

Margins of Error for Estimating a Proportion for the Savannah Reinterview

Cells in pink can be changed

Assumptions

Sample Size	10,000
Confidence Level	95%
z value	1.96
Design Effect	1
Eligibility Rate	1
Response Rate	75%

Sample Group	Sample Allocation
Non-ID Panel	45%
Non-ID Nonpanel	45%
ID	10%

Sample Group	Sample Size
Non-ID Panel	4,500
Non-ID Nonpanel	4,500
ID	1,000

Non-ID Panel Margins of Error				
Estimate Proportion	Overall	75% characteristic	50% characteristic	20% characteristic
0.9	0.0101	0.0117	0.0143	0.0226
0.8	0.0135	0.0156	0.0191	0.0302
0.7	0.0155	0.0179	0.0219	0.0346
0.6	0.0165	0.0191	0.0234	0.0370
0.5	0.0169	0.0195	0.0239	0.0377

For example, if the estimate is 90% of the reinterview households in the Non-ID panel can verify their confidence interval is expected to be 0.9 +/- 0.0101.

If we want to consider a characteristic that represents 20% of the population (such as Hispanics), an estimate would have a confidence interval of .9 +/- .0226 for the Non-ID panel.

Non-ID Nonpanel Margins of Error				
Estimate Proportion	Overall	75% characteristic	50% characteristic	20% characteristic
0.9	0.0101	0.0117	0.0143	0.0226
0.8	0.0135	0.0156	0.0191	0.0302
0.7	0.0155	0.0179	0.0219	0.0346
0.6	0.0165	0.0191	0.0234	0.0370
0.5	0.0169	0.0195	0.0239	0.0377

ID Margins of Error

Estimate Proportion	Overall	75% characteristic	50% characteristic	20% characteristic

Assumptions

Sample Size	5,000
alpha	0.05
z value	1.96
Design Effect	1
Eligibility Rate	1
Response Rate	75%

Sample Group Sample Allocation

Non-ID Panel	40%
Non-ID Nonpanel	40%
ID	20%

Sample Group Sample Size

Non-ID Panel	2,000
Non-ID Nonpanel	2,000
ID	1,000

Non-ID Panel Margins of Error

Estimate Proportion	Overall	75% characteristic	50% characteristic	20% characteristic	10% characteristic
0.9	0.0152	0.0175	0.0215	0.0339	0.0480
0.8	0.0202	0.0234	0.0286	0.0453	0.0640
0.7	0.0232	0.0268	0.0328	0.0519	0.0733
0.6	0.0248	0.0286	0.0351	0.0554	0.0784
0.5	0.0253	0.0292	0.0358	0.0566	0.0800

For example, if the estimate is 90% of the reinterview households in the Non-ID panel can verify their response, the confidence interval is expected to be 0.9 +/- 0.0152.

If we want to consider a characteristic that represents 20% of the population (such as Hispanics), an estimate of 90% would have a confidence interval of .9 +/- .0339 for the Non-ID panel.
