

According to the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is **xxxx-xxxx**. The time required to complete this information collection is estimated to average 20 minutes per response, including the time to review instructions, search existing data sources, gather the data needed, and complete and review the information collection. If you have any comments concerning the accuracy of the time estimate(s) or suggestions for improving this form, please write to: NIH, Project Clearance Branch, 6705 Rockledge Drive, MSC 7974, Bethesda, MD 20892-7974, ATTN: PRA(XXXX-XXXX). Do not return the completed form to this address.

OMB Number: XXXX-XXX
OMB Expiration Date: XX/XX/XXX

Attachment 2 – Web-based Questionnaire
OMB Number: TBD

Blood DROPS
donation rules opinions study

Congratulations! Based on your answers, you are eligible to take our survey. Please read this consent form carefully before deciding whether you wish to participate in this study.

**UNIVERSITY OF CALIFORNIA, SAN FRANCISCO
CONSENT TO PARTICIPATE IN A RESEARCH STUDY
Blood Donation Rules Opinion Study, Blood DROPS.**

Research studies include only people who choose to take part. This is a research study about the views of men who have sex with men on blood donation. The study researchers are Dr. Brian Custer, PhD, MPH from Blood Systems Research Institute and Nicolas Sheon, Ph.D. from the Center for AIDS Prevention Studies at the University of California, San Francisco. If you have any questions, you may contact the researchers using the information below.

Why is this study being done?

The purpose of this study is to learn more about people's views on blood donation deferral policies.

Am I eligible to take this survey?

You are being asked to take part in this study because you have either never been tested for HBV, HCV, or HIV, or have not tested positive for any of these viruses, are age 18 years or older, live in one of the research sites, have access to the Internet, and able to complete the survey using a computer located in the U.S. You may complete only one survey. In addition, only one member of a household is eligible to take the survey, and only one email account may be used to receive compensation for completing the survey.

Who pays for this study?

The U.S Federal Government is paying for this study through research funds from the Food and Drug Administration and from the National Heart Lung and Blood Institute of the National Institutes of Health.

How many people will take part in this study?

About 5000 people will take part in this study.

What will happen if I take part in this research study?

If you agree to be in this study, you will be asked to complete a web-based survey. You will be asked basic demographic questions, and

questions related to blood donation eligibility policies. In particular you will be asked questions about your sexual history and your blood donation history. You will also be asked to provide your opinion about blood donation policies for men who have sex with men. It will take you approximately 20 minutes to complete the survey.

Are there any risks to me or to my privacy?

Some of the survey questions may make you feel uncomfortable or raise unpleasant memories. You are free to skip any question. All of your responses are confidential.

We will do our best to protect the information we collect from you. Any information that could be used to identify you will be kept secure. We will store the survey data, encrypted on a password-protected computer. Only a small number of researchers will have direct access to completed surveys. If this study is published or presented at scientific meetings, names or other information that might identify you will not be used.

To help us protect your privacy, we have obtained a Certificate of Confidentiality from the National Institutes of Health. With this Certificate, the researchers cannot be forced to disclose information that may identify you, even by a court subpoena, in any federal, state, or local civil, criminal, administrative, legislative, or other proceedings. A Certificate of Confidentiality does not prevent you or a member of your family from voluntarily releasing information about yourself or your involvement in this research. If an insurer, employer, or other person obtains your written consent to receive research information, then the researchers may not use the Certificate to withhold that information. Finally, the Certificate may not be used to withhold information from the Federal government needed for auditing or evaluating Federally funded projects or information needed by the FDA.

Certain types of information will be automatically collected from your web browser and Internet connection. As explained earlier in the survey, this information includes:

- *IP (Internet Protocol) address:* Your computer uses an IP address every time you connect to the Internet. It is a unique number that is used to identify computers on a network, so that data requested (such as web pages) can be sent to the computer.
- *General information about your web browser, type of device (such as a Dell computer, iPad, etc.) and operating system you are using.* Web browsers automatically send this information when you visit any web site.
- *The "referring web site,"* which is information passed along by your web browser indicating the web site you linked from to reach this survey.

None of this information will be used to personally identify you, and researchers will only analyze the information for determining the validity of survey data. This information will be collected only for the stated reason and not used later for any other reason. The researchers will not try to access your computer, or gather any other information aside from your answers to survey questions and the electronic information already described above.

IP address information will be deleted and destroyed immediately after the researchers complete their analysis of the survey project.

Are there any eligibility requirements for how I access the online survey?

Yes. If you access the survey using a service called an "anonymous web proxy" that conceals or falsifies your true IP address, or use any other electronic method that misrepresents information about your Internet connection, you are not eligible to complete this survey. Although some individuals make legitimate use of web proxies to protect their online information, we require you to temporarily forgo this minimal loss of privacy

to complete the survey. The purpose of this requirement is not to identify individuals, but rather to block respondents from completing multiple surveys, granting researchers the ability to detect and prevent fraudulent behavior.

Can I say "No," or stop being in the study?

Yes. You do not have to complete the survey and can decide to stop at any time.

Are there benefits to taking part in the study?

There will be no direct benefit to you from participating in this study. However, the information that you provide may help health professionals better understand blood donor policies and how they affect potential donors.

Who can answer my questions about the study?

You can talk with study researchers or your local blood bank about any questions, concerns, or complaints you may have about this study. Contact Dr Brian Custer at 415-901-0756 or Dr. Nicolas Sheon at 415-597-9109. You may also email us at blood@ucsf.edu.

If you wish to ask questions about the study or your rights as a research participant to someone other than the researchers, or if you wish to voice any problems or concerns you may have about the study, please call the Office of the Committee on Human Research of the University of California, San Francisco at 415-476-1814.

Will I be paid for taking part in this study?

In return for your time and effort for completing the survey, you will receive a \$10 Amazon.com gift code within 30 days. Upon completion of the survey, you will be asked to provide an email address so the Amazon.com gift code can be sent to you.

We validate all Amazon.com gift codes before distributing them. If you encounter difficulty redeeming your code, you must resolve the problem with Amazon.com's customer assistance. Contact information for Amazon.com gift code support is included with the code you will receive by email. Amazon.com is not a sponsor, affiliate, or endorser of this study in any way.

If you use a service such as an "anonymous web proxy" to change or conceal your true IP address (as defined above), or use any other method that alters information about your Internet connection, you will not receive an Amazon.com gift code even if you complete the survey, because you do not meet the eligibility criteria for the study as described above.

PARTICIPATION IN RESEARCH IS VOLUNTARY.

You have the right to decline to be in this study, or to withdraw from it at any point.

12. I have read and understand this consent form. *

- I wish to participate in this study.
 - I do not wish to participate in this study
-

13. May we contact you for a follow-up interview by telephone? If you complete this survey and are eligible for the telephone interview, you will be emailed an additional \$50 Amazon.com gift code after completing the one-hour telephone interview. *

- I wish to be contacted in the event I am eligible for a follow-up interview.
- I do not wish to be contacted for further interviews, but am willing to take this survey.

Blood DROPS
donation rules opinions study

Currently, men who have had sex with another man since 1977 are excluded from blood donation. The policy was introduced because of the increased risk of HIV among men who have sex with men. Other people who also are not allowed to donate blood include people who have had sex in exchange for money or drugs or other payment, people who have injected drugs, and people who weigh less than 110 lbs.

40. Were you aware that any man who has had oral or anal sex with another man, even once, since 1977 is not eligible to donate?

- Yes
- No
