For this survey, we code that person as a grandparent because we don't distinguish between biological, adoptive, or step grandparents.

Grandfather: The male parent of the child's biological or adoptive mother or father.
In the case of a step-grandfather, code the relationship as you would a grandfather (code 8).   For this survey, we code that person as a grandparent because we don't distinguish between biological, adoptive, or step grandparents.

Aunt: The sister of the child's biological or adoptive mother or father or the wife of the child's uncle.

Uncle: The brother of the child's biological or adoptive mother or father or the husband of the child's aunt.

Cousin: A child of the focal child's uncle, aunt, or cousin.

Other Relative: Refers to relationships that aren't specifically listed, such as great grandmother, great grandfather, niece, or nephew. In the case of a step-grandparent, code the relationship as you would a grandparent (code 7 for grandmother, code 8 for grandfather).

Other Non-relative: Refers to the relationship between two people when there is no family relationship through blood, marriage, adoption, or partnership (i.e., living together as married). It also refers to more ambiguous relationships that exist where there are two people living together as married and they have children. For example, the child's father and the father's girlfriend (who is not the child's mother) live together as married and the girlfriend's daughter lives with them. The relationship of the girlfriend's daughter to the child would be siblings if they were married, but since the father and the girlfriend are not married, the daughter is an "other non-relative." If the "other non-relative" is coded, you will receive a list of other codes to use if they are more descriptive than "other non-relative."

IDENTIFY THE 2 "KEY" PARENT FIGURES IN THE HOUSEHOLD. THIS PERSON OR PERSONS SHOULD BE CHOSEN AS FOLLOWS:
 1) THE KEY PARENT FIGURES SHOULD BE CHOSEN ONLY FROM AMONG CURRENT MEMBERS OF THE HOUSEHOLD;

2) IF A MOTHER (RELATION=1) IS IN THE HOUSEHOLD SHE SHOULD BE A KEY PARENT FIGURE; IF A FATHER (RELATION =2) IS IN THE HOUSEHOLD HE SHOULD BE A KEY PARENT FIGURE; IF THERE ARE TWO MOTHERS (RELATION=1), PICK THE MOTHER WITH THE LOWER NUMBER RELATIONSHIP IN THE FOLLOWING SYSTEM: BIRTH MOTHER =1, ADOPTIVE MOTHER=2, STEPMOTHER=3, FOSTER MOTHER OR FEMALE GUARDIAN =4. OTHER TYPE OF MOTHER = 5. IF TWO MOTHERS HAVE SAME NUMBER RELATIONSHIP, OR IF THE RELATIONSHIP IN FSQ.140 WAS REFUSED OR DON'T KNOW, PICK ONE WITH LOWEST PERSON NUMBER. IF THERE ARE TWO FATHERS (RELATION=2), PICK THE FATHER WITH THE LOWER NUMBER RELATIONSHIP IN THE FOLLOWING SYSTEM: BIRTH FATHER =1, ADOPTIVE FATHER=2, STEPFATHER=3, FOSTER FATHER OR MALE GUARDIAN =4, AND OTHER TYPE OF FATHER = 5. IF TWO FATHERS HAVE SAME NUMBER RELATIONSHIP, OR IF THE RELATIONSHIP IN FSQ.150 WAS REFUSED OR DON'T KNOW, PICK ONE WITH LOWEST PERSON NUMBER. CHILDREN'S PARENTS WITH RELATION = 1 OR 2 SHOULD BE THE KEY PARENT FIGURES WHETHER OR NOT ONE OF THE PARENTS IS THE RESPONDENT.

