Description	
Name of Data Source	
Ordinal Position of Table in Data Dictionary received from Source System-used internally	
Name of the Table from which the data element is extracted from Source System	
Ordinal Position of the data element in a Table in the Source System Data Dictionary-used internally	
Name of the data element (please use the literal format as in the column)	
Please note YES or NO if the element is PII or HIPPA sensitive for de-identification	
User has accepted this as a valid element for their use-drop down list-Yes or No	
Date the data element requested in Spiral-2. This will help in revising your existing extract routines	
This is the data type.	
This is the Nullability condition.	
Indicator if data element is a primary key (PK) or foreign key (FK) in this table	
Data Element Name	
Dictionary meaning of the data element and enumerated values if applicable	
Please add any comments that will help us understand the output extract.	
Please add any comments on authoritativeness	
Reference to code table.
