

What are the main components of the system?

The system consists of several main components: the user interface, the database, the server, and the client. Each component plays a crucial role in the overall functionality of the system.

The user interface allows users to interact with the system. The database stores all the data used by the system. The server manages the data and provides services to the client. The client is the software that runs on the user's computer.

How does the system work?

The system works by allowing users to input data into the user interface. This data is then stored in the database. The server retrieves the data from the database and provides it to the client. The client then displays the data to the user.

The system is designed to be user-friendly and efficient.