3) IF THERE IS A MOTHER (RELATION =1) BUT NO FATHER (RELATION=2) AND THE MOTHER HAS A MALE (FSQ.140 =1) SPOUSE/PARTNER (SPOUSE/PARTNER, HERE AND IN OTHER PARTS OF THIS BOX, IS DEFINED AS A SPOUSE/PARTNER HAVING BEEN SELECTED AT FSQ.120), THE MOTHER SHOULD BE A KEY PARENT FIGURE AND THE MALE SPOUSE/PARTNER SHOULD BE A KEY PARENT FIGURE. ELSE, IF THERE IS A MOTHER (RELATION =1) BUT NO FATHER (RELATION=2) AND THERE ARE TWO MOTHERS IN THE HOUSEHOLD, THE MOTHER (IDENTIFIED WITH THE SAME CRITERIA AS IN BULLET 2 IF THERE ARE TWO MOTHERS) SHOULD BE A KEY PARENT FIGURE AND THE OTHER MOTHER IN THE HOUSEHOLD (WHO HAS A DIFFERENT PERSON NUMBER THAN THE MOTHER IDENTIFIED AS A KEY PARENT FIGURE) SHOULD BE A KEY PARENT FIGURE. IF THE SEX OF THE SPOUSE/PARTNER OF A PARENT (RELATION = 1 OR 2) IS UNKNOWN (FSQ140 = REF OR DK), THE PARENT AND THE SPOUSE/PARTNER OF THE PARENT SHOULD STILL EACH BE KEY PARENT FIGURES.
(NOTE: IN HOUSEHOLDS WITH TWO MOTHERS AND NO FATHER, EACH MOTHER FIGURE CAN ONLY OCCUPY ONE OF THE TWO KEY PARENT FIGURE SLOTS. IF MOTHER FIGURE #2 QUALIFIES AS A KEY PARENT AND IS ALSO THE SPOUSE/PARTNER OF A MOTHER FIGURE #1, MOTHER FIGURE #1 SHOULD BE ONE KEY MOTHER FIGURE AND MOTHER FIGURE #2 SHOULD BE THE OTHER KEY PARENT FIGURE. ALSO, IN TWO MOTHER FAMILIES WITHOUT A FATHER, IF A MOTHER WHO TAKES PRECEDENCE OVER ANOTHER MOTHER (BY RELATIONSHIP NUMBER OR PERSON NUMBER AS INDICATED IN BULLET 2 ABOVE) IS NOT THE RESPONDENT, BUT IS THE SPOUSE/PARTNER OF THE OTHER MOTHER WHO IS THE RESPONDENT, BOTH MOTHERS SHOULD BE KEY PARENT FIGURES RATHER THAN SETTING THE MOTHER THAT TAKES PRECEDENCE AS BOTH THE KEY FEMALE AND KEY MALE FIGURE.)

4) IF THERE IS A FATHER (RELATION=2) BUT NO MOTHER (RELATION=1) AND THE FATHER HAS A FEMALE SPOUSE/PARTNER, THE FATHER SHOULD BE A KEY PARENT FIGURE AND THE FEMALE SPOUSE/PARTNER SHOULD BE A KEY PARENT FIGURE. ELSE, IF THERE IS A FATHER (RELATION =2) BUT NO MOTHER (RELATION=2) AND THERE ARE TWO FATHERS IN THE HOUSEHOLD, THE FATHER (IDENTIFIED WITH THE SAME CRITERIA AS IN BULLET 2 IF THERE ARE TWO FATHERS) SHOULD BE A KEY PARENT FIGURE AND THE OTHER FATHER IN THE HOUSEHOLD (WHO HAS A DIFFERENT PERSON NUMBER THAN THE FATHER IDENTIFIED AS A KEY PARENT FIGURE) SHOULD BE A KEY PARENT FIGURE.

QUESTION TEXT:

What was the diagnosis or were the diagnoses?

PROBE: Anything else?

CODE ALL THAT APPLY.

CODE DYSLEXIA AS "6." CODE DYSCALCULIA AS "7." CODE "LEARNING DISABILITY" (CODE 1) ONLY IF THE CHILD HAS AN ADDITIONAL LEARNING DISABILITY THAT IS SEPARATE FROM OR IN ADDITION TO DYSLEXIA (CODE 6) OR DYSCALCULIA (CODE 7).

IF BOTH ADD (CODE 2) AND ADHD (CODE 3) ARE MENTIONED, CODE AS "3" FOR ADHD.

