Do not copy your date/time information into column A of the "Data" worksheet. Instead, enter the beginning Date/Time of your data into cell "A2" in the "Data" Worksheet (using the format provided). Then select your AGC scan rate in cell "B2". (2 sec, 3 sec, 4 sec, 5 sec or 6 sec). Note, a data value must exist for each AGC scan. The spreadsheet will fill the Date/Time column with the correct times and format.

instructions.

Copy and Paste Event Data into the appropriate cells of the "Data" worksheet.

Maintain date and time format of mm/dd/yy hh:mm:ss.

Data must start at least 2 full minutes before the beginning of the event.

Collect the same amount of data for each event. Suggest 2 to 3 minutes before to 15 minutes after (up to 60 minutes total). Delete unused rows of data in the Data worksheet below your data, columns A through R. You must also delete any un-used event detection formulas in columns M through R as well.

Enter your BA name in cell B1 of this worksheet.

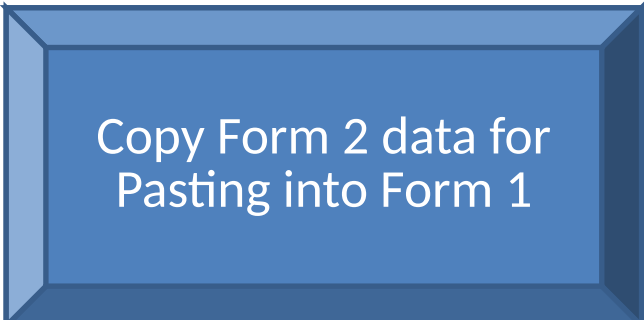

Verify that the "Auto" Event Detection selected the correct event. Verify time and delta Hz

by comparing time of event and delta Hz on graph to the right to that on Form 1 for this event. If the wrong event was selected, in cell "E4" of this worksheet select "Manual" and manually select the beginning and ending row numbers of the desired event and enter these in cells "E5" and "E6". Only rarely should you have to use the "Manual" process.

Verify that the "Auto" selection of T(0) is correct by observing "Graph 20 to 52s".

The very first frequency data point of the event on the graph must not be included in the "A Value" average. This is accomplished when the first frequency data point of the event is dead center of the graph on the center vertical grid line. The Auto event detection will select the single largest event in the data provided. An adjustment for T(0) alignment is provided in Cell Q3 on the Graph 20 to 52s.

When T(0) is properly aligned. Hit the big blue button to copy your data for pasting into FRS Form 1 "BA Event Data" worksheet.

Copy Form 2 data for
Pasting into Form 1

Paste data into "FRS Form 1" in the appropriate row on the "BA Event Data" worksheet.
Be sure to use the latest version of Form 1. This is Form 2.9a so use Form 1.9.

The Target Trend provides an independent "Frequency Response" based on the "Target Trend" of the event until event frequency is reached. The Target assumes a straight line trend of the event until event frequency is reached. The Target adds the Primary Frequency Response (PFR) to the Target Trend. The Target Trend should be adjusted based on the Primary Frequency Response (PFR) and the Bias setting. If the Bias setting is slightly high, the Target Trend should be adjusted downwards. If the Bias setting is slightly low, the Target Trend should be adjusted upwards.

Balancing Authorities that use Dynamic Scheduling or Pseudo-ties for jointly owned units shall reflect their respective share of the unit governor droop response in their respective Frequency Bias Setting.

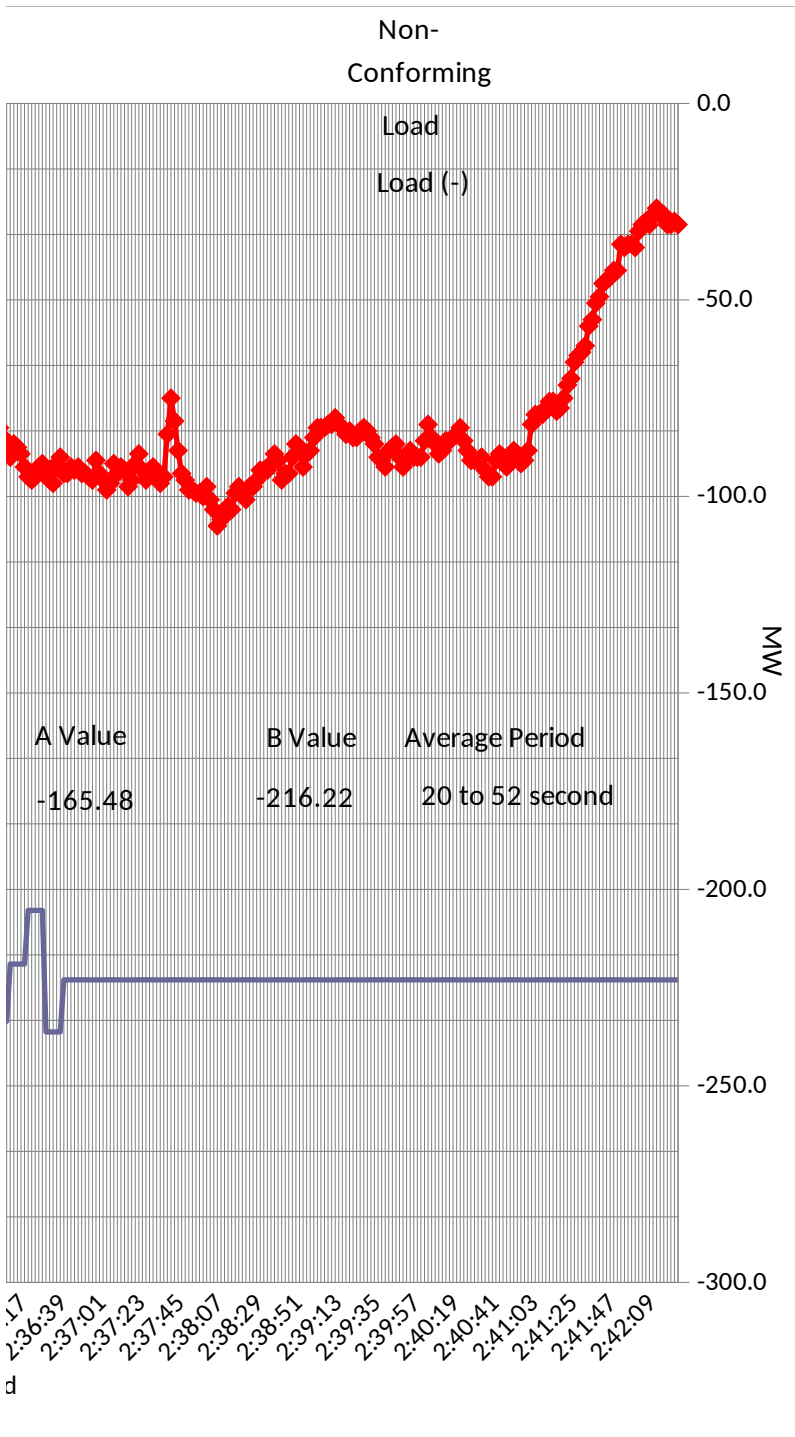

Fixed schedules for Jointly Owned Units mandate that Balancing Authority (A) that contains the Jointly Owned Unit must incorporate the respective share of the unit governor droop response for any Balancing Authorities that have fixed schedules (B and C).

The Balancing Authorities that have a fixed schedule (B and C) but do not contain the Jointly Owned Unit shall not include their share of the governor droop response in their Frequency Bias Setting.
