Programming Notes:
Each of the text boxes on this screen is a rollover object. Display the information shown below when the mouse is rolled over the rollover object.

Who
NFIRS collects data about all of the people involved in the fire incident including those who responded to the fire, the owners or occupants of the property, the people who were injured, the arson suspects (if applicable), and more.

What
NFIRS collects data about what happened during the incident including the cause of the fire, the extent of the fire damage to property, the type of injuries that occurred, the type and amount of HazMat involvement, and more.

When
NFIRS collects data about when events relating to the fire incident occurred including the date and time of the alarm, the dispatch time of personnel and equipment, the time that personnel and equipment arrived at the scene, the time that additional personnel and equipment arrived at the scene, the time that EMS personnel first made contact with injured persons, the time injured persons were transported, the time personnel and equipment left the scene, and more.

Where
NFIRS collects data about where the incident occurred including the location of the property involved in the fire, the place in that property where the fire started, the location of fire damage, the location where injuries occurred, and more.

How
NFIRS collects data about how the incident occurred including how the fire started, how the fire spread, how injuries occurred, how the fire was extinguished, and more.

Main Menu	Help	Glossary			
Tutorial Menu	<p>Why Is Using NFIRS Data Important? ← →</p>				
Task List	Knowing how to extract data from NFIRS 5.0 and how to use that data are critically important to the NFIRS program manager. Once extracted, data can be used:				
FAQs	For statistical analysis				
Manuals	In PowerPoint presentations				
Samples	In annual reports				
Tools	For solving problems				
Links	In combination with other data collection systems				
	<p style="color: green;">Roll your mouse over the topics above to learn more about how extracted data are used.</p> <p style="text-align: right;">← →</p>				
<p style="color: green;">Click on the Next arrow to continue.</p>					

Programming Notes:
Each of the text boxes on this screen is a rollover object. Display the information shown below when the mouse is rolled over the rollover object.

For statistical analysis
NFIRS program managers use data extracted from NFIRS to calculate average response times, total number of responses per day/month/year, numbers of incidents of various types, and more. Statistical analysis can be done manually or using the data analysis tools available in Excel spreadsheets.

In PowerPoint presentations
NFIRS program managers use data extracted from NFIRS in charts created within PowerPoint presentations. These pie charts, bar graphs, line graphs, and so forth graphically display the extracted data in an easily understood form. Charts created in Excel can also be imported into PowerPoint presentations.

In annual reports
Each year NFIRS program managers assemble multiple statistical analyses and a wide variety of charts into annual reports. These reports provide details about the organization in a comprehensive document that is used by the organization, other government agencies, and the public.

For solving problems

NFIRS program managers extract data from NFIRS to solve problems that may include finding arsonists, identifying the need for new equipment or facilities, justifying budget requests, and more. NFIRS program managers at all levels also receive information requests from students, the media, insurance companies, other government agencies, lobbyists, and private companies. Data extracted from NFIRS can provide the data necessary to answer these questions.

In combination with other data collection systems

NFIRS program managers use NFIRS data in conjunction with other database applications including Geographic Information System (GIS) systems, health department databases, and census tract data. Use of NFIRS data with these systems expands the relevance of the data collected by showing NFIRS data in relation to the other elements (e.g., geographic location, health department statistics, and census population statistics).

The information you extract might include: <ul style="list-style-type: none"> <input type="checkbox"/> Total number of incidents responded to by incident type. <input type="checkbox"/> Average incident response time for all units. <input type="checkbox"/> Average incident response time for individual units. 				

- Total number of incidents responded to by volunteers.
- The number of times individual pieces of apparatus were used.
- The percentage of all residential fires in which residents were alerted by smoke detectors.
- Make a list of the information you want to include in an annual report. (Check these links to see samples of typical annual reports: [1999 Fire in Minnesota](#), [Oregon State Fire Marshal Fire Data Page](#), and the [Caldwell, Idaho NFPA Reports](#).)
- Make a list of the information you expect to need to solve problems during the next year. This might include:
 - Answers to questions you frequently receive from the media, students, the public, and other government agencies.
 - Potential organizational problems you may be asked to solve (e.g., locate new fire stations, eliminate fire stations, justify new equipment purchases, etc.).
- Determine how you will extract needed data from NFIRS.
 - Using the Federal Client Tool. (Refer to the [Federal Client Tool Reporting Options](#) job aid in the Tools section of the Toolkit and the [Step-by-Step Instructions for Creating Standard Reports](#) in the Samples section of the Toolkit.
 - Use NFIRS 5.0 standard queries to generate reports in on-line mode.
 - Use NFIRS 5.0 custom queries to generate reports in on-line mode.
 - Use Microsoft Access or other database or report-generating application to generate reports from consolidated State, county, or department databases off-line.
 - Download State database Microsoft Access or other database application to generate custom queries and reports in off-line mode.
 - Using third-party software.
 - Standard reports.
 - List the standard reports available from the third-party software you plan to use.
 - Obtain printed copies of each standard report so that you can see exactly what information is included when the report is generated.
 - Do these reports meet all of your expected needs? If they do not, complete the tasks under the Custom reports section.

