

National Park Service U.S. Department of the Interior Social Science Program

OMB Control Number 1024-0224 Current Expiration Date:8-31-2014

Programmatic Approval for NPS-Sponsored Public Surveys Submission Date 6/4/2014 1. Project Title: One Health Messaging about Bats and Rabies 2. Abstract: This study will investigate One Health messages in the context of bats and rabies. Using a questionnaire with a sample of visitors in national parks, we will explore how (a) acknowledgment of the benefits from bats, (b) the timing of the presence of batrelated disease risk (i.e., rabies), and (c) attribution of blame for the spread of rabies influence pro-environmental attitudinal and behavioral outcomes. (not to exceed 150 words) 3. **Principal Investigator Contact Information** First Name: Katherine Last Name: McComas Title: Professor Affiliation: Department of Communication, Cornell University Street Address: 339 Kennedy Hall City: Ithaca State: NY **Zip code:** 14853 **Phone:** 607-255-7737 **Fax:** 607-254-1322 **Email:** kam19@cornell.edu Park or Program Liaison Contact Information 4. 	Park(s) For Which Research is to be Conducted:	We will collect data in four parks (to be determined). Possible candidate parks include:					
		•Carlsbad Caverns	s (CAVE)	•Arches (A	RCH)		
		•Cedar Breaks (CE	EBR)	 Badlands 	(BADL)		
		 Canyonlands (CA 	NY)	●Zion (ZIOI	N)		
		•Mammoth Cave	(MACA)	 Great Sm 	oky Mountains (GRSM)		
		•Casa Grande (CA	GR)	 Mesa Ver 	de (MEVE)		
		 Rocky Mountain 	(ROMO)	•El Mapais	s (ELMA)		
6.	Survey Dates:	07/01/2014		TO 12/31/20	14

separate page.)	locations during the survey sampling periods between July 1 and December 31, 2014.
	A systematic sampling procedure based on the park's visitation statistics from the previous year will be used to stratify the sample at each site. During the designated sampling period a surveyor will ask every <i>nth</i> visitor to participate in the study. The surveyor will be trained on every aspect of on-site surveying including: using sampling intervals, avoiding sampling bias, and how to handle all types of interviewing situations, especially safety of the visitors and the

The criteria for selection of parks will include: 1) proximity of visitors to bat populations, (2) history of bat-related public health issues, such as visitor-bat contact, in the park and 3) congruence with our messages. Visitor-intercept locations within parks will be determined based upon their proximity to areas that have natural bat populations.

surveyors. Quality control will be ensured by monitoring surveyors in the field,

and by checking their paperwork at the end of each survey day.

(c) Instrument Administration:

The initial contact with visitors will be used to explain the purpose of the study and to determine the visitors' interest in participating. This should take approximately 1 minute. If a group is encountered, the surveyor will ask the individual within the group who has the next birthday to serve as the respondent. At this point, all individuals will be read the following script:

"Hello, I am ______ and I am conducting a survey for the National Parks Service. This survey will help us to better understand how to communicate with visitors about bats. Your participation in the study is voluntary, and all your responses will be kept anonymous. This study has been approved by the Office of Management and Budget as well as our University's Institutional Review Board. It will take about 15 minutes to complete. You will not be asked to provide your name or address. Your responses are voluntary will remain anonymous. Would you be willing to complete the questionnaire using this iPad? If not, we have a paper version with the same question for your convenience.

Before we start, are you at least 18 years old?

The interviewer will check the boxes below to indicate that the respondent is at least 18 years old or older and understands the Paperwork Reduction Act Statement below.

☐ The respondent is at least 18 years old or older ☐ The respondent understands the Paperwork Reduction Act Statement

The interviewer will ask: "Has any member of your group been asked to participate in this survey before today?"

11.	Burden Estimates:	We plan to approach up to 900 individuals per park (n=3,600 total visitors). The initial contact time will be at least one minute per person (3,600 x 1 minute = 60 hours). We expect that 1,800 (50%) visitors will refuse to participate during the initial contact. We will ask those visitors to answer the non-response bias questions which will take less than one additional minute (1,800 x 1 minute = 30 hours).				
		We expect that 1,800 will agree to complete the on-site survey and that 15 minutes will be required to complete and return the survey (1,800 x 15 minutes = 450 hours). The total burden for this collection is estimated to be 540 hours.

	Responses	,	return surveys			

12. Reporting Plan:		The results of the study will be presented in internal agency reports for NPS
		managers as well as possible webinars to interested groups within NPS.
		Response frequencies will be tabulated and measures of central tendency
		computed (e.g., mean, median, mode, as appropriate). The reports will be
		archived with the NPS Social Science Program for inclusion in the Social Science
		Studies Collection. Hard copies will be available upon request.
		We also intend to publish our results in academic journals and present the
		findings at professional conferences.
