ISSN: 1937-4216

Released April 30, 2012, by the National Agricultural Statistics Service (NASS), Agricultural Statistics Board, United States Department of Agriculture (USDA).

## Special Note

Fluid and manufacturing grade milk price and fat test estimates were discontinued in January 2011. Annual revised estimates for 2010 fluid and manufacturing grade milk prices and fat tests are published in the Annual Milk Production, Disposition, and Income Report. Monthly and annual revisions are available from the NASS searchable Quick Stats data base.

## April Farm Prices Received Index Down 7 Points

The preliminary All Farm Products Index of Prices Received by Farmers in April, at 177 percent, based on 1990-1992=100, decreased 7 points (3.8 percent) from March. The Crop Index is down 5 points (2.4 percent) and the Livestock Index decreased 7 points (4.4 percent). Producers received lower prices for broilers, corn, cattle, and eggs and higher prices for soybeans, onions, hay, and oranges. In addition to prices, the overall index is also affected by the seasonal change based on a 3-year average mix of commodities producers sell. Increased monthly movement of cattle, strawberries, milk, and broilers offset the decreased marketing of soybeans, corn, wheat, and cotton.

The preliminary All Farm Products Index is up 1 point (0.6 percent) from April 2011. The Food Commodities Index, at 166, decreased 5 points (2.9 percent) from last month but is unchanged from April 2011.

## Prices Paid Index Unchanged

The April Index of Prices Paid for Commodities and Services, Interest, Taxes, and Farm Wage Rates (PPITW) is 21 percent of the 1990-1992 average. The index is unchanged from March but 10 points above (4.9 percent) April 2011. Higher prices in April for complete feeds, concentrates, hay & forages, and supplements offset lower prices for feeder cattle, feeder pigs, feed grains, and LP gas.

## Adjustment for Seasonal Variation - All Eggs and All Milk

Base prices used in calculating parity prices are averages of prices received by farmers for several years; therefore, any seasonal variation is largely averaged out. To facilitate comparisons with parity prices, monthly prices for All Eggs and All Milk are adjusted for seasonal variation. The seasonally adjusted price is calculated by dividing the monthly price by the adjustment factor.

## Reliability of Prices Received Estimates

**Definition:** Prices received represent sales from producers to first buyers. They include all grades and qualities. The average commodity price from the survey multiplied by the total quantity marketed theoretically should give the total cash receipts for the commodity.

**Survey procedures:** Primary sales data used to determine grain prices were obtained from probability samples of about 1900 mills and elevators. These procedures ensure that virtually all grain moving into commercial channels has a chance of being included in the survey. Generally, States surveyed account for 90 percent or more of total United States production. Livestock prices are obtained from packers, stockyards, auctions, dealers, and market check data from AMS-USDA, private marketing organizations, and state commodity groups and agencies. Inter-farm sales of grain and livestock are not included since they represent very small percentages of the total marketings. Grain marketed for seed is also excluded. Fruit and vegetable prices are obtained from sample surveys and market check data from AMS-USDA, private marketing organizations, state agencies, and universities.

**Summary and estimation procedures:** Survey quantities sold are expanded by strata to state levels and used to weight average strata prices to a state average. State prices are then weighted to a United States price based on expanded marketings. Recommendations are prepared by the State Field Offices and reviewed by the Agricultural Statistics Board in Washington, D.C. State recommendations are reviewed for reasonableness with survey data, other States, and recent historic estimates.

**Revisions:** For most items, the current month's preliminary price represents a 3-5 day period around the 15th of the month. Previous month's prices represent actual dollars received for quantities sold during the entire month. Revisions are published in monthly issues of Agricultural Prices.

**Reliability:** United States price estimates based on probability surveys generally have a sampling error of less than one percent for the major commodities such as corn, wheat, soybeans, cotton, and rice. Current methods of summarization for non-probability commodities are not designed directly to calculate sampling errors. However, analytical measures approximate the United States relative sampling errors at around five percent. Any nonsampling errors are attributed to such things as the inability to obtain correct information, differences in interpreting questions or definitions, mistakes in coding or processing the data, etc. Efforts are made at each step in the survey process to minimize these nonsampling errors.

## Prices Paid by Farmers

The April Index of Prices Paid for Commodities and Services, Interest, Taxes, and Farm Wage Rates (PPITW) at 213 (1990-1992=100), is unchanged from March 2012 but up 4.9 percent from April 2011.