- Custom reports.
 - Does the software provide a custom report capability within the tool?
 - How difficult is it to create a custom report or query?
 - Can custom reports or queries be saved for repeated use?
 - Does your vendor supply technical assistance for the creation of custom reports?
 - Is this assistance free or is there a charge?
 - What is the fee and what does the fee include?
 - If the standard and/or custom reports provided by your software do not fully meet your needs, explore the use of external report writers with your software.
 - Can external report writers be used with your software?
 - Which report writers can be used?
 - Crystal Report Writer
 - Matryx
 - MatryxAccess
 - R&R Report Writer
 - ARPEGGIO
 - Other _____
- Determine how you will use data collected in previous versions of the Federal Client Tool.
 - Review the [NFIRS Data Conversion Tables](#) in the Tools section of the Toolkit to see which fields are affected when data are converted from version 4.1 to version 5.0.
 - Review [NFIRS 5.0 Data Conversion Matrix for Reports](#) in the Tools section of the Toolkit for reporting options to consider.
 - Select the reporting option you will use:
 - Do not use the historical data from version 4.1 at all.
 - Keep the data in the two systems separate and do queries in each system when data are needed.
 - Combine the data from the two systems into the 5.0 database and then do separate queries in 5.0 on 4.1 data and on 5.0 data.
- State program manager must write State data use policies and procedures. (Refer to the [Step-by-Step Instructions for Setting NFIRS Access Permissions](#) in the Samples section of the Toolkit.) Those permissions may include:

--	--

- Set permissions for individuals to have access to State partition of the national database.
 - County or department NFIRS program managers.
 - Other State government agency staff members.
 - NFIRS program managers from other States and metropolitan areas.
- Grant permission for identified individuals to view and/or generate reports.
 - Permission to view existing reports:
 - All State data.
 - Specific counties or departments.
 - Permission to generate reports:
 - All State data.
 - Specific counties or departments.
- Establish a tree structure with a folder for each county or department within the State.

Back to Top**Compile and Analyze NFIRS Data**

- Review Chapter 4 of the [Fire Data Analysis Handbook](#) to learn about basic statistics and how to use them.
- Review Chapter 3 of the [Fire Data Analysis Handbook](#) to learn about the different type of charts and graphs and how to use them.
- Review Unit 4 of the [National Fire Incident Reporting System Program Management, Student Manual](#) for a detailed discussion of the use of data for problem solving, charting techniques, and the fire data analysis process.
- Follow the [Compiling and Analyzing Data Links](#) in the Links section of the Toolkit to learn more about statistics, data analysis, and fire data analysis techniques and tools.
- Extract data from the NFIRS database using standard reports and/or custom queries. (Refer to the [NFIRS 5.0 Data Conversion Matrix for Reports](#) in the Tools section of the Toolkit.)
- Input raw data into a spreadsheet. Use the spreadsheet to:
 - Find totals.
 - Calculate averages.
 - Identify trends.

- ❑ Run projections.
- ❑ Create charts. (Refer to [Creating Charts in Excel and PowerPoint](#) in the Tools section of the Toolkit.)

Back to Top

Combine With Data From Other Databases

- ❑ Determine if you want to plan to use NFIRS data with a Geographic Information System (GIS).
- ❑ Review [NFIRS 5.0 and a Geographic Information System \(GIS\)](#) in the Tools section of the Toolkit to learn about how you can use NFIRS data with a Geographic Information System.
- ❑ Follow the [GIS Links](#) in the Links section of the Toolkit to see examples of how fire incident data have been used with a GIS.

