

Appendix I Heating Matching WK

Heating Source and Equipment Matching

Instructions: Circle energy sources and equipment used. Draw a line between each source and the equipment that uses it. More than one source can be used for each equipment, and one source can be used for multiple equipment types.

Heating Energy Source

Electricity

Natural gas

Fuel oil/Diesel/Kerosene

Bottled gas

District steam piped in from a separate building or utility

District hot water piped in from a separate building or utility

Some other energy source:

Heating Equipment Type

Furnaces that heat air directly, without using steam or hot water

Packaged central unit (roof mounted)

Boilers that produce steam or hot water

Heat pumps (other than components of a packaged unit)

Individual space heaters (other than heat pumps)

Duct reheat coils

Fan coil units

Central air handlers

Radiators

Other heating equipment:
