The electronic Logging Device is a computer that, at will, can have data reproduced, changed and deleted by anyone in a position to do so. Manipulation is therefore always present and uncontrolled even with the best policy directives of a Company whether it being a large fleet or 1 independent truck.

The old saying of - Where there is a will, there is a way, holds true regardless of the current system of paper logs or the proposed system of electronic logging. It is a reality in the industry that can not be corrected by an electronic device.

There are many other alternatives to reducing violations and promoting Safety (if that is what we are TRULY after) that have been proposed by organizations such as OOIDA (Owner Operator Independent Drivers Association). Lets spend our time and money constructively, introducing legislation that will effect what really causes the very issues, that the introduction of this proposal is trying to control with the implementation of the Electronic Logging Device.

Albert J. Renaud Jr
