

Here, Hanwha's assembly processes fall short of those described in H095409. For one, Hanwha's assembly processes take less than a day, whereas those in H095409 took more than six. Moreover, although Hanwha conducts research and development in Korea and Poland, it is focused on the manufacturing process, not on product design and development.

In the scenario where Malaysian solar cells are used, almost none of the parts in the finished panels come from either Korea or Poland, the two countries where the panels are assembled. Unlike H095409, which involved a 43% cost content of the country of assembly, here, where Malaysian solar cells are used, the cost content is at most 8.6% Korean for the panels assembled in Korea and 0% Polish for the panels assembled in Poland. Most importantly, however, the solar cells themselves are produced in Malaysia. As noted above, the complex manufacturing process of the solar cells themselves was key to our finding that a substantial transformation had occurred in H095409. Turning glass tubes into functioning solar cells resulted in a product with a new name, character, and use. Here, assembling solar cells into finished solar panels does not. Rather, we find that the solar cells impart the essential character of the solar panels. Therefore, where Malaysian solar cells are used, the country of origin for government-procurement purposes is Malaysia.

Similarly, in the scenario where Korean solar cells are used, the country of origin for government-procurement purposes is Korea.

HOLDING:

Based on the facts of this case, the solar panels' country of origin for U.S. Government procurement is Malaysia when Malaysian solar cells are used and Korea when Korean solar cells are used.

Sincerely,

Harold Singer,
Acting Executive Director, Regulations &
Rulings Office of International Trade.
