Experience has demonstrated there can be instances when more than one service area category could be applicable for a provided service. The following hierarchy rules apply to these instances: The specific service categories of sterilizations and other pregnancy-related procedures take precedence over provider categories, such as inpatient hospital or outpatient hospital. Services of a physician employed by a clinic are reported under clinic services if the clinic is the billing entity. X-rays processed by the clinic in the course of treatment, however, are reported under X-ray services. Services of a registered nurse attending a resident in a NF are reported (if they qualified under the coverage rules) under home health services if they were not billed as part of the NF bill.		2/25/2013	CLAIMLT

This field is only applicable when the service being billed can be quantified in discrete units, e.g., a number of visits or the number of units of a prescription/refill that were filled. For prescriptions/refills, use the Medicaid Drug Rebate definition of a unit, which is the smallest unit by which the drug is normally measured; e.g. tablet, capsule, milliliter, etc. For drugs not identifiable or dispensed by a normal unit, e.g. powder filled vials, use 1 as the number of units.		2/25/2013	CLAIMOT

Experience has demonstrated there can be instances when more than one service area category could be applicable for a provided service. The following hierarchy rules apply to these instances: The specific service categories of sterilizations and other pregnancy-related procedures take precedence over provider categories, such as inpatient hospital or outpatient hospital. Services of a physician employed by a clinic are reported under clinic services if the clinic is the billing entity. X-rays processed by the clinic in the course of treatment, however, are reported under X-ray services. Services of a registered nurse attending a resident in a NF are reported (if they qualified under the coverage rules) under home health services if they were not billed as part of the NF bill.		2/25/2013	CLAIMOT
See Appendix D for information on the various types of service.		2/25/2013	CLAIMOT

Experience has demonstrated there can be instances when more than one service area category could be applicable for a provided service. The following hierarchy rules apply to these instances: o The specific service categories of sterilizations and other pregnancy-related procedures take precedence over provider categories, such as inpatient hospital or outpatient hospital. o Services of a physician employed by a clinic are reported under clinic services if the clinic is the billing entity. X-rays processed by the clinic in the course of treatment, however, are reported under X-ray services. o Services of a registered nurse attending a resident in a NF are reported (if they qualified under the coverage rules) under home health services if they were not billed as part of the NF bill.		2/25/2013	CLAIMRX

Note: The records in an Update File are not generated as a result of a change processed in the state's Medicaid or Medicaid-related systems during the current reporting month. These Update File record segments may be unchanged from the ones submitted previously for various reasons (For example, the state may be unable to process a change record in their Medicaid/Medicaid-related systems to correct the issue because the state is simply passing through to T-MSIS data that originated outside of the state's systems.) Conversely, the records may be different from those previously submitted, but the change is the result of a fix whose root cause problem was an issue in the T-MSIS file creation process. Regardless, the record was not generated from a change that occurred in the state's source data.		2/25/2013	PROVIDER

All 3 of these NCPDP fields are situationally required and independent of one another. Pharmacists may report none, one, two or all three. NCPDP situational rules call for one or more of these values in situations where the field(s) could result in different coverage, pricing, patient financial responsibility, drug utilization review outcome, or if the information affects payment for, or documentation of, professional pharmacy service. The NCPDP "Results of Service Code" (bytes 1 & 2 of the T-MSIS DRUG-UTILIZATION-CODE) explains whether the pharmacist filled the prescription, filled part of the prescription, etc. The NCPDP "Professional Service Code" (bytes 3 & 4 of the T-MSIS DRUG-UTILIZATION-CODE) describes what the pharmacist did for the patient. The NCPDP "Result of Service Code" (bytes 5 & 6 of the T-MSIS DRUG-UTILIZATION-CODE) describes the action the pharmacist took in response to a conflict or the result of a pharmacist's professional service. Because the T-MSIS DRUG-UTILIZATION-CODE data element is a composite field, it is necessary for the state to populate all six bytes if any of the three NCPDP fields has a value. Experience has demonstrated there can be instances when more than one service area category could be applicable for a provided service. The following hierarchy rules apply to these instances: o The specific service categories of sterilizations and other pregnancy-related procedures take precedence over provider categories, such as inpatient hospital or outpatient hospital. o Services of a physician employed by a clinic are reported under clinic services if the clinic is the billing entity. X-rays processed by the clinic in the course of treatment, however, are reported under X-ray services. o Services of a registered nurse attending a resident in a NF are reported (if they qualified under the coverage rules) under home health services if they were not billed as part of the NF bill.

