

**PAPERWORK REDUCTION ACT STATEMENT:** The Paperwork Reduction Act requires us to tell you why we are collecting this information, how we will use it, and whether or not you have to respond. We will use the information that we collect to evaluate applications and review reports for Wildlife and Sport Fish Restoration grant programs. Your response is required to obtain or retain a benefit. A Federal agency may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB Control Number. OMB has reviewed and approved the information in this system, and assigned OMB Control Numbers 1018-0109 (expires XX/XX/2018).

We estimate that it will take an average of 37 hours to enter information for an application for a mandatory program; 3 hours to enter information for an amendment; and 8 hours to enter report information. You may send comments concerning the burden estimates or any aspect of this information collection to the Information Collection Clearance Officer, U.S. Fish and Wildlife Service, MS BPHC, 5275 Leesburg Pike, Falls Church, VA 22041-3803.

Level 3

**Need/Threat Description (required)**

Over 220 species of native mollusks occur statewide in Arizona, and 27 of these are identified as Tier 1A/1B SGCN in Appendix E of the 2012 Arizona SWAP. Some native mollusks are rare or at risk from numerous threats such as loss or degradation of habitat, groundwater use, catastrophic wildfires, and invasive exotic species. Given the potential for exposure to stressors, small scale, site-specific research or enhancement might be required for effective conservation of SGCN mollusks. In addition, very little is known about most of the State's mollusks, particularly their status, distribution, threats, and population demographics. The lack of this information is a contributing factor in the ranking of mollusks as SGCN. Community surveys are needed to fill information gaps for these species and to help determine their management needs and future research. These needs are identified in the Arizona SWAP through monitoring objectives in pp.146-153, including monitoring unknown status species.
