Subject: Blood Culture Contamination Laboratory Practice Survey

The American Society for Microbiology (ASM) and the Centers for Disease Control and Prevention (CDC) are conducting a survey to learn about laboratories' practices and policies for reducing blood culture contamination with the goal of improving practice and patient care. This post-survey will take approximately 35 minutes to complete; participation is voluntary. The results of this post-survey will be compared with those from the baseline survey distributed six months ago.

The results from the survey will be compiled and shared in aggregate as a learning tool, presented at professional conferences, and potentially published in a professional journal in the field of laboratory science. All information collected in this survey will be kept in a secure manner; your IP address will NOT be retained.

Visit <https://www.surveymonkey.com/s/6TNXKMF> to complete the survey. Thank you for taking the time to complete this post-survey by (date to be determined upon OMB approval). Your feedback is important for guiding ASM and CDC's efforts to improve laboratory practice and patient care. Contact clinmicro@asmusa.org with questions or concerns.

Thank you, Alice

This list may not be used to advertise products, services or employment opportunities by third party recruiters.

For our members from commercial vendors, Federal or regulatory sites, there are some very important issues that arise where we get very candid and often frustrated or angry, but not toward any one individual. This may be sensitive to you, your agency or company but we work and debate in the real world and you are welcome to listen in and respond, but not as a means to justify a punitive position against any of our members or their institutions.

Changing your email address? If you change your email address on file with ASM, make sure you also change your listserv and alert list settings!