All claims for inpatient psychiatric care provided in a separately administered psychiatric wing or psychiatric hospital are included in the CLAIMLTfile.	
Experience has demonstrated there can be instances when more than one service area category could be applicable for a provided service. The following hierarchy rules apply to these instances: The specific service categories of sterilizations and other pregnancy-related procedures take precedence over provider categories, such as inpatient hospital or outpatient hospital. Services of a physician employed by a clinic are reported under clinic services if the clinic is the billing entity. X-rays processed by the clinic in the course of treatment, however, are reported under X-ray services. Services of a registered nurse attending a resident in a NF are reported (if they qualified under the coverage rules) under home health services if they were not billed as part of the NF bill.	
See Appendix D for information on the various types of service.

Experience has demonstrated there can be instances when more than one service area category could be applicable for a provided service. The following hierarchy rules apply to these instances: The specific service categories of sterilizations and other pregnancy-related procedures take precedence over provider categories, such as inpatient hospital or outpatient hospital. Services of a physician employed by a clinic are reported under clinic services if the clinic is the billing entity. X-rays processed by the clinic in the course of treatment, however, are reported under X-ray services. Services of a registered nurse attending a resident in a NF are reported (if they qualified under the coverage rules) under home health services if they were not billed as part of the NF bill.	
See Appendix D for information on the various types of service.

Experience has demonstrated there can be instances when more than one service area category could be applicable for a provided service. The following hierarchy rules apply to these instances: o The specific service categories of sterilizations and other pregnancy-related procedures take precedence over provider categories, such as inpatient hospital or outpatient hospital. o Services of a physician employed by a clinic are reported under clinic services if the clinic is the billing entity. X-rays processed by the clinic in the course of treatment, however, are reported under X-ray services. o Services of a registered nurse attending a resident in a NF are reported (if they qualified under the coverage rules) under home health services if they were not billed as part of the NF bill.

A person enrolled in Medicaid/CHIP should always have a primary eligibility group classification for any given day of enrollment. (There may or may not be a secondary eligibility group classification for that same day.) It is expected that an enrollee's eligibility group assignment (ELG087 - ELIGIBILITY-GROUP) will change over time as his/her situation changes. Whenever the eligibility group assignment changes (i.e., ELG087 has a different value), a separate ELIGIBILITY-DETERMINANTS record segment should be created. In such situations, there would be multiple active ELIGIBILITY-DETERMINANTS record segments, each covering a different effective time span. In such situations, the value in ELG087 would be the primary eligibility group for the effective date span of its respective ELIGIBILITY-DETERMINANTS record segment, and the PRIMARY-ELIGIBILITY-GROUP-IND data element on each of these segments would be set to '1' (YES).	
Should a situation arise where a Medicaid/CHIP enrollee has been assigned both a primary and a secondary eligibility group, there would be two ELIGIBILITY-DETERMINANTS record segments with overlapping effective time spans - one segment containing the primary eligibility group and the other for the secondary eligibility group. The PRIMARY-ELIGIBILITY-GROUP-IND data element on each of the segments is used to differentiate the primary eligibility group from the secondary.

Note: The records in an Update File are not generated as a result of a change processed in the state's Medicaid or Medicaid-related systems during the current reporting month. These Update File record segments may be unchanged from the ones submitted previously for various reasons (For example, the state may be unable to process a change record in their Medicaid/Medicaid-related systems to correct the issue because the state is simply passing through to T-MSIS data that originated outside of the state's systems.) Conversely, the records may be different from those previously submitted, but the change is the result of a fix whose root cause problem was an issue in the T-MSIS file creation process. Regardless, the record was not generated from a change that occurred in the state's source data.

V1#1 - C - DEFINITION

The National Provider ID (NPI) of the rendering/attending provider responsible for the beneficiary.

The National Provider ID (NPI) of the rendering/attending provider responsible for the beneficiary.

