General Comment

collecting data on who has asthma is not th emain help that americans need from their govt agency. they need an active agency that will work for clean air so that asthma does not happen. the fact is this agency has completely failed to act to stop the burning being done in our forests and open space by the usda, the usfws, and the blm,to name a few agencies tha tspecialize. the usdoc also burns and burns and burns,, pollutin gour air. the fine particulate matter released by these agencies is extremely polluting of the air and causes asthma. when they burn out westy, which they do frequently that comes across the entire usa causing asthma attacks. the fact is this is a bloated fat cat bureaucratic wimp agency that fails to acty tyo truly help trhe situation. they are afraid of callign out other agencies to ask for clean air. clean air is what is required to stop asthma attac. all of us need clean air. the earth itsself responds to clean air. this agency has taken not one step to gain that clean air. not one step. in addition, this agency is full of bloated fat cat bureaucrats who make numerous mistakes. this agency deserves an f minus for its grade. i dont think we should give one dollar of tax money to this ineffecxtive ineffic ient agency. it is simply another wate of fat cat bureaucrats. cut the budget of this agency.
