Dear VSPB colleagues,

We were just informed today that 2 of the specimens collected at Foya Hospital in Lofa last week from a woman and her caretaker, who was also her sister, tested POSITIVE for Ebola. The woman who died on or about March 21 was reportedly married to a Guinean and came to Liberia to seek treatment. The sister had subsequently been in quarantine at a site in Lofa but became symptomatic at some point and managed to travel Saturday night on a public taxi with several other passengers to her home in Firestone Compound #2 near the international airport in Margibi County, which is adjacent to Montserrado County where Monrovia is located. The number of contacts is still being determined but is in the double digits. The health care system is stressed to its limits to try and contain this new development and deal with a rising level of hysteria.

Please see the written request from Dr. Bernice Dahn, Chief Medical Officer for the Ministry of Health and Social Welfare (MOHSW) of Liberia requesting assistance from the CDC with surveillance efforts and case management related to the current Ebola situation in Liberia. The Ambassador and her staff are aware of this request to the CDC, support it, and are willing to help in any way possible to facilitate a team's travel with GOL counterparts (visas, on the ground logistics, etc.).

As mentioned to you on our last call, I am the President's Malaria Initiative (PMI) advisor, the only US physician at the Embassy, and currently starting the main PMI event of the year: a two week process of meetings to develop the next operational plan with the Liberia Malaria Control program and our colleagues who have flown in for this event from Washington and Atlanta.

Therefore, the immediate needs would be for at least two persons:

- One to fulfill the role I have been playing and further assist both:
  - USG in its response in terms of epidemiology and communications with the MOHSW (and potentially USG in neighboring countries upon the imminent departure of the Medical Attache); and
  - MOHSW and other partners (e.g. WHO, UNICEF) onsite in Monrovia with:
    - accurate and up to date central registry of suspected cases, contacts, their status etc.;
    - coordinating surveillance, case reporting and investigation; and

- communication and messaging
- An additional person familiar with enhanced surveillance techniques through at least one incubation period from the last possible exposure either to a Guinea or Liberia case to:
  - travel to Lofa to mentor the County Health Team in conducting enhanced surveillance and provide monitoring and evaluation to ensure adequate coverage; and
  - assist with development of specimen transfer systems.

Rod Thompson, from USAID, will now be your point of contact, to assist with logistics, aided by others on the attached list of contacts.

Please let us know if any additional information would assist you. The Embassy would be happy to participate in a phone conversation if that would be of assistance or to set one up with the MOHSW.

Thank you,

CMR

Dear Christie;

The Ministry of Health and Social Welfare is requesting support from CDC to help control the Ebola situation. As you are aware, 7 suspected cases have been identified. With the additional information that is coming from Guinea, we would appreciate your expert experience in helping Liberia in addressing the situation. We are particularly requesting you to support us in surveillance and case management. The support is your actual field presence and material support as well.

We look forward to favorable respond.

Sincerely Yours;  
Bernice T. Dahn MD, MPH

Deputy Minister & Chief Medical Officer , RL
