ATTACHMENT B PROPOSED OUTCOMES, MEASURES AND DATA SOURCES

B.1. Proposed outcomes, measures, and data sources

Proposed Outcomes	Proposed Measures	Proposed Data Source(s)	
		New data collection	Existing data
I.1. What systems and external fac (Environmental Scan: Program	ctors are in place in communities that could help or hinder grant n Year 1 and ongoing)	ees in improving outcomes?	
Partnerships/contracts with LSPs, by type	Number and types of LSP partners	None	 MDEs Grantee applications
Partnerships for physical activity and healthy food	 Number and types of non-partner LSPs available in the community 	Network surveySite visits	Community scan
 Community-based resources available/referred to Partnerships for smoking cessation 	Types of referrals made to community-based resources	 Program survey Network survey Site visits	 Grantee applications Community scan MDEs
Chronic disease programs in the community and collaborated with	Types of chronic disease programs in the community (available and collaborated with)	Program surveyNetwork surveySite visits	 Grantee applications Community scan MDEs
Partnerships to increase access to other resources/services that support healthy behaviors	Types of other resources/services in the community (available and collaborated with)	 Program survey Network survey Site visits	 Grantee applications Community scan
Resources shared	Types of resources shared with the grantee by other organizations, agencies, or programs	 Program survey Site visits	 Grant applications and annual program reports Community scan
Strength and number of partnerships	Number of partnerships	Network surveySite visitsProgram survey	Grant applications and annual program reports
	Strength of partnerships	Network surveySite visitsProgram survey	Grant applications and annual program reports

I.2. What are the characteristics of the environment where the program operates and how have changes in environmental factors and policies affected the delivery of services (e.g., effect on coverage of the services, provider case mix, provider caseload, etc.)? (Domain 3)

Table B.1 (continued)

Proposed Outcomes	Proposed Measures	Proposed	Data Source(s)
Changes in environment or policy	Changes to policies related to provision of screening services and provider requirements	None	Community scanPrevious evaluation information
 Changes in provider practice related to delivery of screening, referrals, and LSPs 	Changes to provider practices related to delivery of screening, referrals, and LSPs	Program surveySite visits	 Clinical guidelines (e.g. JNC-7) Previous evaluation information
	nplementing team-based care and other program components to a lost (i.e., with fidelity)? What are the barriers and promising approach		ol
Implementation in comparison to approved protocols	Types of team-based approaches for hypertension control	 Program survey Site visits	 Grant applications and annual program reports
	Fidelity to and deviations from approved protocols	 Program survey Site visits	Grant applications and annual program reports
Promising approaches	Types of promising team-based approaches to hypertension control	 Program survey Site visits	Annual program reports
Barriers to implementation	Types of barriers to team-based hypertension control	 Program survey Site visits	Annual program reports
	ing being implemented according to approved protocols? What a rogram models? What QI processes are used to improve impleme		g
Health coaching	Number of participants referred to health coaching	None	• MDEs
implementation in comparison to approved protocols	Percentage of referred participants within demographic categories of interest	None	• MDEs
	 Percentage of referred participants within demographic categories of interest 	None	• MDEs
	Percentage of referred participants with health risks	None	• MDEs
	Average number and duration of health coaching sessions completed	None	• MDEs
	Percentage of health coaching sessions within each setting and contact type	None	• MDEs
	Fidelity to and deviations from approved health coaching protocols	 Program survey Site visits	Annual program reportsHealth coaching protocols

Table B.1 (continued)

Proposed Outcomes	Proposed Measures	Propose	d Data Source(s)
 Strategies used to refer, ensure utilization, and track health coaching attendance 	Types of strategies used to refer participants to health coaching	 Program survey Site visits	Annual program reportsHealth coaching protocols
	 Types of strategies used to ensure participant utilization of health coaching 	 Program survey Site visits	Annual program reportsHealth coaching protocols
Promising approaches	Types of promising approaches to implementation of health coaching	 Program survey Site visits	Annual program reportsHealth coaching protocols
Barriers to implementation	Types of barriers to implementing health coaching	 Program survey Site visits	Annual program reportsHealth coaching protocols
	s making referrals to the LSPs according to approved protocols? menting program models? (Domain 3)	What are the barriers and	I
Process for LSP referrals in	Number of participants referred to LSPs	None	• MDEs
comparison to approved protocols (for example: appropriateness of the referrals	 Percentage of referred participants within demographic categories of interest 	None	• MDEs
and readiness to change)	 Percentage of referred participants with health risks Percentage of referred participants by readiness to change status 	None	• MDEs
	Average number and duration of LSP sessions completed	None	• MDEs
	Number of LSP completed sessions by setting and contact type	None	• MDEs
	Fidelity to and deviations from approved LSP protocols	Program surveySite visits	Annual program reportsLSP protocols
Promising approaches	Types of promising approaches to implementation of LSPs	 Program survey Site visits	Annual program reports
Barriers to implementation	Types of barriers to implementing LSPs	 Program survey Site visits	Annual program reports
II.4. What linkages and referrals do coaching? (Domain 4)	grantees make to resources in the communities (by risk factor) o	other than LSPs/health	
	Number of participants referred to tobacco cessation resources, by type of resource	None	• MDEs

