Source: CMS MSIS State Summary Data Marts <http://www.cms.gov/Research-Statistics-Data-and-Systems/Computer-Data-and-Systems/MedicaidDataSourcesGenInfo/MSIS-Mart-Home.html>

\* The target population is adults ages 18 and older as of December 31 of the target year. The Data Mart, however, groups 18-year-olds with 15-, 16-, and 17-year-olds. Thus, we could not isolate the 18-year-olds with this tool and group them with other adults. In general, this will not affect the sample size calculation because including the 18-year-olds increases the population size. As it stands, the population within each of the strata is projected to have more than the required sample size, even without the 18-year-olds. The exception is states that do not have any non-dual non-disabled HMO enrollees. Including 18-year-olds would not change this in these states. Furthermore, most 18-year-olds are covered in children's eligibility groups; the group of newly eligible adults authorized by the Affordable Care Act is for individuals ages 19 to 65.

\*\* The dual eligible include both partial and full dual eligible beneficiaries.
