

SUPPORTING STATEMENT
Approval Request to Conduct Customer Satisfaction Research
W&I CAS Injured Spouse FY2011 Usability Testing Research

W&I CAS Injured Spouse FY2011 Usability Testing Research

A. JUSTIFICATION

1. Circumstances Making the Collection of Information Necessary

The Internal Revenue Service (IRS) enlists a balanced measurement system consisting of business results, customer satisfaction, and employee satisfaction. This initiative is part of the Service-wide effort to maintain a system of balanced organizational performance measures mandated by the IRS Restructuring and Reform Act (RRA) of 1998. This is also a result of Executive Order 12862 that requires all government agencies to survey their customers.

The Injured Spouse operation within the Customer Accounts Services (CAS) Operating Unit of the W&I Business Operating Division (BOD) is responsible for responding to written customer technical and account inquiries, resolving customer account issues, providing account settlement (payment options), and working related issues. W&I require feedback from customers to continually improve the Injured Spouse operations. W&I solicit this feedback through customer satisfaction research.

IRS recently revised the Injured Spouse Customer Satisfaction Survey, and this research is needed to ensure that the revised instrument is respondent friendly.

2. Purpose and Use of the Information Collection

The objective of this task is to do usability testing on the CAS Injured Spouse Customer Satisfaction Survey. This task will be conducted to supplement the information and results found during the main data collection phase of the Injured Spouse Customer Satisfaction Survey. This task will provide richer detail to Injured Spouse on their customer satisfaction survey and their customers' experience with the program. IRS will be testing the current survey as well as gaining insight on the taxpayers' experiences with the Injured Spouse Program.

The key goal of this research is to determine whether or not changes are needed to improve the flow of the survey and the reader's comprehension of its language.

3. Consideration Given to Information Technology

Remote Usability Testing - The FMG Team conducts remote usability testing with participants who live in geographically diverse areas. To accomplish this, FMG will use screen sharing software that allows them to interact with the participant. A view of the participant can also be captured when the participant has a webcam attached to their computer desktop or laptop. Injured Spouse customers can participate remotely from anywhere in the country by using a

program such as the GoToMeeting™ online platform. In addition to the many benefits to the participant, this technology has a wide variety of advantages for researchers:

- **Representativeness:** Sample comprised of customers around the country rather than around a city
- **Cost:** Fewer resources spent on travel and facility costs and more spent collecting customer data
- **Timing:** More sessions can be conducted in shorter times with less set-up and travel time
- **Moderator control:** Moderators can facilitate conversation, show videos and other multimedia, while also letting participants show their screens
- **Client Access:** Clients can watch and listen to sessions remotely anywhere in the world.

4. Efforts Not to Duplicate Research

This will be the only usability research associated with the 2012 Injured Spouse survey and the Injured Spouse survey is the only study currently conducted that provides the opportunity to hear from Injured Spouse customer base on a broad range of customer service issues, with the objective of identifying how to prioritize strategies for improving customer satisfaction.

5. Reducing the Burden on Small Entities Expected

The usability research has been designed to minimize burden on respondents. The time to participate in the study has been carefully considered. Each respondent will be allowed to participate in only one usability study. This will aid in decreasing respondent burden. Small entities are not affected.

6. Consequences of Not Conducting Collection

Without conducting the Injured Spouse survey, CAS would be unable to meet corporate goals and would fall short of meeting the IRS Mission of a Balanced Measurement System. Without the usability research, the survey will be less effective at providing IRS with information about Injured Spouse customers. The usability research provides an opportunity to drill down into why respondents gave particular survey responses and will add the richness of a qualitative component to the overall research endeavor.

7. Special Circumstances

There are no special circumstances. The information collected will be voluntary and will not be used for statistical purposes.

8. Consultations with Persons Outside the IRS

The same contractor that administered the Injured Spouse survey will conduct this usability research.

