

Justification of Non-substantive Change

0938-0534

The attached CMN form was revised for the implementation of ICD-10. As a member of the ICD-10 manuals subgroup, the use of generic language relating to procedures and diagnosis was discussed and decided upon. These face of the form as well as the instructions had the following changes that do not impact the intent or content of these forms:

- “ICD-9” was removed and replaced with “diagnosis code”
- “CPT” was removed and replaced with procedure code

*******Update - January 23, 2015**

We are resubmitting this non-substantive change request because the incorrect version of the form was previously submitted. The attached form reflects the changes detailed earlier in this justification document.
