ABSTRACT:

The NCI Innovative Molecular Analysis Technologies (IMAT) grant program has funded studies by more than 400 investigators to date. Successful dissemination of new technology platforms often occurs past the period of development supported by research grants. The proposed survey will collect information regarding the outcomes of the studies that were funded through IMAT awards. This information will be used by NCI program officers to better monitor the contributions evident from IMAT awards. In addition, the information will contribute significantly towards better program management.