Table B.1 (continued)

Proposed Outcomes	Proposed Measures	Proposed Data Source(s)	
Referrals and participation in tobacco cessation resources by type and grantee	 Number of participants with completed tobacco cessation resource, by type of resource 	None	• MDEs
Use of other community-based referrals, not including LSPs/health coaching and tobacco cessation by grantees 5. What systems do the grantees	 Number of participants referred to other community-based resources, by type of resource Number of participants with completed community-based resources, by type of other resource have in place to track participants, their service utilization, comp he systems work? (Domains 1 and 3) 	Program surveyNetwork surveySite visits	• Annual program report
Data systems used and processes for submitting to CDC	Types of data systems used by grantees	Program surveySite visits	 Community scan MDEs Grant applications and annual program reports Capacity assessment
	Types of data submission processes used by grantees	Program surveySite visits	Community scanMDEsGrant applications and annual program reportsCapacity assessment
Error and quality checks	Number and type of quality assurance checks (e.g., automated validation checks, provider data reports, chart audits) used by grantees	Program surveySite visits	 Community scan Grant applications and annual program report Capacity assessment
Collection and use of high quality data and information for program improvement, reporting and evaluation	Types of non-MDE data elements collected by grantees Processes used by grantees to collect MDE and non-MDE data	Program surveySite visits	Community scanGrant applications and annual program reportsCapacity assessments
	 Number of grantees using data for program improvement, reporting, evaluation and ways in which data is used 	Program surveySite visits	Community scanGrant applications and reportsCapacity assessments

II.6. What are key formal and informal partnerships exist in the community to address cardiovascular health (e.g., type of linkages and partnerships)? What is WISEWOMAN's role in these partnerships? What are the strengths and gaps in the linkages and networks? Which ones are working? (Domains 2 and 4)

Table B.1 (continued)			
Proposed Outcomes	Proposed Measures	Proposed	d Data Source(s)
Continuity of relationship with systems and practices to support cardiovascular health	Types of cardiovascular health programs in the community (available and collaborated with)	Program surveyNetwork surveySite visits	Annual program reports
	Number of cardiovascular health partnerships	Program surveyNetwork surveySite visits	Annual program reports
	Strength of cardiovascular health partnerships	 Program survey Network survey Site visits	Annual program reports
II.7. What are the costs (direct and	d in-kind) associated with delivering WISEWOMAN?		
Cost per woman served	Average cost per WISEWOMAN participant served	Program survey	 Grant applications and annual program reports MDEs
Evaluation Questions:			
(Domains 2-4)	ticipant behaviors, risk, and CVD outcomes from base year to opti parities from base year to option year 2/Program Year 3? How did disparities?		?
Risk Reduction Counseling	Percentage of participants that complete RRC	None	• MDES
(RRC)	Average number of completed RRC sessions per participant	_	

- Percentage of participants receiving RRC that identify nutrition as a priority area
- Percentage of participants receiving RRC that identify physical activity as a priority area
- Percentage of participants receiving RRC who smoke that identify smoking cessation as a priority area
- Percentage of participants receiving RRC that are not taking hypertension medication as prescribed that identify hypertension medication adherence as a priority area

Table B.1 (continued)

Proposed Outcomes	Proposed Measures	Pro _l	posed Data Source(s)
Readiness to Change	Percentage of participants in the "pre-contemplation" state of change	None	• MDES
	 Percentage of participants in the "contemplation" state of change 		
	 Percentage of participants in the "preparation" state of change 		
	Percentage of participants in the "action" state of change		
	Percentage of participants in the "maintenance" state of change		
Hypertension/blood pressure control	Percentage of participants hypertensive at baseline screening	None	• MDES
	Percentage of participants hypertensive at rescreening		
	 Percentage of participants pre-hypertensive at baseline screening 		
	Percentage of participants pre-hypertensive at rescreening		
	 Percentage of hypertensive participants with controlled hypertension at baseline screening 		
	Percentage of hypertensive participants with controlled hypertension at rescreening		
	Percentage of hypertensive participants that monitor their blood pressure at home		
Cholesterol	Percentage of participants with high cholesterol at baseline screening	None	• MDEs
	Percentage of participants with high cholesterol at rescreening		
	Percentage of participants with borderline high cholesterol at baseline screening		
	Percentage of participants with borderline high cholesterol at rescreening		
	Percentage of participants with high cholesterol participants with controlled cholesterol at baseline screening		
	Percentage of participants with high cholesterol participants with controlled cholesterol at rescreening		