**Production index:** The April index, at 226, is unchanged from last month but increased 5.1 percent from last year. Higher prices in April for complete feeds, concentrates, hay & forages, and supplements offset lower prices for feeder cattle, feeder pigs, feed grains, and LP gas.

**Feed:** The April index, at 237, increased 1.3 percent from March and 6.3 percent from last April. Since March, higher prices for complete feeds, concentrates, hay & forages, and supplements more than offset lower prices for feed grains.

**Livestock and poultry:** The April index, at 177, decreased 3.8 percent from last month but increased 11 percent from last year. Since March, prices for feeder cattle, feeder pigs, and milk cows are lower. The April feeder cattle price, at \$155.30 per cwt, is down \$4.10 per cwt from the March price. April feeder pigs averaged \$166.00 per cwt, down \$32.00 per cwt from March.

**Fertilizer:** The April index, at 333, is unchanged from March but 2.1 percent above April a year ago. Since March, higher prices for nitrogen and mixed fertilizer offset lower prices for potash & phosphate.

**Chemicals:** The April index, at 151, decreased 0.7 percent from March but increased 4.9 percent from last April. Compared with last month, prices for herbicides, insecticides, and fungicides/other are lower.

**Fuels:** The April index, at 381, is down 0.3 percent from a month earlier but 0.3 percent above April 2011. Compared with last month, prices are lower for LP gas and diesel but higher for gasoline.

**Machinery:** The April index, at 252, is unchanged from March but is 5.0 percent above last April. Compared with last month, prices are lower for self-propelled machinery.

**Consumer price index:** The March 2012 Consumer Price Index, as issued by the Bureau of Labor Statistics, for all urban consumers (CPI-U) increased 0.8 percent before seasonal adjustment to a level of 229.392 (1982-1984=100). The February index is 227.663. For the 12 month period ending in March, the overall index increased 2.7 percent.

## Reliability of Prices Paid Estimates

**Definition:** Prices paid by farmers represent the average costs of inputs purchased by farmers and ranchers to produce agricultural commodities. Conceptually, the average price when multiplied by quantity purchased should equal total producer expenditures for the item.

**Survey procedures:** The prices paid data are obtained from establishments that sell goods and services to farmers and ranchers. Annually, about 8,500 firms are randomly selected from lists by type of item sold with an average response rate in the range of 75-80 percent. Firms are asked to report the price for the specified item "most commonly bought by farmers" or that was the "volume seller". Approximately 135 items are surveyed each March to represent all production input items purchased. The survey reference period for most items is the five business days centered around the 15th of the month. Separate prices paid surveys are conducted for agricultural chemicals, fuels, feed, fertilizer, machinery, and seed.

**Summary and estimation procedures:** The annual March Prices Paid Survey is summarized as a nonprobability survey. Average prices reported are aggregated to the region and United States level using weights available from expenditure data and other administrative sources. Price recommendations are prepared by the State Field Offices and Headquarters for review by the Agricultural Statistics Board in Washington, D.C. Also, the change in price level for individual items surveyed are combined to the regional and United States levels, and are published as prices paid indexes referenced to a specific base period. Prices paid indexes for new autos and trucks, building materials, farm supplies, motor supplies, and marketing containers are updated based on price changes measured in selected Bureau of Labor Statistics (BLS) indexes.

**Revisions:** Any revisions are published in the monthly and in annual issues of Agricultural Prices. The basis for revision must be supported by additional data that directly affect the level of the estimate. More revisions are likely for March when separate prices paid surveys are conducted, in lieu of BLS indexes, by the USDA to measure price change.

**Reliability:** Current methods of summarization for the March data are not designed directly to calculate sampling errors. However, analytical measures approximate the United States relative sampling errors for major items around 10 percent. Any nonsampling errors are attributed to such things as the inability to obtain correct information, differences in interpreting questions or definitions, mistakes in coding or processing the data, etc. Efforts are made at each step in the survey process to minimize these nonsampling errors.

**Program change:** Effective January 1, 1995, the National Agricultural Statistics Service updated the weights and changed the construction of its prices paid and received by farmers indexes. A Federal Register Notice dated October 28, 1994 discussed these program modifications.

A 1990-1992 reference and base period replaced the 1977 reference and 1971-1973 base weight period. Five-year moving average weights replaced the current fixed 1971-1973 base period weights. The 1910-1914=100 price indexes, required by statute for computing parity prices, were linked forward based on the changes in the new 1990-1992=100 indexes. The new indexes were constructed by multiplying the ratios of the current prices to the base period prices by the moving average weights (adjusted for seasonal marketing patterns for the prices received indexes).
