Could Your Genes Predict Your Weight?

Scientists are working to figure out how our genetic makeup affects our body weight. Tell us how you think and talk about your weight now, and whether you would want to learn about new discoveries that could link your genes and your weight in the future.

We estimate that this survey will take 20 minutes, including the time for reviewing instructions, consenting, and completing the survey.

These surveys are being conducted by researchers at the National Human Genome Research Institute of the National Institutes of Health.

The surveys are being conducted to help researchers understand how people think and feel about issues related to genetics and health. You may complete as many or as few of the surveys as you wish.

Your response to the surveys is completely voluntary. You may end your participation at any time. Any reports or publications based on this research will use only group data and will not identify you individually. We will not store any personally identifying information within the survey. Your responses will remain secure to the extent permitted by law. The privacy and confidentiality of all collected information will be maintained at all times during the study process.

By clicking on the Accept button below you are indicating that you consent to participate in this research.

Talking with your primary care provider:

During this survey, please think of "your primary care provider" as the health care professional you see to take care of your overall health. This would be the person you would go to for medical checkups when you are well. This could be a doctor, another health care provider like a nurse practitioner or physician assistant, or a group of medical professionals like the doctors at a clinic.

Could Your Genes Predict Your Weight?

In the future, it could be possible to look at someone's entire genome to predict much more of their risk for being overweight. It might also be possible to create a personalized diet and exercise program based on someone's genes. This could make it easier for people to lose weight or to maintain a healthy weight.

If this were possible...