HELP TEXT:

Learning disability: This is a disorder in one or more of the basic psychological processes involved in understanding or in using language, spoken or written, which shows up as difficulty to listen, think, speak, read, write, spell, or do mathematical calculations. In some cases the child can perform at grade level, but only with special help. Some names of learning disabilities are dyslexia (CODE UNDER DYSLEXIA), dyscalculia (CODE UNDER DYSCALCULIA), developmental aphasia, minimal brain dysfunction, brain injury, and perceptual disabilities. The term does not include learning problems that are primarily the result of problems with seeing, hearing, or walking (or visual, hearing or motor disabilities); intellectual or severe cognitive disability/mental retardation; emotional disturbance; or environmental, cultural, or economic disadvantage. A commonly used acronym is "LD." "Specific learning disorder" should be coded here.

Attention Deficit Disorder (ADD): A childhood syndrome characterized by short attention span that is inappropriate for his/her age group.

Attention Deficit Hyperactivity Disorder (ADHD): The child displays signs of inattention, impulsivity, and hyperactivity that are inappropriate for his or her mental and chronological age. Adults in the child's environment, such as parents and teachers must report the signs. Inattention means difficulty concentrating, easily distracted, and not finishing things started. Impulsivity means often acts before thinking, shifts excessively from one activity to another, needs a lot of supervision. Hyperactivity means runs about or climbs on things excessively, has difficulty staying seated, always on the go, as if driven by a motor. Onset is typically before age seven and condition lasts at least six months.

Developmental delay: A condition in which a young child falls significantly behind his/her age-mates in physical, mental (cognitive), speech (communication), social/emotional, adaptive (behavioral) development. It does not simply mean that the child talked somewhat later than some children talked or was smaller than average. It is not to be confused with autism or pervasive developmental delay. If the child's social behavior and relationships with other people are generally consistent with his or her delayed cognitive development, then the classification of the condition as developmental delay is probably appropriate. If this is not the case, see the definitions of autism and pervasive developmental disorder or delay.

Autism: A developmental disability significantly affecting verbal and nonverbal communication as well as social interaction, generally evident before age three. Other characteristics often associated with autism are a pervasive lack of responsiveness to other people, and engagement in repetitive activities and stereotyped movements (such as hand-flapping or rocking). There is also often an insistence on sameness, as shown by stereotyped play, abnormal preoccupations, or resistance to change. With autism, the impaired social development and delayed or deviant language development are not merely predictable from the child's cognitive retardation. Some children with autism are actually advanced in their reading skills, memory skills, or musical abilities. The term autism does not apply if the child's educational performance is negatively affected primarily because the child has an emotional disturbance. Asperger's Disorder, Pervasive Developmental Disorder (PDD), or any other autism spectrum disorder may be coded here; the subtype will be captured in the next question. Pervasive developmental disorder or delay is also characterized by gross and sustained impairment in social relationships, but typically has an onset after 30 months of age. Other characteristics are sudden excessive anxiety, inappropriate affect or emotions, resistance to change in the environment, oddities of motor movement, abnormalities of speech, hypersensitivity to sensory stimuli, and self-mutilation. This condition generally does not involve delusions, hallucinations, incoherence, or bizarre associations. "Austism spectrum disorder (ASD)" should be coded here.

Dyslexia: A learning disability (see above definition) marked by impairment of the ability to recognize and comprehend the written word.

Dyscalculia: A learning disability (see above definition) marked by impairment in the ability to perform and remember calculations in mathematics.

Intellectual disability/Severe cognitive disability/Mental retardation: The child's mental development is significantly and noticeably behind what would ordinarily be expected for a child of his or her age. This

significantly below average general intellectual functioning exists at the same time as problems in adaptive behavior, and negatively affects the child's educational performance. "Intellectual developmental disorder" should be coded here.

Orthopedic impairment: A bodily (or physical) impairment that is severe enough to negatively affect a child's educational performance. Disabling physical problems such as those resulting from poliomyelitis (often called polio or infantile paralysis), bone tuberculosis, cerebral palsy, amputations, and fractures or contractures (shortening of tissue) from burns would be considered as orthopedic impairments.

