

IMAGE-ASSISTED CYTOLOGY WORKLOAD SURVEY CHANGE REQUEST:

Nonmaterial/ non-substantive changes are requested for Image-Assisted Cytology Workload Assessment and Measure ICR (OMB # 0920-1000), which includes Attachment C: Image-Assisted Cytology Workload Assessment Survey-Laboratory and Attachment D: Image-Assisted Cytology Workload Assessment Survey –Cytotechnologist. Justification for the non-substantive change requests are described below and detailed in the chart below. There are no requested changes in the scope of the study, the methodology, statistical methods, or significant changes to the respondents, information collection instruments, or burden.

The primary change request is to reformat the survey instrument forms to deliver the survey via Survey Monkey as a single online survey, rather than two paper surveys to be delivered by mail. There are corresponding changes in the format of the survey due to change in the delivery mode. These changes include: adding demographic questions, reformatting questions, reordering questions and changing all correspondence documents (cover letter, reminders, thank you) to an online email format. The additional demographic questions will increase the robustness of the collected data as it will allow for stratification in the analysis by characteristics of the labs; the online skip patterns and question logic allows for only applicable questions to be asked of respondents, and assure that respondent burden will not be increased. Additional changes are requested to include a Don't Know (DK) option to all relevant response categories. Lastly, a change is requested to include incentives, including cytology educational materials, in the form of a random drawing of completed surveys.

The reason for the request to change to an online delivery format is to increase the efficiency of completing the survey. The online format also allows for skip logic patterns to be included in the survey which will assure that respondents are not asked questions that are not applicable based on their previous responses; this will be a benefit to respondents in reducing response errors. The random drawing of prizes for completing the survey includes a variety of educational materials. These incentives are included to encourage participation and increase the response rate because respondents are asked to complete the survey during working hours.

The currently approved data collection instrument (Attachment C and Attachment D) are attached along with the online data collection screen shots from Survey Monkey (pdf file).

The response categories are: Cytotechnologists (Total), Cytotechnologists who screen ONLY gynecologic slides, Cytotechnologists who screen ONLY non-gynecologic slides, Cytotechnologists who screen BOTH GYN and non-GYN slides, Pathologists who practice gynecologic cytopathology, Pathologists who perform primary screening of GYN slides</p> <p>Q 14, Q15,Q 16: Added skip logic, if answer no then the respondent is not asked Q15 and Q16</p> <p>Q 18, Q19: specified date</p> <p>Q20, Q21, Q22: Reformatted into 3 questions to improve clarity (What is the number of cases in each of the following interpretation categories that your laboratory reported in 2013? What percent of the negative cases were reclassified on review into the following diagnostic categories in 2013? Number of cases with corresponding LSIL+ or (CIN2) biopsy within 6 months of PAP?)</p> <p>Q44, Q45 Also asked of CT. reformatted one response into 2 response categories (1. Technical Supervisor determines that the CT is qualified to screen more, based on rescreening of at least 10% of negative cases interpreted as NILM and 2. Technical Supervisor determines that the CT is qualified to screen more, based on comparison of CT interpretation with technical supervisor's confirmation)</p> <p>Q23, Q24, Q25 Multiple questions to</p>

Form	Current Question/Item	Requested Change
Survey-Laboratory		
Attachment C: Image-Assisted Cytology Workload Practices Survey-Laboratory <i>and</i>	Glossary	CHANGE QUESTION ORDER -moved glossary to the beginning of the survey instead of the last page both Attachment C and Attachment D
Attachment D: Image-Assisted Cytology Workload Practices Survey-Cytologist	Q6, Q7, Q8, Q9	Q39, 40, 44, 45 ask of both supervisors and CT, so changed order to put these questions at the end of the survey
Attachment C: Image-Assisted Cytology Workload Practices Survey-Laboratory <i>and</i> Attachment D: Image-Assisted Cytology Workload Practices Survey-Cytologist	Glossary	DELETED PARTIAL ITEMS Removed FN, FP, TP from Glossary terms because they do not appear in any survey questions.