9. Payment of Gift

\$40 per participant - The justification for this is that without it, the contractor may not be able to attract subjects to participate in this study. Offering incentives for participating in this type of research is a standard industry practice.

10. Confidentiality

All participants will be subject to the provisions of the Taxpayer Bill of Rights II during this study and the vendor will ensure that all participants are treated fairly and appropriately.

The security of the data used in this project and the privacy to the extent allowed by law of taxpayers will be carefully safeguarded at all times. Security requirements are based on the Computer Security Act of 1987 and Office of Management and Budget Circular A-130, Appendices A & B. Physical security measures include a locked, secure office. Notes are stored in locked cabinets or shredded. Data security at the C-2 level is accomplished via the Windows NT operating system. Systems are password protected, users profiled for authorized use, and individual audit trails generated and reviewed periodically.

The IRS will apply and meet fair information and record-keeping practices to ensure privacy to the extent allowed by law protection of all taxpayers. This includes criteria for disclosure—laid out in the Privacy Act of 1974, the Freedom of Information Act, and Section 6103 of the Internal Revenue Code—all of which provide for the protection of taxpayer information as well as its release to authorized recipients.

The usability research will not contain or collect tax return or taxpayer information. Usability research participants will not be identified in any of the documents or files used for this project. We will limit and control the amount of information we collect to those items that are necessary to accomplish the research questions. We will carefully safeguard the security of data utilized as well as the privacy to the extent allowed by law of the respondents. We will apply the fair information and record-keeping practices to ensure protection of all survey respondents. The criterion for disclosure laid out in the Privacy Act, the Freedom of Information Act, and section 6103 of the Internal Revenue Code provides for the protection of information as well as its releases to authorized recipients.

11. Sensitive Nature

No questions will be asked that are of a personal or sensitive nature.

12. Burden of Information Collection

The usability research has been designed to minimize burden on the respondents. The time that a respondent takes to participate in the usability research has been carefully considered and only the most important areas are being discussed. The respondent will participate in only one usability research study. This will aid in decreasing respondent burden. We estimate contacting 52 participants to recruit 10 needed for the usability sessions. The total burden estimate for recruiting and administering the 10 usability sessions is 12.4 hours.

BURDEN HOURS

Category of Respondent	No. of Respondents	Participation Time	Burden Hours
Recruiting 13 participants	13	5 minutes	1.08
Recruiting 39 non-participants	39	2 minutes	1.3
Participation by 10 participants	10	60 minutes	10
Totals			12.38 hrs

Total minutes = 743 minutes or 12.38 hours

Total Burden = 12.38 hrs

13. Costs to Respondents

N/A

14. Costs to Federal Government

\$10,404.80

15. Reason for Change

N/A

16. Tabulation of Results, Schedule, and Analysis Plans

The FMG Team will analyze the data, interpret the findings, and present the findings. Findings and analyses will indicate the usability issues with the survey in terms of quantitative (e.g., percent completion, time to complete, satisfaction ratings to items) and qualitative (e.g., participant positive, negative, and open-ended comments) data, as well as the prevailing opinions of the participants. FMG will focus on maximizing the quantitative measurement, and specifically, will highlight recommendations to improve programs, procedures, and future research efforts based on actual end user (i.e., taxpayer) input. Recommendations will be prioritized (high, medium and low) based on participants' difficulties and the relative importance to the IRS. FMG will deliver a draft template of the report, and a revised report within five (5) business days of receiving IRS comments.

Data collection will not apply statistical methods. A qualitative analysis of respondents' experiences with the survey will be performed. There are no plans to publish or otherwise release this information.

Feedback collected provides useful information, but it does not yield data that can be generalized to the overall population. Findings will be used for survey improvement, but are not for publication or other public release. We estimate contacting 52 participants to recruit 10 needed for the usability sessions. The total burden estimate for recruiting and administering the 10 usability sessions is 12.4 hours.