Table B.1 (continued)

Proposed Outcomes	Proposed Measures	Pr	roposed Data Source(s)
• Diabetes	Percentage of participants with diabetes at baseline screening	None	• MDEs
	Percentage of participants with diabetes at rescreening		
	Percentage of participants with pre-diabetes at baseline screening		
	Percentage of participants with pre-diabetes at rescreening		
Medication Adherence	 Percentage of hypertensive participants taking medication at baseline screening 	None	• MDEs
	Percentage of hypertensive participants taking medication at rescreening		
	Percentage of participants with high cholesterol participants taking prescribed medication at baseline screening		
	Percentage of participants with high cholesterol participants taking prescribed medication at rescreening		
	Percentage of with diabetes participants taking prescribed medication at baseline screening		
	Percentage of with diabetes participants taking prescribed medication at rescreening		
Cardiovascular risk factors	 Percentage of participants that have been diagnosed by a healthcare provider as having any of these conditions: coronary heart disease/chest pain, heart attack, heart failure, stroke/transient ischemic attack (TIA), vascular disease, or congenital heart defects 	None	• MDEs
• Diet	Percentage of participants currently watching or reducing your sodium or salt intake	None	• MDEs
	Average amount of fruit participants eat daily		
	Percentage of participants that eat two servings or more of fish weekly		
	Percentage of participants that eat three ounces or more of whole grains daily		
	Percentage of participants that drink less than 36 ounces (450 calories) of beverages with added sugars weekly		
• Exercise	Average amount of moderate physical activity that participants get in a week	None	• MDEs

Table B.1 (continued)

Proposed Outcomes	Proposed Measures	Pro	posed Data Source(s)
	 Average amount of vigorous physical activity that participants get in a week 		
Tobacco use	Percentage of participants that smoke tobacco in any form	None	• MDEs
Body Mass Index (BMI)	 Percentage of participants overweight at baseline screening (BMI between 25.0 and 29.9) 	None	• MDEs
	Percentage of participants obese at baseline screening (BMI at or above 30.0)		
Quality of life	 Average number of days in past 30 days that participants reported their physical health was not good 	None	• MDEs
	Average number of days in past 30 days that participants reported their mental health was not good	_	
	 Average number of days in past 30 days that participants reported their mental health or physical health prevented them from doing their usual activities, such as self-care, work, or recreation 		
Alert values	 Percentage of participants with SBP >180 or DBP >110 that have completed workup 	None	• MDEs
	 Percentage of participants with GLUCOSE ≤50 or GLUCOSE ≥250 that have completed workup 	_	
	rates of recommended referrals (and completion) to LSPs, health coad of risk from base year to option year 2/Program Year 3? (Domains 2-4)		cessation
Referrals	 Percentage of participants that receive referral to LSPs/health coaching resources 	None	• MDEs
	 Average number of referrals to LSPs/health coaching resources received 	_	
	Percentage of participants who smoke that receive referrals to tobacco cessation resources	_	
Completed referrals	Percentage of participants with completed referral to LSPs/health coaching resources	None	• MDEs
	 Average number of completed referrals to LSPs/health coaching resources 	_	
	 Percentage of participants with completed referral to tobacco cessation resources 	_	

Table B.1 (continued)

Proposed Outcomes	Proposed Measures	Proposed Data Source(s)		
III.3. What are some unintended effects from the WISEWOMAN program (such as increased empowerment and social capital among individuals and the community)? (Domains 2-4)				
Measures of social capital	 Degree of participant involvement with community-based groups 	Program surveyNetwork survey	None	
	 Responses to questions from the SOCAT^a trust and cooperation composite (answered by program and network survey respondents based on their experiences with participants) 			
	 Responses to questions from the SOCAT^a networks and mutual support organizations composite (answered by program and network survey respondents based on their experiences with participants) 	_		
	Responses to questions from the SOCAT ^a exclusion composite (answered by program and network survey respondents based on their experiences with participants)	_		
	acteristics that may influence outcomes (for example, WISEWOMANula, and organizational properties)? (Domains 2-4)	N program components, LSP		
IV.2. What are the types and chainfluence outcomes? (Dom	aracteristics of community-clinical linkages and agency/organization nains 2-4)	al-level networks that may		
The outcomes proposed for evaluation questions III.1 and III.2 can be included as outcomes for evaluation question IV (summative evaluation).	We propose to focus on measures for the following outcomes: risk reduction counseling, readiness to change, hypertension/blood pressure control, cholesterol, diabetes, medication adherence, cardiovascular risk factors, diet, exercise, tobacco use, BMI, quality of life, referrals, and completed referrals.	None	• MDEs	

^a Social Capital Assessment Tool (SOCAT) is a multifaceted instrument designed by the World Bank to collect cognitive and structural social capital data at the household level, which is crucial to link social capital information with poverty and household welfare outcomes.

MDEs = minimum data elements
