards pose lesser risk to the Bulk-Power System. If so, some current requirements likely provide little protection for Bulk-Power System reliability or may be redundant. The Commission is interested in obtaining views on whether such requirements could be removed from the Reliability Standards with little effect on reliability and an increase in efficiency of the ERO compliance program. If NERC believes that specific Reliability Standards or specific requirements within certain Standards should be revised or removed, we invite NERC to make specific proposals to the Commission identifying the Standards or requirements and setting forth in detail the technical basis for its belief. In addition, or in the alternative, we invite NERC, the Regional Entities and other interested entities to propose appropriate mechanisms to identify and remove from the Commission-approved Reliability Standards unnecessary or redundant requirements. We will not impose a deadline on when these comments should be submitted, but ask that to the extent such comments are submitted NERC, the Regional Entities, and interested entities coordinate to submit their respective comments concurrently."

The purpose of the project is to retire or modify FERC-approved Reliability Standard requirements that as FERC noted, "provide little protection to the reliable operations of the BES," are redundant or unnecessary, or to retire or modify a FERC-approved Reliability Standard requirement to increase the efficiency of the ERO's compliance programs.

The draft SAR, which included criteria for retiring or modifying requirements, defined phases for the project, and a suggested list of requirements put together by NERC, the regions, and the trades and their member companies for consideration in Phase I, was posted for an informal comment period. In September, the P81 SDT met to respond to the comments received and finalize the SAR. The revisions resulted in a list of 38 requirements in 22 Reliability Standard versions being proposed for retirement and an additional 13 requirements included for informational purposes only. The P81 SDT also developed a Technical White Paper which includes the justification for retiring the proposed requirements.

To sign up for the plus list for this project to follow along with meetings and work products, please email Kristin Iwanechko.

Standards Development Process

The Standards Processes Manual contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate.

For more information or assistance, please contact Wendy Muller, Standards Development Administrator, at wendy.muller@nerc.net or at 404-446-2560.

NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION

Standards Announcement

Project 2013-02 Paragraph 81

Recirculation Ballot Results

Now Available

A recirculation ballot window for the 20 standards with 36 requirements being proposed for retirement in this project concluded at **8 p.m. Eastern on Thursday, January 17, 2013**.

Voting statistics are listed below, and the Ballot Results page provides a link to the detailed results.

Approval
Quorum: 84.60% Approval: 95.22%

Next Steps

The requirements being proposed for retirement will be presented to the Board of Trustees for retirement and then filed with the appropriate regulatory authorities.

Background

On March 15, 2012, the Federal Energy Regulatory Commission (FERC) issued an order on NERC's Find, Fix and Track process that stated the following in P81:

> "The Commission notes that NERC's FFT initiative is predicated on the view that many violations of requirements currently included in Reliability Standards pose lesser risk to the Bulk-Power System. If so, some current requirements likely provide little protection for Bulk-Power System reliability or may be redundant. The Commission is interested in obtaining views on whether such requirements could be removed from the Reliability Standards with little effect on reliability and an increase in efficiency of the ERO compliance program. If NERC believes that specific Reliability Standards or specific requirements within certain Standards should be revised or removed, we invite NERC to make specific proposals to the Commission identifying the Standards or requirements and setting forth in detail the technical basis for its belief. In addition, or in the alternative, we invite NERC, the Regional Entities and other interested entities to propose appropriate mechanisms to identify and remove from the Commission-approved Reliability Standards unnecessary or redundant requirements. We will not impose a deadline on when these comments should be submitted, but ask that to the extent such comments are submitted NERC,

the Regional Entities, and interested entities coordinate to submit their respective comments concurrently."

The purpose of the project is to retire or modify FERC-approved Reliability Standard requirements that as FERC noted, "provide little protection to the reliable operations of the BES," are redundant or unnecessary, or to retire or modify a FERC-approved Reliability Standard requirement to increase the efficiency of the ERO's compliance programs.

The draft SAR, which included criteria for retiring or modifying requirements, defined phases for the project, and a suggested list of requirements put together by NERC, the regions, and the trades and their member companies for consideration in Phase I, was posted for an informal comment period. In September, the P81 SDT met to respond to the comments received and finalize the SAR. The revisions resulted in a list of 38 requirements in 22 Reliability Standard versions being proposed for retirement and an additional 13 requirements included for informational purposes only. The P81 SDT also developed a Technical White Paper which includes the justification for retiring the proposed requirements.