Serious Emotional Disturbance or SED: A condition that has one or more of the following characteristics over a long period of time that negatively affect a child's educational performance: (a) an inability to learn that cannot be explained by other factors; (b) an inability to build or maintain satisfactory interpersonal relationships with peers and teachers; (c) inappropriate behavior or feelings; d) a general mood of unhappiness or depression; or (e) a tendency to develop physical symptoms or fears associated with personal or school problems. The term includes schizophrenia but does not apply to children who are socially maladjusted, unless it is determined that they have a serious emotional disturbance.

Traumatic Brain Injury: An acquired injury to the brain caused by an external force, resulting in total or partial functional disability or psychosocial impairment, or both, that adversely affects a child's educational performance. The term applies to open or closed head injuries resulting in impairments in one or more areas, such as cognition; language; memory; attention; reasoning; abstract thinking; judgment; problem-solving; sensory, perceptual, and motor abilities; psycho-social behavior; physical functions; information processing; and speech. The term does not apply to brain injuries that are congenital (there at birth) or degenerative (problem that grows worse over time), or to brain injuries brought on by birth trauma (injuries during birth). The term is used when an external force has caused the injury.

Panic Disorder: A disorder in which there is the sudden onset of several different physical signs, such as rapid heart rate, shaking, sweating, nausea, dizziness, and difficulty breathing. A panic disorder may make a child think that something horrible is about to happen.

Separation Anxiety Disorder: This is the fear a child has of being separated from his/her parents which is far more than would be expected for the child's developmental stage.

Obsessive Compulsive Disorder: A child must have obsessions or compulsions or both to have this disorder, and these obsessions and/or compulsions must be disabling to the child. Obsessions are thoughts that aren't visible to others but cause the child distress. The thoughts occur over and over and the child spends so much time on them that they have a hard time taking care of themselves or relating to others. Compulsions are mental acts that a child feels driven to perform in response to an obsession.

Generalized Anxiety Disorder: Children who have this disorder worry all the time over nothing, themselves, other's safety, their health, and/or the world to a far greater extent than average. They often have many physical signs of anxiety such as headache, abdominal pain, cramps, diarrhea, vomiting, and dizziness.

Other Anxiety Disorder: An anxiety disorder that is not one of the specific disorders in this list.

Bipolar Disorder: A child with bipolar disorder displays signs of major mood changes, sometimes sad, as in depression, or the opposite, mania. All bipolar disorders are a combination of mania with or without depression. Some signs of mania include inflated self-esteem, decreased need for sleep, distractibility and increased activity. Some signs of depression are sleeping too much, poor appetite, feelings of severe worthlessness, hallucinations or strange beliefs about the past.

Depression: Some signs of depression are frequent sadness, loss of interest or enjoyment of activities, low energy, isolation from friends, sleeping too much, poor appetite, a severe sense of worthlessness, problems with concentration, frequent complaints of physical illnesses, and thoughts of suicide or destructive behavior.

Speech Problems (such as articulation problems; communication problems; phonological problems; voice disorders; or stuttering): Speech problems include many types of issues a child may show when he or she talks. The listener may not hear the child (his/her voice may be inaudible), the child may not speak clearly (sounds are not crisp), or the child may use sounds or say words the listener is not familiar with. These problems are common in very young children as they learn to speak. However, as children age they are expected to speak with more clarity. Thus, a speech problem refers to speech that is not age appropriate. Articulation problems refer to an inability to make certain sounds. The child may say "wock" instead of

"rock" or they may leave off a sound and say "tick or teat" instead of "trick or treat." These problems occur when the child changes a sound, leaves off a sound, or adds a sound to familiar words. If a child cannot make particular sounds that children his/her age normally make, that may also be referred to as a Phonological problem. Voice disorders refer to difficulty producing sound at all and is a problem with the vocal cords. A Stuttering problem refers to difficulty producing fluent (flowing or effortless) speech. The child cannot speak sentences or groups of words with ease. Instead, the child hesitates before saying some words. They may seem as if they are mentally blocking on a word. This hesitation makes it hard for the listener to understand what the child is trying to say.

