**U.S. Nuclear Medicine Technologists Feasibility Study**

**OMB No: 0925-0656**  
**Expiration Date XX/XX/2016**

**NUCLEAR MEDICINE PROCEDURES QUESTIONNAIRE**

This study is a collaborative effort between the University of Minnesota School of Public Health, National Cancer Institute, American Registry of Radiologic Technologists, and the Nuclear Medicine Technology Certification Board.

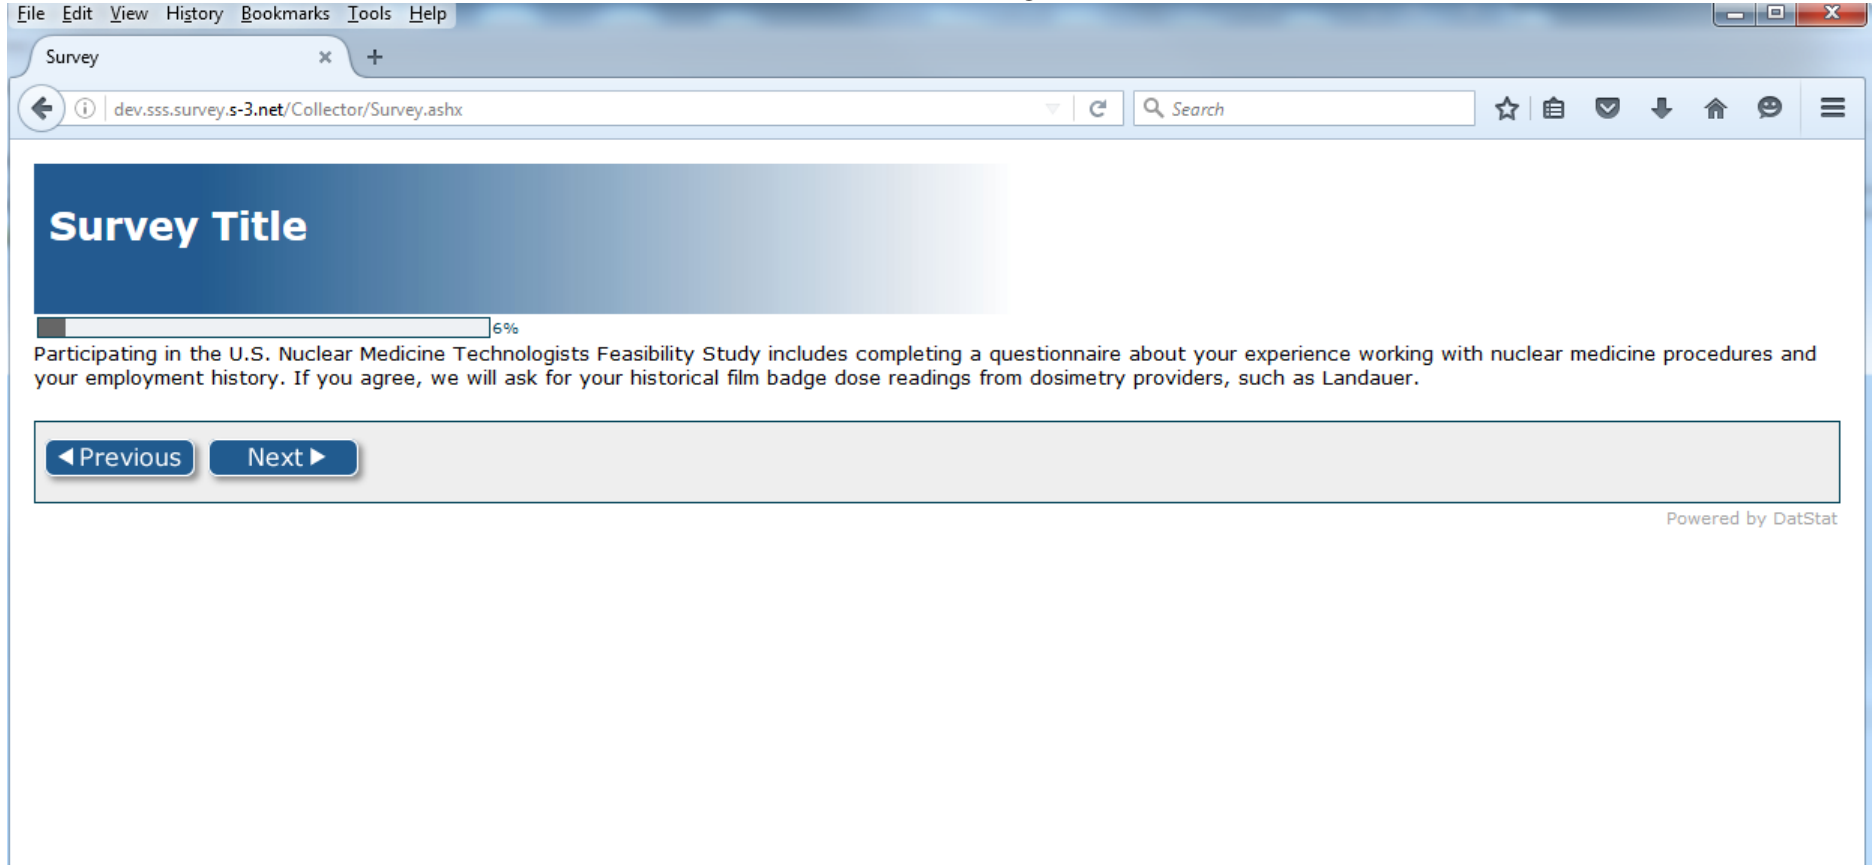

Collection of this information is authorized by The Public Health Service Act, Section 411 (42 USC 285a). Rights of study participants are protected by The Privacy Act of 1974. Participation is voluntary, and there are no penalties for not participating or withdrawing from the study at any time. Refusal to participate will not affect your benefits in any way. The information collected in this study will be kept private to the extent provided by law. Names and other identifiers will not appear in any report of the study. Information provided will be combined for all study participants and reported as summaries. You are being contacted by Bruce H. Alexander, PhD, in the School of Public Health at the University of Minnesota (1-(800) 447-6466) to complete this instrument so that we can study the work history and radiation safety practices of certified nuclear medicine technologists.

Public reporting burden for this collection of information is estimated to average 30 minutes per response, including the time for completing the consent form, reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Send comments regarding this burden estimate or any other aspect of this collection of information including suggestions for reducing this burden to: NIH, Project Clearance Branch, 6705 Rockledge Drive, MSC 7974, Bethesda, MD 20892-7974, ATTN: PRA (0925-0656). Do not return the completed form to this address.

Survey

dev.sss.survey.s-3.net/Collector/Survey.ashx

## Survey Title

13%

You are invited to be in a research study about the work history and radiation safety practices of certified nuclear medicine technologists. You were selected as a possible participant because you were first certified as a nuclear medicine technologist (NMT) after 1980. Active, retired, and former NMTs are invited to participate in this study.

This study is being conducted by Bruce H. Alexander, PhD in the School of Public Health at the University of Minnesota, in collaboration with the National Cancer Institute, the American Registry of Radiologic Technologists (ARRT), and the Nuclear Medicine Technologists Certification Board (NMTCB).

You will need to indicate below if you agree to participate in the study. We estimate that it will take you about 10 minutes to review the consent information and ask any questions that you may have, and about 20 minutes to complete the questionnaire.

## Survey Title

20%

**Background Information:** The purpose of this study is to test the feasibility of conducting a large scale study of certified nuclear medicine technologists (NMT) to understand radiation-related cancer and other disease risks in people who have worked as an NMT. About 1,500 nuclear medicine technologists are being asked to participate in this feasibility study.

**Procedures:** If you agree to be in this study, you will be asked to do the following:

- Complete an on-line survey about your experience working with nuclear medicine procedures. The survey asks questions about the types and frequency of nuclear medicine procedures you performed and related work practices.
- Provide a brief employer history, including the names of current and past employers specific to your work in the field of nuclear medicine