After considering stakeholder comments from the formal comment period and initial ballot that ended on December 10, 2012, the drafting team moved CIP-001-2a R4 and EOP-004-1 R1 to the 'Informational Purposes Only' section in the technical paper, as EOP-004-2 has been filed with regulatory authorities and the EOP-004-2 implementation plan calls for the retirement of CIP-001-2a R4 and EOP-004-1 R1. This resulted in a final list of 36 requirements in 20 Reliability Standard versions.

To sign up for the plus list for this project to follow along with meetings and work products, please email Kristin Iwanechko.

Standards Development Process

The Standards Processes Manual contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate.

For more information or assistance, please contact Monica Benson, Standards Development Administrator, at monica.benson@nerc.net or at 404-446-2560.

Exhibit G

Team Roster for NERC Standards Development Project 2013-02

Project 2013-02 Paragraph 81

Name and Title	Company and Address	Contact Info	Bio
Brian J. Murphy, Chair Manager, NERC Reliability Standards	NextEra Energy, Inc. 4200 W. Flagler Street Miami, FL 33134	(305) 442-5132 Brian.J.Murphy@fpl.com	Brian Murphy has worked for NextEra for over 12 years. Most recently, he was the primary drafter of NextEra Energy's NERC Reliability Standards Compliance Plan, including templates related to processes, controls and the overall supervision of compliance. Worked with Subject Matter Experts (SMEs) on compliance with all mandatory Reliability Standards issues during internal self assessments, spot checks as well as external spot checks and compliance audits. Worked with SMEs on policy and technical comments related to SARs, proposed and revised Reliability Standards, etc. Chair of NERC Standards Committee. Provide support to NextEra SMEs who participate on NERC standard drafting teams. Worked for eight years in Florida Power & Light Company's Transmission Department; and, worked closely with field and construction engineers, transmission planners and system operations on interconnection agreements, procedures, network issues, the sale of transmission, and Open Access Transmission Tariff (OATT) and Standards of Conduct issues. Drafted and negotiated a variety of transmission-related agreements. Field supervisor for contractor distribution crews during hurricane restoration. Significant training and experience in dispute resolution/facilitation, including the recent successful conducting a dispute resolution process that involved over 40 employees. Based on variety of training, Brian lead a pilot program to enhance skillful listening and communications, emotional intelligence, mindfulness and team work. As well, worked closely with Trade Associations, NERC and NERC regions on draft SAR and potential list of requirements for withdrawal. Prior to joining NextEra Energy, DTE Energy's liaison with FERC on technical and policy matters. Also, significant experience, while in private legal practice in Washington, D.C., drafting regulatory regulations, orders (including summarizing and responding to parties positions) and rules for governmental clients (including technical electric utility regulations), as well as chairing electric and gas utility working groups for governmental client and significant amount of project management experience. Holds a Bachelor's of Arts from Siena College and Juris Doctorate from University of Detroit School of Law.

Guy Zito, Vice Chair Assistant Vice President-Standards	Northeast Power Coordinating Council 1040 Avenue of the Americas, 10th Floor New York, NY 10018	(212) 840-1070 gzito@npcc.org	Guy Zito has been with Northeast Power Coordinating Council (NPCC) for in excess of 13 years. The last seven years he has worked as the Assistant Vice President of Standards and in that role developed the standards development process for the NPCC region as well as all the associated processes. He chairs a Regional Standards Committee that evaluates all standard projects and coordinates subject matter expert reviews of those standards. He participates in commenting and develops ballot recommendations for those standards to the entities in the northeast. He participates in various NERC standards activities such as the Standards Committee and its Process Subcommittee, and the Functional Model Working Group and has developed such initiatives for NERC as the Cost Effective Analysis Process or CEAP. The first six years with NPCC were served as the Manager of Planning with support given to regional groups of system studies engineers and also system planning engineers. Mr. Zito led a team of engineers to study constrained transmission in the northeast and how generators affected those constraints. He also manages the NPCC IT Dept. on a day to day basis and maintains responsibility for the reliability, effective, and efficient use of NPCC's IT resources. Also he is responsible for the IT Policies and Procedures for the region. Prior to joining NPCC, he was acting Director of Transmission Services at United Illuminating an investor owned utility, where he conducted and directed planning studies, interconnection studies, rate development and siting. Also in his role he was responsible for filings with the FERC, operations and also principle participant in ISO New England/NEPOOL activities pertaining to markets, planning, studies, and operation. He also was involved in various transmission major projects and the divestiture of generation assets. Prior to directing transmission services, he was Lead Customer Engineer in distribution. Duties included design of distribution to feed major customers using switchgear, underground vaults, distribution network systems, as well as overhead pole lines. He also ran numerous multimillion dollar state projects involving road widening and designed ductline systems in bridges. He supervised construction of large distribution projects and has extensive experience in project management. Mr. Zito has a BSEE from the University of New Haven, and an advance power engineering certificate from Power Technologies Incorporated.

