NOTES

This document contains a printed version of the 2009 Residential Energy Consumption Survey (RECS). The RECS is a Computer Assisted Personal Interview (CAPI) and so the printed questionnaire is never used, however, this version allows interested parties and data users to see all questions in the order they are asked, response categories, and question skip patterns.

RECS is programmed in Blaise and analyzed in SAS. As a result, there are two variables for each question. The first variable is the Blaise variable as it appears in the CAPI and the second variable is the SAS variable as it appears in the data files.

The numbers after each response indicate the value of the SAS variable for each response. These numbers should be used when analyzing the data. For users interested in trend analysis, every attempt is made to maintain historical consistency for variable names and responses.

For those using the public data file, the following standard recodes are used:

Don't Know	-8
Refusal	-9
Not Applicable (due to skip pattern)	-2

A short follow-on rental agent survey is conducted when household respondents do not pay some or all of their utility bills. This questionnaire can also be found on the RECS website.

For any further questions, please contact Chip Berry at james.berry@eia.doe.gov or 202-586-5543.