Sensory Deficit Disorder (such as sensory deprivation problems, sensory processing problems; sensory integration problems; or sensory organization problems): This should not be confused with attention deficit disorder, vision problems, or hearing problems. Sensory deficit disorder, sensory processing disorder, and sensory integration disorder are terms that refer to problems a child may have correctly organizing or interpreting sensory information. The child reacts to sensory information (what is seen, heard, touched, etc.) in an unexpected way. Some examples are strong reactions to smelling certain perfumes, oversensitivity to the touch of certain fabrics or even to any fabric, or overreactions to loud noises. When the level of sensitivity creates a problem with age-appropriate behavior or activities, or age-appropriate functioning at home or school then it becomes a problem.

Oppositional Defiant Disorder (Oppositional Defiance Disorder; ODD): ODD refers to children whose uncooperative, defiant, or hostile behavior disrupts daily life. All children show such behavior in particular circumstances – such as when they are tired, not feeling well, or under unusual stress. However, identification of ODD comes with such behavior that (1) occurs with unusual frequency, (2) occurs in more than one setting - such as home, school, church, or supermarket, and (3) is not appropriate for the age. Examples include the following: the child has frequent temper tantrums; argues excessively with adults; challenges rules or authority; is defiant and refuses to comply with adult requests and rules; purposely tries to annoy or upset people; blames others for his or her mistakes or misbehavior; is often touchy or easily annoyed by others; has frequent anger and resentment; talks in a mean and hateful way when upset; or has a spiteful attitude and seeks revenge.

HELP AVAILABLE

QUESTION TEXT:

{Now I have a few questions about education.} What is the highest grade or year of school that {you/{NAME}} {have/has} completed?

HELP TEXT:

Highest Grade or Year of School Completed: For grades 1-11, enter the exact grade level. If the person you are asking about completed elementary school, find out the last grade completed. If the respondent says the person finished 12th grade, ask whether the person received a diploma or got the equivalent of a high school diploma.

Completing a given grade in school should be counted as the number of years it normally takes to complete that grade level of education, regardless of how many years it actually took the person to finish. This means that for persons who skipped or repeated grades in elementary school, you will enter the highest grade completed regardless of the number of years they were in school. This rule is true for elementary school through high school and is especially relevant to college.

12th grade but no diploma: The person completed the 12th grade, but did not earn a high school diploma or GED.

High school equivalent: This means that the person has a GED. The GED is an exam certified equivalent of a high school diploma received when the person has not actually received a degree from attending high school, but has acquired his/her GED (high school equivalency based on passing the GED exam).

High school diploma: A certificate that verifies that a person has successfully completed the required courses of a high school curriculum and has actually graduated from high school rather than having a GED.

Vocational/technical program after high school but no voc/tech diploma: The person attended this type of

program, but did not earn a degree/diploma/certificate of successful completion of the program. Vocational/trade school after high school refers to work or trade-related education received after completing high school, but does not include college. Examples include secretarial school, mechanical or computer training school, etc. Some community colleges offer vocational training, but this would be considered "1-2 years of college" or "associate's degree" and not vocational or trade school.

Vocational/technical program after high school: The person attended this type of program and DID earn a degree/diploma/certificate of successful completion of the program. Vocational/trade school after high school refers to work or trade-related education received after completing high school, but does not include college. Examples include secretarial school, mechanical or computer training school, etc. Some community colleges offer vocational training, but this would be considered "1-2 years of college" or "associate's degree" and not vocational or trade school.

Some college but no degree: The person does not have a 4-year college (bachelor's) degree but has completed a class for credit at a college or university.

Associate's degree: A 2-year college degree typically earned at a community college (rather than a trade school).

Bachelor's degree: A 4-year college degree earned at a university or 4-year college. It is sometimes called an "undergraduate degree."

Graduate or professional school but no degree: The person attended a graduate or professional school that advanced him/her toward a degree beyond a Bachelor's degree (for example, a Master's, Doctorate, or other professional degree). However, the person did not complete the program or earn the degree.

Master's (MA, MS): Studies beyond a bachelor's degree, but not a Ph.D. or Ed.D.

Doctorate Degree (Ph.D., Ed.D.): Studies beyond a Master's degree that result in a doctorate degree.

Professional degree after bachelor's degree (Medicine/MD; Dentistry/DDS, Law/JD/LLB): Any other graduate degrees earned with academic studies beyond the bachelor's.