Michael Brytowski Standards Specialist	Great River Energy 12300 Elm Creek Boulevard Maple Grove, MN 55369	(763) 445-5961 mbrytowski@grenergy.com	Michael Brytowski has been involved with the Electric Utility Industry for 25 years and is currently employed with Great River Energy as their NERC Standards Specialist. Previously, Michael worked at the Midwest Reliability Organization (MRO) as a NERC Compliance Auditor from March 2009 through March 2011 and as a Standards Specialist and secretary of the NSRS from February 2007 through June 2009. As Standards Specialist, Michael was Secretary of the MRO Augmentations drafting team, participated on the NERC VSL and NERC EOP VSL drafting teams, and participated in the development of the MRO Reliability Standards Voting Process (RSVP) application. Michael participated in the early development of the NERC Critical Infrastructure Protection Working Group/Committee from June 2000 through December 2001. Michael was a Reliability Coordinator at the Mid-Continent Area Power Pool (MAPP) for twelve years.
Doug Johnson Compliance Manager	American Transmission Company, LLC W234 N2000 Ridgeview Parkway Court Waukesha, WI 53188	(262) 506-6863 dfjohnson@atcllc.com	Doug Johnson has 34 years of combined experience in the electric transmission and nuclear power generating industries. Mr. Johnson has served as the Manager of Operational Compliance at American Transmission Company LLC since 2006. In his current role, Mr. Johnson is responsible for managing corporate programs for assuring compliance with NERC and FERC reliability regulations applicable to the electric transmission business. From 2000 to 2006, Mr. Johnson served as the Director of Regulatory Affairs and Strategic Issues for Nuclear Management Company. In this capacity, Mr. Johnson was responsible for directing the staffs at Nuclear Management Company's fleet of nuclear power plants which had responsibility for compliance, licensing, regulatory affairs, license renewal, corrective action program, risk assessment, environmental assessments, and root cause analyses. Mr. Johnson served as Nuclear Management Company's primary interface with staff at the Nuclear Regulatory Commission. He was also responsible for working with industry counterparts and industry trade and lobbying organizations to assure the promulgation of effective federal regulations which assured the safe and reliable operation of the country's nuclear generating assets. From 1980 to 2000, Mr. Johnson was employed by Wisconsin Electric Power Company and supported the operation of the Point Beach Nuclear Plant. He held varying responsibilities in the areas of nuclear compliance, licensing, regulatory affairs, operations, security, risk management and radiation safety. At the end of his tenure at Wisconsin Electric Power Company, Mr. Johnson was responsible for supporting the formulation of the business model for Nuclear Management Company and for coordinating the development and start-up of Nuclear Management Company with the executive teams at the five Midwestern utilities which contributed their nuclear generating assets to the Nuclear Management Company fleet. Mr. Johnson holds a Master of Business Administration from Marquette University and a Master of Science Degree in Nuclear Physics from the University of Pittsburgh.

