The RESTORE Act requires activities designed to protect or restore natural resources to be based on the 'best available science,' which is defined in the Act as science that '(a) maximizes the quality, objectivity, and integrity of information, including statistical information; (b) uses peer-reviewed and publicly available data, and (c) clearly documents risks and uncertainties in the scientific basis for such projects.'

The applicant proposing an activity designed to protect or restore natural resources must explain their determination that the project is based on the 'best available science.' In addressing the three-pronged test for 'best available science, the applicant must cite peer-reviewed, objective, methodologically sound literature sources that support the conclusion that the proposed scope of work is an effective way to achieve the stated objectives, when available.

- The journal in which the literature source appeared, if applicable

- The author(s)

The applicant must provide:

- A summary of the peer-reviewed information that justifies the proposed objectives, including methods used for the proposed activity. If peer-reviewed literature sources are unavailable, the applicant must explicitly state this and provide a brief explanation of what alternative scientific information sources were used. If the applicant relied on publicly available data, the applicant must cite the source of the data, the date of collection, and the size of the data set. Whenever possible, the applicant should use publicly available data such as from the U.S. Census Bureau, U.S. Fish and Wildlife Service, Environmental Protection Agency, National Oceanic and Atmospheric Administration, and other federal agencies. The applicant must provide a link to the publicly available data source used.)
- A summary of the literature sources' conclusions and any uncertainties or risks in the scientific basis that would apply to the proposed activity, including any that were identified by the public or by a Gulf Coast Ecosystem Restoration Council member.
- A summary of how, if the information supporting the proposed activity does not directly pertain to the Gulf Coast Region, the applicant's methods reasonably support and are adaptable to that geographic area.
- A summary of an evaluation of uncertainties and risks in achieving the project's best available science objectives over the longer term; e.g., is there an uncertainty or risk that in 5-10 years the project/program will be obsolete or not function as planned given projections of sea level rise or other environmental change such as in freshwater inflows to estuaries?
