PART I.--GENERAL INFORMATION

Background. On November 4, 2009, the Department of Commerce issued an antidumping duty order on imports of diamond sawblades and parts thereof from China, effective January 23, 2009.¹ On November 4, 2014, the Commission instituted a review pursuant to section 751(c) of the Tariff Act of 1930 (19 U.S.C. § 1675(c)) (the Act) to determine whether revocation of the order would be likely to lead to continuation or recurrence of material injury to the domestic industry within a reasonably foreseeable time. If the Commission makes an affirmative determination, the order will remain in place. If the Commission makes a negative determination, the Department of Commerce will revoke the order. Questionnaires and other information pertinent to this proceeding are available at:

http://www.usitc.gov/investigations/701731/2014/diamond_sawblades_china/first_review_full.htm

Diamond sawblades and parts thereof.—All finished circular sawblades, whether slotted or not, with a working part that is comprised of a diamond segment or segments, and parts thereof, regardless of specification or size, except as specifically excluded.² Within the scope are semifinished diamond sawblades, including diamond sawblade cores (see below) and diamond sawblade segments (see below). Diamond sawblades (and parts thereof) are provided for under subheadings 8202.39.00 and 6804.21.00 of the Harmonized Tariff Schedule of the United States (HTS).³

Diamond sawblade cores.—Inner cores of circular sawblades. Diamond sawblade cores are circular steel plates, whether or not attached to non-steel plates, with slots, manufactured principally, but not exclusively, from alloy steel, and are typically reamed for mounting in finished diamond sawblades.

Diamond sawblade segments.—Outer rings (or working parts) of circular sawblades. A diamond sawblade segment consists of a mixture of diamonds (whether natural or synthetic, and regardless of the quantity of diamonds) and metal powders (including, but not limited to, iron, cobalt, nickel, tungsten carbide) that are formed together into a solid shape (from generally, but not limited to, a heating and pressing process). Diamond segments are designed to be joined to the diamond sawblade core and serve as the actual cutting/grinding surface.

Diamond sawblade parts.—Diamond sawblade cores and segments (as defined above).

Finished diamond sawblades.—Circular sawblades (including slitting or slotting saws) in which the diamond segments have been joined to the diamond sawblade cores (as defined above).

¹ The date of the order and the timing of its effective date were affected by the litigation history of this investigation.

² Commerce excluded these products from its scope: sawblades with diamonds directly attached to the core with a resin or electroplated bond, which thereby do not contain a diamond segment; diamond sawblades and/or sawblade cores with a thickness of less than 0.025 inches, or with a thickness greater than 1.1 inches; circular steel plates that have a cutting edge of non-diamond material, such as external teeth that protrude from the outer diameter of the plate, whether or not finished; diamond sawblade cores with a Rockwell C hardness of less than 25; and diamond sawblades and/or diamond segment(s) with diamonds that predominantly have a mesh size number greater than 240 (such as 250 or 260).

³ When packaged together and put up as a set for retail sale with an item that is separately classified under headings 8202 and 8205 of the HTSUS, diamond circular sawblades or parts thereof may be imported under heading 8206 of the HTSUS.