David Kiguel Manager, Reliability Standards	Hydro One Networks, Inc. 483 Bay Street, TCT06 Toronto, Ontario M5G 2P5	(416) 345-5313 david.kiguel@hydroone.com	David Kiguel has been with Hydro One Networks Inc., and its predecessor, Ontario Hydro, for over 30 years. He currently holds the position of Manager-Reliability Standards. During most of his career he has worked in reliability modelling and assessments. For the past 10 years he has been involved in legal and regulatory issues in the evolving North American electricity industry as well as in the review of emerging reliability standards and their development processes. He also provides support in the reliability standards compliance activities within Hydro One Networks Inc. and in the overall Hydro One Internal Reliability Program and Framework. David has been a member of the NERC Standards Committee from 2008 to 2010 inclusive and again in 2012 and 2013. Also, he has been a member of the NERC Standards Committee Process Subcommittee for the past 6 years. In 2010 and 2012, he was elected by the SC members to be part of the Standards Committee Executive Committee. He is also an active participant in the Northeast Power Coordinating Council (NPCC) where he is a member of the Compliance Committee, the Regional Standards Committee (RSC) and the RSC Executive Committee. He also participates in the Compliance Practices Group of the North American Transmission Forum and in the Ontario IESO's Reliability Standards Standing Committee. Mr. Kiguel is a registered professional engineer in Professional Engineers Ontario (PEO), where he is a member of the Experience Requirements Committee. He is an IEEE Senior Member.
Scott Kinney Director, System Operations	Avista Corporation P.O. Box 3727 Spokane, WA 99220	(509) 495-4494 scott.kinney@avistacorp.com	Scott is responsible for managing the System Operations Department at Avista, which includes the Transmission control center (TOP/BA functions), the EMS/SCADA department (CIP standards), Transmission Planning (TPL functions), Transmission Contracts and Services including OASIS (MOD standards) and Distribution Dispatch control center. Scott is the incoming Vice-chair of the WECC Operating Committee. He is an active member in WECC operating efforts including a past member of the WECC Operating Transfer Capability Policy Committee which approved WECC seasonal SOLs, a member of the WECC Compliance Hearing Body, and is the WECC Avista Member representative. He just completed a two year term as the Chair of both the Northwest Power Pool Operating Committee and the Reserve Sharing Group Committee. He currently sits on the Steering Committee for Columbia Grid, the FERC approved regional Planning and Operating entity. Scott actively participates on the EEI Reliability Executive Advisory Committee. Scott has managed the System Operations Department at Avista for over 11 years, has 13 years of technical operations experience and 8 years of transmission planning experience.

Kevin Koloini Director of Reliability Standards Compliance	American Municipal Power, Inc. 1111 Schrock Road Suite 100 Columbus, OH 43229	(614) 540-0857 kkoloini@amppartners.org	Mr. Koloini is responsible for NERC reliability standards compliance and communicating reliability standards compliance requirements to applicable departments, staff and municipal organizations. He works with internal subject matter experts to develop policies and procedures to comply with reliability standards. He monitors AMP departments for compliance and reports status to senior management and the board of trustees. He coordinates AMP and member interests on reliability issues and standards development. In his previous roles, Kevin has worked on many engineering projects in distribution, generation, energy efficiency and smart grid research. He has also been heavily involved in forecasting, planning, project management, billing, rates, contracts and regulatory compliance. Kevin has worked directly with over 60 companies that have been registered with NERC as Distribution Providers, Load Serving Entities, Purchasing and Selling Entities, Resource Planners, Generator Owners, and Generator Operators and has assisted 22 with audit preparation. Kevin has just completed a two-year term representing the Transmission Dependent Utilities sector on the North American Electric Reliability Corporation Planning Committee, is a member of the RFC/SERC Small Entity Working Group, and is a member of the North American Generator Forum. He also works closely with the Transmission Access Policy Study Group and the American Public Power Association. Kevin received a Bachelor of Science from Ohio State University in Electrical and Computer Engineering, a Distribution Engineering Certificate from the University of Wisconsin at Madison, and a Business Leadership Certificate from Cornell University. Kevin is a certified Project Management Professional.

