Executive Summary

The Bureau of Labor Statistics (BLS) is working with the Social Security Administration (SSA) to develop a survey that will accurately and reliably capture data that are relevant to the SSA's disability program. The proposed new Occupational Requirements Survey (ORS) is envisioned to be an establishment survey that collects information on the vocational preparation and physical requirements of occupations in the U.S. economy, as well as the environmental conditions in which those occupations are performed.

These three areas give a broad overview of the types of information on which BLS plans to collect data. Data on the vocational preparation for the occupation is collected through information on the position's level of education, prior work experience, and amount of on-the-job training. Some physical demands are collected as the number of hours spent performing activities such as reaching, pushing, pulling, walking, or sitting. Other physical demands may include the weight a worker lifts, or the postural positions one assumes. Environmental conditions measure an employee's length of work time spent exposed to elements such as weather, noise, and extreme heat or cold.

For further information on the ORS project, you can visit www.bls.gov/ORS.
