

Form Change Summary

November 12, 2013, compared to July 2013 OMB-approved forms

Form 2005 – Confirmation of HLA Typing

- o Question 1: Changed arrangement of relationship option group and changed floating text instructions to “A separate copy of this form should be completed for each non-NMDP donor, recipient, or cord blood unit. Parental typing (maternal and paternal) should be submitted for all mismatched related donor transplants (CRF track only), if available. Cord blood maternal typing should be submitted for all unrelated cord blood transplants (CRF track only), if available.”
- o Question 4: Changed question text to “Is the cord blood unit maternal HLA typing available?” and added floating text instruction “Complete form 2005 to report cord blood unit maternal HLA typing” next to Yes.
- o Question 5: Changed arrangement of relationship option group; removed word ‘other’ from the question text, so the new text would be “Specify recipient’s biological relative and typing.”

Form 2400 – Pre-TED

- o Added additional disease for Aplastic Anemia
- o Added one and removed one disease for Inherited Abnormalities of Erythrocyte Differentiation or Function
- o Added a unit of measure category for Busulfan
- o Moved consent question to the pre-TED form
- o Added a text-based “Other Specify” field to each disease category