Mark Ladrow Senior Compliance Assessment Engineer	SERC Reliability Corporation 2815 Coliseum Centre Drive Suite 500 Charlotte, NC 28217	(704) 940-8217 mladrow@serc1.org	Mark Ladrow joined SERC Reliability Corporation in 2007, and is currently a Senior Compliance Assessment Engineer. He is a member of the Compliance Programs staff with responsibilities including entity Compliance Assessments and Compliance Investigations. Previously, Mr. Ladrow was the Manager of Reliability Standards for the North American Electric Reliability Council (NERC) in Princeton, NJ where he managed the ANSI accredited standards process for electric grid reliability. Reporting directly to Gerry Cauley, he was responsible for the content of new and modified Reliability Standards ensuring that they are clear, concise, and enforceable. He served as the primary contact to stakeholders for all Reliability Standard issues, represented NERC at various industry and regulatory venues, and was a key interface in a team effort alongside leading industry professionals in the development of the Electric Reliability Standards supporting the overall mission of a safe and reliable electric grid for North America. Over the course of 24 years in the electric power industry, Mark has held several key management positions. Mr. Ladrow served as the Assistant Vice President for Power Products ACE USA in Philadelphia, PA where he worked in sales and marketing of insurance-based, market settled risk products to the regulated and non-regulated electric industry. As Manager of Energy Marketing of Trigen Energy Group, Mark negotiated wholesale off-take agreements for surplus energy from cogeneration projects located throughout contiguous U.S. He also provided recommendations on the viability of oversized cogeneration projects based on research of regulatory and market environments. Serving as Manager of Power Supply for The United Illuminating Company, Mark managed short-term power supply for a 1200 MW portfolio of regulated assets, optimizing the daily and monthly generation portfolio to maximize the value to shareholders. He sat as a voting member or alternate member on several NEPOOL subcommittees. Mr. Ladrow holds an MBA from Southern New Hampshire University, Manchester, NH and a BS, Mechanical Engineering from the University of Bridgeport, Bridgeport, CT.

Scott McGough Bulk Electric System Compliance Manager	Georgia System Operations Corporation 2100 East Exchange Place Tucker, GA 30084	(770) 270-7689 scott.mcgough@gasoc.com	Scott McGough has more than 7 years electric industry experience as a program manager developing and implementing compliance programs. He pioneered Oglethorpe Power Corporation's (OPC) GO and GOP compliance program. At OPC, his responsibilities included reviewing new reliability standards and applying compliance-related policies and procedures into OPC's program; assessing compliance and operational risk and conducting reliability audits. He managed the AURORA cyber vulnerability project while working with NRECA representatives and played a strategic role in discussions with FERC regarding this initiative. Also, Scott worked closely with Trade Associations, NERC and NERC regions on developing the draft SAR and potential list of requirements for withdrawal. Scott recently moved to Georgia System Operations Corporation's (GSOC) Compliance Department where he directs program enhancements for the TOP and LSE related compliance activities. He is currently GSOC's FERC 693 compliance manager and serves a support role in GSOC's CIP compliance program. Scott holds a Bachelor of Science degree from Oklahoma State University.
Ken McIntyre Director Standards and Protocols Compliance	Electric Reliability Council of Texas, Inc. 2705 West Lake Drive Taylor, TX 76574	(512) 248-3969 kmcintyre@ercot.com	Ken McIntyre received his Bachelors of Electrical/Electronic Engineering from the University of Southern Queensland, Australia, and Master of Business from Charles Sturt University, Australia. He has seventeen years of power industry experience, including working in the Australian power industry from 1995 to 2006, before joining the Electric Reliability Council of Texas (ERCOT) in 2007. Ken commenced work with the Queensland Electricity Commission in 1995, before moving to Powerlink Queensland upon the deregulation of the electricity industry and the introduction of the National Electricity Market. At Powerlink Queensland, Ken worked in both transmission and substation engineering, before moving into power system operations. During his time in operations, Ken was an accredited Transmission System Operator before becoming the Lead for Operations Planning, Real-time Support and Outage Coordination. Since working for ERCOT, Ken has held the positions of Senior Operations Planning Engineer, Supervisor of Advanced Network Applications and Manager of Operations and Planning Standards, before his recent promotion as the Director Standards and Protocols Compliance. In this current role, Ken is responsible for ERCOT meeting its regulatory responsibilities for both the NERC Reliability Standards and the ERCOT Protocols and Operating Guides, and to provide guidance to and increased reliability assurance for, the ERCOT region. Ken has been a member of a standards drafting team, invited to NERC Focus Groups, and presented at FERC Technical Conference. He is also a proxy member of the NERC Certification and Compliance Committee (CCC).

