SUPPLEMENTARY INFORMATION:

I. Abstract

The U.S. Geological Survey National Geospatial Program (NGP) is the Federal agency tasked by the Office of Management and Budget Circular A-16 with coordination of the hydrography (surface- water features) geospatial data theme. The purpose of this study is to ensure that the NGP's management of hydrography data theme is optimized to fully support the potential of geospatial data and information use in water science and mapping.

This one-time, voluntary information collection will engage professional users of hydrography information, including scientists, planners, and managers from Federal, state, and local government as well as academia and the private sector. The process will be guided by an interagency management team led by USGS with support from a professional services contractor. The information collection will include an online survey. Respondents may be contacted subsequently for clarification of responses. The information collection will focus on (1) respondent's current use of hydrography data, (2) desired improvements to hydrography data, and (3) benefits accrued to the respondent's mission if enhanced hydrography data were available. Personally Identifiable Information (PII) will not be sought. The results of the information collection will be used to evaluate potential future program changes for USGS hydrography data. A summary of the results will be published in a USGS publication. We will protect information from respondents considered proprietary under the Freedom of Information Act (5 U.S.C. 552) and its implementing regulations (43 CFR part 2), and under regulations at 30 CFR 250.197, "Data and information to be made available to the public or for limited inspection." All information will be stored according to established USGS security and information access protocols.