- Allow researchers to obtain historical records of your film badge dose readings from dosimetry providers, such as Landauer. The information you provide about your employers will be used to identify your badge dose records in the dosimetry provider databases. Dosimetry information will not be provided to participants because we cannot ensure the accuracy of the matches or the completeness of the data.
- The information you provide will be used to evaluate participation and completeness of the data. It will also be used to estimate cumulative organ-specific radiation doses to technologists who perform nuclear medicine procedures.

## Survey Title

26%

**Risks:** There is a very small risk that someone could trace the information in a scientific database back to you, but we will make every effort to protect your privacy und the Privacy Act of 1974. There are no other known risks associated with your participation in the study.

**Benefits:** There is no direct benefit to you for participating in this study. The information obtained in other studies of medical workers has been helpful for establishing practices that minimize radiation exposure and for understanding health risks to medical workers exposed to radiation. We hope the information gathered in the current survey will continue to be helpful in these ways.

**Confidentiality:** Collection of this information is authorized by The Public Health Service Act of 1974. Please be assured that information you provide will be kept private under the Privacy Act and personally identifiable information will not be disclosed to anyone but the researchers conducting the study, except as otherwise required by law. The data collected may be made available to other researchers with interests in radiation exposure and health outcomes, but no personally identifiable information that links your data to you will be provided. Any published results from this survey will be reported in statistical summaries only and will never include a participant's name.

**Voluntary Nature of the Study:** Your participation in this study is completely voluntary and failure to answer any particular question or the information collection as a whole will not affect your current or future contacts with the University of Minnesota, the National Cancer Institute, the American Registry of Radiologic Technologists (AART), and the Nuclear Medicine Technologists Certification Board (NIMTCB). By contacting the research staff at the University of Minnesota at (800) 447-6466 or [usnmt@umn.edu](mailto:usnmt@umn.edu), you can also withdraw from the study at any time without affecting those relationships. Your data can be withdrawn from the database, if requested, but cannot be withdrawn from analyses that have been completed or are underway.

**Nuclear Medicine Procedures Questionnaire**

The image shows a screenshot of a web browser window. The browser's address bar displays the URL `dev.sss.survey.s-3.net/Collector/Survey.ashx`. The page content includes a blue header with the text "Survey Title" and a progress bar showing 90% completion. Below the header, a question is posed: "Which of the following BEST describes the type of FACILITY you usually worked in before 1980?". Five radio button options are listed: "University or other major medical center", "General or community hospital", "Outpatient imaging center or clinic", "Physician office", and "N/A - did not work in nuclear medicine during this time". At the bottom of the question area, there are two buttons: "Previous" and "Next". The footer of the page indicates it is "Powered by DatStat".