Stephanie Monzon Manager of NERC and Regional Coordination	PJM Interconnection, LLC 944 Jefferson Avenue Norristown, PA 19403	(610) 666-8870 monzos@pjm.com	Stephanie Monzon is a mechanical engineer with over 12 years experience in the industry. Prior to PJM, Stephanie was a Manager at NERC within the Standards group focused on Regional Standards. She also coordinated several drafting teams. Prior to NERC, she worked for PJM in various roles including senior engineer in Operations, AC2 (Second Control Center Project), and the NERC and Regional Coordination group. In her current role Stephanie is the Manager of NERC and Regional Coordination for PJM. She is responsible for overseeing the 693 Compliance program and for coordinating NERC activities. She is also a member of the Paragraph 81 team and has worked closely with Trade Associations, NERC and NERC regions on developing the draft SAR and potential list of requirements for withdrawal.
Stephen Pelcher Deputy General Counsel Nuclear and Regulatory Compliance	South Carolina Public Service Authority (Santee Cooper) One Riverwood Drive Moncks Corner, SC 29461	(843) 761-4016 stephen.pelcher@santeecooper.com	Steve's current responsibilities at Santee Cooper include providing ongoing legal advice concerning compliance issues associated with the NERC Reliability Standards. Steve has worked closely with Trade Associations, NERC and NERC regions on developing the draft SAR and potential list of requirements for withdrawal.
Mark A. Pratt Reliability Standards Compliance Assurance Manager	Southern Company 600 North 18th Street Birmingham, AL 35203	(205) 257-7670 mapratt@southernco.com	At Southern Company, Mark is responsible for managing compliance activities and programs that support reliability standards compliance in all functional areas for Southern Company Operations over three Regions (SERC, FRCC and Texas RE). Mark has actively participated in every reliability standards audit of Southern Company since 2007. Also, Mark worked closely with Trade Associations, NERC and NERC regions on developing the draft SAR and potential list of requirements for withdrawal. Prior to this role, Mark served as the Data & Compliance Manager in Southern Company's Fleet Operations and Trading organization with a focus on, among other things, the reliability standards applicable to the GO, GOP and PSE functions. Mark has a total of 25 years experience in the electric utility industry including 16 years in fossil and nuclear power plant operations, maintenance and engineering with Southern Company, Florida Power Corporation (Now Duke/Progress Energy Florida) and Bechtel Power Corporation. Mark is a registered Professional Engineer in the state of Florida and holds a bachelors degree in nuclear engineering from the University of Florida and a masters degree in mechanical engineering from the University of South Florida.
Frank Vick Compliance Team Lead	Texas Reliability Entity, Inc. 805 Las Cimas Parkway, Suite 200 Austin, TX 78746	(512) 583-4949 frank.vick@texasre.org	As an Auditor and Compliance Team Lead for Texas RE since 2005, Frank Vick has actively participated in the NERC Compliance Monitoring Processes Working Group. Frank was a contractor for CenterPoint Energy from 1997 through 2005. Frank previously spent over 20 years at CenterPoint Energy (1974 –1996) in their Electrical Systems and Substation Engineering Divisions supporting relaying, planning, and major equipment procurement functions.

Mary Ann Zehr Senior Transmission Policy Specialist-Transmission Contracts, Rates, and Policy	Tri-State Generation and Transmission Association, Inc. 1100 W. 116th Avenue Westminster, CO 80234	(303) 254-3098 mzehr@tristategt.org	Mary Ann Zehr has twelve years of experience in the energy industry, currently holding the position of Senior Transmission Policy Specialist for Tri-State Generation and Transmission Association, Inc. Tri-State is a wholesale electric power supplier owned by the 44 electric cooperatives that it serves. Tri-State generates and transmits electricity to its member systems throughout a 200,000 square-mile service territory across Colorado, Nebraska, New Mexico and Wyoming, serving approximately 1.5 million customers. Mary Ann's current position as Senior Transmission Policy Specialist affords her the opportunity to frequently engage in the review and analysis of current and proposed NERC and WECC reliability standards as well as monitor Tri-State's adherence to and compliance with those standards. Preceding her transition to transmission policy, Mary Ann spent several years as a NERC Certified (RC) System Operator. Prior to joining Tri-State, Mary Ann served in the U.S. Navy as a nuclear power plant operator for six years. Mary Ann's educational background includes a Master's of Science Degree in Global Energy Management from the University of Colorado which included research in various facets of U.S. and Foreign Energy Policy and a Bachelor's of Science Degree in Business Administration with a specialization in Management from Regis University.
