Burden Est: 80 hours

Comments: We do not collect any of the data necessary to fill out the DSR (eg. cd4 count to determine HIV status, ethnicity, etc.) so we have to reach out to multiple other service providers to gather that information for the report. Addition of the new ethnicity/race/sex would increase the burden, and that the narrative question deletions would not have an impact on the time because they are easy to fill out.

Burden Est: 10 hours. Anticipate no changes in burden due to new and deleted data items.
