Roster details will be collected on EVNT:

EVNT key = EVNT.EVNTBASE + EVNT.EVNTNUM
EVNT.EVNTNUM = Number of PM event selected.

If Prescription Medicine added at Prescription Medicine Roster, see PRESCRIPTION
MEDICINE ROSTER POP-UP specifications for pop-up window programming instructions.

Variables populated at the Prescription Medicine Roster:

EVNT.EVNTNUM	Event number
EVNT.EVNTRNDC	Round number
EVNT.EVNTTYPE	PM
EVNT.PMEDNAME	Prescription Medicine name
EVNT.PMSTRUNI	Prescription Medicine strength text field
EVNT.EVNTPROV	02
BASE.LASTEVNT	Highest EVNT.EVNTNUM

For all Prescription Medicines selected, create a current round PMRO. Note: a current
round PMRO may already exist for a Prescription Medicine event if it has already been
selected earlier in the interview.

PMRO key = PMRO.PMROBASE + PMRO.PMROEVNT + PMRO.PMRORND.

PMRO key = PMRO.PMROBASE + PMRO.PMROEVNT + PMRO.PMRORND

PMRO.PMROEVNT = EVNT.EVNTNUM of PM event selected.
PMRO.PMRORND = current round.

PM6 can be asked more than once if response to PM17=1/Yes, there are more PM's to
enter. If at PM6, a medicine is selected that was previously displayed at PM6A and
GETNUM was set to 0, we will reset GETNUM=empty so that the medicine will be
displayed again at PM6A. See additional instructions below.

PMROEVNT	PMRO.PMROEVNT = EVNT.EVNTNUM of prescription medicine selected.

DESIGN NOTES

BOX PM1 checks for any PM's reported during the current round utilization sections, including PMs selected at PM2, PM4 and PM6. The PM's entered in utilization sections, PM2, and PM4 do not have number of purchases entered. However, because PM6 could be asked more than once in PM and we do not prohibit PM's from being selected more than once at PM6, BOX PM1 excludes any PM that has been selected in an earlier loop and GETNUM has already been asked.