Back to Top

Use the Data Effectively

Present the Data

- ❑ Review Unit 5 of the [National Fire Incident Reporting System Program Management, Student Manual](#) for a detailed discussion of effective presentation techniques and developing presentations using PowerPoint.
- ❑ Review Chapters 2 and 3 of the [Fire Data Analysis Handbook](#) to learn about histograms and the different type of charts and graphs and how to use them in presentations.
- ❑ Review [Do's and Don'ts of Effective Presentation](#) in the Tools section of the Toolkit for presentation guidelines.
- ❑ Review [10 Tips for Creating Effective Visual Presentations](#) in the Tools section of the Toolkit for presentation visual design guidelines.
- ❑ Prepare and deliver the presentation.
 - ❑ Identify the target audience for the presentation.
 - ❑ Determine the message you are going to deliver.
 - ❑ Extract the data from the NFIRS 5.0 database to support the message.
 - ❑ Display the data in a graphic format that is easily understood by the target audience. (Refer to [Creating Charts in Excel and PowerPoint](#) in the Tools section of the Toolkit.)
 - ❑ Deliver the presentation.
 - ❑ Obtain and record feedback on the presentation and use it to improve future presentations including:
 - ❑ Presentation content

- Visual design
- Use of charts and graphs
- Presentation delivery

Back to Top**Report the Data**

- Review [Fire in the United States](#) as an example of the use of fire incident data in an annual report.
- Follow the links in the [Reporting Data Links](#) portion of the Links section of the Toolkit to see examples of annual reports from State and local fire departments.
- Prepare and distribute the report.
 - Identify the target audience for the report.
 - Determine the message you are going to deliver in the report.
 - Extract the data from the NFIRS 5.0 database to support the message.
 - Display the data in a graphic format that is easily understood by the target audience. (Refer to [Creating Charts in Excel and PowerPoint](#) in the Tools section of the Toolkit.)
 - Establish publication guidelines for the report:
 - Who will receive the report?
 - How will the report be published?
 - Printed and distributed via USPS or other mail distribution system.
 - Distributed electronically via email, diskette, CD, etc.
 - Electronic version placed on your Web site.
 - Other: _____
 - When will the report be published?
 - One time only.
 - Annually.
 - Monthly.
 - Every 6 months.
 - Other: _____

- ❑ Obtain and record feedback on the report and use it to improve future reports including:
 - ❑ Report content
 - ❑ Visual design
 - ❑ Use of charts and graphs
 - ❑ Distribution method

Back to Top

Solve Problems With the Data

- ❑ Follow the links in the [Solving Problems With Data Links](#) portion of the Links section of the Toolkit to learn about the problem-solving process.
- ❑ Review Unit 4 of the [National Fire Incident Reporting System Program Management, Student Manual](#) for a detailed discussion of the use of data for problem solving, charting techniques, and the fire data analysis process.
- ❑ Consider using the Special Studies block in the Basic Module to capture data to solve the problem.
 - ❑ Block E3 provides two fields for optional local use.
 - ❑ Temporary data can be used to collect information for a specified period of time.
 - ❑ Data elements are:
 - ❑ Special Study ID Number (SSID) - a five-digit number that identifies the special study.
 - ❑ Special Study Value - a five-digit number representing the data being collected. It is up to the individual or group running the special study to define the values that are to be entered in this field.
- ❑ Follow the five-step problem-solving process to identify and solve the problem. (Refer to page 4-4 in Unit 4 of the [National Fire Incident Reporting System Program Management, Student Manual](#) for a detailed discussion of the five-step problem-solving process.)
 - ❑ Define the problem. If the problem is large or complex you may need to break it into small, manageable chunks at this point and solve each part of the problem separately.
 - ❑ Develop a data analysis plan, including dependent and independent data requirements and assumptions.
 - ❑ Extract the data from the NFIRS 5.0 database.
 - ❑ Organize the data.
 - ❑ Analyze and report the results. (Refer to the tasks under [Report the Data](#) above for details.)

	<u>Back to Top</u>
--	------------------------------------

Develop Data Use Policies and Procedures

- ❑ Write policies and procedures to support the data use plan. (Refer to the [Sample State NFIRS Procedure Manual Pages](#) and [Sample State NFIRS Policy Manual Pages](#) in the Samples section of the Toolkit, and [Suggested Policies and Procedures](#) in the Tools section of the Toolkit.)

[Back to Top](#)**Budget for the Data Use Plan**

Develop a budget to support the NFIRS Data Use Plan and consolidate it with the budgets developed for all other aspects of NFIRS. (Refer to the [Budget Items Table](#) in the Tools section of the Toolkit and the [Planning](#), [Managing](#), [Marketing](#), [Support](#), and [Training](#) sections of the Toolkit for additional budget items.)

[Back to Top](#)

Click on the Back arrow to return to the Task List menu screen.

Programming Notes:

Locate the Print button on this screen. When the Print button is clicked, print the document Using NFIRS DataTaskList.doc. (**NOTE:** This document will be developed following review of the storyboards.) Create hypertext links to the documents or Toolkit sections shown in blue and underlined in the Task List. Make this a single scrollable page.

The bulleted section titles on the top of this page will function as buttons. When the buttons are clicked, take the user directly to the section of the page where the section begins.

Add [Back to Top](#) links at the end of each section to return the user to the top of the page.
