

Currently, FERC-725L (OMB Control No. 1902-0261) accounts for the information collection burden associated with Mandatory Reliability Standards for the Northeast Power Coordinating Council (NPCC) Region.

However, FERC-725I (OMB Control No. 1902-0258) also contains information collection burden associated with the NPCC.

The Commission requests OMB approval to add the burden associated with FERC-725L to the existing burden in FERC-725I since both collections account for the information collection burden of Reliability Standards in NPCC. Later, FERC will request to remove the NPCC related burden hours from the FERC-725L. Currently, FERC divides all burden associated with a particular reliability region to be incorporated under the same OMB Control Number.