A code indicating the conflict, intervention and outcome of a prescription presented for fulfillment.

A DUR response consists of three components. The conflict code is a two-digit entry that contains the same two letters of the alert that the pharmacist wants to override. The intervention code describes what action the pharmacist took - whether he or she consulted the prescriber (M0), the patient (P0) or another source (R0), including the provider's own knowledge. Finally, the outcome code describes the intended outcome of the claim. This includes a number of codes that show the prescription was filled (1A through 1G) and two codes showing the prescription was not filled (2A and 2B).

A freeform field to document the race of the beneficiary when the beneficiary identifies themselves as Other Asian, Other Pacific Islander, or Other (race codes 010, 014, or 015).

V2#0 - C - DEFINITION
The NPI of the health care professional who delivers or completes a particulay medical service or non-surgical procedure. The SERVICING-PROV-NPI-NUM is required when rendering provider is different than the attending provider and state or federal regulatory requirements call for a "combined claim" (i.e., a claim that includes both facility and professional components). Examples are Medicaid clinic bills or critical access hospital claims.
The NPI of the health care professional who delivers or completes a particulay medical service or non-surgical procedure. The SERVICING-PROV-NPI-NUM is required when rendering provider is different than the attending provider and state or federal regulatory requirements call for a "combined claim" (i.e., a claim that includes both facility and professional components). Examples are Medicaid clinic bills or critical access hospital claims.
A code indicating the conflict, intervention and outcome of a prescription presented for fulfillment. The T-MSIS DRUG-UTILIZATION-CODE data element is composite field comprised of three distinct NCPDP data elements: "Reason for Service Code" (439-E4); "Professional Service Code" (44Ø-E5); and "Result of Service Code" (441-E6). All 3 of these NCPDP fields are situationally required and independent of one another. Pharmacists may report none, one, two or all three. NCPDP situational rules call for one or more of these values in situations where the field(s) could result in different coverage, pricing, patient financial responsibility, drug utilization review outcome, or if the information affects payment for, or documentation of, professional pharmacy service. The NCPDP "Results of Service Code" (bytes 1 & 2 of the T-MSIS DRUG-UTILIZATION-CODE) explains whether the pharmacist filled the prescription, filled part of the prescription, etc. The NCPDP "Professional Service Code" (bytes 3 & 4 of the T-MSIS DRUG-UTILIZATION-CODE) describes what the pharmacist did for the patient. The NCPDP "Result of Service Code" (bytes 5 & 6 of the T-MSIS DRUG-UTILIZATION-CODE) describes the action the pharmacist took in response to a conflict or the result of a pharmacist's professional service. Because the T-MSIS DRUG-UTILIZATION-CODE data element is a composite field, it is necessary for the state to populate all six bytes if any of the three NCPDP fields has a value. In such situations, use 'spaces' as placeholders for not applicable codes.

A freeform field to document the race of the beneficiary when the beneficiary identifies themselves as Other Asian, Other Pacific Islander (race codes 010 or 015).

A person enrolled in Medicaid/CHIP should always have a primary eligibility group classification for any given day of enrollment. (There may or may not be a secondary eligibility group classification for that same day.) It is expected that an enrollee's eligibility group assignment (ELG087 - ELIGIBILITY-GROUP) will change over time as his/her situation changes. Whenver the eligibility group assignment changes (i.e., ELG087 has a different value), a seperate ELIGIBILITY-DETERMINANTS record segment should be created. In such situations, there would be multiple active ELIGIBILITY-DETERMINANTS record segments, each covering a different effective time span. In such situations, the value in ELG087 would be the primary eligibility group for the effective date span of its respective ELIGIBILITY-DETERMINANTS record segment, and the PRIMARY-ELIGIBILITY-GROUP-IND data element on each of these segments would be set to '1' (YES).
Should a situation arise where a Medicaid/CHIP enrollee has been assigned both a primary and a secondary eligibility group, there would be two ELIGIBILITY-DETERMINANTS record segments with overlapping effective time spans - one segment containing the primary eligibility group and the other for the secondary eligibility group. The PRIMARY-ELIGIBILITY-GROUP-IND data element on each of the segments is used to differentiate the primary eligibility group from the secondary.
