Current Population Survey (CPS) October School Enrollment Supplement
Office of Management and Budget (OMB) Control No. 0607 - 0464

B. COLLECTION OF INFORMATION EMPLOYING STATISTICAL METHODS

1. Universe and Respondent Selection

We conduct the October School Enrollment supplement in conjunction with the CPS, for which the universe is 114 million households. From this universe, we select a sample of approximately 72,000 households each month, of which approximately 59,000 households are eligible for interview. We ask the items in the October supplement, as appropriate, for members of these households. We expect the response rate to be the same as that obtained for similar questions asked in October 2014. The historical response rates for the October supplement are:

Supplement Year	Additional Items to Basic School Enrollment Supplement	Response Rate
2000	Basic School Enrollment Only	93.20 %
2001	Basic School Enrollment Only	93.34 %
2002	Library Supplement	93.35 %
2003	Computer Use Supplement	92.71 %
2004	Language Proficiency Disability Items	92.34 %
2005	Basic School Enrollment Only	92.61%
2006	Basic School Enrollment Only	91.92%
2007	Internet Use Items	91.97%
2008	Basic School Enrollment Only	91.71%
2009	Internet Use Items	92.10%
2010	Internet Use Items	91.53%
2011	Basic School Enrollment Only	91.29%
2012	Internet Use Items	90.36%
2013	Basic School Enrollment Only	90.14%
2014	Basic School Enrollment Only	88.44%

2. Procedures for Collecting Information

The School Enrollment Supplement is a supplemental survey associated with the CPS in October. Attachment E gives an overview of the CPS sample design, weighting methodology and response rates. The statistical properties of these supplemental items will fall within those associated with the CPS.

3. Methods to Maximize Response

We maintain response rates and data accuracy for the CPS at high levels through interviewer instruction and training and close monitoring of data output. (Refer to Item 5 of Attachment E for a discussion of the CPS nonresponse.)

A full allocation for item nonresponse is done within the October School Enrollment Supplement for eligible people. (Item nonresponse is not expected to exceed five percent.)

4. Testing of Procedures

We do not require testing of procedures and methods since we have conducted the October supplement for more than 50 years. Attachment D discusses the reliability of estimates produced by the October 2014 School Enrollment Supplement.

5. Contacts for Statistical Aspects and Data Collection

The following individuals may be contacted on the statistical data collection and analysis operations:

Statistical Design:

Yang Cheng
Demographic Statistical Methods Division