The recruiting of the sample is the responsibility of the contractor. The contractor will use the analysis of this qualitative information to augment the information obtained from of the survey responses and to improve the usability of the survey.

The contractor will hold the identities of respondents anonymous to the extent permitted by law. The contractor will not provide the IRS with data or status updates that are linked to individual respondents. This data will not include any individually identifying information such as name, address, or taxpayer identification number.

17. Display of OMB Approval Date

N/A

18. Exceptions to Certification for Paperwork Reduction Act Submissions

N/A

19. Dates collection will begin and end

Collection will begin as early as August 1, 2012 and will end prior to December 1, 2012.

B. STATISTICAL METHODS

This task will be conducted to supplement the information and results found during the main data collection phase of the Injured Spouse Customer Satisfaction Survey. This task will provide richer detail to Injured Spouse on their customer satisfaction survey and their customers' experience with the program. IRS will be testing the current survey as well as gaining insight on the taxpayers' experiences with the Injured Spouse Program.

1. Universe and Respondent Selection

The sampling frame consists of Injured Spouse customers. We estimate contacting 52 participants to recruit 10 needed for the usability sessions. The total burden estimate for recruiting and administering the 10 usability sessions is 12.4 hours.

2. Procedures for Collecting Information

The contractor will recruit participants and will be responsible for establishing procedures for data collection. The contractor will prepare the data and conduct data analysis in accordance with accepted industry standard procedures.

The contractor will conduct usability testing by telephone. The contractor will recruit 10 participants; that quantity is sufficient to discover ways to make the survey clearer and more user friendly.

The FMG Team will conduct remote usability testing (see explanation below) to facilitate in-depth qualitative analysis and ensure taxpayer experiences and needs are understood and integrated into the research program. The testing will also serve to ensure that the current survey reflects customer concerns and the wording facilitates comprehension. This testing will also ensure that the current survey reflects the customer experience and comprehension (e.g., includes “taxpayer friendly” terminology rather than industry jargon).

Recruitment for the usability testing will be performed at the conclusion of survey transactions, asking participants their willingness to participate in future research. FMG will make follow-up phone calls with recruited participants to ensure the desired number of participants is recruited. FMG will recruit participants with varying characteristics such as customer type, census region, and/or population density (high, medium, low).

All usability testing will be led by an experienced FMG Team facilitator, who will lead discussions on established activities defined within a moderator guide. A second team member will participate in all usability sessions and will assist the facilitator, take notes, and support reporting and analysis efforts. The overall approach to this testing is structured and clinical. The moderator guide will be pre-tested by FMG staff. The IRS will have the opportunity to observe all usability tests via live streaming.

3. Methods to Maximize Response

Standard procedures will be used in order to obtain the highest response rate possible for the usability testing. The contractor will recruit usability testing participants and conduct the usability testing research. To encourage participation, the contractor will be offering a \$40 incentive.

4. Testing of Procedures

The purpose for this OMB approval application is to conduct usability testing research on the CAS Injured Spouse survey. FMG will use screen sharing software that allows them to interact with the participant. A view of the participant can also be captured when the participant has a webcam attached to their computer desktop or laptop. Injured Spouse customers can participate remotely from anywhere in the country by using a program such as the GoToMeeting™ online platform.

5. Contacts for Statistical Aspects and Data Collection

For questions regarding the usability test, contact:

Veronica Ogletree, COR

Mgmt/Program Analyst
401 West Peachtree St, Suite 2030
Atlanta, GA 30308
Telephone: 404-338-8531
E-Mail: veronica.b.ogletree@IRS.gov

The Paperwork Reduction Act requires that the IRS display an OMB control number on all public information requests. The OMB Control Number for this study is 1545-1349. Also, if you have any comments regarding the time estimates associated with this study or suggestions on making this process simpler, please write to the, Internal Revenue Service, Tax Products Coordinating Committee, SE:W:CAR:MP:T:T:SP, 1111 Constitution Ave. NW, Washington, DC 20224.
